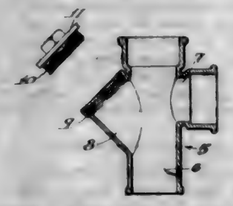
2. In a combination, a cylindrical casing open at the top and having its side and bottom walls formed of heat insulating material, the bottom wall having a central aperture therein, a funnel having a neck extending through said aperture and its upper edge engaging the upper edge of the side wall of the casing, said funnel having its body of inverted frusto-conical shape whereby an air chamber is formed between the funnel and casing walls, a disk of electric insulating material in said casing spaced slightly above the bottom wall thereof and having a central aperture through which the neck of said funnel passes, and an electric heating unit consisting of a resistance element resting flat on said disk in spaced relation to the center thereof.

---

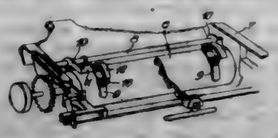
1,557,509. SANITARY TEE. GEORGE W. WENTZEL, Los Angeles, Calif. Filed Apr. 10, 1924. Serial No. 705,518. 2 Claims. (Cl. 137—75.)



2. A sanitary tee comprising a straight, vertical pipe section having a pair of branches integral therewith, which project from opposite sides thereof in substantially the same plane, one of said branches being horizontal with respect to the pipe section, the other being upwardly inclined at approximately 45°, said branches being so arranged that the central axis of the inclined branch where it enters the vertical pipe section is below the central axis of the horizontal branch where it enters the pipe section.

---

1,557,510. TYPEWRITER ATTACHMENT. HAZARL E. WEST, Washington, D. C. Filed June 2, 1923. Serial No. 642,978. 3 Claims. (Cl. 197—139.)

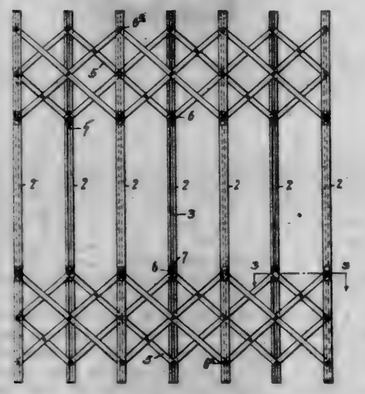


1. In combination with a typewriter having a platen, a rod above and at the rear of the platen, arms pivoted to the rod, guide fingers resiliently carried by said arms

and extending about the platen in slightly spaced relation thereto, guide rollers carried by said guide fingers and rolling upon the platen to space the guide fingers therefrom, of means for exerting direct yieldable pressure upon said guide fingers in substantially the direct line passing through the rollers and radially respecting the platen.

---

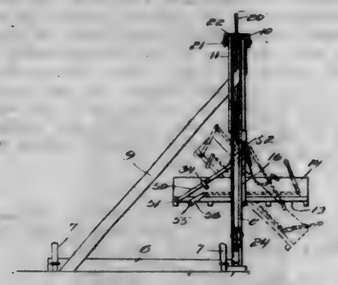
1,557,511. GATE. LOUIS A. WIBLAND, Pittsburgh, Pa. Filed July 16, 1923. Serial No. 651,873. 3 Claims. (Cl. 39—86.)



3. An expansible gate comprising two adjacent sets of lattice bars, each of said sets being composed of lattice bars pivotally connected at their ends, a plurality of parallel bars connected alternately to opposite sides of said lattice bars, the parallel bars on one side being connected to one set of said lattice bars and the parallel bars on the other side being connected to the other set of lattice bars, and means for securing each of said parallel bars slidably to said lattice bars comprising a rivet extending through the joined ends of a pair of said lattice bars and also extending into an undercut slot formed in said parallel bar, and a rectangular member carried by said rivet and received in the undercut portion of said slot.

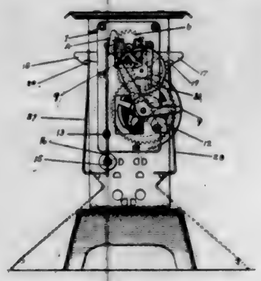
---

1,557,512. MANURE LOADER. THOMAS A. WILLIAMSEN, Hampton, Nebr. Filed June 2, 1925. Serial No. 34,412. 7 Claims. (Cl. 214—121.)



1. A device of the class described including a frame and a platform, said frame comprising a pair of uprights, a pair of cross bars extending across the tops of the uprights, rods projecting upwardly from the platform between the top bars, grapple members mounted on the top bars for receiving the rods and preventing the descension of the platform, and means for releasing the grapple members from the rods so as to allow the descension of the platform, and means for elevating the platform.

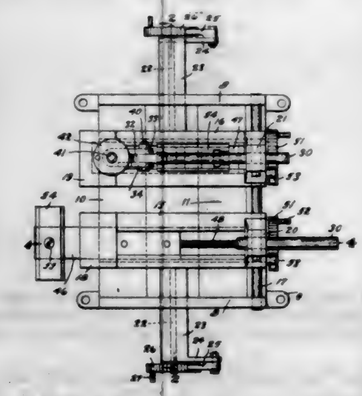
1,557,513. AUTOMATIC TOASTER. HERBERT STERLING WILSON, Chicago, Ill. Filed July 14, 1922. Serial No. 575,120. 2 Claims. (Cl. 161—16.)



1. An automatic toaster consisting of a heating element, means to support the article to be toasted at a suitable distance from the heating element, consisting of hinged frames, a spring actuated timing mechanism so arranged as to release the hinged frames and allow them to fall away from the heating element together with adjustable means to vary the time of exposure to the action of the heating element, all as has been described and specified.

---

1,557,514. CLAMP. FRED W. WISE, Kirkland, Wash., assignor, by mesne assignments, of one-half to Oscar E. Higgins, Seattle, Wash. Filed June 12, 1922. Serial No. 567,587. 10 Claims. (Cl. 113—99.)

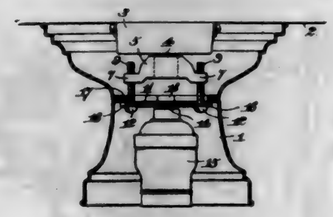


1. In a device of the class described, a normally horizontal frame, two relatively long clamping members extending across said frame and supported in parallel relation for sidewise movement toward and away from each other, independent screw means for moving each of said clamping members sidewise, a post projecting upwardly at the rear end of each of said clamping members, a shank supported for rotary and longitudinal adustment crosswise of each of said posts, and clamping means on the forward end of each of said shanks.

---

1,557,515. ELECTRIC LIGHTING UNIT. FREDERICK E. WOOLEY, Manasquan, N. J. Filed Sept. 18, 1924. Serial No. 738,500. 1 Claim. (Cl. 240—85.)

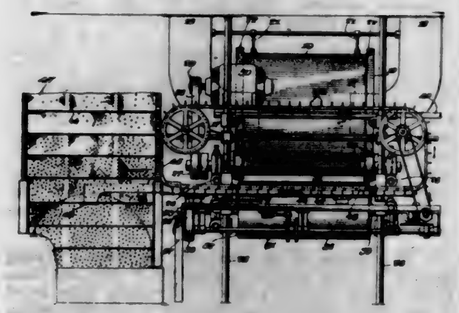
The combination with a shell having an inturned flange, of a support comprising a yoke adapted to be secured at its center to an outlet device, a plate below the support, said plate and flange having registering



recesses and lugs permitting the coupling of the plate and flange together, and screws projected through the plate and adjustably mounted in the yoke.

---

1,557,516. MECHANISM FOR STRAIGHTENING AND ASSEMBLING SPLINTS. JACOB P. WRIGHT, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 21, 1924. Serial No. 744,864. 8 Claims. (Cl. 144—191.)

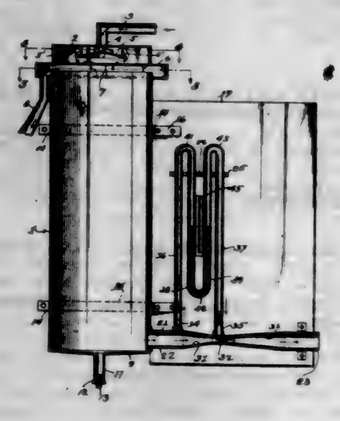


1. In mechanism for straightening and assembling splints, the combination of a rotary receptacle including parallel rows of rectangular compartments, each compartment being proportioned to receive and carry a group of splints in parallelism, a continuously moving conveyer mounted to travel directly below and in angular relation to the axis of rotation of the receptacle, and means permitting the discharge of the contents of each succeeding row of compartments upon the progressing conveyer during the rotation of the receptacle.

---

1,557,517. VISCOSIMETER. FRANS P. ZIMMERLI, Detroit, Mich. Filed July 30, 1923. Serial No. 654,673. 14 Claims. (Cl. 265—11.)

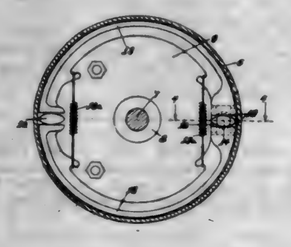
1. In a viscosimeter, the combination with a container adapted to contain a substance of undetermined viscosity, an inlet pipe in the top thereof, baffle plates against which the incoming liquid is diverted as it enters the container, and an overflow outlet near the top of the container for the discharge of the excess or fluid undergoing test, of an outlet pipe narrowed at the throat extending laterally from the bottom of the container, a U-tube adjacent thereto with a measuring liquid therein, means connecting the U-tube with the outlet tube, whereby a vacuum is produced in one leg of the U-tube and



a pressure in the other leg thereof, and a calibrated scale for registering the differences in the levels of the measuring fluid in the respective branches of the U-tube.

---

1,557,518. BRAKE. CARL J. DELEGARD and JOHN HAWKINSON, Poskin, Wis., assignors to Victor Delegard and Oscar M. West, both of St. Paul, Minn. Filed Aug. 21, 1922. Serial No. 583,135. Renewed Mar. 23, 1925. 2 Claims. (Cl. 188—78.)



1. The combination with a rotatable brake drum and a stationary plate closing the end of the drum, of a pair of oppositely disposed semi-circular brake shoes adapted to frictionally brake against said drum, means at one end of the pair of shoes for spreading the same to effectuate said braking, a cam intermediate the opposite ends of said shoes, a bolt formed integrally with said cam and threaded into said plate, means for locking the bolt in adjusted non-rotatagle position in the plate, and a pair of oppositely disposed yokes extending from the cam ends of said shoes to engage over the shank portion of said bolt.

---

1,557,519. SYNTHETIC RESIN COATING COMPOSITION. CARLETON ELLIS, Montclair, N. J. Filed Feb. 7, 1921, Serial No. 443,250. Renewed Jan. 9, 1924. 23 Claims. (Cl. 134—26.)

2. A varnish basis comprising a solution in a drying oil of an oil-soluble cresol sulphur resin.

21. A coating composition containing an artificial sulfur resin adapted as a surface finish.

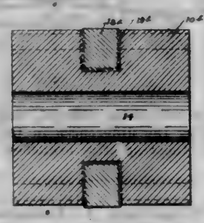
1,557,520. CLEANER. CARLETON ELLIS, Montclair, N. J. Filed June 16, 1924. Serial No. 720,457. 14 Claims. (Cl. 87—5.)

1. A composition for use as a cleaner, for cleaning fabrics, clothing and the like, consisting essentially of trichlorethylene and ethyl acetate, such mixture being substantially free from fats, soaps and waxes.

1,557,521. CYCLOHEXANOL-ALDEHYDE RESIN AND PROCESS OF MAKING THE SAME. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Mar. 30, 1923. Serial No. 628,748. 5 Claims. (Cl. 260—3.)

1. A resinous composition prepared from cyclohexanol and formaldehyde.

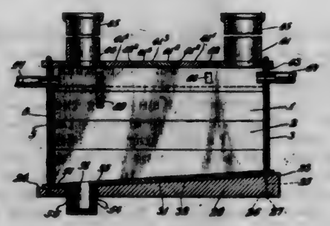
1,557,522. METHOD OF MAKING AND STRUCTURE OF GEARS. JOHN W. FULPER, Annandale, N. J., assignor to Elmer H. Stout, Trenton, N. J. Filed Jan. 17, 1922. Serial No. 529,821. 23 Claims. (Cl. 29—159.)



1. A gear comprising a main toothed body of highly wear resistant material, and having a plurality of less refractory gear toothed inserts therein, said less refractory gear toothed portions being of less wearing surface than the said highly refractory portion.

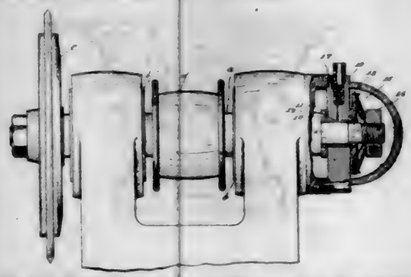
5. A process comprising reducing in size the projecting teeth of an article comprising a highly resistant portion and a less resistant portion provided with teeth respectively arranged side by side with the softer teeth projecting relative to the harder teeth.

1,557,523. SEPTIC TANK AND LIKE CONSTRUCTION. FRANK R. HAHN, Decatur, Ill., assignor of one-half to W. P. Landon, Rochelle, Ill. Filed Sept. 12, 1924. Serial No. 737,262. 15 Claims. (Cl. 210—6.)



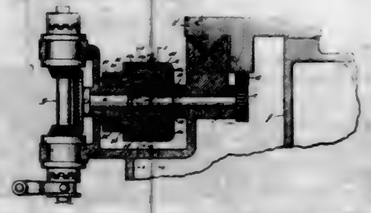
1. A construction of the character described including in combination a foundation having a plurality of stringers of beams, having sloping upper surfaces, a floor mounted on said sloping upper surfaces, side and end walls each composed of a plurality of units or elements arranged on said floor and a top or cover member composed of a plurality of units or elements positioned on said side and end walls, said end walls having inner and outer connections.

1,557,524. THRUST BEARING. BENGT M. W. HANSON, Hartford, Conn.; Einar A. Hanson and Clarence E. Whitney administrators of said Bengt M. W. Hanson, deceased. Filed Nov. 20, 1920. Serial No. 425,356. 5 Claims. (Cl. 308—163.)



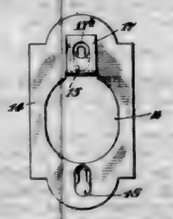
1. In a metal working machine, a spindle rotatably supported in suitable bearings but movable longitudinally therethrough, a grinding wheel fixed to said spindle, a fixed thrust bearing member through which said spindle extends, an abutment on said spindle bearing against one face of said member, a collar on said spindle bearing against the other face of said member, and a spring engaged between said collar and spindle.

1,557,525. DRIVING CONNECTION. BENGT M. W. HANSON, Hartford, Conn.; Einar A. Hanson and Clarence E. Whitney administrators of said Bengt M. W. Hanson, deceased. Filed Apr. 16, 1921. Serial No. 461,958. 6 Claims. (Cl. 64—106.)



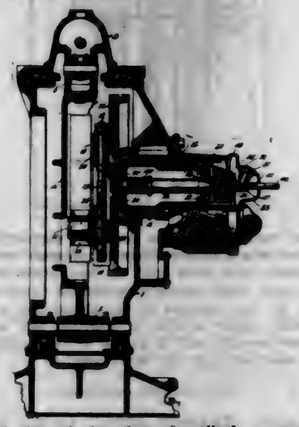
5. In a device of the character described, a driving member, a driven member, a plurality of frictional disks keyed to said driving member, intervening disks keyed to said driven member, the key-ways in said intervening disks being of different lengths and that disk having the longest key-way being provided with a slot of greater length than the key-way, and a pin carried by one of the disks fixed to the driving member and engaging in said slot.

1,557,526. ELECTRICAL FIXTURE SUPPORT. POUL HARTMANN, Brooklyn, N. Y., assignor to Electric Outlet Company, Inc., New York, N. Y., a Corporation of New York. Filed June 15, 1921. Serial No. 477,634. 2 Claims. (Cl. 240—85.)



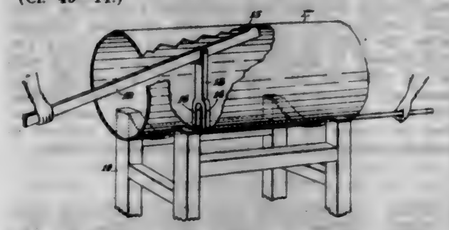
2. A unitary fixture support formed from sheet metal and providing a substantial bearing surface against a receptacle plate, said fixture support being formed with a key-hole slot to engage the head of a retaining-screw of the receptacle plate, a portion of said fixture support below the slot being bent outwardly to provide engaging and supporting means for a lighting fixture and to form a space for the use of an attachment plug in the receptacle.

1,557,527. STROKE INDICATOR. ROBERT T. HAZELTON, Cincinnati, Ohio, assignor to The Cincinnati Shaper Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 25, 1924. Serial No. 728,275. 8 Claims. (Cl. 74—38.)



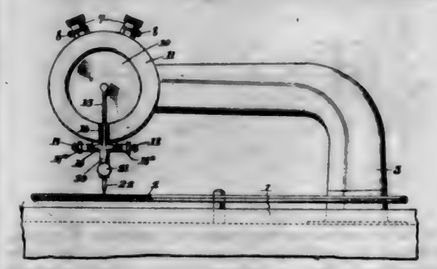
1. In a device of the class described, a crank gear having a crank pin adjustably mounted thereon a stroke-adjusting mechanism including a rotatable spindle journaled within said crank gear, a sleeve independently translatably non-rotatably mounted within said crank gear, having threaded connection with said spindle and having rack teeth thereon, and a rotatably mounted dial-shaft having a gear at one end in mesh with said rack teeth and having a graduated disk rotatable therewith for visually indicating the degrees of stroke adjustment when said spindle is independently rotated.

1,557,528. SPLITTING JACK FOR GLASS CYLINDERS. JOE H. HOWARD, Okmulgee, Okla., assignor of one-fourth to Baker Brothers Glass Company, Okmulgee, Okla., a Corporation of Oklahoma; one-fourth to The Harding Glass Company, Fort Smith, Ark., a Corporation of Arkansas; one-fourth to The National Glass Company, Independence, Kans., a Corporation of Kansas; and one-fourth to Wichita Falls Glass Company, Wichita Falls, Tex., a Corporation of Texas. Filed Mar. 11, 1925. Serial No. 14,599. 2 Claims. (Cl. 49—14.)



1. A splitting jack for glass cylinders comprising a standard, and a lever articulated therewith upon an axis transverse to the length of the lever, said lever having one end adapted to engage the upper interior of the glass cylinder and the other end adapted to be engaged by the hand of an operator.

1,557,529. ELECTRICAL REPRODUCER FOR PHONOGRAPHS. EDWARD THOMAS JONES, New Orleans, La. Filed Dec. 3, 1921. Serial No. 519,754. 5 Claims. (Cl. 179—100.1.)

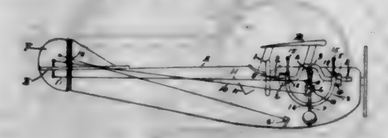


1. A phonograph reproducer comprising a watch case telephone receiver having a pair of magnets, a diaphragm adjacent the poles thereof, a screw threaded ring for securing said diaphragm in position, a support secured on the exterior of said watch case adjacent said magnets, a stylus arm formed of a single piece of material pivotally mounted in said support and provided at one end on one side of said pivotal mounting with a stylus point and secured at the other end on the opposite side of said pivotal mounting to said diaphragm and electrical connections from said magnets to a reproducing circuit.

1,557,530. PROCESS FOR THE PREPARATION OF METALLIC SCREENS FOR LUMINOUS PROJECTIONS. PIERRE JEAN MARTIN, Brussels, Belgium. Filed July 24, 1923. Serial No. 653,616. 2 Claims. (Cl. 88—24.)

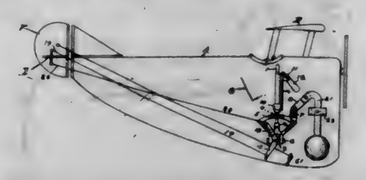
1. The herein described process of producing metallized screens for cinematographic and other projections, which consists in applying a coating of fine grains of flint to a plain backing, and applying to said coating a metallizing layer consisting of aluminum admixed with a small proportion of gold in the pure state finely divided from thin sheets into minute facets of dimensions in proportion to the degree of fineness of the grains of flint, the gold being uniformly distributed throughout the aluminium whereby the metallized surface is given increased brilliancy.

1,557,531. CONTROL FOR AEROPLANES. ROBERT ELVYN MITTON, Salt Lake City, Utah, assignor to The Mitton-Braley Aeroplane Control Company, Salt Lake City, Utah, a Corporation of Utah. Filed Aug. 22, 1922, Serial No. 583,631. Renewed Apr. 27, 1925. 6 Claims. (Cl. 244—29.)



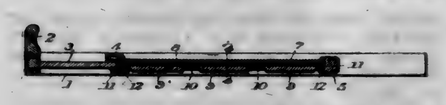
6. In a control for aeroplanes of the character described, comprising, a hand control wheel mounted on a shaft, said shaft having a crank formed thereon, a pendulum for automatically operating said shaft, a ball and socket joint connecting said crank to said pendulum, means for securing said shaft to the casing of the aeroplane, means for supporting said pendulum, means controlled by said pendulum, for operating the elevators and ailerons, substantially as described.

1,557,532. AUTOMATIC CONTROL FOR FLYING MACHINES. ROBERT ELVIN MITTON, Salt Lake City, Utah, assignor to The Mitton-Braley Aeroplane Control Company, Salt Lake City, Utah, a Corporation of Utah. Filed Sept. 25, 1922, Serial No. 590,281. Renewed July 10, 1925. 6 Claims. (Cl. 244—29.)



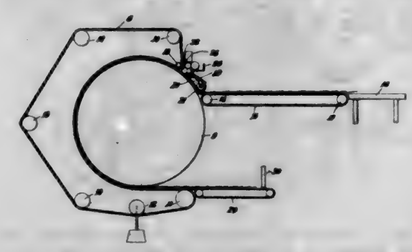
1. In a control of the character described for flying machines, in combination, a hand control lever pivotally mounted on a shaft, a segment bracket pivotally mounted on said shaft, said segment bracket having a hole therein, a sleeve mounted on said control lever, said sleeve to fit within said hole in said segment bracket to lock said control lever to said segment, means on said control lever for operating said sleeve, means on said control lever for attaching the wires to the ailerons, and means on said shaft for operating the wires to the elevators.

1,557,533. WASHBOARD. RALPH M. REEL, Cuyahoga Falls, Ohio, assignor to Marathon Rubber Company, Inc., Akron, Ohio, a Corporation of Ohio. Filed Nov. 1, 1922. Serial No. 598,404. 5 Claims. (Cl. 68—29.)



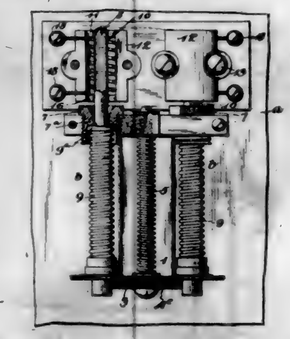
1. A wash board comprising, side frames and transverse members, a facing in the form of a continuous sheet forming the rubbing surface, a plurality of separate spaced transverse backing members beneath the facing member and parallel ribs extending transversely of the back of the facing member and integral therewith and received between the several backing members.

1,557,534. GUMMING MACHINE. JAY G. SWAB, Brooklyn, N. Y., assignor to Henry Trenchard, jr., Brooklyn, N. Y. Filed Aug. 16, 1923. Serial No. 657,688. 13 Claims. (Cl. 93—68.)



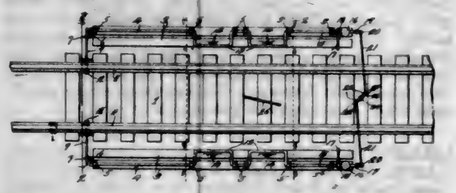
1. A drying apparatus of the character described comprising, in combination, a rotatable drum, a chain partially encircling the drum to hold gummed articles thereagainst, said chain having flat links with their edges presenting narrow bearing faces arranged to engage the gummed areas substantially as described.

1,557,535. THERMOSTATIC DEVICE. GEORGE H. WHITTINGHAM, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed Mar. 17, 1924. Serial No. 699,955. 4 Claims. (Cl. 297—8.)



1. The combination with suitable supporting means, of a thermostatic device mounted thereon and comprising a closed tube filled with an expansible liquid, said tube having a lower corrugated section expansible longitudinally by the pressure of the liquid and a relatively inexpansible upper section, a heating coil surrounding said upper section, and a shield of insulating material between said coil and the lower section.

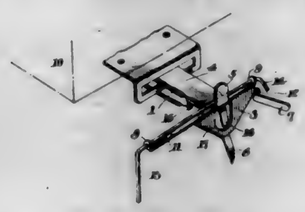
1,557,536. TRAFFIC STOP. ARTHUR W. BRIGGS, Omaha, Nebr.; Clara Briggs administratrix of the estate of said Arthur W. Briggs, deceased. Filed Dec. 21, 1923. Serial No. 682,070. 1 Claim. (Cl. 246—293.)



The combination with a railway, of railway crossing barriers, said barriers comprising longitudinally disposed rockable shafts at opposite sides of the railway, train actuated levers cooperating with one end of said shafts for rocking said shafts substantially ninety degrees, inwardly extending U-shaped members carried by the shafts and forming barriers, the other ends of said shafts being provided with downwardly extending arms, rods connected to said arms and extending inwardly under the rails, an angularly disposed horizontally pivoted member to opposite ends of which the inner ends of the rods are pivotally connected, a vertically disposed pin carried by said horizontally pivoted member, said pin being adapted to be engaged by a member carried by a train for restoring the U-shaped members to normal position after the train has passed a crossing.

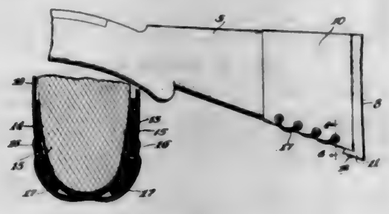
1,557,537. AUTOMATIC CAR AND ELECTRIC COUPLER. GEORGE C. GEIGER, East McKeesport, Pa.; Anna B. Geiger executrix of said George C. Geiger, deceased. Filed Apr. 9, 1921. Serial No. 459,954. 13 Claims. (Cl. 173—332.)

11. A coupling for toy cars comprising a pair of oppositely arranged couplers each including a coupler head, a draw bar connected therewith, a yieldable mounting for the draw bar on the car including a king bolt carried by the car and associated with the draw bar, a spring on the king bolt engaging the draw bar at one end, said coupler head including a frame and lugs upstanding from the frame, a lock plate depending from said frame and having an inclined lock shoulder along one side thereof, a keeper arranged on said lock plate



at the side opposite said lock shoulder, an outwardly curved cam carried by said keeper, a curved guide wing carried by the lock plate adjacent the lower end of said shoulder and an uncoupling lever journaled in said upstanding lugs and having an arm engageable with the frame.

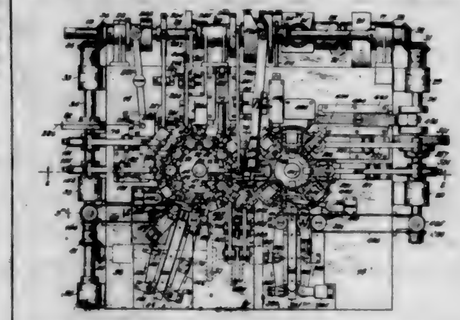
1,557,538. RECOIL DEVICE FOR GUNS. WALTER R. JORGENSON, Chicago, Ill., assignor to Jostam Manufacturing Co., a Firm composed of Walter R. Jorgenson, W. D. Stannard, and A. H. Ammann, Chicago, Ill. Filed June 19, 1925. Serial No. 38,147. 4 Claims. (Cl. 42—74.)



4. A recoil device for gun stocks comprising a resilient cushion, a gaiter-back cemented to the rear face of said cushion, a gaiter-side adapted to lie around a gun stock and having its rear margin cemented to the edge of said cushion, a forwardly turned tongue carried by said gaiter-back at its lower portion, tongues carried by the rear portions of the proximal edges of said gaiter-side, said tongues being superposed and secured each to the others, eyelets carried by the gaiter-side adjacent to its proximal edges, a lace co-operating with said eyelets to draw the proximal edges of the gaiter-side toward each other, and a flap carried by the gaiter-side adapted to bridge the space between the proximal edges of the gaiter-side and to underlie the lace.

1,557,539. MACHINE FOR AUTOMATICALLY HINGING THE BODIES AND COVERS OF RECEPTACLES. MARCELLE KUGEL, now by judicial change of name Carroll K. Marcell, Brooklyn, N. Y., assignor to Metal Package Corporation of New York, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 3, 1920. Serial No. 407,920. 163 Claims. (Cl. 29—11.)

1. In an apparatus for hinging together a body member and a cover member, means for forming pintle ears on said body member, means for inserting a pintle in said ears, means for moving said pintle forwardly in said



pintle ears and from engagement with said body member and means for hinging said cover to said pintle while it is in said forward position.

1,557,540. PROCESS OF MANUFACTURING RESISTANT GLASS. VÁCLAV HORÁK, Vinohrady, Prague, Czechoslovakia. Filed Jan. 22, 1923. Serial No. 614,297. 3 Claims. (Cl. 106—36.1.)

1. The method of manufacturing a resistant glass, which will support a sudden fall of temperature from 320° to 0° C. consisting in melting at about 1200° centigrade, a mixture of sand, boric acid, potassium carbonate, sodium carbonate, kaolin, muscovite, zirconic oxide and titanic oxide.

1,557,541. DESK. DAVID WARREN LYNCH and RAYMOND S. LYNCH, Lancaster, Pa. Filed Feb. 2, 1923. Serial No. 616,552. 2 Claims. (Cl. 155—124.)

1. A desk of the class described, including in combination, a supporting frame having a transverse yoke member at its upper end, said yoke member being provided with a notch at its bottom edge, a desk top pivotally carried by the upper end of the frame, a supporting bar fitting into said notch and extending upwardly to provide a rest for said top and its lower end providing a supporting foot, means for securing the bar in said notch, a seat carried by the intermediate portion of the bar, and means for adjusting the top member with reference to the upper end of the bar.

Patents Nos. 1,557,542 to 1,558,448.

THE

# OFFICIAL GAZETTE

OF THE

# United States Patent Office.

Vol. 339—No. 3. TUESDAY, OCTOBER 20, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## Interference Notices.

U. S. Patent Office, *Washington, Oct. 7, 1925.*

*The R. & H. Manufacturing Company, its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of The Columbus Vending Company, 2005 East Main Street, Columbus, Ohio, for registration of a trade-mark and trade-mark registered June 30, 1914, No. 98,089, to The R. & H. Manufacturing Company, corner of Asylum and Spruce Streets, Hartford, Conn., and a notice of such declaration sent by registered mail to The R. & H. Manufacturing Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said The R. & H. Manufacturing Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. Patent Office, *Washington, Sept. 29, 1925.*

*Polydyne Corporation, its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of the Polymet Manufacturing Corporation, 599 Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered October 14, 1924, No. 190,597, to the Polydyne Corporation, #248 West Fourteenth Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Polydyne Corporation at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Polydyne Corporation, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

## ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,420,824, H. P. Donle, Rectifier, decided September 23, 1925, claims 1, 2, 4, 5, 6, 8, and 9.

Pat. 1,474,392, P. Van Vlissingen, Purging device, decided September 9, 1925, claims 1, 4, 5, 6, and 7.

Final decisions in interferences have been rendered against the following registered trade-marks:

T. M. 62,479, Popcorn and mixed popcorn and peanuts coated with taffy, The Earl Manufacturing Company, Pittsburgh, Pa. Registered May 7, 1907. Decided September 2, 1925.

T. M. 62,958, Golf clubs and implements and parts thereof, The P. G. Manufacturing Company, Homewood, Ill. Registered June 4, 1907. Decided September 9, 1925.

T. M. 101,884, Soft drinks, still and carbonated; natural spring water, and synthetic mineral water, The Hampshire Company, Incorporated, Fairfield Township, Fairfield County, Conn. Registered December 8, 1914. Decided September 9, 1925.

T. M. 107,438, Candy, Barbara Fritchie Shops, Chicago, Ill. Registered November 30, 1915. Decided September 2, 1925.

T. M. 110,037, Carbonated beverages, nonalcoholic, The Sparkade Company, Cleveland, Ohio. Registered May 2, 1916. Decided August 31, 1925.

## TRADE-MARKS CANCELED.

54,513. Canned corn and canned sauerkraut. P. Hohenadel, jr., Janesville, Wis., and Rochelle, Ill. Registered June 26, 1906. Canceled September 17, 1925.

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decisions.

Ex parte Benes.

*Decided August 5, 1925.*

Joint and Sole Applications—Changing Sole to Joint Application.

A sole application may not be changed to a joint application.

On petition.

*Mr. Frank J. Schraeder, jr.*, for the applicant.

Robertson, *Commissioner:*

Applicant petitions that his sole application be changed to a joint application by entering an amendment consisting of a new petition with power of attorney signed by petitioner and by Warren Joseph Fretz, the coinventor with petitioner, a joint oath, and a substitute specification signed by both parties.

In support of the petition the following decisions are cited: *In re Roberts*, 273 O. G. 410; 1920 C. D. 158; 49 App. D. C. 250; *Bijur* v. *Kennington*, 295 O. G. 887; 1922 C. D. 54; 51 App. D. C. 230; *Briggs and Jacobi* v. *Keisling*, 311 O. G. 3; 1923 C. D. 186; 53 App. D. C. 49.

In each of the cited cases the question was whether a sole applicant could have the benefit of the date of the joint application erroneously filed as a joint application when in fact one of the said parties was found to be the sole inventor of the subject matter of the application.

In the Roberts case, supra, the joint applicant who erroneously joined in the application conceded that he had no part in the invention and the court, in holding that the sole applicant in that case had the benefit of the date of the joint application, said:

> • • • It is difficult to perceive any reason for not permitting the rectification of such a mistake by an amendment eliminating the superfluous applicant.

The decisions in *Bijur* v. *Kennington* and *Briggs and Jacobi* v. *Keisling*, supra, sanction amending a joint application to eliminate a joint inventor who was erroneously and in good faith joined as a joint inventor, or filing a sole application which is entitled to the benefit of the date of the joint application.

Petitioner's case, however, presents an entirely different problem. He is seeking to change a sole application to a joint application, which is not a case of eliminating superfluous matter, but an attempt to add matter that was not in the application as originally filed. It is true that the subject matter of the application remains the same, but it adds an additional party who did not sign the specification or join in the oath as originally filed. To accept the amendment would in effect be giving a filing date and a serial number to an incomplete application, as the proposed joint application was not complete as a joint application at the time this application was given a filing date—namely, December 24, 1923. The remedy in this case appears to be to file a new joint application, provided the parties can make the required averments of the application oath.

The petition is denied.

## Court of Appeals of the District of Columbia.

The Rieser Company, Inc., *v.* Niles.

*No. 1,731. Decided April 6, 1925.*

Trade-Marks — Descriptive Properties Different — Hair and Scalp Preparations—Hair Nets and Hair Curlers.

Hair and scalp preparations are not goods of the same descriptive qualities as hair nets and hair curlers, since their general and essential characteristics are different.

Appeal from Patent Office. Affirmed.

*Mr. Jos. L. Levy* for The Rieser Company, Inc.

*Mr. Joseph Atkins* and *Mr. L. L. Townshend* for Niles.

Before Martin, C. J., Robb, J., and Van Orsdel, J.

Robb, *J.:*

This appeal is in a trade-mark cancellation proceeding in which the tribunals of the Patent Office concur in the view that appellee's mark should not be canceled.

Prior to the adoption and registration by appellant of the mark "Weneeda," for use on a preparation for the treatment of the hair and scalp, appellee had used the mark "Venida" on hair nets and hair curlers. Subsequent to appellee's entry into the field, appellant used its mark on toilet soaps, lip sticks, talcum powder, rouge, toilet creams, etc.

The tribunals of the Patent Office did not find it necessary to determine whether the two marks are deceptively similar, nor do we. Hair and scalp preparations are not goods of the same descriptive qualities as hair nets and hair curlers, since their general and essential characteristics are different. See *Hump Hairpin Co.* v. *De Long Hook & Eye Co.*, 190 O. G. 1032; 1913 C. D. 393; 39 App. D. C. 484; *Consumers Co.* v. *Hydrox Chemical Co.*, 192 O. G. 744; 1913 C. D. 432; 40 App. D. C. 284; and *Nulyne Laboratories* v. *Electro-Alkaline Co.*, 312 O. G. 399; 1923 C. D. 209; 52 App. D. C. 265, 285 Fed. 999. In the case last cited we said:

> This, therefore, is a case in which the goods of the parties are dissimilar and possess different qualities and characteristics. (Citing cases.) When appellant adopted its mark, the field was open. In other words, there is nothing to raise a doubt as to its good faith, and we therefore do not think appellee should be permitted, at this late day, to appropriate the business and good will thus established.

The ruling just discussed is apposite here, and it results that the decision must be affirmed.

Affirmed.

## Court of Appeals of the District of Columbia.

IN RE DREW.

*No. 1,735. Decided April 6, 1925.*

DESIGNS—INVENTION—HUNTING KNIFE.

Refusal of an application for a design patent on a hunting knife in view of several references, one disclosing a blade and another a handle, *reversed*, there being substantial differences of appearance resulting in a unitary design that is useful and ornamental, possessing points of substantial improvement in appearance over the references, and exhibiting the quality of invention.

APPEAL from Patent Office. Reversed.

*Mr. James T. Newton* for the applicant.

*Mr. T. A. Hostetler* for the Commissioner of Patents.

Before MARTIN, C. J., ROBB, J., and VAN ORSDEL, J.

MARTIN, *J.*:

Appeal from the Commissioner of Patents.

The appellant filed an application for a design patent for an "ornamental design for a hunting knife, as shown." The application was rejected by the Acting Examiner upon the ground that the design was not new and original in view of several cuts appearing in a certain Military Shop's catalogue of the year 1915. The Examiner held that one of these cuts disclosed a blade and the other a handle almost identically like those appearing in the applicant's drawing, and that these elements had merely been combined by the applicant to form the proposed design, without the exercise of originality and invention. This ruling was sustained upon successive appeals by the Examiners in Chief and the First Assistant Commissioner.

It is claimed by the appellant that a

design must be viewed and considered as a whole, and originality and novelty will not be denied it because elements or component parts of the design are old, if as a whole it produces a new and pleasing impression on the esthetic sense;

also, that

a combination of old design elements presenting a new appearance not a mere sum of old appearances presented by the elements, involves patentable invention.

He claims accordingly that his proposed design is a new and original combination of design elements, giving a new and original appearance to a manufactured article which has enhanced its salable value, and is entitled of right to a design patent as applied for.

We have compared the blade and handle of the applicant's design with the corresponding elements of the references, and we find substantial differences of appearance between them. The blade of the reference presents a concave-convex appearance for almost its entire length, whereas applicant's blade presents a flat appearance interrupted only by a relatively small depression. The contrasting blades moreover differ in point of configuration. The corresponding handles distinctly differ in their respective lines of ornamentation.

We are of the opinion that the applicant's unitary design is in fact original and ornamental, possessing points of substantial improvement in appearance over the references as judged by the eye of the average man, and that it exhibits the quality of invention as applicable to the article in question. It is also an established rule that in case of a serious doubt in the mind of the court after a careful review of the evidence, the doubt should be resolved in favor of the one seeking a patent.

Upon these considerations we reverse the decision below.

---

## Court of Appeals of the District of Columbia.

J. E. BATES & CO., INC., *v.* A. J. BATES CO.

*No. 1,714. Decided April 6, 1925.*

TRADE-MARKS—CANCELLATION—SALE OF BUSINESS—REGISTRATION UNDER TEN-YEAR CLAUSE.

Where A. J. B. and J. E. B., copartners established a factory in 1885 which put forth under the trade name of "The Bates Shoe," certain lines of shoes chiefly but not exclusively for sale at a store owned by the company; where the partnership was dissolved in 1905 and the factory with all of its assets was transferred to A. J. B., and J. E. B. secured the store, and where the successor of A. J. B. registered the mark in 1906 under the ten-year clause of section 5 of the act of 1905 and used it from that time on, *Held* that the transfer to A. J. B. carried with it all of the firm's rights, including the trade-marks or trade names under which the factory's production had been put out and marketed, that the registration was lawful and that the petition for its cancellation by the J. E. B. Co. was properly denied.

APPEAL from Patent Office. Affirmed.

*Mr. Wm. F. Hall* for J. E. Bates & Co., Inc.

*Mr. E. T. Fenwick* for A. J. Bates Co.

Before MARTIN, Chief Justice, ROBB, Associate Justice, and BARBER, Judge of the United States Court of Customs Appeals.

MARTIN, *C. J.*:

Appeal from the Commissioner of Patents.

This is an appeal by J. E. Bates & Co., Inc., from a decision of the Assistant Commissioner of Patents denying a petition of the appellant seeking a cancellation of the registration of "The Bates Shoe" as a trade-mark of the appellee.

The record contains extended evidence, but the controlling facts are plain. In the year 1886 A. J. Bates and J. E. Bates were copartners engaged in the wholesale and retail shoe business in New York city; in the year 1885 the firm, as part of its going business, established a shoe factory at Webster, Mass.; from 1886 until 1905 the factory put out certain lines of shoes under the trade name of "The Bates Shoe," chiefly but not exclusively for sale at the company's New York store; in the year 1905 the partnership was dissolved by mutual agreement, and the assets including the factory and store were divided between the two partners; in conformity with the terms of the agreement the firm made over to the partner A. J. Bates the said factory including all the property of the copartnership of every name and nature owned by the firm in and about Webster, Mass., consisting of all machinery, tools, implements, lasts, and other personal property

used in the manufacture of shoes at the "plant of said firm" in Webster, including all merchandise and stock on hand, whether raw material, finished or unfinished, all bills receivable standing on the books of the firm at Webster, whether in the name of the firm or in the name of the Webster Shoe Company, all notes payable to said firm at Webster, all cash on hand or in bank in Webster, all unexpired insurance,

and other assets of every name and nature pertaining to the business at Webster, Mass., intending to include hereby not only the items above specifically mentioned, but all others that may be there located.

By the terms of the agreement the partner J. E. Bates acquired the New York store.

The trade-mark now in question had not been registered prior to this time, but in January, 1906, the appellee A. J. Bates Co., as assignee of A. J. Bates, filed an application for its registration, and it was regularly registered on June 5, 1906, under the ten-year clause of section 5 of the act of February 20, 1905. The mark has been used continuously by A. J. Bates and the appellee as his successor, at the Webster factory since that time.

The appellant, J. E. Bates & Co., Inc., in succession to J. E. Bates, continued the business of the New York store, and in 1918 also established a factory for the manufacture of shoes. In 1922 the appellant filed the present petition for a cancellation of the trade-mark in question. The petition was sustained by the Examiner of Interferences, but upon appeal was dismissed by the Assistant Commissioner of Patents.

The facts above recited fully justify the conclusion that the transfer to A. J. Bates of the Webster factory with all of its assets, carried with it all the firm's rights in and about the factory as a going business, including the trade-marks or trade names under which the factory's production had been put out and marketed, and that among these was the mark "The Bates Shoe," which at the time of the dissolution had been in continuous use by the factory for more than ten years. Accordingly, under the ten-year provision of the statute the registration of the mark was lawful, and the Assistant Commissioner was correct in denying the appellant's petition for its cancellation.

The decision is therefore affirmed.

---

## Court of Appeals of the District of Columbia.

IN RE GRIGGSY.

*No. 1,722. Decided April 6, 1925.*

1. DESIGNS—INVENTION.

A design for an automobile weather shield and glare visor, embodying features which constitute a distinctive characteristic of the article, which is novel, attractive, ornamental, and a distinct departure from the former construction, which marks an advance in the style of such articles and meets a great demand, is patentable.

2. DESIGNS—STRUCTURAL IMPROVEMENTS.

The fact that a design presents also certain structural improvements does not alone furnish ground for granting a design patent, but it does not militate against such action.

APPEAL from Patent Office. Reversed.

*Mr. Geo. E. Mueller, Mr. J. H. Milans*, and *Mr. C. T. Milans* for the applicant.

*Mr. T. A. Hostetler* for the Commissioner of Patents.

Before MARTIN, C J., ROBB, J., and VAN ORSDEL, J.

MARTIN, *J.*:

Appeal from the Commissioner of Patents.

The appellant applied for a design patent for a device known as a weather shield and glare visor. The article consists of an aluminum frame having a central dividing rib, and carrying two translucent sections or panes. It is of the type to be mounted above the windshield at the front of an automobile in order to protect the windshield from rain and sleet, and to shield the driver from the glare of the sun.

The application was rejected by the Acting Examiner upon the ground that the design was not new, original, and ornamental, in view of certain prior design patents, and particularly that it exhibited no invention over former designs. This decision was successively affirmed by the Examiners in Chief and the Assistant Commissioner of Patents.

[1, 2] The device in question is referred to by the appellant as a triple curve or three arc visor, and the feature upon which the application rests is to be found in its uniformly curved lines extending from front to rear, thereby forming three several arcs. These constitute a distinctive characteristic of the article and distinguish it from the visors described in the references, the latter showing plain arcuate curves or so-called ogee curves. The present design is novel and attractive in appearance, and when conspicuously mounted in its place upon the car the visor is very ornamental. The design is a distinct departure from the plain or irregularly curved visors of the former construction, and marks an advance in the style of such articles. These statements find support in the testimonials contained in the record, and by proof of the enormous sales of the article as compared with those of other designs. It seems clear that the popular demand for it is caused by its attractive appearance, rather than by utilitarian considerations. It is true that this design presents also certain structural improvements over former visors, but while that fact alone does not furnish ground for granting a design patent it does not militate against such action.

It is suggested that the difference in appearance between the present visor and former ones results from comparatively slight changes in form, and that these do not have the quality of invention. It should be noted however that a visor is composed of few and simple elements, and invention with respect to its design must necessarily deal with features which are of minor consequence if taken alone. Such changes however may greatly affect the appearance of the article as an entirety when judged by the taste and fancy of an average man, and this has been accomplished in the present in-

stance. We hold therefore that the applicant was entitled to a patent as sought by him, and that it was error to reject his application.

The decision in question is reversed.

## Court of Appeals of the District of Columbia.

JONES, JR., *v.* MIDGLEY AND NAYLOR.

*No. 1,718. Decided April 6, 1925.*

INTERFERENCE—PRIORITY—DECISION OF PATENT OFFICE AFFIRMED.

Decision of Commissioner of Patents awarding priority to M. and N. affirmed.

APPEAL from Patent Office. Affirmed.

*Mr. Wm. M. Jones, jr.*, pro se.

*Mr. E. C. Taylor* and *Mr. Wm. L. Edmonston* for Midgley and Naylor.

Before MARTIN, C. J., ROBB, J., and BARBER, J., U. S. Court of Customs Appeals.

MARTIN, *C. J.*:

Appeal from the Commissioner of Patents.

This is an appeal from the decision of the Commissioner of Patents awarding priority of invention of the count in issue to the appellees who are the junior parties.

The invention relates to the vulcanizing of pneumatic tires or casings by the use of a hollow iron annulus or core so constructed as to permit of the continuous passage of steam or hot water practically through its entire circumference, thus applying heat to the inside of the casing leaving the outside to be otherwise treated.

The count in issue reads as follows:

A tire vulcanising core, a tubular annulus having a partition therein and having a continuous passage throughout its circumferential extent from one side to the other side of said partition, a fluid-inlet at one side of and adjacent to said partition, and a fluid-outlet at the other side of and adjacent to said partition, said fluid-outlet and fluid-inlet extending inwardly of the core, so that these fluid carrying elements extend between the beads of the tire-casing when the core is in the casing, and so that the current of fluid can be effected substantially through the circumferential extent to the core for the purpose specified.

The questions presented upon this appeal are primarily questions of fact, and they have been decided against the apellant by three concurrent findings of the tribunals of the Patent Office. Under well-established rules of practice, this court will not disturb such a decision unless clear error has intervened to the prejudice of the appellant. We do not find such error in the record.

The appeal in effect raises three questions; first, whether the appellees in fact were prior to the appellant in respect to the time of the invention; second, whether the appellees were joint inventors as claimed by them; and third, whether the appellees lost their rights as inventors by reason of an alleged concealment and suppression of the invention.

The evidence fully discloses that the appellees in fact conceived the invention on December 16, 1918, with disclosure and reduction to practice within a few days thereafter, followed by a commercial production and use of the cores in the month of January, 1919; whereas February 6, 1919, was the date of conception and disclosure by the appellant who however made no core embodying the invention prior to his application for a patent on January 30, 1920, and who never manufactured any such cores for use or sale. It is shown that large numbers of cores were constructed for appellees and used by them industrially in the vulcanizing of tires throughout the years 1919 and 1920; in fact more than three hundred cores were in commercial use by appellees within a year after their date of conception. It is also clear that no effort was made by appellees to conceal or suppress the invention but that cores were obtained in large numbers on order from an outside firm and were used openly in the commercial production of tires. It appears moreover that the appellees filed as joint inventors, and that their claim in that particular is consistent with the fair import of the evidence in the case.

We therefore hold that priority of invention was properly awarded to the appellees, and affirm the decision of the Commissioner.

## Court of Appeals of the District of Columbia.

IN RE LUDWICK.

*No. 1,664. Decided April 6, 1925.*

1. CLAIMS—PROLIXITY—AGGREGATION.

A claim comprising a page and a half of typewritten matter and including substantially every detail of the invention, condemned.

2. SAME—UNPATENTABLE COMBINATION.

A combination of old elements, though resulting in an improvement over the prior art, is not patentable when the various parts function as before.

APPEAL from Patent Office. Affirmed.

*Mr. Arthur E. Paige* for Ludwick.

*Mr. T. A. Hostetler* for the Commissioner of Patents.

Before MARTIN, C. J., ROBB, J., and VAN ORSDEL, J.

ROBB, *J.*:

Appeal from a Patent Office decision disallowing claims 1 to 18, inclusive, 23, 24, and 25, of appellant's application.

[1] The device is a force-feed lubricator designed for lubricating various bearings of machinery, more particularly a roller mill. The Primary Examiner disallowed all the claims because, in his view, they were anticipated by the prior art. The Board allowed claims 19 to 22, inclusive, but affirmed the Examiner as to all the other claims, and this decision in turn was affirmed by the Assistant Commissioner. As to claims 1 to 12, inclusive, the Assistant Commissioner said:

No error is found in the holding of the lower tribunals that claims 1 to 12 cover aggregations of unrelated elements. Claim 1, for example, comprises a page and a half of typewritten matter and includes substantially every detail of the lubricator. This class of claims was discussed and condemned by Commissioner Fisher in *Ex parte Lawrence*, 1869 C. D. 88.

[2] This ruling was in line with the decisions of this court. A combination of old elements, though resulting in an improvement over the prior art, is not patentable when the various parts function as before. *In re Merritt, Black and Morris*, 162 O. G. 540; 1911 C. D. 266; 36 App. D. C. 122; *In re Smithey*, 276 O. G. 211; 1920 C. D. 198; 49 App. D. C. 374; *Smithey* v. *Robertson*, 325 O. G. 6; 1924 C. D. 452; 299 Fed. 248.

We have carefully examined the other claims and are content to rest our decision upon the reasoning of the tribunals of the Patent Office.

The decision is affirmed.

Affirmed.

## Court of Appeals of the District of Columbia.

PRATHER *v.* TELLIER AND HOSKINS.

*No. 1,742. Decided June 1, 1925.*

INTERFERENCE—PRIORITY.

Decision awarding priority to Tellier on invention relating to baking and granulating clay for softening hard water affirmed.

APPEAL from Patent Office. Affirmed.

*Mr. J. E. Stryker* and *Mr. A. V. Cushman* for Prather.

*Mr. John H. Lee* and *Mr. M. J. Jewett* for Hoskins.

*Mr. R. F. Steward, Mr. J. Q. Rice*, and *Mr. M. C. Massie* for Tellier.

Before MARTIN, C. J., ROBB, J., and VAN ORSDEL, J.

PER CURIAM:

Appeal from concurrent decisions of the Patent Office tribunals in an interference proceeding, which is one of a series of interferences, awarding priority to the party Tellier.

The invention relates to the baking of suitable clay and the crushing of it to make it granular, for softening hard water. The issue here, as before the Patent Office, is one of fact, and the concurrent decisions of the three tribunals below, covering as they do almost sixty printed pages of the record, contain an exhaustive and satisfactory discussion of the evidence. A review of those decisions, in the light of the briefs, argument, and record, not only fails to disclose any error but convinces us that the correct conclusion was reached. In these circumstances, it would serve no useful purpose again to review the evidence, and we therefore affirm the decision.

Affirmed.

Note.—Decisions of the Commissioner affirmed June 1, 1925, in the following cases for the reasons stated in Appeal No. 1,742: *Widner* v. *Tellier and Hoskins*, No. 1,741; *Widner* v. *Tellier*, No. 1,743; *Prather* v. *Tellier*, Nos. 1,744 and 1,745.

## Court of Appeals of the District of Columbia.

SAUNDERS *v.* CAMPBELL.

*No. 1,736. Decided June 1, 1925.*

1. INTERFERENCE — PRELIMINARY STATEMENT — AMENDMENT OF — WAIVER OF OBJECTION — APPEAL TO COURT OF APPEALS.

Where C. was permitted to amend his preliminary statement and no objection was made to the evidence introduced under the amended statement, *Held* on appeal to the court from decisions awarding priority to C. that the point had been waived.

2. SAME—SAME—SAME.

Where on an appeal to the court from a decision awarding priority to C., the principal contention of S. related to the ruling of the Patent Office permitting C. to amend his preliminary statement, although S. himself had twice been permitted to amend his preliminary statement under circumstances similar to those surrounding C., and where there was no abuse of the discretion with which the statute clothes the Commissioner, the decision was affirmed.

APPEAL from Patent Office. Reversed.

*Mr. Wm. W. Dodge* for Saunders.

*Mr. F. W. Harris* for Campbell.

Before MARTIN, C. J., ROBB, J., and VAN ORSDEL, J.

ROBB, *J.*:

Appeal from concurrent decisions of the Patent Office tribunals in an interference proceeding awarding priority to the senior party, Campbell.

The principal contention of appellant here relates to the ruling of the Patent Office permitting appellee to amend his preliminary statement. There are two answers to this contention: First, there was no objection to the evidence introduced under the amended statement, and hence the point was waived; and, second, even though appellant were in a position to insist upon the point here, the result would be the same, for under the facts before the Patent Office and fully set forth in the decisions of its tribunals there was no abuse of the discretion with which the statute clothes the Commissioner. See *Myers* v. *Myers*, 336 O. G., 511; Patent Appeal No. 1694, present term. Moreover, appellant twice was permitted to amend his preliminary statement under circumstances substantially similar to those surrounding the appellee.

Finding no error in the record, we affirm the decision.

Affirmed.

## PATENT SUITS.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

635,429, Culmer & Culmer, Manufacture of asphaltic fluxes; 635,430, same, Asphaltic fluxes, appeal filed July 3, 1925, C. C. A. (7th Cir.), Doc. 3614, *Barber Asphalt Paving Co.* v. *Standard Asphalt & Rubber Co.*

635,430. (See 635,429.)

# TRADE-MARKS

## OFFICIAL GAZETTE, OCTOBER 20, 1925.

[VOL. 339. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 190,516. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) ARTHUR MERRICK PADMORE, Minneapolis, Minn. Filed Jan. 7, 1924.

PADMORE'S PALACE

**WOODO SEALO**

No claim is made to the surname "Padmore's" apart from the mark as shown in the drawing.

*Particular description of goods.*—Liquid Oil Stain and Filler for Wood.

*Claims use* since on or about May 1, 1917.

Ser. No. 192,218. (CLASS 37. PAPER AND STATIONERY.) NATIONAL CARDOSCOPE CO., INC., San Francisco, Calif. Filed Feb. 18, 1924.

**JIFFY JOT**

*Particular description of goods.*—Self-Erasing Memorandum Pads.

*Claims use* since April, 1923.

Ser. No. 194,723. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE LIVERPOOL BORAX CO. LTD., Liverpool, England. Filed Mar. 31, 1924.

**VEEVIC**

*Particular description of goods.*—Soap and Cleaning Powder.

*Claims use* since July 26, 1917.

Ser. No. 194,728. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MILLNER DAIRY COMPANY, Norfolk, Va. Filed Mar. 31, 1924.

**CHOCOL-LAC**

*Particular description of goods.*—Food Product Containing Sugar and Milk and a Food Product Containing Cocoa, Sugar, and Milk.

*Claims use* since July 21, 1921.

Ser. No. 196,432. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) CHEMISCHE FABRIK PÖTT & CO., Dresden, Germany. Filed May 2, 1924.

**POSAVON**

*Particular description of goods.*—Soaps and Purification and Washing Powders.

*Claims use* since June, 1923.

Ser. No. 197,406. (CLASS 37. PAPER AND STATIONERY.) AMERICAN SALES BOOK COMPANY, LIMITED, Toronto, Canada, and Niagara Falls and Elmira, N. Y. Filed May 22, 1924.

No claim is made to the exclusive use of the word "Interfolded" or to the picture of the goods apart from the mark shown.

*Particular description of goods.*—Paper Sheets, Strips, Rolls, Pads, and the Like Suitable for Manifolding Use; Printed Forms for All Kinds of Business Transactions; Separate Paper Record Sheets or Strips Assembled Together in Pad Form; Folded Paper Record Receiving Strips, Especially Two or More Zigzag-Folded Strips Assembled and Interengaging Each Other to Form a Manifolding Book or Pad of Superposed Record Leaves Providing a Flat Compact Record Supply Pad or Book for Autographic Registers, Typewriters, and Like Machines; Sales Checks, Sales Books, Sales Slips, Book Leaves, Letter Sheets, Invoice Sheets, Billing Sheets.

*Claims use* since June 20, 1923.

---

Ser. No. 198,654. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) LOS ANGELES SOAP COMPANY, Los Angeles, Calif. Filed June 16, 1924.

Applicant states that the term "For Every Personal Use" and the word "Mission" appearing on drawing is intended to apply in this registration only in connection with the mark shown in drawing.

*Particular description of goods.*—Soap.

*Claims use* since Mar. 5, 1924.

---

Ser. No. 200,342. (CLASS 37. PAPER AND STATIONERY.) ROCKWELL-BARNES COMPANY, Chicago, Ill. Filed July 21, 1924.

CORPORATE BOND

No claim is made to the word "Bond" except in connection with the mark as shown in the drawing.

*Particular description of goods.*—Typewriter Paper.

*Claims use* since June 15, 1922.

Ser. No. 200,344. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ST. CLAIRS' (INC.), Boston, Mass. Filed July 21, 1924.

St. Clair's

*Particular description of goods.*—Confectionery—Namely, Candies, Sweetmeats, Candied Fruits, Bonbons, Caramels, Chocolates, and Comfits; Ices, Ice Cream, and Nonalcoholic Soda-Fountain Beverages, Prepared With Ice Cream and Food Preparations.

*Claims use* since 1890.

---

Ser. No. 200,403. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MOORMAN MFG. CO., Quincy, Ill. Filed July 23, 1924.

It Pays

*Particular description of goods.*—Prepared Stock Feed.

*Claims use* since May 25, 1922.

---

Ser. No. 201,034. (CLASS 39. CLOTHING.) IVORY GARTER COMPANY, New Orleans, La. Filed Aug. 6, 1924.

ARTERY GUARDERS

*Particular description of goods.*—Hose Supporters.

*Claims use* since January, 1924.

---

Ser. No. 201,288. (CLASS 12. CONSTRUCTION MATERIALS.) DECATUR BRICK MFG. CO., Decatur, Ill. Filed Aug. 12, 1924.

ROYAL HA-SIER

*Particular description of goods.*—Bricks.

*Claims use* since Jan. 1, 1919.

Ser. No. 201,782. (CLASS 39. CLOTHING.) THE TAYLOR BRAMLEY COMPANY, Chicopee, Mass. Filed Aug. 22, 1924.

*Particular description of goods.*—Infants' and Children's Clothing—Namely, Knitted Shirts, Knickers, and Bellybands.

*Claims use* since June 1, 1924.

---

Ser. No. 201,933. (CLASS 25. LOCKS AND SAFES.) MOTOR EQUIPMENT MANUFACTURERS, INC., New York, N. Y. Filed Aug. 27, 1924.

No claim is made to the three pictures of the goods apart from the mark shown on the drawing.

*Particular description of goods.*—Locking Radiator Caps.

*Claims use* since Dec. 4, 1923.

---

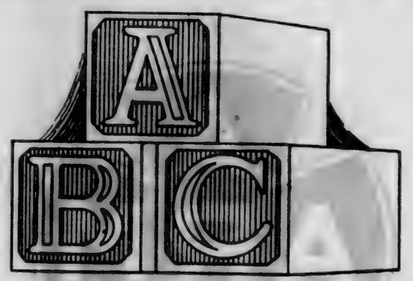
Ser. No. 203,330. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WILLIAM RUEHL, Milwaukee, Wis. Filed Oct. 2, 1924.

Applicant disclaims the words "Real Quality" apart from the mark as shown in the drawing.

*Particular description of goods.*—Coffee, Cinnamon, Cloves, Pepper, Allspice, and Vanilla, a Food-Flavoring Extract; Dill Pickles, Tomato Catchup, Stuffed Queen Olives, Queen Olives, Horse-Radish, Prepared Mustard, Butter, and Eggs.

*Claims use* since Sept. 15, 1924.

Ser. No. 203,773. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE A. B. C. STORES, INCORPORATED, Houston, Galveston, and Beaumont, Tex. Filed Oct. 13, 1924.



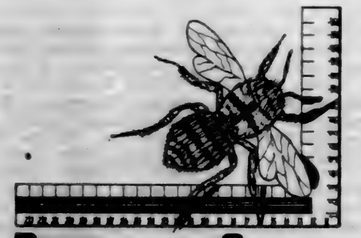
The lining of the drawing is for shading and does not indicate color.

*Particular description of goods.*—Eggs and Coffee.

*Claims use* since July, 1919.

---

Ser. No. 204,115. (CLASS 39. CLOTHING.) JOHN L. POWERS, Indianola, Iowa. Filed Oct. 18, 1924.



BE ON THE SQUARE
CLOTHES
POWERS

No claim is made to the words "Clothes" and "Powers."

*Particular description of goods.*—Men's and Boys' Suits and Overcoats.

*Claims use* since Oct. 7, 1924.

---

Ser. No. 204,424. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HAROLD M. ROURK, doing business as Country Club Produce Company, Kansas City, Mo. Filed Oct. 25, 1924.

*Particular description of goods.*—Thousand Island Dressing and Sandwich Spread Containing Mayonnaise, Ground Olives, Ground Pickles, Eggs, Vinegar, Spices, and Salt.

*Claims use* since Apr. 1, 1924.

Ser. No. 204,462. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ARTHUR R. MAAS, doing business as A. R. Maas Chemical Co., Los Angeles, Calif. Filed Oct. 27, 1924.

*Particular description of goods.*—Sodium Hyposulphate; Sodium Carbonate, Anhydrous; Sodium Carbonate, Granular; Sodium Carbonate, Monohydrate; Sodium Sulphite, Sodium Bisulphite, Sodium Metabisulphite, Potassium Metabisulphite, Sodium Bicarbonate, Sodium Sesqicarbonate, Sal Soda, Precipitated Sulphur, Lac Sulphur, Colloidal Sulphur, Colloidal Sulphur Paste, Soluble Sulphur, Water Reagent, Boiler Compound, Water Softener, Carbon Black, Colloidal Carbon, Activated Carbon, Decolorizing Carbon, Caustic-Soda Solution, Saponified Creosote Known as "Sheep Dip"; Liquid Lice Killer, a Solution of Sodium Hypo-Chlorite Containing Five Per Cent of Available Chlorine; Sheep Dip, Fly-Spray, Disinfectants, Crude Carbolic Acid, Creosote, Insecticides, Fungicides, Disinfecting Sprays, Iron Oxide, Gas-Purifying Material, Photographic Developer, Photographic Chemicals; Essential Oils—Namely, Oil of Peppermint; Headache Remedy.
*Claims use* since January, 1917.

---

Ser. No. 205,118. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) GRIFFIN MANUFACTURING CO. INC., New York, N. Y. Filed Nov. 11, 1924.

GRIFFIN

QUICK CLEANING FLUID

No claim is made to the exclusive use of the words "Quick Cleaning Fluid" except in association with the other features of the mark.
*Particular description of goods.*—Cleaning Fluid.
*Claims use* since 1914.

Ser. No. 206,102. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) THE BELDAM PACKING & RUBBER COMPANY LIMITED, London, England. Filed Dec. 2, 1924.

"Beldam's" and the name of the firm appearing on the drawing being disclaimed.
*Particular description of goods.*—Packings of All Kinds (Including Jointings in the Nature of Packing) for Engines or Machines for Preventing the Escape of Steam or Other Fluids Between the Working Parts of Same and for Inserting Between Stationary Joints; Hose; India-Rubber, Gutta-Percha, and Balata Valves, and Rings and Washers in the Nature of Packing and of Rubber, Leather, or Like Material.
*Claims use* since 1922.

---

Ser. No. 206,366. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PIEDMONT CREAMERY COMPANY, INCORPORATED, The Plains, Va. Filed Dec. 6, 1924.

"Meadow Queen"

BUTTER

No claim is made to the exclusive use of the word "Butter."
*Particular description of goods.*—Butter.

# REISSUES

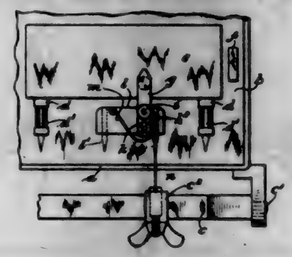
## OCTOBER 20, 1925.

16,187. HINGE. Joseph Soss, Brooklyn, N. Y. Filed May 10, 1924. Serial No. 712,460. Original No. 1,477,193, dated Dec. 11, 1923, Serial No. 570,446, filed June 23, 1922. 16 Claims. (Cl. 16—185.)

1. A hinge of the class described, one of the butts of which is composed of a sheet metal shell or facing member provided with a curved end, a core or filler member for said first named member and conforming with the general shape of said first named member and that portion of said last named member within the curved end portion of the first named member being provided with independent bearing members adapted to receive the usual pivot pin for joining the separate butts of the hinge together.

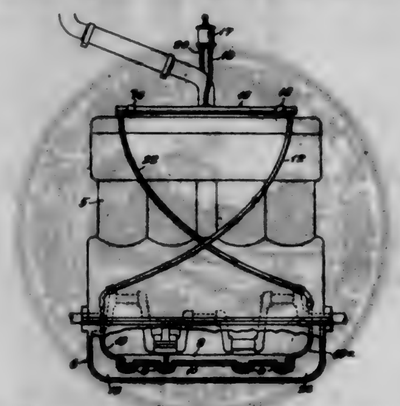
---

16,188. SHEET ADJUSTER FOR PRINTING PRESSES. Henry S. Hornbeck, Riverhead, N. Y., assignor to Miller Saw-Trimmer Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 14, 1925. Serial No. 43,634. Original No. 1,479,914, dated Jan. 8, 1924, Serial No. 520,909, filed Dec. 6, 1921. 8 Claims. (Cl. 101—414.)



2. A sheet adjuster for platen printing presses comprising a base, a sheet-engaging member associated with said base so as to have lengthwise and sidewise movement with respect thereto, for registering a sheet endwise and sidewise; means for securing said base on the platen in adjusted positions lengthwise or laterally of the latter, and means for actuating said sheet-engaging member.

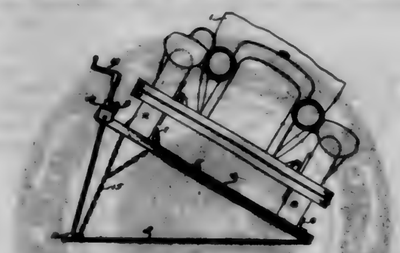
16,189. OIL FEEDER FOR INTERNAL-COMBUSTION ENGINES. Albert E. Nicholls, Brea, Calif. Filed Apr. 29, 1924. Serial No. 709,997. Original No. 1,423,677, dated July 25, 1922, Serial No. 470,946, filed May 17, 1921. 7 Claims. (Cl. 184—6.)



7. The combination with an internal combustion engine having main bearings and an oil pan provided with troughs, of an oil manifold secured to said engine; pipes connected to said manifold and discharging onto the main bearings, said pipes being inclined and crossed; and means for directing oil from said main bearings to the troughs in said pan.

---

16,190. AUTOMOBILE LIFT. Fred Quinn, Oliver, Ill. Filed Mar. 20, 1925. Serial No. 17,090. Original No. 1,526,232, dated Feb. 10, 1925, Serial No. 691,634, filed Feb. 6, 1924. 5 Claims. (Cl. 214—1.)



1. In a device of the character described, a stationary base, a member hingedly connected to said base, said member comprising a pair of transverse wheel engaging bars spaced from each other a distance less than the diameter of a motor vehicle wheel, means for elevating the free end of said member, and means for preventing transverse movement of the wheels of a vehicle arranged on said member.

# DESIGNS

## OCTOBER 20, 1925.

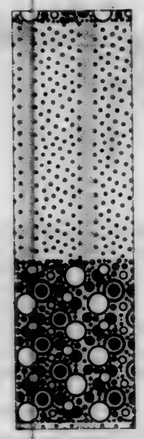
68,504. PLATE OR SIMILAR ARTICLE OF MANUFACTURE. HARRY G. AITKEN, Syracuse, N. Y., assignor to Onondaga Pottery Company, Syracuse, N. Y., a Corporation of New York. Filed June 8, 1925. Serial No. 18,696. Term of patent 14 years.

The ornamental design for a plate or similar article of manufacture, substantially as shown.

68,505. PLATE OR SIMILAR ARTICLE OF MANUFACTURE. HARRY G. AITKEN, Syracuse, N. Y., assignor to Onondaga Pottery Company, Syracuse, N. Y., a Corporation of New York. Filed June 8, 1925. Serial No. 18,697. Term of patent 14 years.

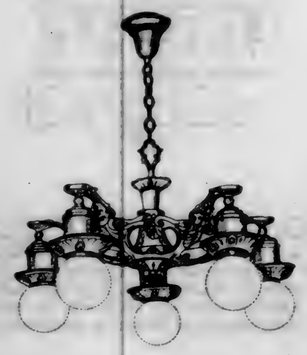
The ornamental design for a plate or similar article of manufacture, substantially as shown.

68,506. PRINTED FABRIC. LEO BLUHM, New York, N. Y. Filed Aug. 4, 1925. Serial No. 14,314. Term of patent 3½ years.



The ornamental design for a printed fabric as shown.

68,507. CHANDELIER. JOHN A. BOEHRINGER, Springfield, N. Y. Filed July 16, 1925. Serial No. 14,110. Term of patent 3½ years.

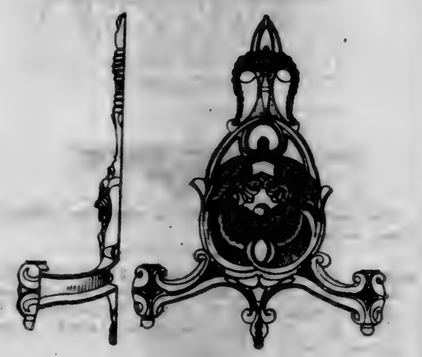


The ornamental design for a chandelier, as shown.

68,508. MATCH HOLDER. EUGENE S. BOUDINOT, Webster City, Iowa. Filed July 14, 1924. Serial No. 10,141. Term of patent 3½ years.

The ornamental design for a match holder, as shown.

68,509. ELECTRIC-LIGHTING FIXTURE. EDWARD BRANDT and HILIA J. BARTON, Detroit, Mich. Filed Aug. 17, 1925. Serial No. 14,505. Term of patent 7 years.



The ornamental design for an electric lighting fixture as shown.

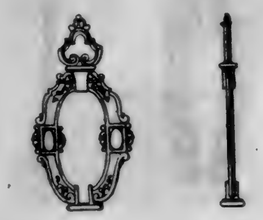
68,510. CANDY BOX. JOHN E. CHRISTENSEN and HARRY P. MCNERNEY, Chicago, Ill. Filed Oct. 6, 1923. Serial No. 7,413. Term of patent 14 years.

The ornamental design for a candy box, as shown.

68,511. LOOP FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed July 15, 1925. Serial No. 14,086. Term of patent 7 years.

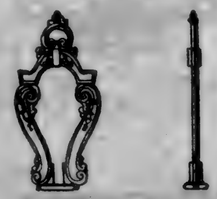
The ornamental design for a loop for lighting fixtures, as shown.

68,512. LOOP FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed July 15, 1925. Serial No. 14,087. Term of patent 7 years.



The ornamental design for a loop for lighting fixtures, as shown.

68,513. LOOP FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed July 15, 1925. Serial No. 14,088. Term of patent 7 years.

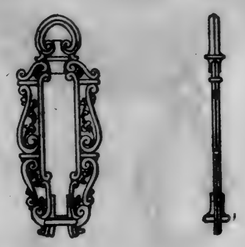


The ornamental design for a loop for lighting fixture as shown.

68,514. LOOP FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed July 15, 1925. Serial No. 14,089. Term of patent 7 years.

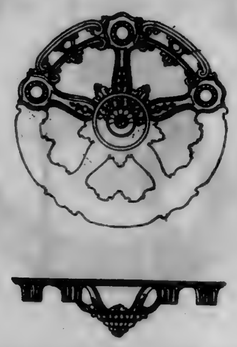
The ornamental design for a loop for lighting fixtures, as shown.

68,515. LOOP FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed July 15, 1925. Serial No. 14,090. Term of patent 7 years.



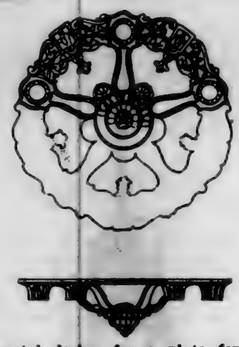
The ornamental design for a loop for lighting fixtures, as shown.

68,516. PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed July 15, 1925. Serial No. 14,091. Term of patent 7 years.



The ornamental design for a plate for lighting fixtures, as shown.

68,517. PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed July 15, 1925. Serial No. 14,092. Term of patent 7 years.

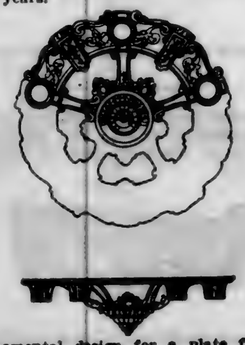


The ornamental design for a plate for lighting fixtures, as shown.

68,518. PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed July 15, 1925. Serial No. 14,093. Term of patent 7 years.

The ornamental design for a plate for lighting fixtures, as shown.

68,519. PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed July 15, 1925. Serial No. 14,094. Term of patent 7 years.

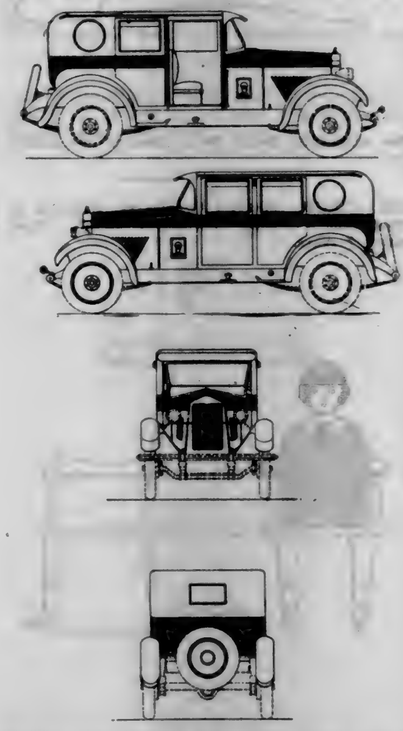


The ornamental design for a plate for lighting fixtures, as shown.

68,520. COAT. TAUBE DAVIS, New York, N. Y., assignor to Franklin Simon & Co. Inc., New York, N. Y., a Corporation of New York. Filed July 21, 1925. Serial No. 14,158. Term of patent 3½ years.

The ornamental design for a coat, as shown and described.

68,521. VEHICLE BODY. BENJAMIN DECKHOFF, New York, N. Y. Filed July 2, 1925. Serial No. 13,977. Term of patent 3½ years.

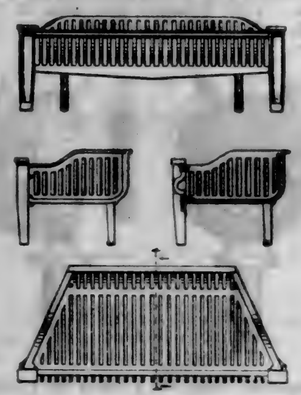


The ornamental design for a vehicle body as shown.

68,522. SHINGLE STRIP. CHARLES W. DOHM, Baltimore, Md., assignor to The Continental Roofing and Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed June 8, 1925. Serial No. 13,649. Term of patent 14 years.

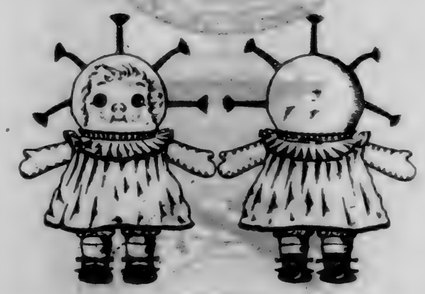
The ornamental design for a shingle strip as shown.

68,523. FIREPLACE BASKET. GEORGE W. DONLEY, Cleveland, Ohio, assignor to The Donley Brothers Company, Cleveland, Ohio, a Corporation. Filed Nov. 1, 1922. Serial No. 4,185. Term of patent 14 years.



The ornamental design for a fireplace basket, substantially as shown.

68,524. DOLL. GRACE G. DRAYTON, New York, N. Y., assignor to Averill Manufacturing Corporation, New York, N. Y., a Corporation of New York. Filed June 11, 1924. Serial No. 9,850. Term of patent 3½ years.

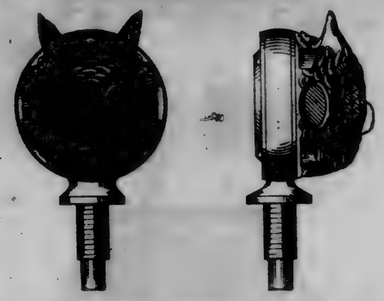


The ornamental design for a doll as shown.

68,525. SWIMMING RING. ALBERT J. ELDON, Mount Vernon, N. Y., assignor to The Paramount Rubber Cons., Inc., Tuckahoe, N. Y., a Corporation of Delaware. Filed Jan. 19, 1925. Serial No. 12,087. Term of patent 7 years.

The ornamental design for a swimming ring substantially as shown.

68,526. CASING FOR A TEMPERATURE-INDICATING DEVICE. IRVING FLORMAN, New York, N. Y. Filed June 29, 1925. Serial No. 13,943. Term of patent 14 years.

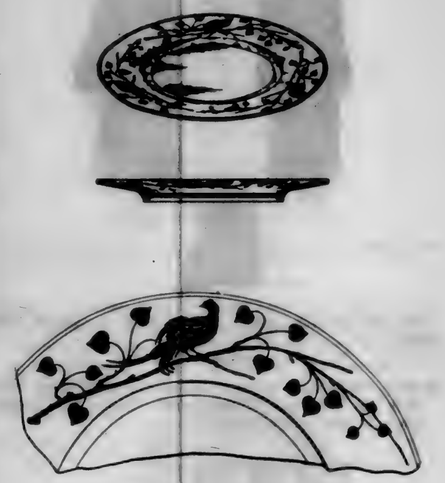


The ornamental design for a casing for a temperature indicating device, as shown.

68,527. PLATE OR LIKE ARTICLE. ALFRED FRIEDRICH, New York, N. Y., assignor to National Silver Deposit Ware Co., Inc., New York, N. Y., a Corporation of New York. Filed June 27, 1925. Serial No. 13,924. Term of patent 7 years.

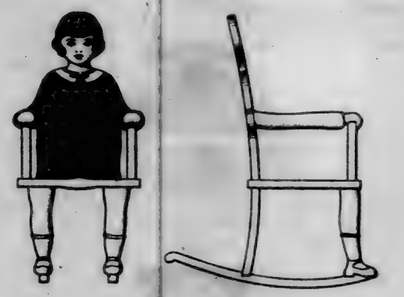
The ornamental design for a plate or like article, as shown.

68,528. PLATE OR LIKE ARTICLE. ALFRED FRIEDRICH, New York, N. Y., assignor to National Silver Deposit Ware Co., Inc., New York, N. Y., a Corporation of New York. Filed June 27, 1925. Serial No. 13,925. Term of patent 7 years.



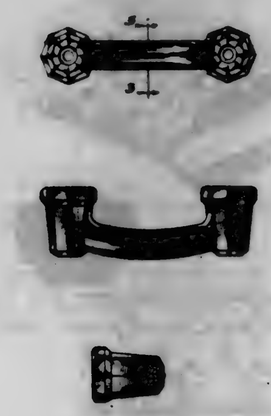
The ornamental design for a plate or like article, as shown.

68,529. CHAIR. MARTHA COX GRAFF, Bayonne, N. J. Filed June 13, 1925. Serial No. 13,775. Term of patent 7 years.



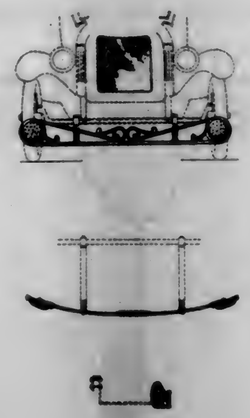
The ornamental design for a chair as shown.

68,530. DRAWER HANDLE. GRANVILLE H. GRAY, Santa Ana, Calif., assignor to Brock Glass Company, Santa Ana, Calif., a Corporation of California. Filed July 18, 1925. Serial No. 14,139. Term of patent 14 years.



The ornamental design for a drawer handle as shown.

68,531. AUTOMOBILE BUMPER. OTTO GUIDOTTI, Buffalo, N. Y. Filed Aug. 7, 1925. Serial No. 14,335. Term of patent 14 years.



The ornamental design for an automobile bumper, substantially as shown.

68,532. TIRE TREAD. CHESTER O. HENDERSON, Columbus, Ohio, assignor to Henderson Tire & Rubber Co., Inc., Columbus, Ohio. Filed Sept. 27, 1922. Serial No. 8,880. Term of patent 7 years.

The ornamental design for a tire tread, substantially as shown.

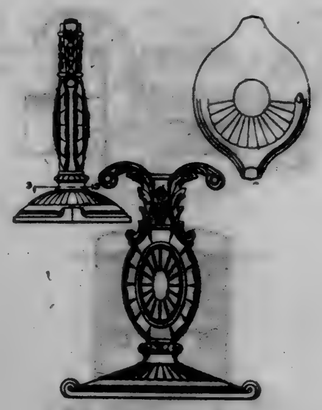
68,533. VEHICLE BODY. LIONEL MANUEL HENDLER, Baltimore, Md. Filed July 24, 1925. Serial No. 14,204. Term of patent 14 years.

The ornamental design for a vehicle body, substantially as shown.

68,534. PUSH-THROUGH SWITCH. WILLIAM ISH, Jackson, Mich. Filed July 29, 1925. Serial No. 14,260. Term of patent 14 years.

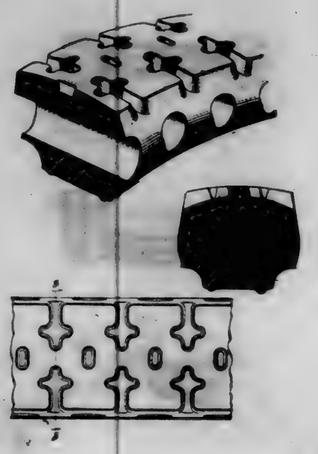
The ornamental design for a pushed through switch.

68,535. LAMP BASE. FRANK M. KATS, New York, N. Y., assignor to Frank M. Kats & Co., Inc., New York, N. Y. Filed Nov. 17, 1923. Serial No. 7,805. Term of patent 3½ years.



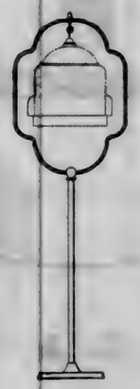
The ornamental design for a lamp base, as shown.

68,536. TIRE. WILLIAM LAMBERT, San Francisco, Calif., assignor to Lambert Tire & Rubber Co., Barberton, Ohio, a Corporation of Arizona. Filed Feb. 18, 1925. Serial No. 12,406. Term of patent 14 years.



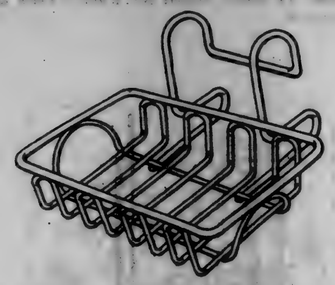
The ornamental design for a tire substantially as shown.

68,537. BIRDCAGE STAND. LEWICKI J. LEON, Chicago, Ill. Filed Apr. 23, 1925. Serial No. 13,204. Term of patent 14 years.



The ornamental design for a birdcage stand, as shown.

68,538. SOAP DISH OR SIMILAR ARTICLE. HENRY H. MOINEAU, Marlboro, Mass. Filed Aug. 17, 1921. Serial No. 493,190. Term of patent 14 years.

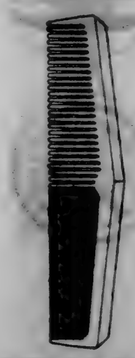


The ornamental design for a soap dish or similar article, as shown.

68,539. BOX. JAMES MONTGOMERY, New York, N. Y., assignor to Wallace & Co., Brooklyn, N. Y., a Corporation of New Jersey. Filed Dec. 19, 1924. Serial No. 11,753. Term of patent 7 years.

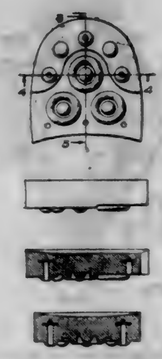
The ornamental design for a box substantially as shown.

68,540. COMB. GEORGE H. NEVIUS, Shrewsbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 26, 1923. Serial No. 5,944. Term of patent 7 years.



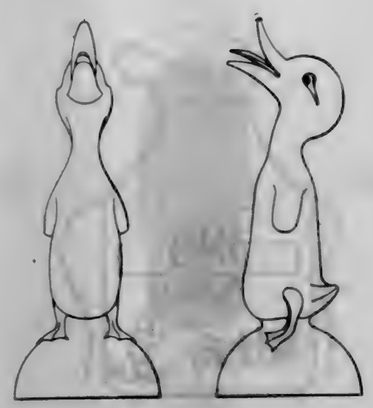
The ornamental design for a comb, as shown.

68,541. SHOE HEEL. EVERETT T. PACKARD, Avon, Mass. Filed Nov. 23, 1922. Serial No. 4,876. Term of patent 14 years.



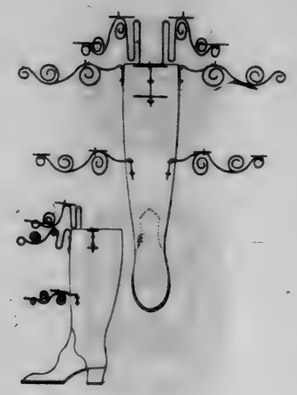
The ornamental design for a shoe heel as shown.

68,542. CRUET. EDWARD O. PARKER, Brooklyn, N. Y., assignor to Herman C. Kupper, Inc., New York, N. Y., a Corporation of New York. Filed June 9, 1924. Serial No. 9,838. Term of patent 7 years.



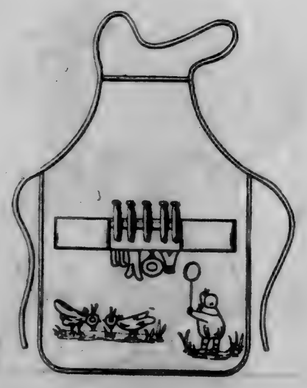
The ornamental design for a cruet as shown.

68,543. SHOE STAND. JOHN PASYNSKI, San Francisco, Calif. Filed Oct. 30, 1923. Serial No. 7,629. Term of patent 7 years.



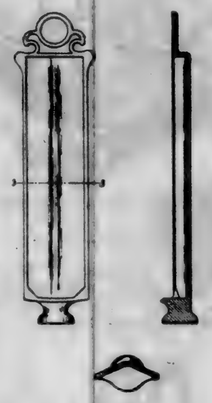
The ornamental design for a shoe stand, as shown.

68,544. CHILD'S APRON. CAROLINE A. PETERS, Los Angeles, Calif. Filed May 23, 1925. Serial No. 13,550. Term of patent 7 years.



The ornamental design for a child's apron, as shown.

68,545. THERMOMETER CASING. JAMES REID, Syracuse, N. Y., assignor to Pierce, Butler & Pierce Manufacturing Corporation, Syracuse, N. Y., a Corporation. Filed Mar. 14, 1923. Serial No. 5,465. Term of patent 14 years.



The ornamental design for a thermometer casing, substantially as shown.

68,546. JEWELRY-DISPLAY CONTAINER. EVERETT IRVING ROGERS, Jr., Providence, R. I. Filed Dec. 1, 1922. Serial No. 4,454. Term of patent 3½ years.

The ornamental design for a jewelry display container, as shown and described.

68,547. GAME BOARD. JOSEPH A. SCOTT, Shelby, Iowa. Filed Aug. 7, 1924. Serial No. 10,390. Term of patent 7 years.

The ornamental design for a game board, as shown.

68,548. TOY. CARL F. SHIDLER, Portland, Me. Filed July 14, 1925. Serial No. 14,081. Term of patent 14 years.

The ornamental design for a toy, as shown.

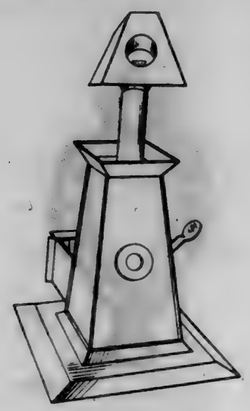
68,549. WALL BRACKET. GUSTAVE SHENKEL, Brooklyn, N. Y. Filed July 20, 1925. Serial No. 14,143. Term of patent 7 years.

The ornamental design for a wall bracket, as shown.

68,550. DRESS. MAUDE SIEGEL, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 8, 1922. Serial No. 4,454. Term of patent 3½ years.

The ornamental design for a dress, as shown and described.

68,551. CIGAR LIGHTER. EDWARD SIMON, Montreal, Quebec, Canada. Filed June 22, 1925. Serial No. 13,841. Term of patent 7 years.

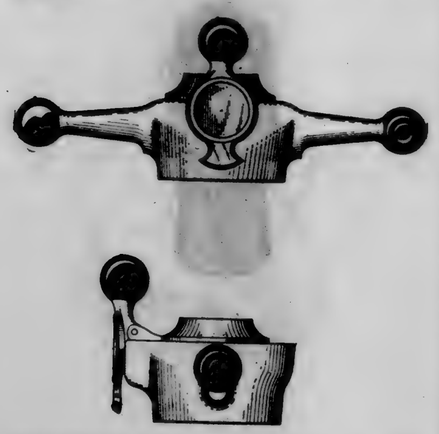


The ornamental design for a cigar lighter, as shown.

68,552. SHINGLE. HILDING A. SJODAHL, Cincinnati, Ohio. Filed June 28, 1924. Serial No. 10,002. Term of patent 14 years.

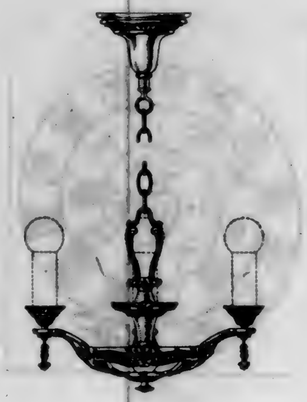
The ornamental design for a shingle, as shown.

68,553. RADIATOR CAP. LAURENCE A. SWEET, Los Angeles, Calif., assignor to Laurence A. Sweet Manufacturing Company, a Corporation of California. Filed Nov. 26, 1924. Serial No. 11,491. Term of patent 14 years.



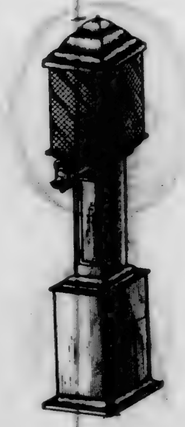
The ornamental design for a radiator cap substantially as shown.

68,554. CHANDELIER. HARRY TEPPER, Brooklyn, N. Y., assignor to Apex Chandelier Co. Inc., New York, N. Y., a Corporation of New York. Filed July 25, 1925. Serial No. 14,213. Term of patent 3½ years.



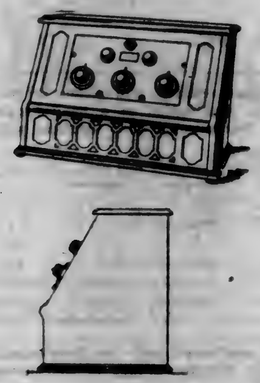
The ornamental design for a chandelier, as shown.

68,555. CASING FOR A GASOLINE-DISPENSING PUMP. WILLIAM S. TOWNSEND, Rochester, Pa., assignor to Guarantee Liquid Measure Company, Rochester, Pa., a Corporation of Delaware. Filed June 20, 1924. Serial No. 9,928. Term of patent 14 years.



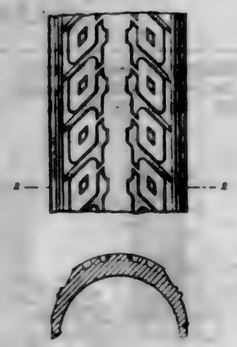
The ornamental design for casing for a gasoline dispensing pump, as shown.

68,556. RADIOCABINET. KELLY M. TURNER, Los Angeles, Calif. Filed July 15, 1925. Serial No. 14,100. Term of patent. 7 years.



The ornamental design for a radiocabinet, as shown.

68,557. TIRE TREAD. PARK E. WELTON, Cuyahoga Falls, Ohio, assignor to The Paul Rubber Company, Salisbury, N. C., a Corporation of North Carolina. Filed Jan. 27, 1923. Serial No. 5,019. Term of patent 7 years.

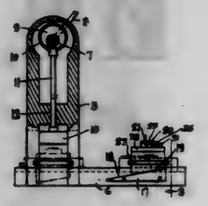


The ornamental design for a tire tread substantially as shown.

# PATENTS

## GRANTED OCTOBER 20, 1925.

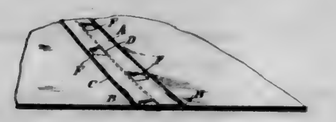
1,557,542. EMBOSSING-PRESS TYPE AND STRIP HOLDER. BRYANT L. AKINS, Brooklyn, N. Y. Filed Apr. 11, 1925. Serial No. 22,254. 7 Claims. (Cl. 101—8.)



1. In an embossing press, a pressing head, an embossing type carrier, a work carrying table movable toward and away from said head, and means for raising and lowering the type carrier automatically during movement of said table.

---

1,557,543. LINOLEUM-BINDING STRIP. ARCHIE A. ALLEN, Sturgis, Mich., assignor to Kirsch Manufacturing Company, Sturgis, Mich., a Corporation of Michigan. Filed Feb. 14, 1924. Serial No. 692,650. 8 Claims. (Cl. 154—49.)

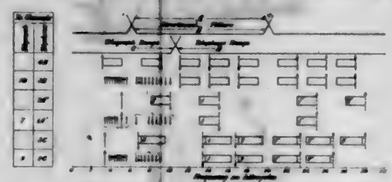


1. A linoleum binder comprising a strip of flexible sheet metal provided along its side edges with bevel-flanges presenting sharp edge portions adapted to become embedded in the linoleum and provided with L-shaped projections between said side edges, the free end portions of said projections opposing the sharp edges of said bevel-flanges, the edge portions of abutting strips of linoleum adapted to be received between said free end portions of said projections and the body portion of said strip.

---

1,557,544. CARRIER FREQUENCY ARRANGEMENT. HERMAN A. AFFEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 18, 1924. Serial No. 707,494. 5 Claims. (Cl. 179—15.)

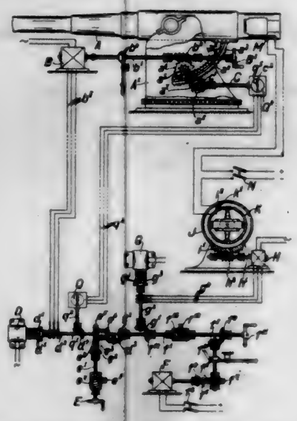
1. A selective arrangement to be employed in connection with a multiplex carrier system in which the carrier range is divided into two subranges, each of which is split into two directional groups of channels transmitting in opposite directions of which the adjacent groups of the two subranges are operated in the same direction, comprising a low pass filter for selecting the lower subrange into one path, a high pass filter for selecting the upper subrange into another path, means in said first path comprising a combination of a band suppression filter and a band transmission filter for discriminating between the two oppositely directed groups of the subrange selected, and means in the other path comprising a combination of a band suppression filter and a band transmission filter identical with the filters



in the first mentioned path for discriminating between the oppositely directed groups of the subrange selected into the path.

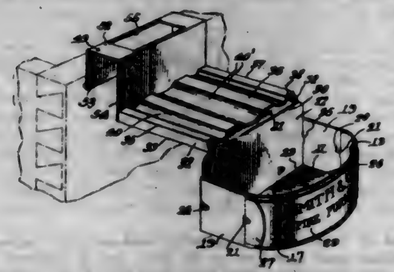
---

1,557,545. FIRE-CONTROL APPARATUS FOR NAVAL GUNS. WALTHER AKEMANN, Berlin-Dahlem, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Mar. 3, 1924. Serial No. 696,708. 9 Claims. (Cl. 89—41.)



1. A fire control apparatus for naval guns, comprising the combination with one or several adjustable gun barrels of a pointing mechanism, a long distance adjusting device operatively connected with said pointing mechanism for adjusting said gun barrel or barrels and comprising a transmitter and a receiver, said receiver being positively connected to said pointing mechanism, an electric firing device, two cooperating contacts contained in said firing device and being situated in the circuit thereof, a stabilizing means for one of said contacts, the other of said contacts being non-stabilized, a long distance adjusting device enabling the adjusting of the non-stabilized contact of said firing device and comprising a transmitter and a receiver, said receiver being positively connected to said non-stabilized contact; and operating means for the transmitters of both said long distance adjusting devices, said means adapted for alternatively setting said gun barrel or barrels either independently of the adjustment of said non-stabilized contact or in common therewith.

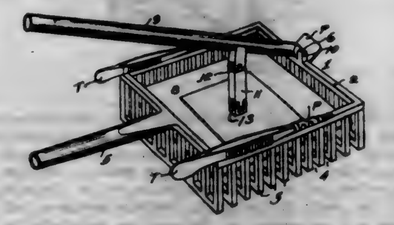
1,557,546. SMOKER'S DEVICE. GEORGE I. ALLEN, Wilson, N. C. Filed Mar. 21, 1924. Serial No. 700,982. 8 Claims. (Cl. 131—51.)



1. A smoker's device formed from an integral blank, said blank including a receptacle portion, said receptacle portion comprising a bottom portion, a front portion foldable upwardly upon the bottom portion, a back portion foldable upwardly upon the bottom portion, end portions foldable upwardly upon the bottom portion, said portions having interfitting tongues and grooves whereby they are retained in the assembled position, the end portions having forwardly extending tongues arranged in close relation to the outer surface of the front portion and also adapted for receiving and holding the ends of an advertising card, and means for securing the device upon a support.

---

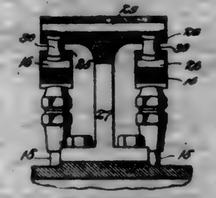
1,557,547. COMPRESSOR. EMMA C. ANDERSON, Spokane, Wash. Filed Dec. 24, 1924. Serial No. 757,919. 2 Claims. (Cl. 100—41.)



1. The combination with a rectangular basket having a fixed handle, of an alined, pivoted handle on the basket, a compressor head, and a link pivotally connecting said head and pivoted handle, said link having pivots at its ends located in planes at right angles one to another.

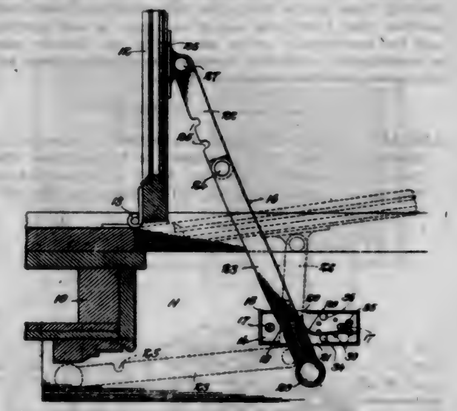
---

1,557,548. VALVE-OPERATING MECHANISM. DORSEY F. ASBURY, Washington, D. C. Filed Apr. 19, 1920. Serial No. 374,996. 4 Claims. (Cl. 123—90.)



1. In a valve mechanism, a member provided with a pair of openings intersecting one another at right angles, and a cylindrical pin fitted within one of said openings whereby a side portion thereof provides within the other opening a convex bearing surface having parallel elements.

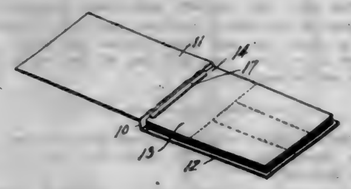
1,557,549. CLOSURE OPERATOR. JAMES P. BECKER, Miami, Fla. Filed Mar. 28, 1924. Serial No. 702,609. 1 Claim. (Cl. 268—15.)



An operator for swinging closures comprising an arm adapted to be pivotally secured at one end to a closure, a base plate adapted to be secured to a fixed support and over which said arm is slidably disposed, a housing adapted to be secured over said base plate, said housing having openings in the side walls thereof through which said arm is adapted to pass, a pin within said housing adapted to be engaged by a notch in said arm, and means holding the arm with a notch thereof engaged with said pin, said means providing a stop cooperating with said arm to completely close said housing against the passage of insects.

---

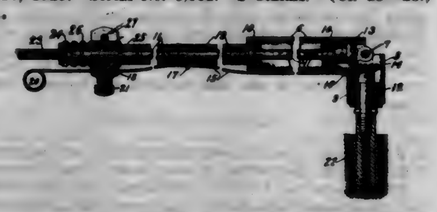
1,557,550. BINDER. EDWIN P. BENSON, New York, N. Y. Filed Apr. 10, 1923. Serial No. 631,124. 1 Claim. (Cl. 129—37.)



A filler gripping member which includes a channel plate having limbs to engage a filler, and integrally formed right angular projections on the inner faces of the limbs, projections on the bound end surfaces of the filler to be directly engaged against the right angular projections on the limbs.

---

1,557,551. ADJUSTABLE ROTARY-BRUSH MECHANISM. EUGENE BERTONE, Stevenson, Md. Filed Jan. 20, 1925. Serial No. 3,601. 4 Claims. (Cl. 15—23.)

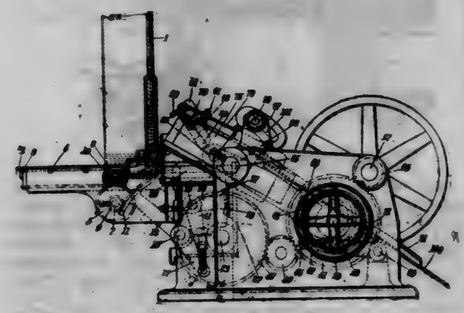


1. The combination of a pair of bevel gear-wheels, shafts on which said gear-wheels are carried respectively, bearings in which said shafts are mounted to rotate.

means on one of the shafts for securing a brush or the like thereon, two members hinged to one another and carrying said bearings and adjustable for alternately moving these shafts into axial alinement and into such position that their axes are at an angle to one another and the gear-wheels are in mesh with one another, and a manipulative adjusting member for effecting these adjustments, for the purpose specified.

---

1,557,552. SOLE-BEVELING MACHINE. FREDERIC E. BERTRAND, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 30, 1918. Serial No. 256,227. 28 Claims. (Cl. 69—15.)



1. A machine of the class described, having, in combination, means for cutting a chip from the end of a blank and for feeding the chip and blank, and means including a movable chute for separating the blank from the chip.

6. A machine of the class described having, in combination, a support for blanks of parts of boots and shoes, means for engaging the edges of the blanks one by one and feeding them over and past the support, a gage mounted below the support, said gage being held from movement in the line of feed and means for causing the gage to move up and down across the plane of the support alternately into and out of the paths of the blanks on the support.

---

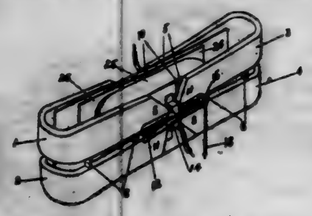
1,557,553. LENS. STEVE J. BORCHARDT, Stevens Point, Wis. Filed Jan. 12, 1925. Serial No. 1,978. 1 Claim. (Cl. 240—48.4.)

A lens of the character described comprising a spaced series of parallel plates projecting from each side of the lens, the plates of the respective series being equidistantly spaced apart to define light passages therebetween, with the plates on one side of the lens disposed in alignment with the plates on the other side thereof, the plates on one side being considerably wider than the plates on the other side of the lens, and the plates of each series successively decreasing in length from the center of the lens towards the opposite sides thereof.

---

1,557,554. SOUND-REPRODUCING APPARATUS. CLAYTON M. BOUDETTE, Revere, Mass. Filed July 21, 1922. Serial No. 576,539. 10 Claims. (Cl. 179—119.)

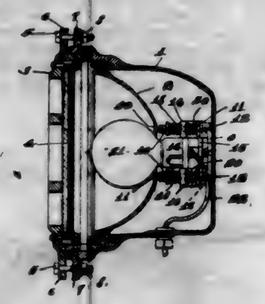
1. In a sound reproducing apparatus, the combination of an armature, means supporting said armature for oscillating movement about an axis, a coil encircling said armature and operative when a current flows therethrough to create north and south magnetic poles in said armature with said poles adjacent, respectively, to the opposite ends of said axis, means for creating magnetic



lines of force cooperating with said magnetic poles to oscillate said armature on its axis, and a resilient diaphragm connected with said armature to be vibrated thereby.

---

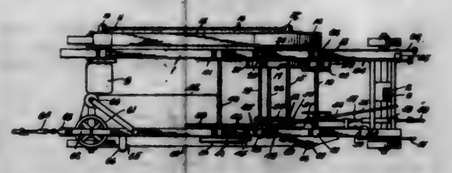
1,557,555. HEADLIGHT. FRANK BUCHANAN, Syracuse, N. Y. Filed Oct. 3, 1923. Serial No. 667,498. 3 Claims. (Cl. 240—80.)



1. In a lamp the combination of a support, a carriage for a lamp socket carried by the support comprising studs pivotally connected to the support, a lamp socket mounted between the studs, a carriage for the socket and springs arranged to act on the carriage and the studs to yieldingly restrain movement of the studs and movement of the carriage relatively to the studs.

---

1,557,556. DRILLING MACHINE. MASON GILBERT CARPENTER, Marietta, Ohio. Filed Dec. 29, 1924. Serial No. 758,749. 4 Claims. (Cl. 255—11.)

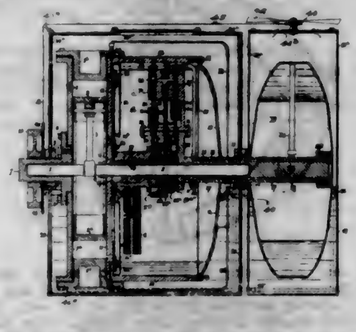


1. In a device of the class described, a frame, a power shaft journaled on the frame, an engine on the rear end of the frame, means for connecting the power shaft operatively with the engine, a friction wheel on the power shaft, a sand line shaft located in front of the power shaft, a friction wheel on the sand line shaft, means for mounting the said line shaft for rotation and for swinging movement to enable the friction wheel of the sand line shaft to be brought into and out of engagement with the friction wheel of the power shaft, a third shaft located to the rear of the power shaft, a friction wheel on the third shaft, means for mounting

the third shaft for rotation and for swinging movement to enable the friction wheel of the third shaft to be brought into and out of engagement with the friction wheel of the power shaft, a casing line shaft journaled on the frame between the third shaft and the power shaft, a drilling line shaft journaled on the frame to the rear of the third shaft, gear wheels on the drilling line shaft and on the casing line shaft, a pinion shiftable on the third shaft into and out of engagement with either of the gear wheels, means for operating the shiftable pinion from the forward end of the frame, and means for operating the sand line shaft and the third shaft on the forward end of the frame to bring the friction wheels on said shafts into and out of engagement with the friction wheel on the power shaft.

---

1,557,557. ROTARY POWER PLANT. ALEXIS CHAUSSEPIED, Saumur, France. Filed Nov. 5, 1921. Serial No. 513,208. 3 Claims. (Cl. 60—36.)



1. In a rotary engine, the combination of two substantially cylindrical closed vessels (A) and (B); two tanks enclosing said vessels; an outer shaft rotatably supported in said tanks and having said vessels secured thereon; a pulley secured on the said shaft outwardly of the tanks; an inner shaft extending across the first vessel (A) and rotatably supported in relation to the outer shaft, said inner shaft having a crank formed thereon; a set of radially disposed cylinders formed integrally in one of the end-walls of said first vessel (A); a corresponding set of rigidly assembled pistons arranged in said cylinders; a connecting rod between said set of pistons and the crank on the inner shaft; a sleeve keyed on the last-named shaft; means on said sleeve for preventing the rotation of said shaft; a set of valve-chests arranged against the wall of the cylinders inside the first vessel (A) and in communication on the one hand with the said vessel and on the other hand with said cylinders; slide-valves in said chests controlling the last-named communication; means on the sleeve for operating said slide valves; a pipe communication between the second vessel (B) and said slide-valves; a radially disposed pump rigidly mounted on the outer shaft within the first vessel (A) and in relation on the one hand with the inside of said first vessel (A) and on the other hand with the inside of the second vessel (B), said pump including a pair of centrifugally influenced valves; and means on the inner shaft for operating said pump; all substantially as described.

---

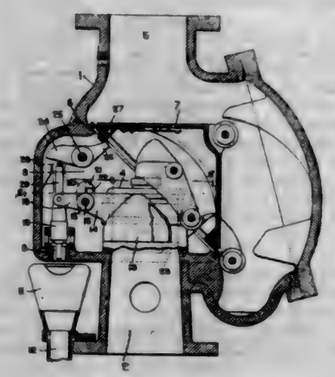
1,557,558. ANIMAL TRAP. EDWARD G. CHERBONNIER, Baltimore, Md. Filed Feb. 3, 1922. Serial No. 533,806. 3 Claims. (Cl. 43—69.)

1. In an animal trap, a cover adapted to be fitted to the top of an animal receptacle, and having a central opening and steeply inclined portions extending from the top of the cover inwardly and downwardly to said opening, a trap door pivoted at its middle to said cover in said opening at the lower ends of said inclined portions and arranged to swing downwardly in either direction

from a closed position, and means arranged to carry bait at the under side of the door for normally forcing said door to the closed position, substantially as set forth.

---

1,557,559. DRIP VALVE FOR DRY-PIPE VALVES. ERRA E. CLARK, Newtonville Mass., assignor to Frank J. Fee, New York, N. Y. Filed Aug. 28, 1922. Serial No. 585,765. 6 Claims. (Cl. 169—22.)



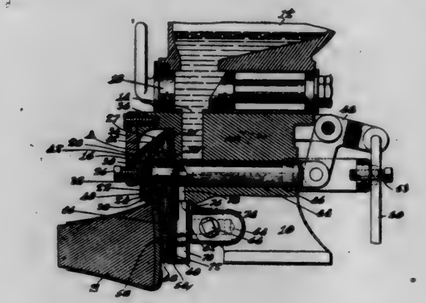
1. A dry pipe valve comprising a casing, an air valve and a water valve therein with valve seats therefor, the space between said valves constituting a neutral chamber, an automatically-closing drip valve for the neutral chamber, and means independent from the air valve for holding the drip valve open, said means becoming inoperative for this purpose when there is an accumulation of water in the neutral chamber, whereby the drip valve will automatically close.

---

1,557,560. CEMENTING APPARATUS. JOHN W. COSGROVE, Medford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 26, 1920. Serial No. 391,983. 26 Claims. (Cl. 12—30.)

1. In a cementing apparatus, a cement-applying brush provided with fibers radiating about an axis and having an applying surface furnished by the ends of the fibers inclined longitudinally of the axis to correspond gen-

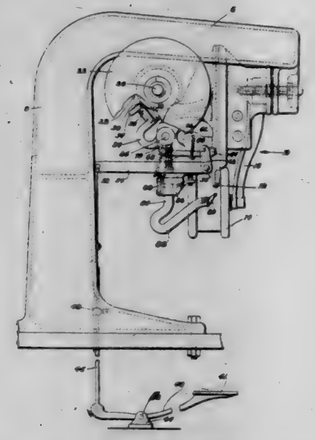
erally to the portion of the work to be coated, a gage member having an edge adjacent to the fibers at the extremity of the brush and arranged for contact with the



surface to be cemented, a cement container, and a conduit arranged to deliver cement from the container outwardly between the brush fibers.

---

1,557,561. FASTENING-INSERTING MACHINE. JOHN W. COSGROVE, Medford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 9, 1922. Serial No. 542,289. 18 Claims. (Cl. 1—41.)

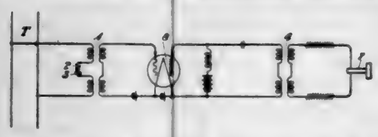


1. In a machine of the class described, fastening inserting mechanism, a work support, means operative through the work support yieldingly to press the work in clamping relation to the inserting mechanism, and means for locking the work support against retractive movement only, the locking means serving to hold the work support rigidly against retraction while a fastening is being inserted into the work.

---

1,557,562. FREQUENCY SELECTIVE DEVICE. GEORGE CRISSON, Hoboken, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 16, 1919. Serial No. 331,085. 6 Claims. (Cl. 178—44.)

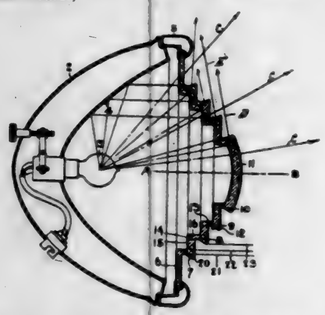
1. A device for monitoring on a telephone transmission line, comprising a telephone receiver, a three electrode vacuum tube with its output circuit associated with said receiver, a shunt across the line having high impedance compared to the characteristic impedance of



the line, comprising inductance resistance and capacity elements, and means connecting the grid of said tube in shunt relation to said inductance element.

---

1,557,563. LENS. JOHN DAHLSTROM, Pittsburgh, Pa. Filed July 12, 1922. Serial No. 574,865. 4 Claims. (Cl. 240—48.4.)



1. A lens comprising a series of concentric annular prisms decreasing successively in diameter and each having two exterior surfaces intersecting at an acute angle, one of said exterior surfaces being inclined with respect to the central axis of the lens, and the other exterior surface being substantially perpendicular to the central axis of the lens, translucent rings separating said annular prisms, and a translucent ring surrounding the outer annular prism, said translucent rings having plane parallel inner and outer surfaces substantially perpendicular to the central axis of the lens.

---

1,557,564. SHOE HEEL. NUNZIO DAQUINO, Akron, Ohio. Filed Sept. 21, 1923. Serial No. 664,111. 4 Claims. (Cl. 36—36.)

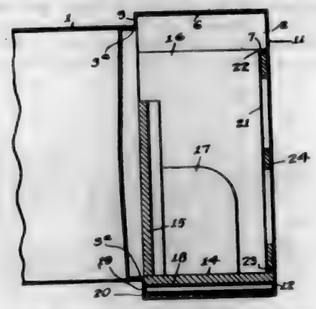
1. In a shoe heel, a frame having a cross-bar, a resilient lift in slidable engagement with said frame, a recess formed in the vertical breast face of the resilient lift, a metal plate seated in the lift recess, in engagement with the frame cross-bar, and the breast of the resilient lift, and means passing through the resilient lift, the metal plate and the frame, adapted to embed itself into the upper portion of the heel, for securing the resilient lift against slidable disengagement from the frame.

---

1,557,565. BUCKET-BOX CONSTRUCTION. AUGUSTINE DAVIS, Jr., Covington, Ky. Filed Dec. 16, 1922. Serial No. 607,453. 3 Claims. (Cl. 220—1.)

1. A bucket-box for vehicle tanks comprising a welded sheet metal structure including a back, top, sides and

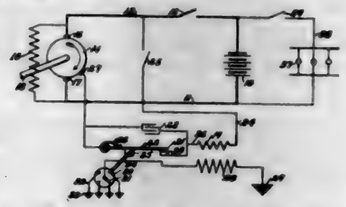
a front containing a door opening, the back being united to the rear end of a tank, a unit wooden lining structure



including a back, bottom and sides inserted upward into the welded structure, and a bottom sheet inserted into the bottom of the welded structure and welded thereto.

---

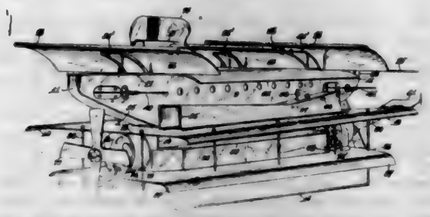
1,557,566. IGNITION SYSTEM. HENRY R. DAVIES, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Feb. 21, 1921. Serial No. 446,625. 4 Claims. (Cl. 123—148.)



1. In an ignition system for gas engines, the combination of a dynamo-electric machine having main brushes and an auxiliary brush; a shunt field connected to the main brushes; an ignition circuit connected to the auxiliary brush and one of the main brushes; a storage battery connected to the ignition circuit and to the dynamo-electric machine for supplying current to the dynamo-electric machine to operate the same as a motor, and to receive current from the dynamo-electric machine operating as a generator; the connections being such that the battery supplies maximum current to the ignition circuit when operating the dynamo-electric machine as a motor, and the dynamo-electric machine supplies a constantly decreasing current to the ignition circuit when operating as a generator, as its speed is increased.

---

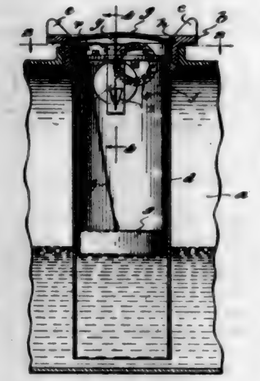
1,557,567. AEROPLANE. JOHN C. DAVNIX, Philadelphia, Pa. Filed Aug. 7, 1924. Serial No. 730,586. 37 Claims. (Cl. 244—14.)



1. A flying machine including a main aerofoil with the major dimension lengthwise and superposed vacuum wave producing minor planes having a rearward declination, and provided with adjustable noses.

---

1,557,568. GASOLINE GAUGE. JAMES V. DILLEY, Detroit, Mich. Filed Oct. 14, 1922. Serial No. 594,468. 4 Claims. (Cl. 73—82.)

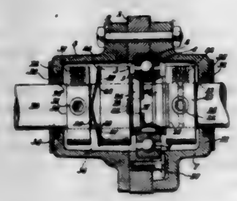


1. The combination with a liquid fuel tank of fuel-controlled means for indicating the fuel level in the tank, said means normally giving an erroneous indication when the tank is tilted in one plane, and gravity-controlled means co-operating with said first-named means for automatically rectifying the indications thereof when the tank is tilted as specified.

4. The combination with a liquid fuel tank of movable fuel-level indicating means carried by the tank, fuel controlled means for actuating the indicating means, a pivoted error-rectifying pointer adapted for co-operation with the fuel-level indicating means, a plumb-bob weight pivotally suspended in the tank and so connected with the pointer as to move the latter with reference to the indicating means when the tank is inclined in the plane of movement of the pointer that the pointer will be caused to indicate on said means the correct reading of the fuel level despite the inclination of the tank.

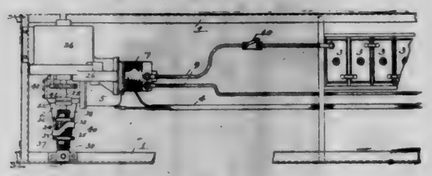
---

1,557,569. SECTIONAL SHAFT BEARING AND COUPLING. GEORGE M. EAMES, Bridgeport, Conn., and IRVING F. WEBB, Elizabeth, N. J., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 29, 1924. Serial No. 702,731. 12 Claims. (Cl. 64—91.)



1. In a sectional-shaft bearing and coupling, in combination, a bearing-support, a shaft-bearing sustained by said support, a plurality of shaft-sections, a universal-coupling connecting said shaft-sections adjacent said bearing, and a bearing-cone mounted upon the end of one of said shaft-sections sustained by said shaft-bearing for universal-angular shaft-positioning movement.

1,557,570. MEANS FOR CHARGING THE STORAGE BATTERIES OF WHEELED VEHICLES. GEORGE ECKMAN and ALBERT W. MOORE, Kalamazoo, Mich. Filed Aug. 2, 1923. Serial No. 655,195. 8 Claims. (Cl. 180—154.)



1. In wheeled vehicle having an electric storage battery and spring-connected members interrelatively movable vertically, mechanism of the character described, comprising: an electric generator for charging the battery; spring-actuated means for operating the generator; and connections extending between said members and operated by their interrelative movement for tensioning the spring of said spring-actuated means.

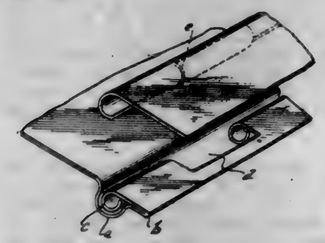
---

1,557,571. KETO-ALCOHOL RESIN AND PROCESS OF MAKING THE SAME. CARLETON ELLIS, Montclair, N. J. Filed Feb. 27, 1922. Serial No. 539,763. 6 Claims. (Cl. 260—2.)

2. A method of forming a resin which comprises reacting on keto butyl alcohol with caustic alkali at a temperature sufficient to cause heat-setting.

---

1,557,572. HINGE. ROBERT EWING, Detroit, Mich. Filed July 14, 1924. Serial No. 725,874. 5 Claims. (Cl. 16—128.)

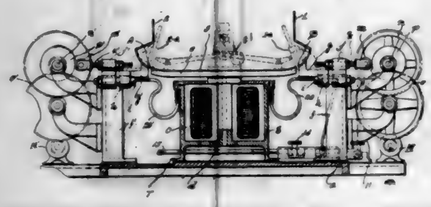


1. A hinge, comprising a pair of sheet metal wings one of which is turned over to form on the inside a continuous trough, and is then folded over at intervals into knuckle eyes which are located inside of the trough but spaced therefrom, and the other of the hinge wings being provided with a turned over edge having at regular intervals extended journal portions adapted to turn in the spacing between the knuckle eyes, said turned over edge fitting into the space between the knuckle eye and the trough on the adjoining hinge wing and guided thereby in turning movement, and a knuckle pin passing through the folded over portions.

---

1,557,573. BUTT-WELDING MACHINE. PETER FASSLER, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Apr. 18, 1924. Serial No. 707,328. 6 Claims. (Cl. 219—4.)

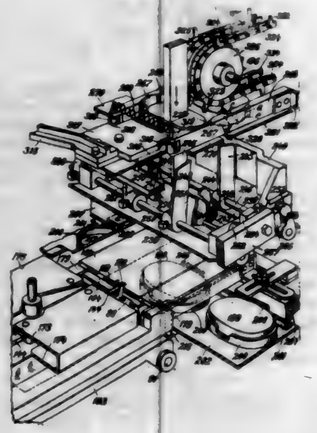
6. In a butt welding machine, the combination of a support, means for supporting a panel of sheet metal stock thereon, a plurality of movable sheet metal panel stock holders movably supported on the first mentioned support, means for clamping the other stock to said movable stock holders, power driven means for actuating said movable stock holders to bring the sheet panel stock carried thereby into registering edge-to-edge contact with the first mentioned sheet panel stock on different sides of said panel and for applying pressure to



said movable stock holders to force the pieces of sheet panel stock tightly together, means for passing current through the abutting stock to weld the several joints of said panel stock pieces, and manually operated means whereby the movable stock holders may be retracted and the welded panel stock removed from the machine.

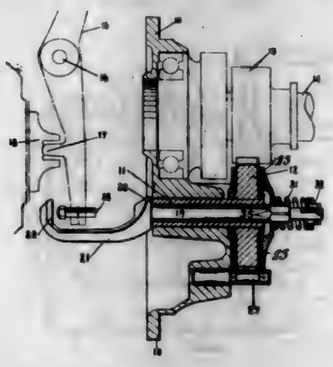
---

1,557,574. WRAPPING MACHINE. MILFORD BERRIAN FERGUSON and EDWARD HAAS, Brooklyn, N. Y. Filed Jan. 4, 1921. Serial No. 434,912. 29 Claims. (Cl. 93—2.)



1. In apparatus of the character described, in combination, means adapted to receive and hold an article and a wrapper therefor, folding means adapted to fold said wrapper downwardly on the two opposite sides of said article to form side flaps, folding means adapted to fold said wrapper downwardly on the two opposite ends of said article to form two end flaps, folding means adapted to move inwardly and about the ends of said article to fold the end portions of said side flaps inwardly against the ends of the article, means adapted to fold the lower portion of said last folded portions together with the lower portions of said end flaps inwardly and upwardly against the bottom of said article, and means adapted to fold the lower portions of said side flaps inwardly and upwardly against the bottom of the article to complete the wrapping operation.

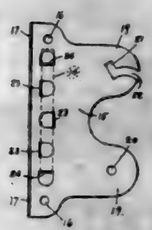
1,557,575. BRAKE. HENRY FORD, Dearborn, Mich. Filed May 31, 1924. Serial No. 716,990. 5 Claims. (Cl. 188—72.)



1. In a brake mechanism for transmissions having a gear operatively connected with a driven shaft and an operating lever for the transmission, brake mechanism associated with said gear and means for operatively connecting said mechanism with the operating lever whereby movement of said lever beyond a pre-determined point will operate said brake mechanism.

---

1,557,576. DOUBLE-ROLLER SHADE AND LIGHT-SHIELD SUPPORTING BRACKET. WILLIAM H. FORBS, Jr., Anderson, Ind. Filed Sept. 15, 1924. Serial No. 737,833. 4 Claims. (Cl. 156—21.)



1. In a bracket of the character described, the combination of shield-retaining groove-defining means, a pair of members positioned in the groove thus defined, one of which is adapted to serve as a stop and prevent movement of the shield through the groove and the other of which is adapted to have a yielding engagement with the shield for preventing rattling movement of the shield in a plane parallel to the groove and having its free edge directed toward the other member and adapted to engage the shield and prevent ready removal of the shield from the groove but permit the ready seating of the shield in the groove.

---

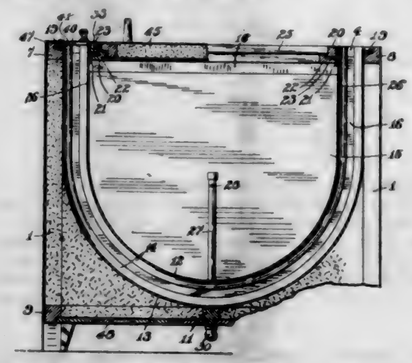
1,557,577. NONREFILLABLE CONTAINER. CHARLES COLEMAN FREDERICKS, St. Louis, Mo. Filed Oct. 20, 1922. Serial No. 595,797. 5 Claims. (Cl. 220—85.)

1. A non-refillable container comprising a boss on the head, a bushing threaded therein, the upper surfaces of the head and bushing being flush with one another, means preventing removal of the bushing from the boss without mutilation of the device, and a suction pipe threaded into the bushing and having at its lower end a foot valve resting against the bottom of the container, the foot valve comprising a casing having a slotted base, a seat in the base, a ball normally resting against the seat, and a pin adapted to be driven through the casing above the ball to limit movement of the ball; said means comprising complementary threaded recesses in bushing and boss adapted to register with one another

when the bushing has been screwed into place in the boss, a set-screw adapted to be screwed into the lower portion of the cooperating recesses when thus in registry, and means for sealing the exposed portion of the recesses and the flush surfaces of the head and bushing to thereby prevent access to the set-screw without mutilating said sealing means.

---

1,557,578. BOTTLE REFRIGERATOR. CHESTER A. FRICK, Muncie, Ind. Filed Jan. 10, 1925. Serial No. 1,595. 9 Claims. (Cl. 62—34.)



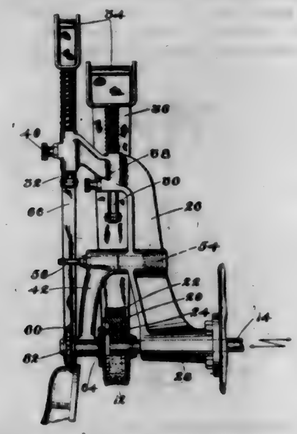
9. A bottle refrigerator comprising a frame including corner posts, a semi-cylindroidal tub hung from and within said frame, a supplemental frame supported by said main frame, a second semi-cylindroidal tub having closed ends hung from said supplemental frame and nesting within the first tub, the space between said two tubs being formed into a series of circumferential laterally liquid-communicating channels each having two open upper ends.

---

1,557,579. PATENT-LEATHER-REPAIRING MACHINE. FREDERICK M. FURBER, Revere, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 2, 1916, Serial No. 134,701. Renewed Mar. 5, 1925. 15 Claims. (Cl. 51—58.)

4. In a machine of the type described, a shaft, a tool mounted thereon, means for imparting to said shaft a

combined oscillating and reciprocating movement, and auxiliary tool, means for rotatably supporting said tool



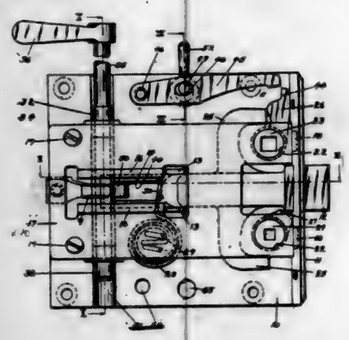
in operative relation adjacent to said first tool, and means for detachably connecting said auxiliary tool to said shaft to receive one of these movements.

---

1,557,580. OPERATING MECHANISM FOR PRUNERS. FOUNTAIN P. GOVER, Ephrata, Wash. Filed Apr. 26, 1924. Serial No. 709,208. 2 Claims. (Cl. 74—14.)

1. Mechanism for operating a plunger, comprising a body, a plunger slidable in the body, an operating member comprising a head and a shank disposed at an angle to each other, oppositely extended links having their outer ends pivoted respectively to the body and to the plunger, the inner ends of the links being pivoted to the ends of the head of the operating member, the operating member being freely movable in the body, to permit the head of the operating member to move toward alinement with the links when the plunger is advanced, and a retractile spring having its ends connected to the body and to the head of the operating member and constituting means for retracting the plunger.

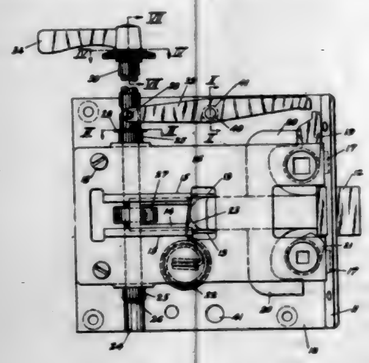
1,557,581. COMBINED LATCH AND LOCK FOR DOORS. WILLIAM F. HARRINGTON, Toledo, Ohio. Filed Feb. 7, 1923. Serial No. 617,437. 12 Claims. (Cl. 292—169.)



1. In a lock for vehicle doors, a pair of casing plates arranged in spaced parallel relation, one of said plates being shaped to form a trough open towards the second plate, a bushing fitting said trough, interengaging means between the bushing and the second plate for holding said bushing against movement in the trough, and a rod mounted within said bushing.

---

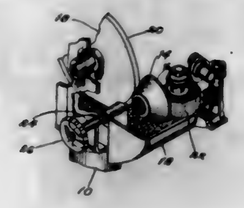
1,557,582. COMBINED LOCK AND LATCH FOR DOORS. WILLIAM F. HARRINGTON, Toledo, Ohio. Filed Dec. 29, 1923. Serial No. 683,282. 8 Claims. (Cl. 292—153.)



1. In a lock for vehicle doors, a slidable latch bolt, a spring for throwing said bolt to operative position, means for retracting said bolt, a second means for retracting the bolt including an oscillatable rod, and means for preventing the operation of said first-named means, including a sleeve surrouning said rod and rotatable thereon, a pivoted locking lever and an operative connection between said sleeve and lever.

4. In a lock for vehicle doors, a slidable latch bolt, a spring for throwing said bolt into operative position, an oscillatable rod, connections between said rod and bolt for retracting the latter, a sleeve surrounding said rod and rotatable thereon, a spiral cam on said sleeve, and a pivoted locking lever having a projection arranged to co-operate with said cam for the actuation of said lever.

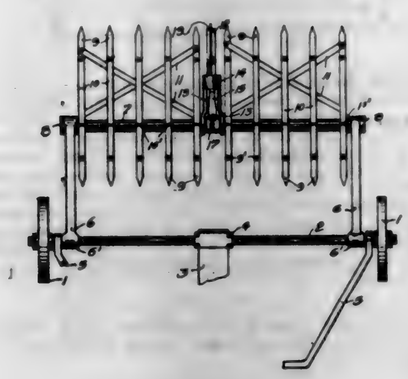
1,557,583. SHOE-BOTTOM-STAINING MACHINE. AMOS S. HAYDEN, Holbrook, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 29, 1922. Serial No. 571,713. 4 Claims. (Cl. 36—31.)



1. In a shoe-bottom-staining machine, an applying member, feeding means including a rotatable disk, and a feed-controlling memeber having a portion of wood cooperating with the feeding surface of the disk and extending beyond the periphery thereof.

---

1,557,584. DRAG. CHARLES H. HEITSTUMAN, Uniontown, Wash. Filed Aug. 8, 1923. Serial No. 656,439. 4 Claims. (Cl. 56—380.)

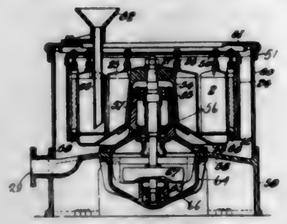


1. The combination in a wheeled drag with a pair of side arms pivoted thereto, of a rock shaft journaled in said arms, tines secured to said shaft, an operating handle connected with said shaft, a lever fixed to said shaft, means on the handle for holding said lever, and release devices whereby the drag and shaft may be caused to move through one revolution for dumping and returning to normal position.

---

1,557,585. FILTER. HENRY SELBY HELE-SHAW, London, England. Filed Oct. 23, 1924. Serial No. 745,437. 6 Claims. (Cl. 210—63.)

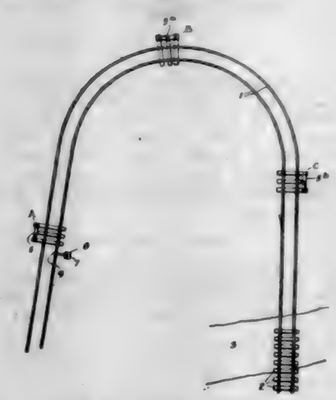
1. A filter comprising a number of superposed sheets of flexible material held together between press heads so that filtration takes place between the sheets, means for varying the pressure between the sheets, a rotary carrier for supporting the sheets at a uniform distance from its centre, means for rotating the rotary carrier at such a speed that the hydraulic pressure caused by the centrifugal force in the rotating fluid will force the fluid to be filtered between the flexible sheets leaving



the separated matter on the edges of the sheets, the degree of filtration being regulatable by the means for varying the pressure between the sheets.

---

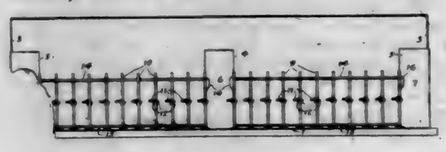
1,557,586. RAILROAD SIGNAL. HARRIETTE E. HODGSON, New York, N. Y. Filed Dec. 18, 1923. Serial No. 681,323. 2 Claims. (Cl. 246—473.)



1. Improvement in means for protecting crossings or other danger points in railroad rights of way by means of differentiated groups of ties located at predetermined distances of approach to the danger point, which comprises upstanding fixed signal members of distinctive forms mounted on end extensions of the ties spanning groups of the ties, substantially as set forth.

---

1,557,587. CAR. HARRIETTE ENSLEY HODGSON, New York, N. Y. Filed Dec. 15, 1924. Serial No. 755,871. 3 Claims. (Cl. 105—345.)



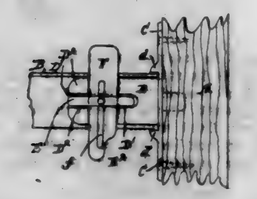
1. A passenger car in which large seating capacity is obtained by perch seats, comprising vertical frames placed close one behind another and narrow, ledge-like seats on the frames at a height materially higher than ordinary car seats, the said seats being reversibly mounted on the frames so that they can be shifted from one side to the other of the frames.

1,557,588. FERRULE-VALVE OPENER. CHARLES HOLTMAN, Pittsburgh, Pa. Filed May 31, 1922. Serial No. 564,994. 6 Claims. (Cl. 137—70.)

1. In a valve opener, a barrel, a rod slidably and rotatably mounted in the barrel, a block, means for securing the block to a valve, said means being adjustable to accommodate valves of different sizes, means for securing the barrel to said block, a cutting tool secured on the inner end of said rod, and means for effecting a water-tight closure between the valve and the barrel and about said tool.

---

1,557,589. JOINTING MEANS. HALBERT AUGUSTINE JENKINS, Hawera, New Zealand. Filed Feb. 28, 1923. Serial No. 620,765. 4 Claims. (Cl. 287—54.)

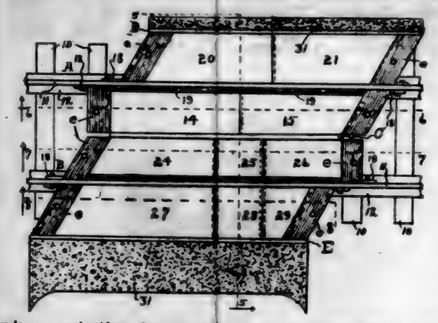


3. Jointing means for frames having two members, comprising a plate portion secured to one of said members; a block associated with said plate portion and provided with a slot; a tongue secured to the second member and provided with a slot, said tongue being adapted to project into and through the slot in said block; means on said plate portion for holding the second member from lateral movement; and a wedge adapted for engagement in the slot in said tongue to rigidly hold the two members together.

---

1,557,590. RAILWAY HIGHWAY CROSSING. OLUF F. JENSEN, Council Bluffs, Iowa. Filed May 23, 1925. Serial No. 32,321. 7 Claims. (Cl. 238—8.)

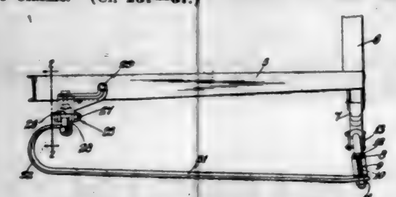
2. In a highway crossing for the pair of rails of a railway track, a third rail having a form in cross-section corresponding to and adapted to be disposed between the rails of said track, and bearing-plates each having



wings projecting downwardly from its longitudinal edges for engaging the base of a track rail and the base of the third rail.

---

1,557,591. STRUT ROD. CHARLES H. JOCKMUS, Ansonia, Conn. Filed Dec. 22, 1922. Serial No. 608,511. 6 Claims. (Cl. 267—67.)



1. The combination of an automobile frame employing side members and having an axle associated therewith, of a strut rod connected to said axle, means for connecting said strut rod to the frame, said means comprising a bracket adapted to be fitted to the side member of the frame and a shackle disposed intermediate said bracket and said strut rod, said shackle being connected to the strut rod and pivoted to said bracket longitudinally of said frame whereby the point of connection between the strut rod and shackle is adapted to move only in a vertical plane passed transversely through said frame.

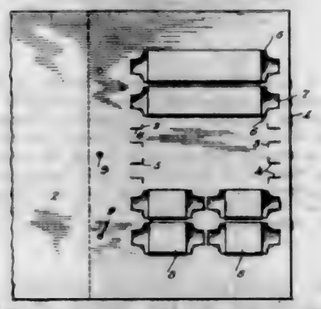
---

1,557,592. TOY. MARIE CATHERINE JONES, Los Angeles, Calif. Filed July 28, 1924. Serial No. 728,788. 4 Claims. (Cl. 46—40.)

1. A toy embodying a flue having an opening simulating a fire-place; a figure in the fire-place; a spring carried by the figure and compressed between the figure and the bottom of the fire-place; and means for holding the spring compressed, said means being releasable to cause the figure to ascend the flue, and to cause the spring to move out of contact with the bottom of the fireplace along with the figure.

---

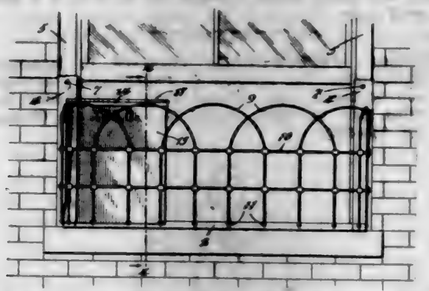
1,557,593. SAMPLE-DISPLAY CARD. HARRY L. KALISH, Brooklyn, N. Y. Filed May 26, 1924. Serial No. 715,785. 1 Claim. (Cl. 211—34.)



A sample card cut to provide pairs of oppositely disposed lips, certain of the margins of each pair being disposed in parallelism to form an intermediate body portion between the lips, and the other margins of said pair being arranged at an angle to the first named margins, each of said pairs of lips being capable of having a portion of one end of a sample binder inserted beneath the same with the remaining portion of the binder overlying said intermediate body portion.

---

1,557,594. WINDOW BOX. ALEXANDER KATZ, Brooklyn, N. Y. Filed June 30, 1924. Serial No. 723,285. 2 Claims. (Cl. 45—104.)



1. In a window box including a base of a length to extend from the outer face of one stile to that of the other of a selected window frame, channel members at the ends of the base for engaging the outer face and sides of the respective stiles, means to secure said members to the stiles, a casing on one end of the base adjacent to one attaching member and provided with a door at the inner edge of the base, the base forming the bottom of the casing.

---

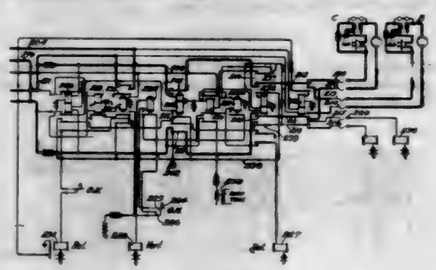
1,557,595. MEANS AND METHOD FOR RAISING AND SALVAGING SHIPS AND OTHER SUNKEN OBJECTS. WOLDEMAR KIWULL, Berlin-Halensee, and WALTHER KORNIOSS, Berlin, Germany. Filed Mar. 14, 1925. Serial No. 15,456. 10 Claims. (Cl. 114—50.)

1. A system of salvaging sunken ships and other bodies by the aid of the artificial formation of ice, in contact with the bodies, which consists in applying the refrigerating means directly to the metal of the ship or body to be raised so as to maintain the metal at

the required position at a lower temperature than that of the surrounding ice which forms upon the cooled metal and remains attached to it.

---

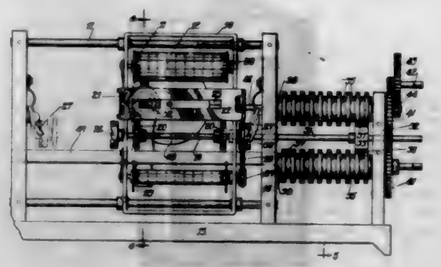
1,557,596. MACHINE-SWITCHING TELEPHONE EXCHANGE SYSTEM. WILLIS E. LAMB, Oakland, and RALPH W. MASON, Berkeley, Calif., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed July 8, 1921. Serial No. 483,305. 4 Claims. (Cl. 179—18.)



1. In a telephone system, a connector switch having a pair of bush sets, groups of called lines to which said switch has access, terminal banks leading to said connector, a brush shifting relay in said connector for rendering operative the proper connector brush set, a circuit including said brush shifting relay closed over the talking conductors of said connector switch via certain of said terminal banks for operating said brush shifting relay, a release magnet in said connector switch, and a locking circuit for said brush shifting relay including a contact of said release magnet.

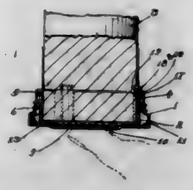
---

1,557,597. MOTION-PICTURE MACHINE. HENRY LUBE, College Point, N. Y., assignor to Radio Motion Picture Phon. Corp., Long Island City, N. Y., a Corporation of Massachusetts. Filed Sept. 21, 1922. Serial No. 589,520. 13 Claims. (Cl. 88—16.)



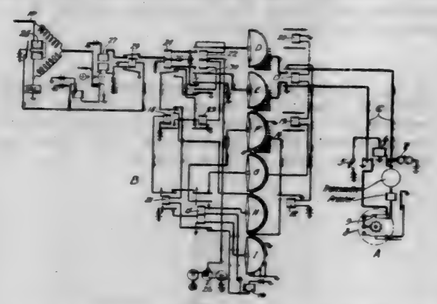
1. A motion picture apparatus including a carriage, a shaft supported by said carriage, film feeding means connected with said shaft, a standard, and pawl and ratchet mechanism associated with said standard and shaft, and means for bringing said mechanism into operative engagement to rotate said shaft.

1,557,608. SHAVING-STICK HOLDER. FREDERICK O. PERKINS, New York, N. Y., assignor, by mesne assignments, to The Andrew Jergens Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 27, 1922. Serial No. 532,131. 8 Claims. (Cl. 206—56.)



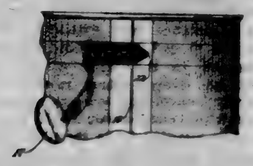
1. In a holder of the class described the combination of a cap comprising a cylindrical flange and a bead formed on the flange, a cup adapted to be inserted in the cap and comprising a base, fingers extending from the base, and lugs formed on the fingers adapted to enter a shaving stick disposed upon the base of the cup, the bead on the cap being adapted to engage the fingers so as to preclude separation of the lugs from the stick.

1,557,609. PRINTING-TELEGRAPH EXCHANGE SYSTEM. DONALD B. PERRY, Yonkers, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 10, 1923. Serial No. 674,016. 6 Claims. (Cl. 178—2.)



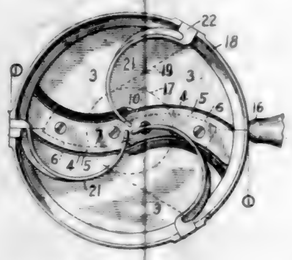
1. In a telegraph system, a plurality of printing telegraph stations, each provided with a receiving printer and transmitter, a telegraph line, and switching mechanism common to said stations and under the control of any of said stations for extending connections in either direction over said line between said stations.

1,557,610. TEAR-OPEN CAN. JOHN F. PETERS, Rochester, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed June 12, 1922. Serial No. 567,513. 3 Claims. (Cl. 220—54.)



1. A container, comprising a body provided with a soldered side seam, a tearing strip set off by parallel score lines extending circumferentially about said body and a tongue extending from said tearing strip at and across said side seam, said tongue having its narrowest portion nearest the soldered side seam whereby the soldered connection of said tongue is reduced to a point to permit ready removal of the tearing strip.

1,557,611. VEGETABLE CUTTER. FERDINAND A. PFEIFER, Springfield, Ohio, assignor to The Eagle Engineering Company, Springfield, Ohio, a Corporation of Ohio. Filed June 9, 1922. Serial No. 566,926. 12 Claims. (Cl. 146—124.)



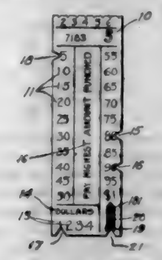
1. In a cutting device of the character described, a rigid supporting structure having a vertical bearing, a shaft journaled in said vertical bearing, means for rotating said shaft, a disk rigidly secured to the upper end of said shaft and having its upper surface in a plane above the upper end of said shaft so that said upper surface is unobstructed, said disk having openings therethrough extending from the center thereof to its opposite edges, cutter blades mounted in the respective openings in said disk, rigidly secured to said shaft and having their inner ends extending to the center of said disk whereby said blades will remove the entire lower surface of an article resting upon and covering the whole of said disk, and a guard extending circumferentially of said disk to position said article with relation thereto.

1,557,612. TOY SAFETY-RAZOR OUTFIT. GEORGIA A. POST, West Long Beach, N. Y. Filed Sept. 29, 1924. Serial No. 740,567. 2 Claims. (Cl. 40—37.)

1. A toy safety razor outfit, comprising an imitation razor, a brush contained in the handle thereof, and a soap for use therewith, said soap having mixed therewith particles of bristle.

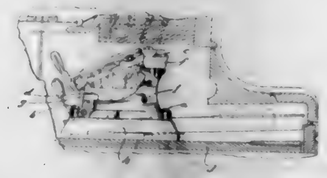
1,557,613. RESTAURANT CHECK. CHARLES T. RASCHICK, St. Paul, Minn. Filed Dec. 19, 1921. Serial No. 523,375. 9 Claims. (Cl. 283—60.)

7. A restaurant check comprising a column of numerals arranged by fives from one to fifty inclusive near the margin at one side thereof, and a second column of numerals arranged by fives from fifty five to one hundred, said columns indicating cents, a row of numerals indicating dollars, all of said numerals being adapted to be punched to indicate the amounts of sales and means for indicating the punch marks in the second



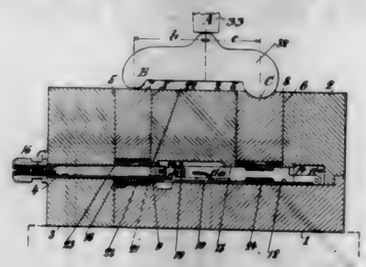
of said column of numerals void when additional sales have been registered sufficient to bring the total sale over and above one dollar.

1,557,614. PIANO-ACTION BRACKET. EDWIN S. RAUWORTH, De Kalb, Ill., assignor to Apollo Piano Company, De Kalb, Ill., a Corporation of Illinois. Filed Dec. 4, 1922. Serial No. 604,668. 2 Claims. (Cl. 84—250.)



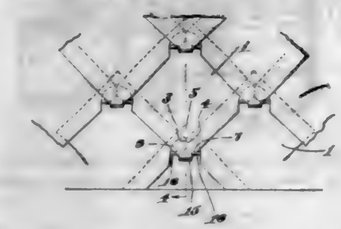
1. A piano action bracket composed of two similar sheet metal blanks assembled face to face, one blank being formed with an aperture and the material of the other blank opposite said aperture being forced through the aperture and clinched over against the apertured blank in the manner of a hollow rivet for holding said blanks together.

1,557,615. METHOD AND MOLD FOR MANUFACTURING TELEPHONE JACKS. MORTEN BALTHAZAR RICHTER, Copenhagen, Denmark. Filed Mar. 6, 1923. Serial No. 623,208. 7 Claims. (Cl. 18—59.)



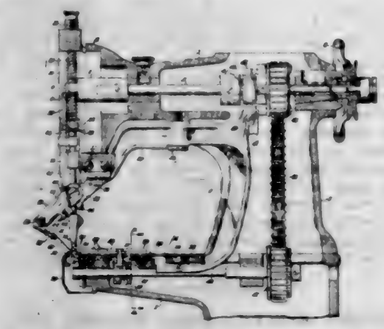
1. A method of producing telephone jacks consisting in placing cylindrical bushes, adapted to receive the connecting plugs, upon individual cylindrical steel gauges arranged in series in a suitable mold, pressing insulating material of the condensation type in plastic condition around the bushes at a substantial pressure sufficiently high to force the inner surface of the bushes into intimate contact with said gauges, allowing said insulating material to become hardened while still maintaining said pressure, and removing said gauges after the hardening of the insulating material to thereby form an insulating strip in which the bushes, properly gauged, are embedded.

1,557,616. SHINGLE FASTENER. WILLIAM J. RILEY, Boston, Mass. Filed Sept. 10, 1923. Serial No. 661,792. 1 Claim. (Cl. 108—33.)



A shingle fastener of the kind described, comprising a body portion, adapted to underlie a plurality of shingles, flanges formed integral therewith and at each side thereof, adapted to interlock with shingles arranged side by side and overlying the body portion, a flange formed integral with said body portion at the lower end thereof and between the first said flanges and adapted to interlock with a shingle overlying the shingles arranged side by side, and means for permitting fastening of the fastener in position.

1,557,617. FOLDING MACHINE. JOHN C. RINGE, Stratford, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 19, 1923. Serial No. 675,508. 8 Claims. (Cl. 12—55.)

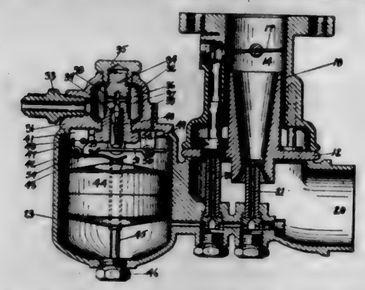


1. In a folding machine, in combination, folding instrumentalities comprising a member having a fold-determining free end, a folder reciprocated in a right line across the free end of said member to fold the work thereabout, means for reciprocating said folder, and means for advancing the work past said instrumentalities.

1,557,618. CARBURETOR. GEORGE F. RITTER, Toledo, Ohio, assignor to Tillotson Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed July 22, 1920. Serial No. 398,203. 11 Claims. (Cl. 137—104.)

9. In a device of the class described, the combination of a carburetor bowl, a removable cover upon the bowl having an inlet passageway therethrough, a valve for

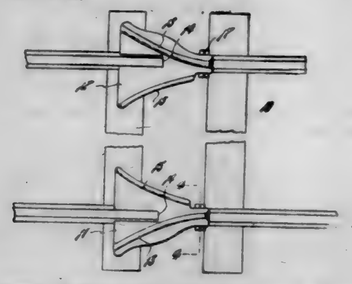
controlling said passageway, a lever pivoted upon said cover, a second lever pivoted upon the cover adapted to support said valve and having its free end engaging



the first mentioned lever intermediate its ends and a float within the bowl for actuating said second mentioned lever.

---

1,557,619. RERAILER. THEODORE RIVARD, Newport, Vt. Filed Jan. 21, 1925. Serial No. 3,835. 1 Claim. (Cl. 104—270.)



A rerailing device of the character described comprising an arcuate shaped longitudinally slotted body portion, the body portion being substantially V-shaped in length and having upstanding flanges provided on the side thereof and terminating at the reduced portion thereof, a pair of attaching flanges extending downwardly from the opposite sides of the reduced portion and receiving the heads of a rail therein, the upper portion of the reduced portion having an inner wall upwardly and inwardly inclined so as to snugly receive the head of a rail whereby the rerailing device will not cant sideways when the wheels are in engagement therewith, and securing means extending through the attaching flanges whereby the same may be held securely to the reduced portion of a rail for the purpose set forth.

---

1,557,620. EYECUP. HENRY ROBINSON, Waco, Tex. Filed Aug. 17, 1923. Serial No. 657,928. 3 Claims. (Cl. 128—249.)

1. In a device of the character described, an eye-cup, a syringe bulb having a tubular extension extending through the bottom of said eye-cup, a tubular member having its one end closed and its open end adapted to be inserted in said tubular extension of the syringe bulb, and said tubular member having restricted orifices in its portion disposed within said eye-cup for the purpose described.

1,557,621. TELEPHONE RECEIVER. WILHELM SCHEPPMANN, Berlin, Germany, assignor to C. Lorenz Aktiengesellschaft, Lorenzweg, Berlin-Tempelhof, Germany. Filed Feb. 17, 1923. Serial No. 619,573. 1 Claim. (Cl. 179—119.)

In a telephone receiver, the combination with a flattened and approximately cylindrical receiver casing, and magnet core, a return pole piece for the said core, a permanent magnet, said permanent magnet and said return pole piece being annular in form, said pole piece surrounding the said core and said annular magnet surrounding the said pole piece, a magnet winding disposed over the said core and within the said pole piece, a diaphragm, said core, permanent magnet, and diaphragm being entirely mounted in the casing, the pole pieces of the said core and return pole piece being disposed therein and closely adjacent the said diaphragm.

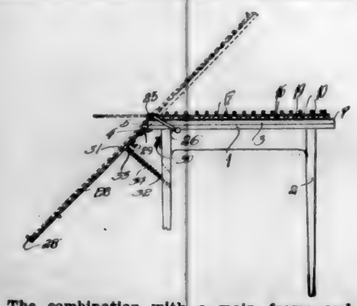
---

1,557,622. LIGHTING-FIXTURE TASSEL. SAUL SHAPIRO, New York, N. Y., assignor to Artcraft Metal Stamping Corporation, a Corporation of New York. Filed Jan. 29, 1925. Serial No. 5,672. 5 Claims. (Cl. 41—10.)

1. A lighting fixture tassel comprising a bottom downwardly dished stamping, an upper stamping whose lower peripheral edge is permanently united to the upper peripheral edge of the lower stamping, a bushing fastened to the upper part of the upper stamping, and a metal member threaded onto the outside of the bushing, the upper side of said metal member having a ring for hanging the tassel.

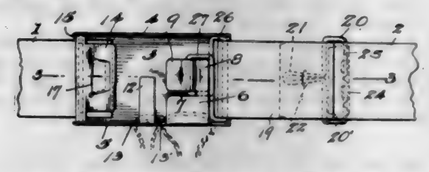
---

1,557,623. CRUSHING MACHINE. CLARK L. SMITH, Spokane, Wash., assignor to Spokane Casket Company, Spokane, Wash., a Corporation. Filed Apr. 13, 1925. Serial No. 22,730. 3 Claims. (Cl. 223—52.)



1. The combination with a main frame and flexibly connected slats therein, of a tiltable holder parallel with the slats, crushing rods arranged in pairs and carried by said holder for co-action with the slats, and means for clamping said rods in the holder.

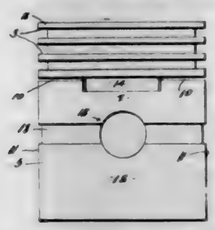
1,557,624. BELT BUCKLE. MARY STARMER, Newport News, Va. Filed Apr. 24, 1924. Serial No. 708,691. 4 Claims. (Cl. 24—191.)



1. The combination with a belt buckle having upper and lower flanges and alined integral pins thereon, of an anchoring plate pivoted on said pins and fashioned with an angularly disposed gripping jaw, and a resilient tongue in said plate adapted to receive the slotted end of a belt.

---

1,557,625. PISTON CONSTRUCTION. LOUIS M. STELLMANN, Syracuse, N. Y., assignor to H. H. Franklin Manufacturing Company, Syracuse, N. Y., a Corporation of New York. Filed Apr. 18, 1922. Serial No. 554,748. 5 Claims. (Cl. 74—108.)



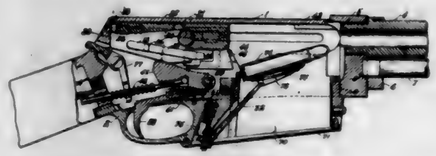
1. A piston for internal combustion engines comprising a head and a sleeve, the sleeve being slightly elliptical in general form in cross section, and the sleeve being formed with longitudinal slots arranged in the end walls of the elliptical form, the sleeve having pin bosses extending inwardly from the long walls of the elliptical form along a short diameter of the elliptical form and each of the long walls of the ellipse being approximately one third of the sleeve, substantially as and for the purpose specified.

---

1,557,626. RAILROAD SWITCH. PETER SWANSON, Ely, Minn. Filed Feb. 16, 1925. Serial No. 9,370. 4 Claims. (Cl. 246—409.)

2. The combination with a railroad switch stand, of an automatically gravitating target therefor comprising three angular rigidly united target wings.

1,557,627. FIREARM. CARL GUSTAF SWEBILIUS, New Haven, Conn., assignor, by mesne assignments, to The Marlin Firearms Corporation, New Haven, Conn., a Corporation of Delaware. Filed May 17, 1919. Serial No. 297,829. 22 Claims. (Cl. 42—22.)



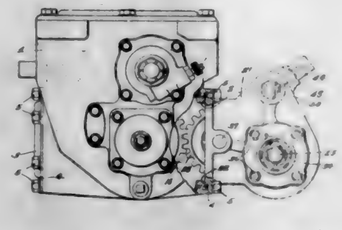
1. In a repeating firearm, a receiver, a breech bolt therein, a locking member operatively associated with said breech bolt, a detent mounted on said locking member for maintaining said locking member in operative position, an action slide for operating said breech bolt, and means for actuating said detent by said action slide.

10. In a repeating firearm, a breech bolt, an action slide, a hammer having a shoulder, a sear pivotally mounted with one end adapted to engage said shoulder, means on said action slide to rock said sear from engagement with said shoulder and to be engaged by said sear to prevent rearward movement of the action slide, means on said hammer to disengage said sear from said means on the action slide, and a lost motion connection between said breech bolt and action slide whereby said sear is disengaged from said shoulder only after the breech is completely closed.

14. In a repeating firearm, a receiver, a magazine in communication therewith, a pivoted lid for said magazine, a lever pivoted to said lid and having one end extending into said magazine, means urging said end toward said lid, a plate pivoted to said end of said lever, and means to urge said plate into alignment with said lever.

---

1,557,628. POWER TAKE-OFF. HENRY W. SWEET, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Dec. 4, 1922. Serial No. 604,679. 1 Claim. (Cl. 74—7.)

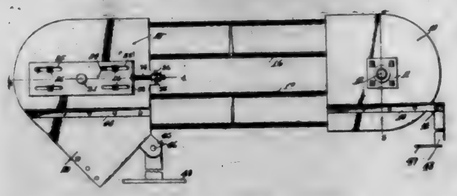


The combination with a transmission gearing, comprising a main casing, of a power take-off, comprising a case interchangeably mountable upon opposite sides of the main case, and motion transmission means in the power take-off case, including a gear arranged to project into the main case, and mesh with one of the gears therein when the power take-off is mounted on either side of the main case, a reversible power take-off shaft mounted in the power take-off case, reversible to project beyond either the front or rear side thereof, gearing within the case including the former gear, such gearing including the former gear being also reversible within the power take-off case from one side of the case to the other, and reversible means for holding the gears of such gearing in either of such reversible positions in the power take-off case, whereby the power take-off is

mountable interchangeably on opposite sides of the main case, and the gearing is reversible in the power take-off case from either side of the case to the other and the power take-off shaft, is reversible end for end in the power take-off case.

---

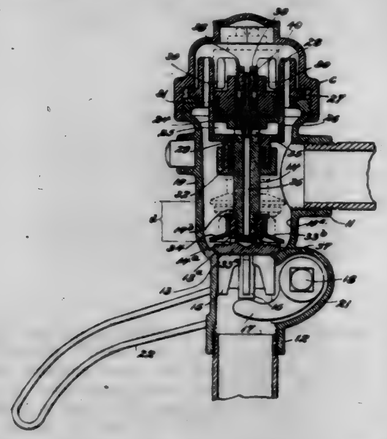
1,557,629. WATER CONVEYER. JESSE E. TAYLOR, Valier, Mont., assignor of one-fourth to Lena B. Taylor and one-fourth to George W. Taylor, sr., both of Valier, Mont. Filed June 17, 1924. Serial No. 720,672. 1 Claim. (Cl. 103—74.)



The combination with the wheel casing of one end of a chain pump, said casing having a longitudinal slot in each side wall and spaced openings adjacent the ends of said slots, the ends of the said side walls being provided with laterally directed apertured ears, of a plate disposed longitudinally on a side wall of the casing in covering relation to said slot and openings, said plate having a central opening alining with the slot and arranged to receive a shaft end therein, said plate having longitudinal slots alining with said openings, securing means through the last-named slots and said openings, one end of the plate having a laterally directed apertured flange, and an adjusting screw disposed through said apertured ear and said apertured flange.

---

1,557,630. FLUSHING VALVE. BURCHARD THORNS, New York, N. Y. Filed Mar. 6, 1923. Serial No. 623,215. 19 Claims. (Cl. 137—93.)



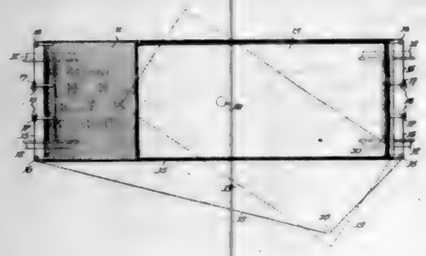
8. In a flushing valve, in combination, a casing having inlet and outlet openings, a valve head controlling the outlet opening, means for unseating said valve head, and means adjacent the valve head extending in close proximity to the casing to form a restricted passage when the valve is open, whereby an excess of pressure is built up on one side of said valve head, said valve head being adapted to be automatically closed by said excess pressure.

1,557,631. OPHTHALMIC LENS. EDGAR D. TILLYER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed May 5, 1922. Serial No. 558,758. 2 Claims. (Cl. 41—20.)

1. An ophthalmic lens having a polished refracting lens surface and a spot on said surface having a different reaction to vapor than the rest of the surface, and being without refractive effect on the lens surface in the absence of vapor.

---

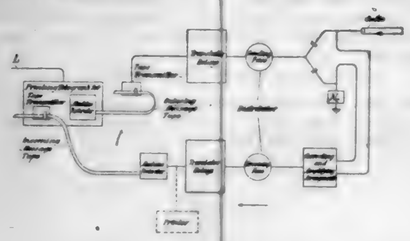
1,557,632. SAFETY DEVICE FOR REVOLVING PLATFORMS. JOHN H. TRESIDER, Chisholm, and CLARENCE M. BOSS, Duluth, Minn. Filed July 17, 1925. Serial No. 44,411. 5 Claims. (Cl. 212—70.)



1. In a safety device for movable platforms, a fixed platform, a guard member carried by the fixed platform, and means carried by the movable platform and adapted to engage the guard member when the movable platform extends beyond the fixed platform.

---

1,557,633. TRANSLATING DEVICE. GILBERT S. VERNAM, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 21, 1920. Serial No. 375,602. 4 Claims. (Cl. 178—71.)



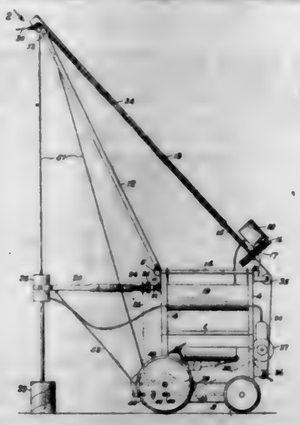
1. A transmission line, transmitting apparatus associated therewith adapted to transmit three-impulse combinations thereover in accordance with a three-unit code, a transmitter operated in accordance with five-impulse combinations of a message transmitted in a five-unit code, a series of relays controlled by said transmitter, a second series of relays controlled by said first series of relays, locking circuits for said second series of relays, means controlled by said first series of relays for determining the character of the first impulse of the three-unit combination to be transmitted by said transmitting apparatus over said line, means operating subsequent to said determination for releasing said first series of relays, means controlled by said second series of relays for determining the character of the second and third impulses of said three-unit combination, and means operating subsequent to said last mentioned determination for opening said locking circuits.

1,557,634. SCOOTER WAGON. LOWELL E. WALTER, Des Moines, Iowa. Filed Aug. 25, 1924. Serial No. 733,955. 6 Claims. (Cl. 208—33.)

1. In a scooter vehicle, a frame, a steering wheel at the forward end thereof, a crank axle journaled at the rear of said frame and having opposed cranks, and pedal plates having bearings at their rear ends directly on said cranks and having their forward ends arranged for reciprocal sliding movement relative to said frame.

---

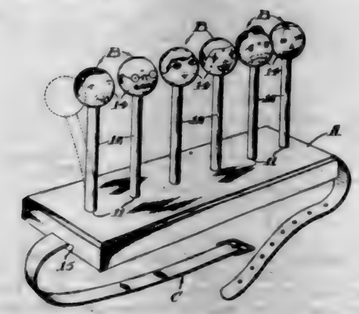
1,557,635. APPARATUS FOR ERECTING POLES. JOHN H. WARE, Jr., Oxford, Pa. Filed Jan. 9, 1923. Serial No. 611,629. 4 Claims. (Cl. 255—22.)



3. Apparatus for digging post holes comprising in combination a truck, auger mechanism, an arm projecting from the truck for co-operating in applying down draft to the auger mechanism, a cable extending upward and adapted to pull down on the auger mechanism, and means for operating the cable.

---

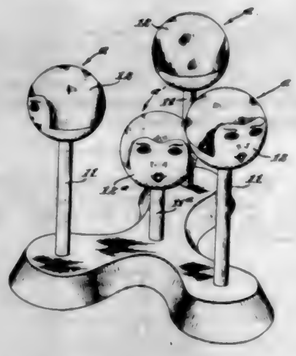
1,557,636. VIBRATING FIGURE TOY. PAULINE B. WARNER, St. Paul, Minn. Filed Mar. 1, 1924. Serial No. 696,203. 3 Claims. (Cl. 46—40.)



2. In a toy, a base, a series of resilient stems secured to said base, a plurality of objects, one for each stem, each object being secured to its respective stem at the free end thereof and being sufficiently heavy to render said stem actively vibrative through relatively great limits, said stems being relatively located to bring each object within range of adjacent objects, whereby a continuity of movement may be set up in the series through a succession of impacts initiated by one of said objects and carried on through the remaining objects.

---

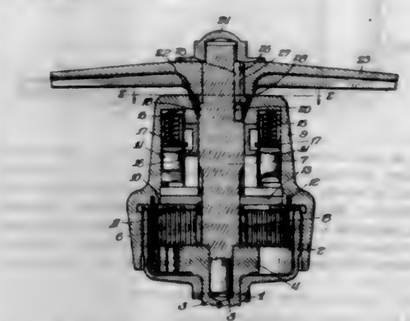
1,557,637. VIBRATING FIGURE TOY. PAULINE B. WARNER, St. Paul, Minn. Filed Dec. 31, 1924. Serial No. 759,022. 6 Claims. (Cl. 46—40.)



4. In a toy, a base, closely grouped vibrative objects, each comprising a resilient stem rising from the base and having a head thereon, the heads of said objects being supported, normally, at different elevations to provide for maximum limits in the swaying movements of said objects in such closely grouped relation.

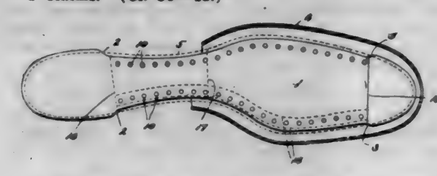
---

1,557,638. ADJUSTMENT MEANS FOR STEERING WHEELS. LOUIS G. WELLDS, Chicago, Ill., assignor to Richard M. Decker Company, Chicago, Ill., a Co-partnership consisting of Richard M. Decker, F. B. Harriman, H. M. Decker, S. P. Harriman, and L. M. Harriman. Filed Oct. 4, 1923. Serial No. 666,427. 5 Claims. (Cl. 74—33.)



1. Steering wheel construction comprising a rotatable shaft, an enclosed housing member for said shaft, adjustment means having screw threaded engagement with said shaft, said housing member and said adjustment means having corresponding conical bearing surfaces whereby upon the turning of said adjustment means, play between said adjustment means and said housing may be minimized, said shaft being provided with a key slot and said adjustment means being provided with a plurality of key slots adapted to register with the key slot in the said shaft.

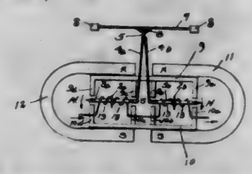
1,557,639. INSOLE. WARREN B. WHITE, North Abington, Mass. Filed May 19, 1922. Serial No. 562,097. 4 Claims. (Cl. 36—43.)



4. An insole for boots and shoes, having a removable portion, extending from the toe portion rearwardly to the shank, said portion being temporarily removable from the shoe after the upper and outsole have been attached, and lasting tacks can be withdrawn from the forepart and shank of the removable portion such portions be replaced in the shoe.

---

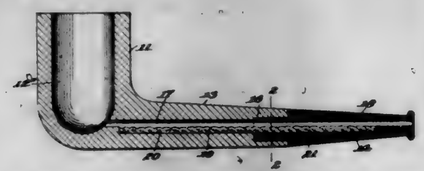
1,557,640. ELECTROMECHANICAL TRANSFORMING DEVICE. HENRY MERLE WILLIAMSON, Oak Park, Ill. Filed July 22, 1925. Serial No. 45,432. 19 Claims. (Cl. 179—119.)



2. An electro-mechanical transforming device including pole pieces, a plurality of torsionally mounted movable armatures operatively related to said pole pieces, and means for combining the movements of said armatures.

---

1,557,641. PIPE. DALL WORTHINGTON, Baltimore, Md. Filed Jan. 24, 1925. Serial No. 4,431. 3 Claims. (Cl. 131—12.)



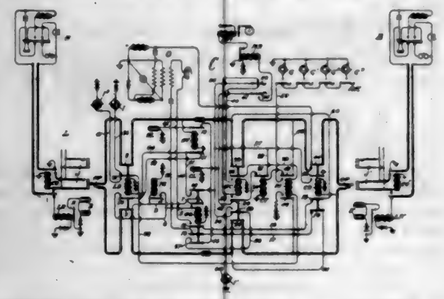
1. A pipe including a mouthpiece portion and a bowl member having a stem portion, each of said portions having a smoke passage and an absorbent passage communicating therewith, each of said absorbent passages being adapted to receive a portion of an absorbent member, means for connecting said portions, said absorbent passages being located centrally of said connecting means.

---

1,557,642. TELEPHONE SYSTEM. GEORGE A. YANOCHOWSKI, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed June 20, 1921. Serial No. 478,796. 11 Claims. (Cl. 179—58.)

1. A telephone system comprising telephone lines, an operator's link circuit for interconnecting said lines, operator controlled means for applying ringing current to a called line, an interrupter and an interrupter relay for intermittently applying said ringing current, a second interrupter, and means under the control of the calling substation for disconnecting said first interrupter and connecting said second interrupter in said circuit.

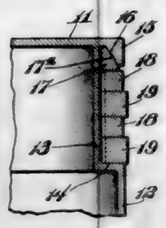
9. A telephone system including a pair of lines, a circuit for connecting said lines, a signal, means controlled by one subscriber for flashing said signal if the other



subscriber has not responded, and means controlled by said other subscriber for afterwards causing a continuous operation of said signal.

---

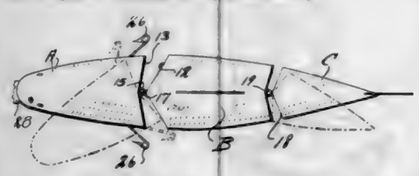
1,557,643. PISTON FOR INTERNAL-COMBUSTION ENGINES. HENRY R. YOUNG, Muskegon, Mich. Filed Oct. 4, 1924. Serial No. 741,607. 1 Claim. (Cl. 74—109.)



A one piece piston having the skirt thereof reduced intermediate its ends to provide a groove forming opposing shoulders, the upper shoulder being undercut, a split resilient wedging ring opposing said shoulder and having an inclined face opposing the undercut portion of the shoulder and a plurality of split resilient rings arranged within said groove and between the first named ring and the shoulder at the opposite end of the groove, the last named rings including packing rings and spacers therefor, the first named ring constantly urging the last named rings toward the last named end of the groove, the shoulder at the last named end of the groove being square.

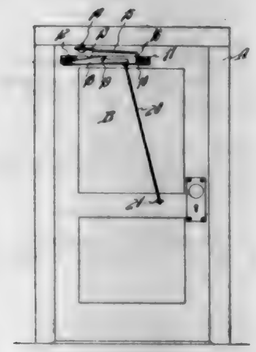
---

1,557,644. ARTIFICIAL BAIT. CHRISTIAN A. ANDERSEN, Watertown, S. Dak. Filed May 5, 1925. Serial No. 28,233. 3 Claims. (Cl. 43—36.)



1. An artificial bait of the character described composed of a plurality of jointed sections, one of said sections being formed with a recess, hooks having forwardly convergent shanks disposed in said recess, eyes supporting the rear ends of said shanks, and a coiled compression spring resisting rearward movement of the forward ends of the shanks.

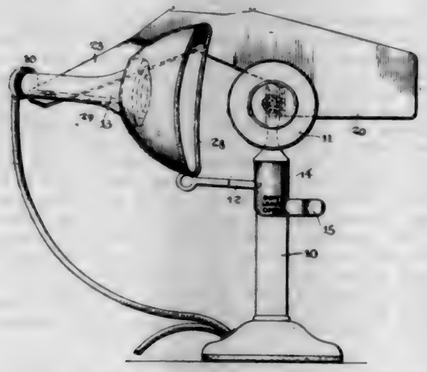
1,557,645. DOOR-HOLDING DEVICE. NELS J. ANDERSON, Owen, Wis. Filed Oct. 22, 1923. Serial No. 670,205. 2 Claims. (Cl. 292—274.)



1. In a door holding mechanism, a track carried by the door and formed with notches in its upper edge, and a latch pivoted upon the door frame and having a down turned forked end straddlingly engaging and riding upon the upper edge of the track, and adapted to enter a selected one of the notches for holding the door in open position.

---

1,557,646. TELEPHONE STAND. MAUDE ARMSTRONG, Denver, Colo. Filed Aug. 13, 1923. Serial No. 657,104. 7 Claims. (Cl. 179—147.)

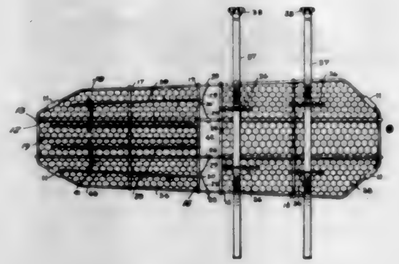


4. A device of the class described comprising a bracket, an element pivotally supporting said backet to swing in a substantially horizontal plane, and a second element adjustably and pivotally supported by said bracket, said bracket having a counterbalancing portion extending on the opposite side of its supporting element, substantially as set forth.

---

1,557,647. SPLINT STRETCHER. SYDNEY B. AUSTIN, Mountain Lakes, N. J., assignor to The Kny-Scheerer Corporation of America, New York, N. Y., a Corporation of New York. Filed May 2, 1923. Serial No. 636,049. 3 Claims. (Cl. 5—82.)

1. In a splint stretcher a separable frame comprising an outer frame member which at the point of separation has two tongue members mounted in the head portion of said frame adapted to engage the outer frame member of the foot portion, a circular boring in each of said tongues adapted to register with a circular boring in said outer frame foot portions, a pin adapted to secure said members together through said circular borings,



longitudinal frame members the head portions of which terminate at the point of separation in cylindrical tubes, a cylindrical boring in said cylindrical tubes and semicircular cutouts in the foot portions of said frame members adapted to register with said borings and pins adapted to secure the same together.

---

1,557,648. METHOD OF SPLICING CANE ENDS. JOSEPH HENRY BLAIR, St. Louis, Mo., assignor to St. Louis Car Company, St. Louis, Mo., a Corporation of Virginia. Filed May 31, 1924. Serial No. 717,121. 1 Claim. (Cl. 24—30.)

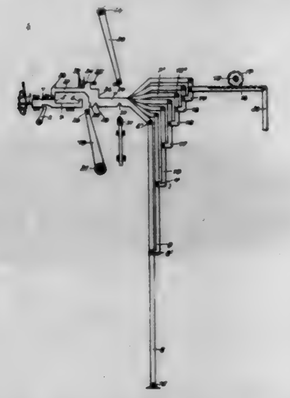
An interlocking joint comprising two independent ends tapered on one side from their extremities to points spaced a material distance therefrom whereby they are reduced in thickness toward their extremities, one of said ends being provided intermediate the ends of its tapered portion with a relatively narrow rectangular longitudinal slot, the other of said ends being substantially equal in width to the length of said slot and provided on opposite sides intermediate the ends of its tapered portion with transversely alined rectangular notches forming a shank substantially equal in width to that of said slot, said second named end being adapted to be inserted in said slot with its width arranged lengthwise thereof and turned to arrange said shank transversely of said slot and snugly fitting therein, the portions of each end outwardly of said slot and said shank being adapted to be arranged against the other end inwardly of said slot and said shank.

---

1,557,649. AUTOMATIC APPARATUS. WILHELM BLANK, Plauen, Germany. Filed July 13, 1923. Serial No. 651,386. 8 Claims. (Cl. 112—86.)

1. An automatic apparatus for adjusting textile machine parts comprising, in combination, a set of adjusting levers, of which each forms a double-armed lever and of which the second is pivoted to the first at half of the length thereof, and the third to the second at

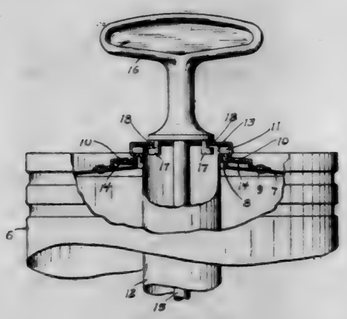
half of the length thereof; a jacquard-device; means to transmit to said levers a driving motion as determined by said jacquard device; and means adapted to



transmit the summed-up movements from the last of the said levers to the machine part to be re-adjusted, as set forth.

---

1,557,650. SPRAYER CLOSURE. HENRY E. BRANDT, North St. Paul, Minn., assignor to Dobbins Manufacturing Company, North St. Paul, Minn., a Corporation of South Dakota. Filed Aug. 28, 1924. Serial No. 734,652. 14 Claims. (Cl. 299—96.)

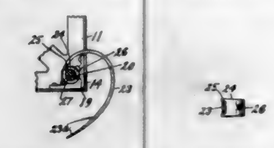


1. The combination with the wall of a sprayer receptacle having an opening therethrough and an outwardly projecting ring about said opening, a gasket contacting said ring, a pump cylinder having a flange overlying said gasket, a substantially annular helical means on the exterior of said wall, and a cap having helical means thereon engaging said first named helical means and pump cylinder to draw the latter against said gasket.

---

1,557,651. SEEDER AND DRILL ATTACHMENT. JOSEPH J. BUSS, Prescott, Wis. Filed Sept. 17, 1923. Serial No. 663,141. 1 Claim. (Cl. 55—74.)

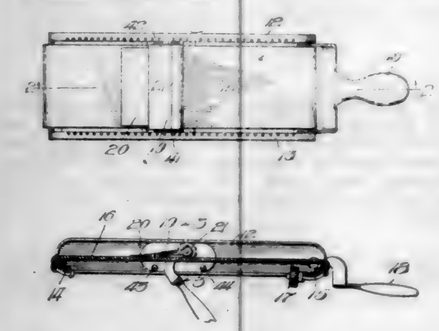
In a machine of the class described, a rock shaft having a series of spaced diametral bolt holes, a series of C-shaped pulverising teeth each of which has its upper end formed with a loop fitting about the shaft and provided with two holes registering with the ends of one of the holes in the shaft, and a bolt passed through said registering holes and provided with a nut the short



end of said looped portion of the tooth being broadened and formed with two projections which straddle the body of the tooth near the loop.

---

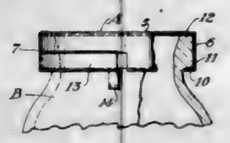
1,557,652. RAZOR STROP. CHARLES E. CARPENTER, Chicago, Ill. Filed Aug. 8, 1923. Serial No. 656,391. 1 Claim. (Cl. 51—153.)



In a razor stropper, the combination of a rectangular frame having a pair of channel shaped side plates with their channel portions facing each other and also having suitable end connections joining said channels together, a strap extending between the end connections aforesaid, a blade carrier located on one side of the strap and between the channel shaped side plates, said blade carrier including a tubular member, a handle pivotally connected to the tubular member and serving to shove the tubular member back and forth with respect to the strap, a fixed member in each end of the tubular member, a sprocket wheel at each end of the tubular member, a hub connected to each sprocket wheel and reaching into the tubular member and frictionally engaging the fixed member in the tubular member aforesaid, spring pressure means tending to draw the hubs against the fixed blocks aforesaid, and ratchets on the frame side plates, engaging the sprockets, substantially as described.

---

1,557,653. CAP FOR BOTTLES OR OTHER CONTAINERS. LESLIE R. N. CARVALHO, Toledo, Ohio, assignor to The Closure Service Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 11, 1924. Serial No. 685,531. 12 Claims. (Cl. 215—38.)

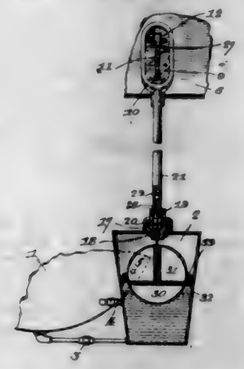


1. A closure cap comprising a top portion and a depending circumferential flange portion, the latter formed with a score or weakened line extending lengthwise thereof approximately only half the circumference of

the flange and providing a removable strip, the score line being so positioned and arranged that when the strip is removed the depth of the remaining flange along said half of the circumference is substantially less than the depth of the other portion of the flange.

---

1,557,654. OIL GAUGE. BASILE CASPAIN, Montreal, Quebec, Canada, assignor to Eagle Utilities Company, Detroit, Mich., a Copartnership consisting of Elias P. Asmur, Albert Saghbini, and Basile Caspain. Filed Mar. 18, 1924, Serial No. 700,132. Renewed Sept. 2, 1925. 3 Claims. (Cl. 73—82.)



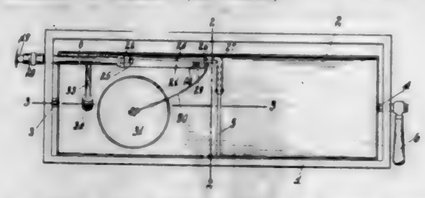
1. An oil gauge comprising a reservoir and an indicator, a stem slidably mounted in said reservoir, a float section secured to said stem, a second float section surrounding said stem and disposed above the first section, lugs extending from said second section, stop members carried by said reservoir and adapted for engagement by said lugs, and an operative connection between said stem and indicator.

---

1,557,655. BRUSH HANDLE. HENRY CAVE and CHAUNCEY P. MANNING, Hartford, Conn., assignors to The Fuller brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Oct. 8, 1923. Serial No. 667,206. 1 Claim. (Cl. 15—206.)

A brush structure including a brush having a stem formed of twisted strands of wire, and a handle into which said stem projects, one of said strands terminating within the handle and having its end projected laterally to form a key located in a key-way extending longitudinally of the handle and opening out of the hole for the stem in said handle.

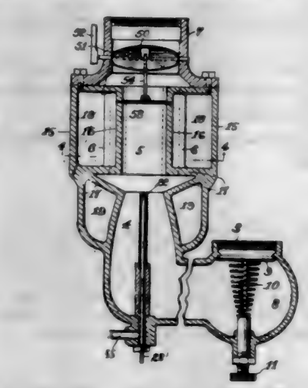
1,557,656. FLUSHER BOX. FRANKLIN D. CHASE, Berkeley, Calif. Filed Mar. 4, 1922. Serial No. 541,022. 2 Claims. (Cl. 4—32.)



1. A flush tank including a flush tank casing having an outlet, a water receptacle journaled within said casing, an intake valve mounted in said casing for controlling the admission of water into said receptacle, a lever formed with a presser foot for engaging the end of the stem of said valve, a spring for swinging said lever so that said presser foot will release said valve stem, a float lever, a float connected to said lever within said receptacle, a cam on said float lever, and a catch on said receptacle for engaging said lever and swinging it over said cam into engagement therewith into position so that said presser foot will open said valve, when the receptacle is swung back into normal position after being emptied, said cam being shaped to allow said lever to escape it when the float rises to cause said spring to swing said lever to release said presser foot from the valve stem to permit the valve to open.

---

1,557,657. CARBURETOR. HARRY O. CRAM, Bridgeport, Conn. Filed Sept. 22, 1920. Serial No. 412,041. 13 Claims. (Cl. 261—13.)



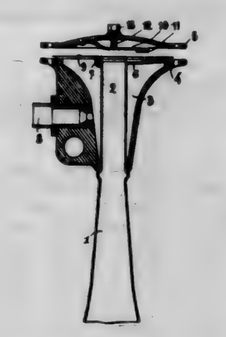
2. A carburetor comprising a mixing chamber, a heating chamber integrally surrounding the same, said mixing chamber comprising a main duct and a plurality of auxiliary ducts having a common outlet, a primary throttle valve for controlling the flow of gases through said common outlet, and a secondary throttle valve for controlling the flow of gases through said main duct.

---

1,557,658. MECHANICAL HORN. LOUIS CHOLLET, Paris, France, assignor to Compagnie Industrielle et Commerciale du Cycle et de l'Automobile, Neuilly-sur-Seine, France. Filed Dec. 28, 1922. Serial No. 609,405. 3 Claims. (Cl. 116—142.)

2. In a sound producing instrument the combination with a horn, an inner extension thereof, an air supply entrance, an expansion chamber and a cover piece, of an end piece mounted on the inner end of the said horn extension and adapted to partially close the open end

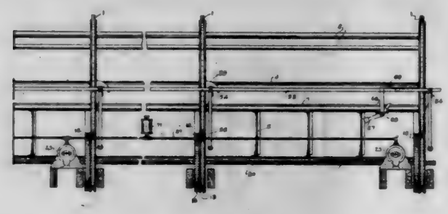
of the said air expansion chamber, a rigid strip on the said horn extension end piece, a membrane secured between the said expansion chamber and the said cover piece, an adjustable plate secured within the said cover



piece and adapted to be actuated by the air pressure acting on the entire surface of the membrane; a passage leading from the air supply entrance to the air expansion chamber, and an air outlet of adjustable diameter.

---

1,557,659. ROTARY-DUMP CONTROLLER. WILLIAM R. COLEMAN, Birmingham, Ala. Filed Jan. 3, 1922. Serial No. 526,848. 27 Claims. (Cl. 214—52.)



1. The combination with a dump having means to receive and hold a car and a fixed axis about which the dump turns to discharge the contents of the car, of a dash-pot, and a speed reducing transmission actuated by the periphery of the dump and directly connected to the movable element of the dashpot to control the dump's angular movements in both directions.

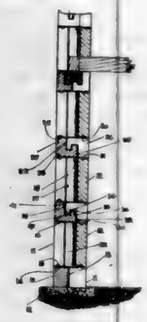
---

1,557,660. METHOD OF MAKING ANHYDROUS MAGNESIUM CHLORIDES. PAUL COTTRINGER and WILLIAM R. COLLINGS, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Mar. 10, 1921. Serial No. 451,199. 8 Claims. (Cl. 23—91.)

1. In a method of making anhydrous magnesium chloride, the steps which consist in intermixing partially dehydrated magnesium chloride with the normal hydrated salt, both in solid form, and then directly heating the mixture at a temperature sufficiently elevated to drive off water of crystalliation.

8. In a method of making anhydrous magnesium chloride the steps which consist in driving off a portion of the water of crystallization from the normal hydrated salt by moving the latter in opposed direction against a current of gases of combustion, regulating the temperature of such gases by admixing air at normal temperature therewith, and returning a portion of the product for use over again in the preceding steps.

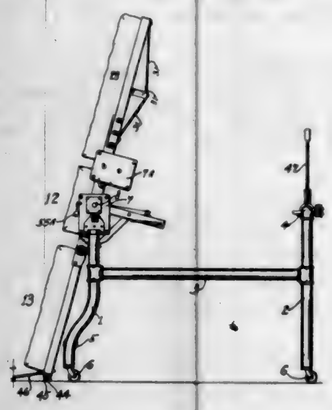
1,557,661. WALL CONSTRUCTION. ANTON MARIUS CRAMER, Montreal, Quebec, Canada. Filed Jan. 16, 1925. Serial No. 2,853. 6 Claims. (Cl. 72—102.)



1. In wall construction, a plurality of main blocks, in courses, a plurality of intermediate blocks in courses, between said main blocks and forming therewith a front to the wall, a plurality of main rear blocks having abutments meeting the joints of the front blocks, a plurality of intermediate rear blocks and locking blocks front and rear having interlocking inner portions and introduced in said intermediate courses.

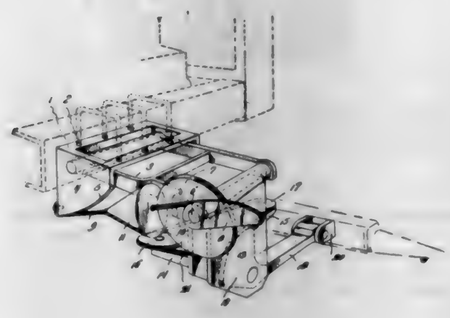
---

1,557,662. INVALID BED. JAMES W. CRAWFORD, Memphis, Tenn. Filed Feb. 15, 1924. Serial No. 692,978. 6 Claims. (Cl. 5—62.)



3. In an invalid bed, the combination with a supporting frame, of a mattress support pivoted to said frame, and means for varying the inclination of said central section, comprising a casing, a gear sector within said casing, a hub projecting therefrom through said casing and attached to said support, said hub being rotatably mounted in said casing, means for turning said gear sector, a pawl for locking said turning means, a pawl locking member, a handle thereon for depressing said locking member to hold said pawl in engagement with said pinion, and for raising said member to disengage said pawl, and a spring for normally depressing said handle.

1,557,663. VEHICLE BODY STABILIZER AND EQUILIBRIUM DEVICE. LAWRENCE P. CROSS, Gary, Ind., assignor of one-fifth to Henry B. Colburn, one-fifth to Bernard T. Sayles, one-fifth to Edwin W. Sales, and one-fifth to Carl E. Valette, all of Gary, Ind. Filed July 16, 1924. Serial No. 726,311. 4 Claims. (Cl. 267—20.)



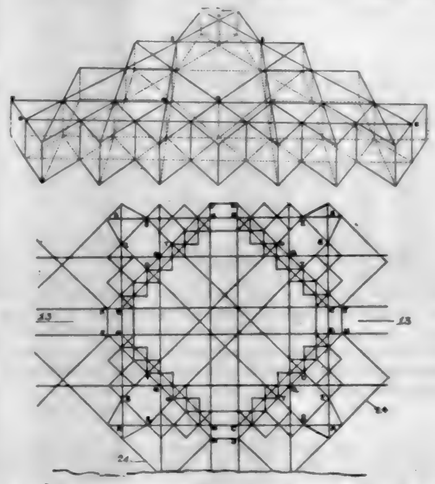
1. A stabilizing device of the class described comprising a bracket, a frame pivoted upon the bracket, a shaft journaled for rotation upon said frame, said shaft having a crank arm and a pulley at one end thereof, a hanger depending from said frame, an arm pivoted at one end to said hanger and adapted to be pivotally connected at its opposite end to the axle of a vehicle, additional pulleys journaled for rotation upon said hanger, a cable connected at one end with said first named pulley and connected at its opposite end with the second named arm, and having its intermediate portions trained around said additional pulleys, and a sectional cable, the outer ends of the sections of which are connected to said bracket and crank arm respectively, and spring means with which the inner ends of said cable sections are associated.

---

1,557,664. MICROPHONE TRANSMITTER FOR GRAMOPHONES. PHILIP E. DAVENPORT, London, England. Filed Jan. 2, 1924. Serial No. 684,041. 8 Claims. (Cl. 179—100.1.)

1. A microphone transmitter adapted to be operated by gramophone and like records comprising a casing, a microphone mounted therein, a cover of soft fibrous material stretched across the front of said microphone adapted to prevent external sounds from affecting the microphone and means mounted on said casing for mechanically transmitting the vibration of the stylus to said cover.

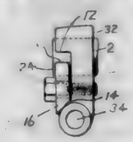
1,557,665. REENFORCED CONCRETE STRUCTURE. DAVID DAVIDSON, Leeds, England. Filed Dec. 10, 1923. Serial No. 679,783. 9 Claims. (Cl. 72—15.)



1. In a reenforced concrete structure of the class described, the combination of a series of spaced supports, trussed frame unclear units external to each of the supports and positioned adjacent the sides thereof and reenforcing means joining said units together.

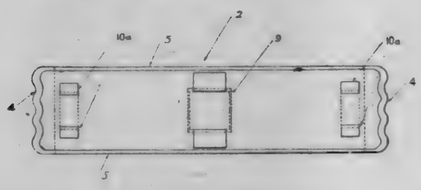
---

1,557,666. TERMINAL CONNECTER. CHARLES MELVIN DAVIS, Lynn, Mass. Filed Oct. 27, 1919. Serial No. 333,680. 1 Claim. (Cl. 173—259.)



A storage-battery connecter comprising two conducting members between which a storage-battery terminal is adapted to be clamped; the two conducting members being separate and distinct one from the other to permit lifting one of the conducting members away from the other conducting member and thereby release the storage-battery terminal without hammering the connecter or prying the connecter away from the storage-battery terminal with an instrument; one of the conducting members being provided with a conductor-receiving socket, a wedge face, and an interior opening a wall of which constitutes a jaw; the other conducting member being provided with a cooperating wedge face, and with a cooperating jaw; the wedge faces being adapted to engage to effect a relative sliding movement of the two conducting members into clamping engagement with the storage-battery terminal; the clamping walls of the jaws extending at right angles to the direction of relative sliding movement of the conducting members; the said other conducting member having an opening that is elongated in the direction of relative sliding movement of the jaws and that is situated to one side of the clamping jaws; the said one conducting member having a screw-threaded opening registering with the elongated opening; and a screw-threaded member mounted in the elongated opening, and screw-threaded into the screw-threaded opening, and provided with a polygonal head adapted to be engaged by a wrench to effect the said relative sliding movement of the conducting members into clamping engagement with the storage-battery terminal.

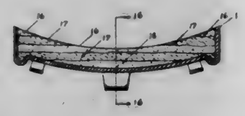
1,557,667. BRAKE SHOE. MURRELL R. DE FRANCE, Bellevue, Pa. Filed Oct. 16, 1924. Serial No. 743,937. 10 Claims. (Cl. 188—254.)



5. In a brake shoe having a filling of composition and a pressed metal shell embracing the same, a metallic shell pressed from a single integral blank which has relatively thick back and end walls and relatively thin side walls of uniform thickness throughout their vertical extent, and a separately formed lug attached to the back of the shell and having in the key way thereof teeth for firmly engaging the key which connects the brake shoe to its hanger.

---

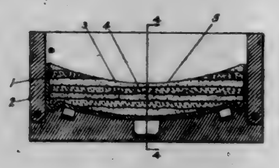
1,557,668. BRAKE SHOE. MURRELL R. DE FRANCE, Bellevue, Pa. Filed Nov. 10, 1924. Serial No. 748,863. 12 Claims. (Cl. 188—254.)



5. In a brake shoe comprising a pressed metal shell and a composition filler therefor, an integral block of filling composition stratified vertically into areas with different coefficients of friction, the composition in certain of such areas comprising granular asbestos as one of its principal ingredients.

---

1,557,669. BRAKE SHOE. MURRELL R. DE FRANCE, Bellevue, Pa. Original application filed Nov. 10, 1924. Serial No. 748,863. Divided and this application filed Apr. 18, 1925. Serial No. 24,069. 4 Claims. (Cl. 188—254.)

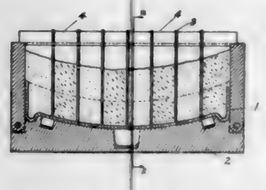


3. In a brake shoe comprising a pressed metal shell and a composition filler therefor, an integral block of filling composition stratified horizontally into areas having different rates of disintegration in use of the brake shoe.

---

1,557,670. METHOD OF MAKING BRAKE SHOES. MURRELL R. DE FRANCE, Bellevue, Pa. Original application filed Nov. 10, 1924, Serial No. 748,863. Divided and this application filed Apr. 18, 1925. Serial No. 24,070. 10 Claims. (Cl. 18—59.)

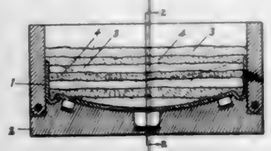
1. The method of making a composition brake shoe which consists in positioning a pressed metal shell within a mold, dividing the shell within the shell and mold by temporary partitions, inserting into different compartments formed by such partitions various grades



of filling composition in a plastic condition, withdrawing such partitions, and pressing the body of composition to compact the same into a single integral block.

---

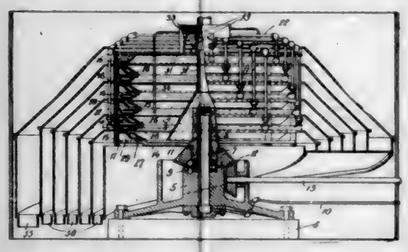
1,557,671. METHOD OF MAKING BRAKE SHOES. MURRELL R. DE FRANCE, Bellevue, Pa. Original application filed Nov. 10, 1924, Serial No. 748,863. Divided and this application filed Apr. 21, 1925. Serial No. 24,737. 2 Claims. (Cl. 18—59.)



1. The method of making a composition brake shoe which consists in positioning a pressed metal shell within a mold, introducing into the shell and mold a plurality of grades of filling composition while in a plastic condition in such manner that the several grades of filling composition form horizontal strata, and pressing the body of composition to compact the same into a single integral block.

---

1,557,672. CENTRIFUGAL CONCENTRATOR. HENRY ALFRED DOERNER, Reno, Nev. Filed Mar. 14, 1924. Serial No. 699,216. 13 Claims. (Cl. 83—67.)



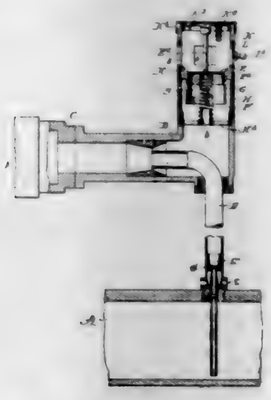
1. The improvement in the method of separating finely divided solids of different densities by centrifugal action which comprises discharging the solids of higher specific gravity through a discharge path of such character that centrifugal force acting upon the accumulating solids of higher specific gravity effects a substantially continuous movement of such solids through a liquid seal operatively maintained in the discharge path by centrifugal action, and maintaining said accumulating solids of higher specific gravity in a substantially mobile condition by the action of a fluid other than the sealing liquid which flows opposite in effect to the action of centrifugal force upon said accumulating solids.

1,557,673. SHADE ROLLER. CHARLES G. DUNLAP and ANDY WITTEN, North Tazewell, Va. Filed Oct. 18, 1923. Serial No. 669,290. 1 Claim. (Cl. 156—19.)

A shade roller structure comprising a cylinder provided upon its inner surface with a spirally disposed guide, sleeve members entering the ends of the cylinder and upon which the cylinder is journaled for rotation, parallel spaced members traversing the length of the cylinder and connected with the sleeve members, a block slidably mounted upon the runners and housed within the cylinder, a member carried by the block and engageable with the spirally disposed member of the cylinder and flexible elements connected at their ends with the block and extending through the sleeves.

---

1,557,674. DASHPOT-CONTROLLED AIR VALVE FOR INTERNAL-COMBUSTION ENGINES. WILLIAM A. EDWARDS, Chicago, Ill. Filed Sept. 18, 1923. Serial No. 662,583. 7 Claims. (Cl. 123—124.)

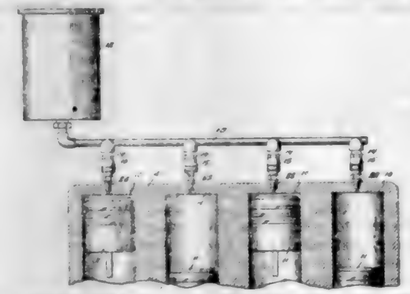


1. In a fuel feeding device for internal combustion engines in combination with a conduit through which air for fuel admixture is drawn by the engine suction, a valve controlling atmosphere access to said conduit, a dash-pot device connected with the valve for retarding its openings, the valve being a piston and the slide seat a cylinder having lateral ports; a chamber which encloses said cylinder, the latter being carried by one end of said chamber and terminating short of the other end, said chamber being mounted by said other end on the conduit for communication therewith.

---

1,557,675. LUBRICATING SYSTEM. ALBERT EICHELBERGER, De Soto, Mo. Filed Oct. 29, 1921, Serial No. 511,361. Renewed Aug. 6, 1925. 1 Claim. (Cl. 184—58.)

The combination with an internal combustion engine including a cylinder provided with a port, of a lubricating system comprising a container, a valve casing, a valve in said casing, and a conduit connecting said casing and said container, said casing having a recess therein, a pair of oppositely disposed valve seats in said recess, and a bore communicating with said recess and connecting said conduit and said port, said valve having a stem and an enlarged part loosely disposed in said bore and said recess respectively, and said enlarged



part being forced into engagement with said seats alternately by the operation of said engine to control the flow of lubricant thereto from said container.

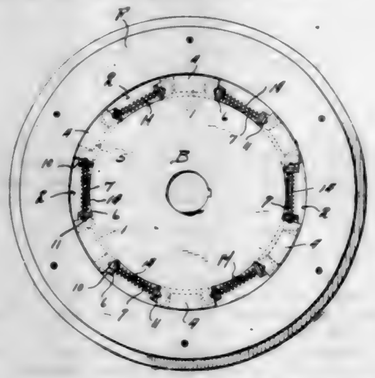
---

1,557,676. SAFETY RAZOR. ISAK EKLUND, Paterson, N. J. Filed June 5, 1922. Serial No. 566,182. 2 Claims. (Cl. 30—12.)

2. A safety razor comprising an elongated head having one longitudinal edge portion formed with a longitudinal depression, a rearwardly projecting flange extending approximately in a plane at right angles to the normal plane of a blade supported on said head, the flange being extended for the full length of said head and the depression terminating short of the ends of said head and flange, whereby to define protecting members at the ends of the edge for the corners of the blade, a holder having an attaching member extending through said head and being provided with blade positioning means, and a blade confined between said holder and head and having means cooperating with said blade positioning means.

---

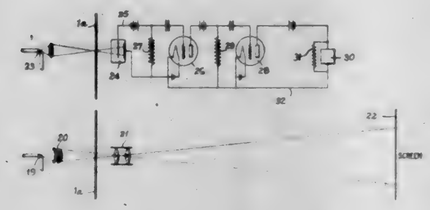
1,557,677. RESILIENT WHEEL. WILLIAM YANCEY ELLIOTT, Deer Lodge, Mont. Filed June 30, 1925. Serial No. 40,589. 4 Claims. (Cl. 152—28.)



1. A resilient wheel comprising, in combination, a felly, a wheel body substantially snugly fitting within the opening defined by the felly, the marginal portion

of the body being provided therearound with spaced recesses, the marginal parts of the body between the recesses constituting flanges, said flanges being provided with circumferentially disposed grooves, inwardly directed lugs carried by the felly and disposed circumferentially therearound, said lugs being received within the grooves of the flanges, the recesses being of a length less than the space between adjacent lugs, and a shock absorbing medium positioned within each of the recesses and coacting with the felly.

1,557,678. ACOUSTIC-CINEMATOGRAPHIC APPARATUS. JOSEF ENGL and JOSEPH MASSOLLE, Berlin-Grunewald, and HANS VOGT, Berlin-Wilmersdorf, Germany, assignors to Tri-Ergon Limited, Zurich, Switzerland, a Corporation of Switzerland. Original application filed Apr. 4, 1921, Serial No. 458,629. Divided and this application filed Oct. 29, 1924. Serial No. 746,741. 6 Claims. (Cl. 179—100.1.)



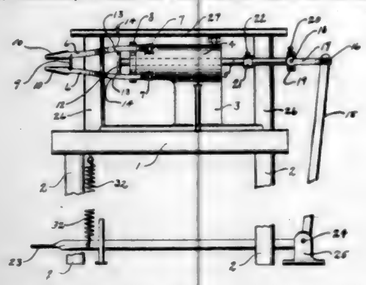
1. In acoustic-cinematographic apparatus, including an electric device, adapted to cause electro-magnetic disturbances in adjacent electrical apparatus, the combination of means for producing an acoustically modulated electric current, a plurality of thermionic amplifiers, and connections between all of said elements including resistance couplings between adjacent amplifiers, adapted to avoid the disturbing effect of said electric device on the circuits of said amplifiers.

1,557,679. FIGURE TOY. MAX H. FEIST, Toutle, Wash. Filed Mar. 10, 1921. Serial No. 451,425. 2 Claims. (Cl. 46—40.)

2. A figure toy of the character described comprising a supported figure, flexible arms secured to said figure, a tool fixed to said arms, and a cam operated means for operating said tool and moving said arms in unison.

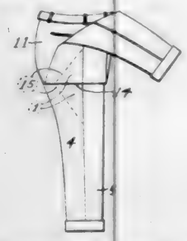
1,557,680. CUFFING MACHINE. JOHN A. FLEISCHLI, St. Louis, Mo., assignor to Cupples Company Manufacturers, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 17, 1922. Serial No. 582,343. 2 Claims. (Cl. 154—5.)

1. A cuffing machine including a standard, a cylinder on the standard, a plurality of fingers pivoted on the cylinder to swing away from and towards the axis of said cylinder, said fingers being curved inwardly at the extremities, bluntly pointed conical ends on said fingers, and spring means holding the fingers normally closed toward said axis a rod extending through the cylinder axially thereof, a disk on the end of the rod having its



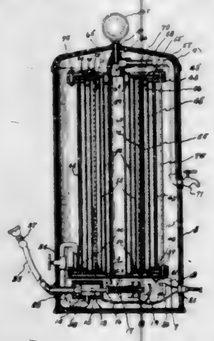
edges in contact with said fingers on their inner sides and movable forwardly to expand the set of fingers, and means to move the rod.

1,557,681. MEANS FOR PREVENTING WEAR IN THE CROTCH OF TROUSERS. HENRY A. FUNK, St. Louis, Mo. Filed Oct. 12, 1923. Serial No. 668,054. 1 Claim. (Cl. 2—231.)



A shield for protecting the crotch of trousers which consists of two triangular-shaped members disposed one on each side of the crotch on the inside of the trousers and secured along two of its edges to the seams of the crotch, the other edge being left free to permit a slight degree of movement of the member with respect to the cloth of the crotch, said triangular-shaped members being respectively faced with rubber on the side bearing against the cloth of the crotch and having the outside faced with a protective covering of fabric.

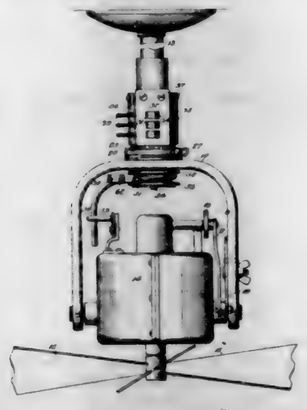
1,557,682. ELECTRIC HEATER. MICHELLE S. GAZELLE, Highland Park, Mich. Filed Apr. 10, 1925. Serial No. 22,073. 2 Claims. (Cl. 219—39.)



1. An electrical heater of the class described, comprising a plurality of tubes; a pair of rings adapted for mounting on each of said tubes, one of said rings

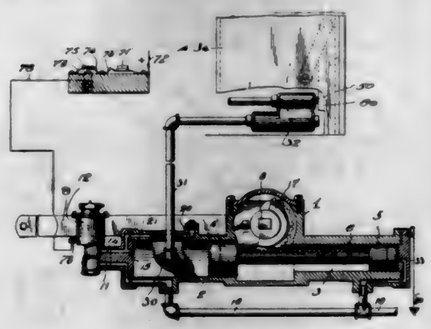
being mounted at each end of each of said tubes in embracing relation, the passages between the adjacent tubes being in connection at alternate ends; means for conducting water into said passages; means for conducting water from said passages; and an electrical heating element adapted for heating the water while passing through said passages.

1,557,683. ELECTRIC FAN. MAURICE M. GLASSER, Charleston, S. C. Filed Nov. 13, 1924. Serial No. 749,712. 12 Claims. (Cl. 230—1.)



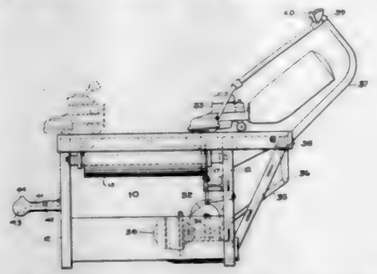
1. In an electric fan, a supporting element, a yoke rotatable on said member, a motor casing journaled in the yoke, means for oscillating the casing in a plane at right angles to the direction of rotation of the yoke, and means for intermittently rotating the yoke, said means comprising a plate fixed to the supporting element, a latch lever, co-operating latching elements on said plate and lever normally held disengaged by gravity, and means controlled by the oscillation of the motor casing for positively moving said latching elements into engagement.

1,557,684. PNEUMATIC-MOTOR MECHANISM. ALBERT GOTTSCHALK, New York, N. Y., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Mar. 22, 1919. Serial No. 284,480. 9 Claims. (Cl. 268—8.)



1. The combination with a door and a yieldable member associated therewith adapted to collapse when pressure is exerted thereagainst, of a motor for actuating said door to open and close the same, and fluid pressure controlled means actuated by the collapsing of said yieldable member only after the door has completed a prescribed distance of its travel towards closed position, for reversing said motor.

1,557,685. MECHANICAL DEMONSTRATING MACHINE. PHILIP G. GRAF, North Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Oct. 15, 1923. Serial No. 668,468. 8 Claims. (Cl. 35—16.)



1. The combination of an article to be used on carpets and mechanism for demonstration thereof, means for causing reciprocation of the article, a portion of the mechanism for demonstrating comprising a carpet over which the demonstrated article is reciprocated, the mechanism for demonstrating having means causing progressive step-by-step movement of the carpet in timed relation to reciprocations of the article thereover.

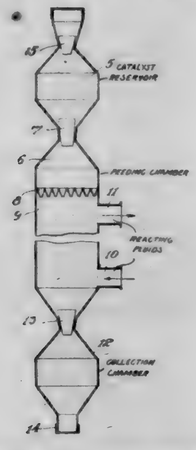
1,557,686. COMBINATION RECEIVER AND TRANSMITTER TELEPHONE SET. OTTO HAGENRUP, Maywood, Ill. Filed May 2, 1924. Serial No. 710,511. 6 Claims. (Cl. 179—103.)

1. A telephone head set, comprising, in combination, a casing, a transmitter and a receiver mounted in said casing in proximate relation, and means engageable with the head of a user for supporting said casing with the receiver against the user's ear and the transmitter disposed in proximity to, but spaced from, the user's cheek.

1,557,687. METHOD OF PRODUCING CATALYTIC REACTIONS. HANS E. HAGGENMACHER, New York, N. Y. Filed Apr. 13, 1921. Serial No. 460,990. 2 Claims. (Cl. 23—1.)

1. The method of effecting catalytic reaction to minimize the production of side reactions comprising continuously bringing a reacting-fluid in contact with fresh

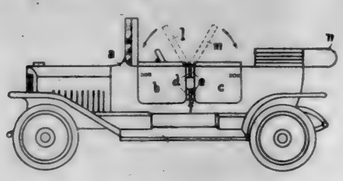
quantities of a catalytic agent continuously and uniformly distributed in the reaction zone and continuously withdrawing substantially all of the used catalyst from



the reaction zone immediately, after once falling through the gases whereby side reactions are avoided and a maximum yield of the end product is obtained.

---

1,557,688. MOTOR-CARRIAGE BODY. CURT WILLIBALD ALEXIS HANNEBOHN, Berlin-Charlottenburg, Germany, assignor to Alexis Kellner, Berlin-Charlottenburg, Germany. Filed Jan. 10, 1925. Serial No. 1,680. 1 Claim. (Cl. 296—45.)

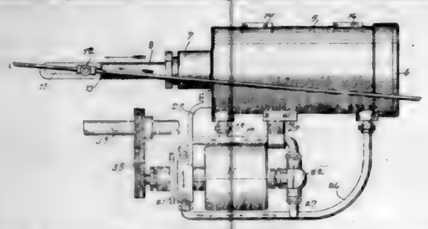


In combination with a motor-carriage body having two doors on either side: two hinges located at some distance from the lateral faces of the carriage body, one on one side, the other on the other side of said body and each being adapted to serve for the two doors of the respective side; bipartite window-guides on the doors the upper halves being hinged to the lower halves and adapted to be turned into horizontal and into vertical position; and tightening ledges attached to the back faces of those window-guides which are located opposite one another when in upright position, one of the tightening ledges on either side of the carriage body having a longitudinal recess and the other having a corresponding projection adapted to engage said recess.

---

1,557,689. AUTOMATIC BRAKE-CONTROL MECHANISM FOR AUTOMOBILES. LON T. HARRIGAN, San Quentin, Calif., assignor, by mesne assignments, to Hydro Patents Company, a Corporation of California. Filed May 5, 1923. Serial No. 637,001. 3 Claims. (Cl. 303—21.)

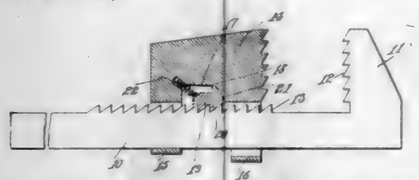
1. In combination with an automobile having a brake rod and a driven shaft, of a fluid containing cylinder mounted adjacent thereto, a piston mounted within said cylinder, a connection between the piston rod and the brake rod permitting a limited manually applied braking movement of the brake rod independent of the piston rod, a shaft mounted below said cylinder, means for driving said last mentioned shaft from the driven shaft, a governor mounted upon said second mentioned



shaft, and a valve controlled by said governor for regulating the flow of fluid from one side of said piston to the opposite side thereof.

---

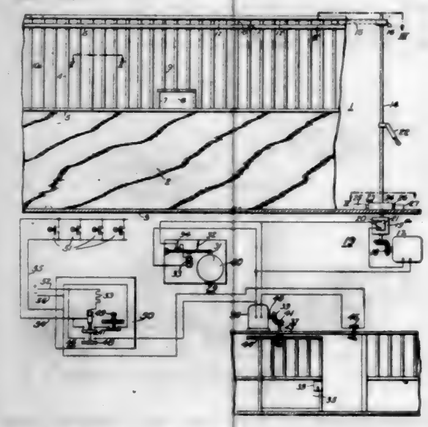
1,557,690. WRENCH. CHARLES W. HILL, Powell, Wyo. Filed Apr. 30, 1924. Serial No. 710,065. 1 Claim. (Cl. 81—145.)



In a wrench, a toothed shank, a fixed jaw integral with said shank at one end thereof, a slidable jaw embracing said shank by means of spaced loop members providing a recess in proximity to the teeth of the shank, an inclined end wall disposed inwardly toward the shank and longitudinally of the fixed jaw, and a toothed block having an inclined face for sliding movement in said recess and along said inclined end wall, whereby the slidable jaw is simultaneously forced toward the shank and in closer proximity to the fixed jaw to enable the work to be more firmly gripped upon operative movement of the wrench with respect to the work.

---

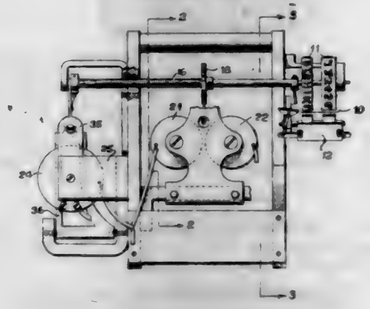
1,557,691. ROBBERY-PREVENTIVE DEVICE. WILLIAM CHANCELLOR HILL, Bellefonte, Pa., assignor of one-half to Jacob W. Eisenstadt, Pittsburgh, Pa. Filed Jan. 15, 1923. Serial No. 612,849. 4 Claims. (Cl. 268—2.)



1. In a robbery preventive device, the combination with a barrier, of a shield movably mounted in said barrier, means comprising a motor for actuating said shield, a door, means comprising a motor for actuating said door, means comprising a push button for simultaneously energizing said motors, and means for maintaining said motors energized independently of said push button.

---

1,557,692. TYPE-WHEEL-SETTING MECHANISM FOR PRINTING-TELEGRAPH RECEIVERS. GEORGE S. HILTZ, Brooklyn, N. Y., assignor to Stock Quotation Telegraph Company, New York, N. Y., a Corporation of New York. Filed Feb. 8, 1923. Serial No. 617,860. 6 Claims. (Cl. 178—40.)



1. In a printing telegraph receiver in combination, a typewheel, a spring to actuate the typewheel to bring characters thereon to the printing position, electromagnetic setting means to control the movement of the typewheel, electromagnetic means in series with said setting means for printing from the typewheel after the same has been set, and electromagnetic means in parallel with the setting means for tensioning the typewheel actuating spring.

---

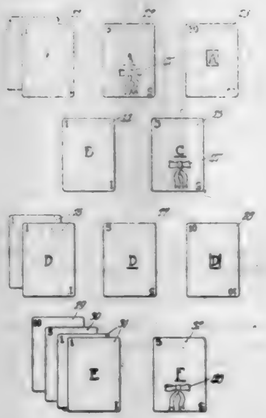
1,557,693. TOILET ARTICLE. JULES HINDRELDT, Brooklyn, N. Y. Filed Oct. 11, 1924. Serial No. 743,124. 2 Claims. (Cl. 132—87.)

1. The combination with a pair of hingedly connected sections having their opposed sides formed with shallow recesses, of a toilet article received in one of said recesses, a second toilet article received in the other recess and having a spring pedestal for supporting the second toilet article and for urging the sections to open position, and a latch for connecting the sections.

---

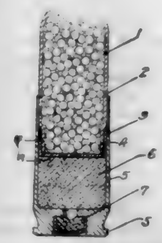
1,557,694. CARD GAME. JINGORO HINO and KIYOTAKA SHINDO, Chicago, Ill. Filed Apr. 3, 1924. Serial No. 703,975. 7 Claims. (Cl. 273—152.)

4. In a card game, a plurality of cards having means thereon for indicating the values of said cards, said cards comprising groups having similar indicating means thereon, each of said groups comprising a pair of cards having the same indicating means and a pair of cards having different indicating means, and other groups having different indicating means thereon than those of said first mentioned groups, each card having a symbol thereon, the symbols of each group being similar, the cards having the same indicating means having the same symbol thereon.



---

1,557,695. SHOT CARTRIDGE. CHARLES LE ROY HOLDEN, Kings Mills, Ohio, assignor to The Peters Cartridge Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 13, 1921. Serial No. 491,924. 3 Claims. (Cl. 102—15.)



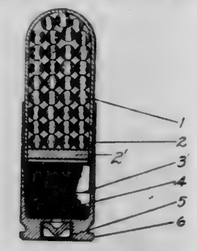
3. A shot cartridge comprising a tubular shell closed at one end and open at the other; a cup disposed in and fitting the bore of the shell with the open side of the cup opening toward the open end of the shell; charge of explosive material in the shell between the bottom of the latter and the cup; a charge of shot extending into the shell; and a tubular covering on the shot, closed at its outer end with a portion of its periphery fitting the bore of the shell and another portion of said periphery restricted and fitting the bore of the cup.

---

1,557,696. LOADED SHOT CARTRIDGE. CHARLES LE ROY HOLDEN, Kings Mills, Ohio, assignor to The Peters Cartridge Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 17, 1922. Serial No. 578,552. 16 Claims. (Cl. 102—15.)

9. A loaded shot cartridge comprising a shell, an explosive charge in the base of the shell, an inverted cup with its cylindrical wall extending toward the bottom

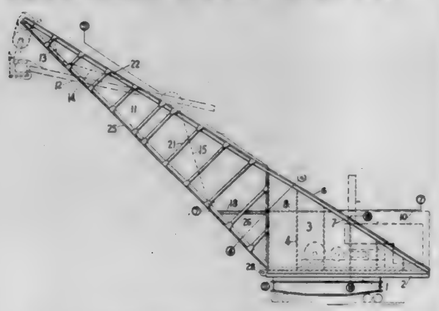
of the shell, a shot charge, an elongated cup-shaped container for said shot charge and extending into said shell to said cup leaving a portion of said container



projecting from the shell, and a wad in the open end of said container to hold the shot therein and to occupy a position adjacent the bottom of said cup.

---

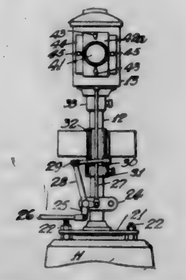
1,557,697. BOOM. GRANT HOLMES, Danville, Ill., assignor to The Marion Steam Shovel Company, Marion, Ohio, a Corporation of Ohio. Filed Apr. 28, 1924. Serial No. 709,428. 20 Claims. (Cl. 212—144.)



1. In a boom structure of the character described, a frame portion comprising side members having their upper edges inclined upwardly from the rear end thereof, a boom portion rigidly secured to said frame portion and extending upwardly and forwardly therefrom and having its lateral edges converging toward the point of the boom and arranged in line with the lateral edges of said side members.

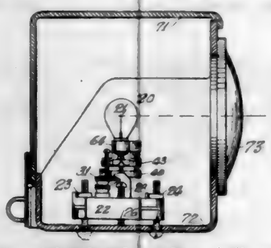
---

1,557,698. RAILWAY SIGNAL. SAMUEL P. HULL, New York, N. Y. Filed Feb. 9, 1923. Serial No. 618,157. 6 Claims. (Cl. 246—476.)



5. In a railway signal lamp, in combination, a lamp housing, a lens adjustably secured to said housing, a source of light and a movable colored member moving in the plane of said lens for changing the indication from said signal.

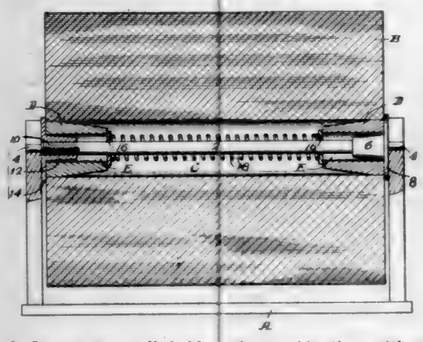
1,557,699. ADJUSTABLE LAMP BRACKET. SAMUEL P. HULL, New York, N. Y. Filed July 1, 1924. Serial No. 723,523. 8 Claims. (Cl. 240—44.)



1. A compound bracket for a lamp bulb comprising a primary bracket adjustably positioned and a secondary bracket with a socket having means for engaging said primary bracket, said lamp bulb secured in said socket, said socket being adjustably secured to said secondary bracket with reference to said engaging means and spring controlled means for latching said brackets together.

---

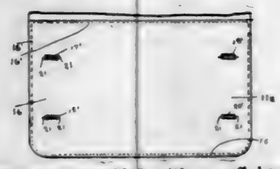
1,557,700. PAPER-ROLL HOLDER. CARL A. JADERLUND, Kansas City, Kans. Filed Oct. 29, 1923. Serial No. 671,467. 2 Claims. (Cl. 211—31.)



2. In a paper roll holder, the combination with end bushings, of a shaft extending freely through said bushings and provided adjacent to one end with an enlarged tapered portion for centering the associate bushing thereon, a tapered element removably mounted upon the shaft adjacent its opposite end for centering the other bushing thereon, peripheral flanges on the enlarged parts of the tapered portion of the shaft and the tapered element for engaging the outer ends of the bushings, two members loosely mounted upon the shaft, and a coil spring for forcing said members against the inner ends of the bushing.

---

1,557,701. SHIRT. EDWARD A. JODOIN, Springfield, Mass. Filed Apr. 16, 1924. Serial No. 707,787. 4 Claims. (Cl. 2—123.)

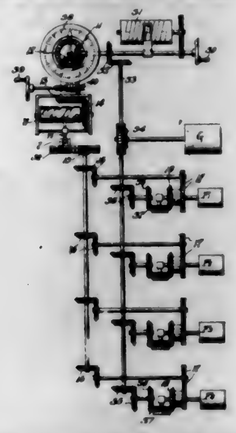


1. A shirt sleeve provided with a cuff having layers stitched to each other and a wholly detachable extra facing layer secured directly to and against one side of the cuff externally of the first named layers by auxiliary

stitching extending through the marginal edge portion of said extra facing and the marginal edge portions of the first named layers, and adapted to be wholly detached from said cuff by the removal of said auxiliary stitching, whereby the layers of the cuff will remain permanently secured to each other and the outer face of the layer against which the extra facing is secured will be completely exposed by the removal of said extra facing.

---

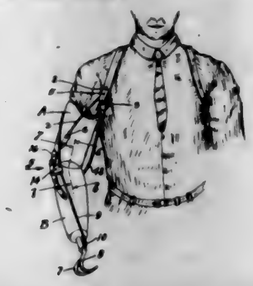
1,557,702. GUN-LAYING APPARATUS. PAUL KAMINSKI, Berlin-Pankow, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Oct. 26, 1923. Serial No. 670,884. 4 Claims. (Cl. 89—41.)



1. In an arrangement for the telecontrol of the elevation of simultaneously levelled guns the combination of an electrical transmission system having transmitters placed at a remote control station and receivers arranged near the guns and adapted to transmit a predetermined elevation angle, a mechanical device comprising a plurality of different coacting elements for correcting the elevation angle, mechanical means for operating one of said co-acting elements according to the lateral training angle of the guns, means for rotating a second element of said device in correspondence with the predetermined elevation angle and means for modifying the correcting movements of said co-acting elements with regard to the different distances between the remote control station and the individual guns.

---

1,557,703. ARTIFICIAL ARM. FRANK A. KENNEY, Denver, Colo. Filed Nov. 19, 1923. Serial No. 675,550. 11 Claims. (Cl. 3—12.)



1. An artificial arm comprising, in combination, a section adapted to be secured to the upper arm, a forearm section hingedly connected thereto, means for securing the arm to the wearer, means for flexing the arm, separate means for limiting the amount of flexure to any extent desired, and resilient means for normally holding said limiting means in inoperative position.

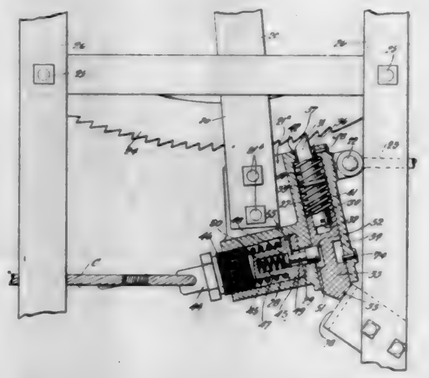
---

1,557,704. TRACK MECHANISM FOR AUTOMATIC TRAIN-CONTROL SYSTEMS. OTIS B. KENT, Washington, D. C., and ROBERT L. MILLER, Spokane, Wash.; said Miller assignor to Otis Automatic Train Control, Inc., Spokane, Wash., a Corporation of Washington. Filed June 30, 1921. Serial No. 479,056. 4 Claims. (Cl. 246—202.)

1. A ramp device for automatic train control apparatus including a pair of ramp rails arranged in end to end relation, a weight operated member normally exerting an upward force upon the adjacent inner ends of said ramp rails to maintain them normally projected, and electro-magnetic means to retract said member thereby to permit retraction of said ramp rails under the influence of gravity.

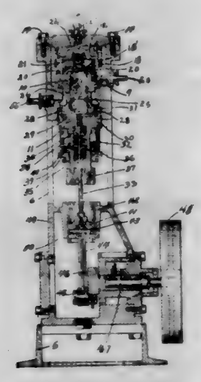
---

1,557,705. TRAILER BRAKE. GARNER L. KNOX, Los Angeles, Calif., assignor to Utility Trailer Manufacturing Company, a Corporation of California. Filed Oct. 22, 1924. Serial No. 745,131. 19 Claims. (Cl. 74—89.)



1. In a vehicle brake control mechanism, an operating lever operatively connected to the vehicle brakes, a control member operatively connected to the lever for moving it to brake applying position, releasable means for locking the lever in brake applying position, a trip mechanism for holding the locking means normally in operative position, said mechanism being operatively connected to and adapted to be tripped by movement of said control member, and means for moving the locking means to release position when the mechanism is tripped.

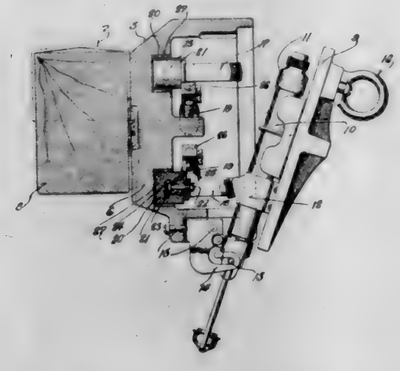
1,557,706. COMPRESSOR. GEORGE F. KNOX, Milwaukee, Wis. Original application filed Mar. 27, 1922, Serial No. 547,071. Divided and this application filed Jan. 7, 1924. Serial No. 684,900. 6 Claims. (Cl. 230—34.)



1. A compressor comprising a cylinder having an open end; a valve normally closing said open end; a cover member yieldingly engaging said cylinder end and guiding said valve; and a piston working in said cylinder.

---

1,557,707. FUSE BOX AND METHOD OF MAKING SAME. WILLIAM D. KYLE, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed June 6, 1924. Serial No. 718,355. 14 Claims. (Cl. 25—157.)

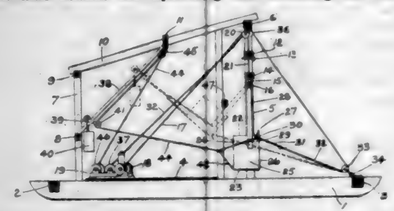


8. The hereindescribed method of forming boxes for housing electrical appliances, which consists in forming a housing member of dry process porcelain, in forming a contact carrying member of wet process porcelain, and in setting the wet process porcelain member in the dry process porcelain member.

---

1,557,708. DREDGE. HOKAN LUDVIG LARSON, Chilliwack, British Columbia, Canada. Filed Feb. 10, 1925. Serial No. 8,268. 7 Claims. (Cl. 37—71.)

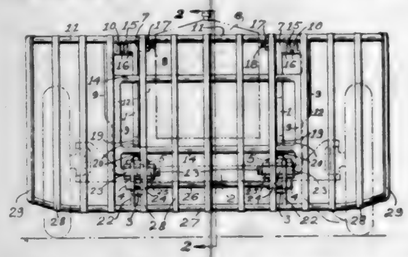
1. In a dredge having a pair of vertical standards and a head, of a crosshead slidable along the standards, a dredging bucket suspended for swinging movement below the crosshead, means for lowering and raising the crosshead and bucket for upsetting and drawing the bucket



forward to fill and after filling to restore the bucket to normal position, and means for inverting the bucket to discharge after raising.

---

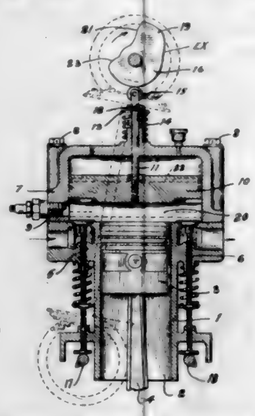
1,557,709. FENDER. ARTHUR M. LEISSE, St. Louis, Mo. Filed Aug. 29, 1924. Serial No. 734,866. 22 Claims. (Cl. 293—36.)



1. A fender comprising a pair of elements diverging from a mutual pivotal connection, and flexible fending means connecting the diverging portions of said elements, and limiting swinging movement of said elements away from each other and then causing one element to swing back towards the other element to a point beyond its normal position for flexing of the flexible means into a pocket formation.

---

1,557,710. INTERNAL-COMBUSTION ENGINE. WILLIAM LENNON, Manitou, Colo. Filed Oct. 9, 1924. Serial No. 742,568. 2 Claims. (Cl. 123—78.)



1. An internal combustion engine of the four cycle type provided with means for intermittently varying the volume of the clearance space to values over and under normal, said means comprising an auxiliary piston, said piston being stationary during the greater part of the compression and power stroke, means for moving the piston so as to decrease the clearance space during the exhaust stroke whereby thorough scavenging is obtained and means for moving the auxiliary piston so as to increase the volume of the clearance space above normal during the intake stroke whereby a supercharge of fuel is taken in, said means being also adapted to move the piston back to normal position during the first part of the compression stroke.

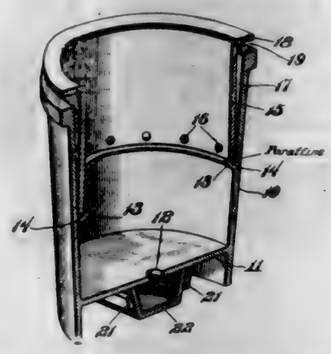
---

1,557,711. NAIL. FRANK P. LEONARD, Troy, N. Y., assignor of one-half to Frederick C. Claessens, Troy, N. Y. Filed Jan. 25, 1923. Serial No. 614,900. 3 Claims. (Cl. 72—118.)

1. As an article of manufacture, a nail having a shank portion, and a head portion, said head portion being relatively wide and having a plurality of flanges outturned from the plane of the top surface thereof, and arcuately bent to overlie said top surface.

---

1,557,712. FLOWERPOT. WILBER R. LITTLE, Iowa Falls, Iowa. Filed July 19, 1924. Serial No. 727,015. 1 Claim. (Cl. 47—34.)



A flower pot including side walls and a bottom, the bottom being spaced from the lower ends of the side walls, the side walls having a notch formed therein, the bottom having an opening formed therein, a drip pan insertible through the notch beneath the bottom to receive drippings from the opening of the bottom, said drip pan having upwardly flaring sides, and supports extending transversely of the pot having their adjacent faces inclined at an angle equal to the angle of flare of the sides of the drip pan and spaced apart a distance equal to the width of the drip pan at the point of contact with the support.

---

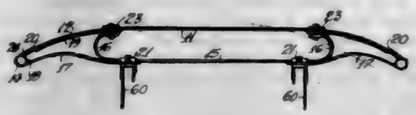
1,557,713. COMBINED WHEEL-HOLDER, LOCK, AND WRENCH. SAMUEL T. LOGAN, Denver, Colo. Filed Mar. 14, 1924. Serial No. 699,344. 3 Claims. (Cl. 70—90.)

1. In combination, an automobile axle, a spindle body oscillatively secured thereto, a spindle arm secured to said body, a radius rod connected to said axle, rigid means for connecting the spindle arm and radius rod,

said means comprising a member having a notch at one end for engaging with the spindle arm, and a similar notch at the other end for engaging with the radius rod.

---

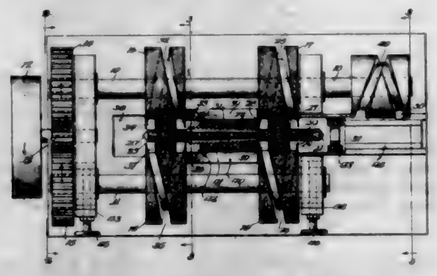
1,557,714. AUTOMOBILE BUMPER. MATTHEW H. LOUGHRIDGE, Bogota, N. J., assignor to Cox Corporation, Wilkes-Barre, Pa., a Corporation of New Jersey. Filed Jan. 30, 1925. Serial No. 5,725. 25 Claims. (Cl. 293—55.)



1. In an automobile bumper of the class described, the combination of an impact bar and a supporting bar in rear thereof with reinforcing end pieces connected to the impact bar intermediate its ends and to the supporting bar and following the contour of the impact bar up to the connecting point.

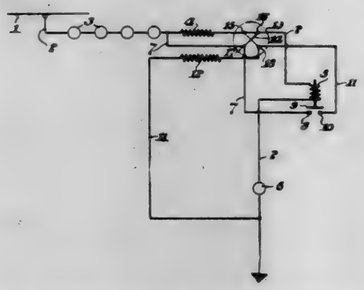
---

1,557,715. NUT-TAPPING MACHINE. PAUL H. MCCAIN, Chicago, Ill., assignor to Economy Screw Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 14, 1922. Serial No. 606,780. 27 Claims. (Cl. 10—133.)



14. A nut tapping machine embodying a pair of driving elements disposed in close proximity and rotatable about parallel axes and having the same direction of rotation and a tapping element, a portion of the tap projecting between and being engaged on opposite sides by the said driving elements, the peripheries of said driving elements being provided with serrations and the periphery of the portion of said tap that projects between said driving elements being correspondingly serrated whereby the said tap will be rotated and the serrations will co-operate to maintain the tap against longitudinal movement, portions of the peripheries of the said driving elements being shaped to form co-operating cam grooves for advancing the work upon the end of and lengthwise of the tap.

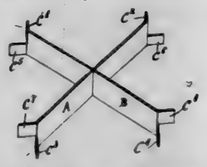
1,557,716. ELECTRIC HEADLIGHT DIMMING AND COMPENSATING MEANS. JOHN R. MCFARLIN, Philadelphia, Pa., and ELVY G. MCALLISTER, Audubon, N. J., assignors to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 14, 1920. Serial No. 351,462. 3 Claims. (Cl. 171—97.)



1. In a lighting system, a circuit comprising a set of lamps arranged in series; an auxiliary circuit around a lamp aforesaid and provided with resistance approximately equivalent to that through said lamp; said circuits having means for automatically opening and closing said auxiliary circuit when the circuit through said lamp is closed and opened respectively, and means for passing divided current through said lamp and resistance so as to reduce the current through said lamp relatively to that through the remainder of said lamps.

---

1,557,717. CONCRETE STRUCTURE. ROWLAND MCWILLIAMS, New York, N. Y. Filed Aug. 19, 1920. Serial No. 404,639. 3 Claims. (Cl. 72—122.)



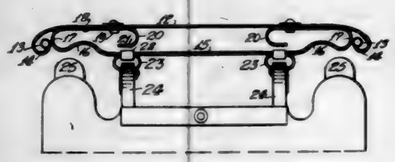
2. A device of the character described, comprising two strip-like members crossed at their central portions, the ends of said members being slit longitudinally, and the portions of the same slit end being bent in different directions, one portion of a slit end being in alignment with a similar portion of one adjacent end, and the other portion of the first-named slit end being in alignment with a similar portion of the other adjacent end.

---

1,557,718. CLAMPING BAND. JEAN PAUL MARIE MALLEVILLE, Paris, France. Filed Sept. 16, 1924. Serial No. 738,104. 4 Claims. (Cl. 24—20.)

2. In clamping bands, in combination a metal strip having a slotted end and a free end to pass therethrough and to be interlocked therewith, a device detachably mounted on the slotted end and arranged for the attachment of the free end thereto to grip said free end, pull the same and bend it over the slotted end.

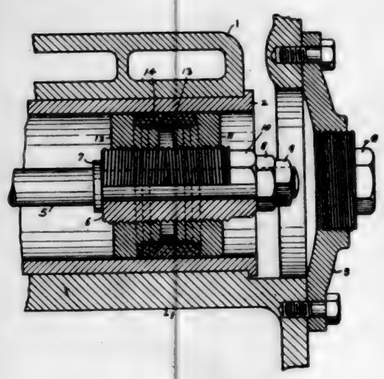
1,557,719. AUTOMOBILE BUMPER. JOSEPH J. MASCUCH, East Orange, N. J. Filed Nov. 7, 1924. Serial No. 748,351. 5 Claims. (Cl. 293—55.)



1. In a bumper of the class described, the combination of an impact member with its ends bent backwards in curves, a rear supporting bar parallel with and spaced from said impact member, said bar clamped against said impact member at points intermediate its ends and each end of said bar formed in a double C spring spaced from and in the plane of the supporting bar and means for clamping said bar to a vehicle frame.

---

1,557,720. PLUNGER. ROBERT A. MUELLER, Houston, Tex., assignor of one-half to E. J. Drake, Harris County, Tex., and one-half to Gray Tool Company, Houston, Tex., a Corporation of Texas. Filed Oct. 16, 1922. Serial No. 594,736. 9 Claims. (Cl. 74—109.)

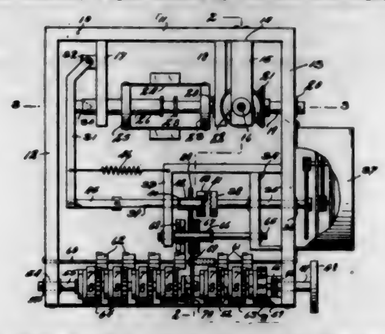


1. A plunger including a sleeve having oppositely threaded sections, plunger sections threaded into the respective sleeve sections, and an annular packing element clamped between said plunger sections.

---

1,557,721. RUNNING-TIME INDICATOR. CARL S. PASSAMANECK and HARVEY E. MCCAULOU, Fullerton, Calif. Filed May 5, 1925. Serial No. 28,175. 3 Claims. (Cl. 161—15.)

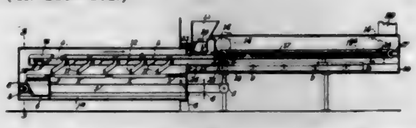
1. In means for indicating the running time of motors or the like, a register, a clock, a shaft operated from the clock, a governor connectible with the motor to be operated therefrom and including a part shifted in one direction as the governor comes to rest, a non-rotatable reciprocable shaft coaxial with the clock operated shaft, a sleeve rotatable upon the non-rotatable shaft, coacting clutch sections upon the sleeve and clock operated shaft, an arm pivoted to swing in a plane including the part shifted by the governor and the non-rotatable shaft and having a link connection with the non-rotatable shaft, a spring engaging said arm and constantly urging the same toward the part shifted by the governor and in a direction shifting the non-rotatable shaft to engage said clutch sections, a spur carried by the arm and engaging



in a socket carried by the part shifted by the governor and an operative connection between the register and said sleeve.

---

1,557,722. FEEDING DEVICE FOR FURNACES. ANTONIN PASTERNÁK, Velke-Kuncice, n/Ostr., Czechoslovakia. Filed Feb. 7, 1923. Serial No. 617,623. 3 Claims. (Cl. 110—101.)



1. In combination with a furnace grate, a furnace feeder comprising a frame mounted for longitudinal movement above the grate, means to impart reciprocating movement to said frame, blades pivotally mounted on said frame, a bar connected to said blades and adapted to rock the same into operative and into inoperative positions, a weighted lever movable with said frame and operatively connected to said bar, and means to operate said lever, to actuate said bar, and cause the same to operate said blades at the limits of the strokes of said frame.

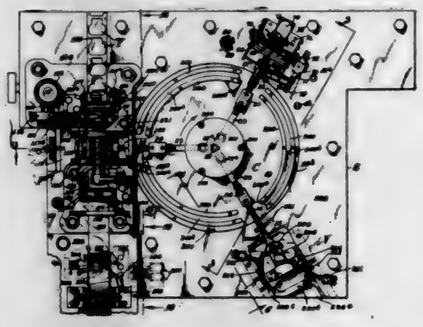
2. A furnace feeder comprising a fixed hopper, a movable bottom therefor, a frame arranged for longitudinal movement below said hopper, a second hopper carried by said frame and arranged to open the bottom of the first hopper when the frame is at one end of its stroke, the said second hopper having a movable bottom, and means to close the bottom of the second hopper as the latter reaches a position under the first hopper.

---

1,557,723. MEANS FOR MAKING INLAID CEMENT BLOCKS. ARTHUR E. PEARSON, Los Angeles, Calif. Filed Sept. 7, 1922. Serial No. 586,557. 1 Claim. (Cl. 25—123.)

A moulding device for inlaid cement blocks comprising a flat base for moulding the face of the blocks, a body mould composed of separable mating sections and having vertically disposed moulding faces on the inner sides thereof, and an inlay mould having vertical partitions removably held within said body mould whereby plastic inlays may be formed within the body of the blocks formed in said body mould, one of the edges of the inlay mould being flush with one of the edges of said body mould, and said inlay mould being of lesser depth than said body mould for providing a substantial backing of plastic material thereabove.

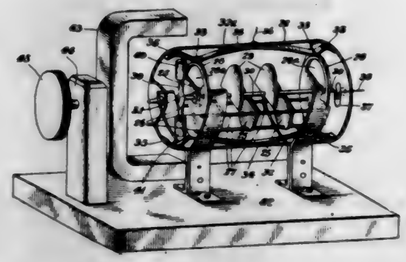
1,557,724. MACHINE AND METHOD FOR BUILDING ELECTRICAL CONDENSER STACKS. WILLIAM H. PRIESS, Belmont, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Aug. 2, 1921. Serial No. 489,156. 92 Claims. (Cl. 250—41.)



1. A machine for building mica sheet condenser stacks comprising a pickup mechanism for mica sheets, insulating material applying mechanism, a foil punching and laying mechanism and carrying means for carrying mica sheets to be treated from the pickup mechanism to the other mechanisms comprising a movable table and arms movable with and relative to said table towards and from said several mechanisms to take up the sheets and present them for treatment and means for moving said arms relative to the table to pick up mica sheets and present them for treatment and moving said table with said arms to the several mechanisms alternately.

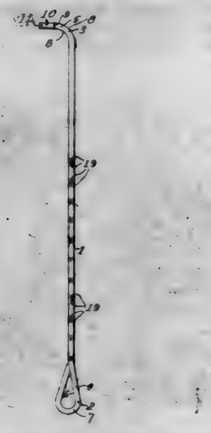
---

1,557,725. VARIABLE ELECTRICAL CONDENSER. JOHN A. PROCTOR, Lexington, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Original application filed Feb. 1, 1921. Serial No. 441,628. Divided and this application filed July 9, 1924. Serial No. 724,924. 16 Claims. (Cl. 250—41.)



1. A variable electrical condenser comprising electrical conductors which are movable relative to one another to permit variation of the condenser capacity; a vacuum casing surrounding said conductors and a vacuum dielectric between them, said casing mechanically supporting both said conductors in positions spaced from one another by the vacuum dielectric; and means causing variation of the condenser capacity by relative movement of said conductors in their vacuum-spaced relation to one another.

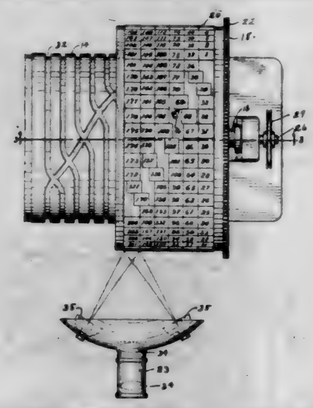
1,557,726. TOOL. OSCAR J. RANKIN, St. Louis, Mo. Filed July 30, 1923, Serial No. 654,657. Renewed June 1, 1925. 2 Claims. (Cl. 137—139.)



1. A tool of the character described comprising a rod having one of its ends flattened to rectangular form, the flattened portion being bent into a loop to form a handle, and having the other of its ends bent to form a perpendicular arm, the free end of said arm being bent a half turn about an axis parallel to the main portion of said rod, the flattening providing a slot with flat parallel sides.

---

1,557,727. MOTION-PICTURE MECHANISM. ERNEST M. REYNOLDS, Cleveland, Ohio. Filed May 2, 1923. Serial No. 636,094. 8 Claims. (Cl. 88—16.)

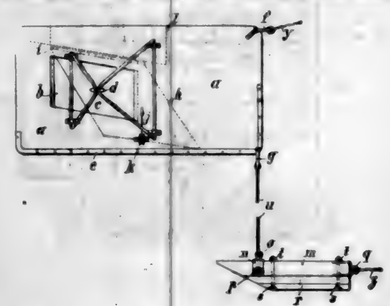


3. In a motion picture machine, a guide for a picture strip carrier comprising a spiral cam track having its ends connected by a return track running in the same general direction around the cam and intersecting the successive convolutions of the spiral track.

---

1,557,728. MEANS FOR OPENING FISHING NETS IN WIDTH AND HEIGHT. ALPHONSE VICTOR ALEXANDRE ROBERT, Morbihan, France. Filed Feb. 28, 1924. Serial No. 695,831. 2 Claims. (Cl. 43—9.)

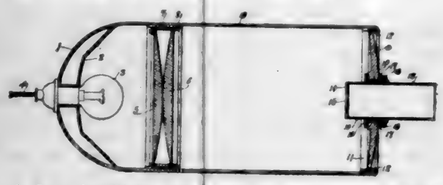
2. A device of the character described comprising a pair of fixed symmetrically disposed panels, counterweights, cables adjustably connecting the panels and the counterweights, a net disposed between the panels, cables connecting the panels to the head rope of the net and the counterweights to the ground rope of the net, each of said panels having a quadrangular orifice, the transverse sides of the orifice being parallel to those of the panel and the longitudinal sides being at inclination to those of the panel, this arrangement of the elements constituting means for keeping the nets opened both in



width and height when the net is being trawled, an articulation on the rear side of the fixed above panels and parallel to the upper inclined side thereof, an adjustable lozenge-shaped panel hung upon said articulation, a cable connecting the lozenge-shaped panel and the front face of the fixed panel, this constituting means for balancing and regulating the depth of the net, as stated.

---

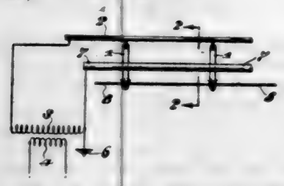
1,557,729. ILLUMINATING MECHANISM. JOHN T. SIEFERT, Dayton, Ohio. Filed June 5, 1924. Serial No. 717,986. 2 Claims. (Cl. 240—41.)



1. In a headlight, the combination with a casing, an electric light bulb near one end thereof, and a reflector, of a translucent disk located near the other end of said casing and having an opening therein, and a tube adapted to occupy such opening and provided at or near its inner end with a restricted orifice through which the rays of light pass and at or near which they cross; the said disk serving to dim the light and said tube to cut off the direct rays from the vision of an on-comer.

---

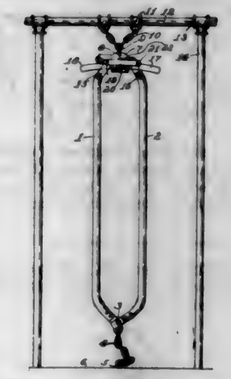
1,557,730. METHOD OF PRODUCING A FIBROUS MASS IMPREGNATED WITH A PHENOLIC CONDENSATION PRODUCT. FRANKLIN S. SMITH, Philadelphia, Pa., assignor to The Products Protection Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 15, 1921. Serial No. 445,114. 7 Claims. (Cl. 18—55.)



3. The method of producing a string of organic material impregnated with bakelite B, which comprises the dissolving of bakelite A in a suitable solvent, thereafter impregnating the said string with the solution thus formed, subjecting the same to the action of a high tension electric current for removing the solvent from the said string and thereafter converting the bakelite from the A to the B form.

---

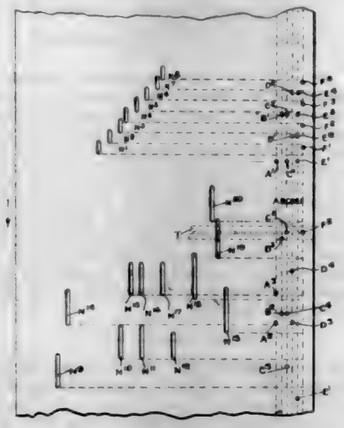
1,557,731. STANCHION. HENRY W. STEEGE, Waterloo, Iowa. Filed Dec. 29, 1924. Serial No. 758,766. 3 Claims. (Cl. 119—149.)



1. In combination, an elevated support, an open-ended housing suspended from said support, a pair of stanchions swingingly connected at their lower extremities and having at their upper ends arcuate arms in parallel relation mounted within said housing to slide past each other, and resiliently controlled operating connections movably connected to and between said housing and the upper parts of the stanchions, operable to be moved past their dead centers and swing the stanchions to and fro to closed and opened positions and to yieldingly resiliently lock them in both of said positions.

---

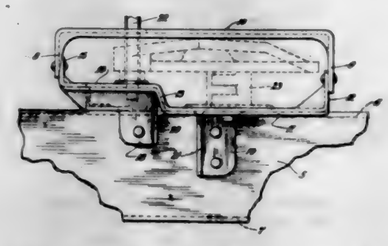
1,557,732. NOTE SHEET. CHARLES F. STODDARD, New York, N. Y., assignor to American Piano Company, New York, N. Y., a Corporation of New Jersey. Original application filed July 7, 1908, Serial No. 442,288. Patent No. 1,409,478, dated Mar. 14, 1922. Divided and this application filed Mar. 13, 1922. Serial No. 543,148. 3 Claims. (Cl. 84—161.)



1. A perforated sheet for tone-governing apparatus, comprising a plurality of perforations for tones to be played in a group substantially simultaneously, a perforation for a relatively loud tone being advanced beyond a perforation for a relatively soft tone; and an intensity-reducing perforation retreated rearwardly of the louder-tone perforation, to cooperate with the softer-tone perforation.

---

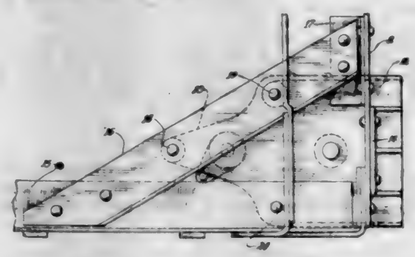
1,557,733. MOUNTING FOR BRAKE GEARS. SVEN JULIUS STRID, Chicago, Ill., assignor to Fred Mathews, Chicago, Ill. Filed Aug. 5, 1925. Serial No. 48,423. 3 Claims. (Cl. 74—121.)



1. The combination with an angular end sill of a railway car, of a brake gear mounting device comprising an inverted U-shaped top casting, a bottom casting having flanged ends secured to the top casting, said bottom casting being provided with a plurality of lugs disposed at right-angles to each other, certain of said lugs resting upon the horizontal portion of said end sill whereby to support the brake gearing above the end sill, and the other lug or lugs engaging and secured to the vertical portion of the end sill whereby to brace the structure against stress longitudinally of the car.

---

1,557,734. MOUNTING FOR BRAKE GEARS. SVEN JULIUS STRID, Chicago, Ill., assignor to Fred Mathews, Chicago, Ill. Filed Aug. 5, 1925. Serial No. 48,424. 4 Claims. (Cl. 74—121.)



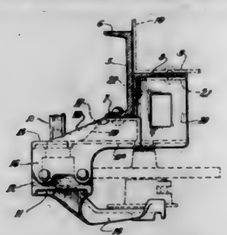
1. Means for mounting a brake gear, comprising a car body provided with a depending member at the end thereof, a longitudinal side-sill, an obliquely disposed angle-bar connected at its forward end to the depending member at a distance from the corner of the car body and secured at its opposite end to said longitudinal sill, and a gear housing, the upper member of which is provided with an inward extension secured to said oblique brace and has an abutment arising in front of said depending member intermediate the adjacent end of the brace, and the corner of the car body.

---

1,557,735. MOUNTING FOR BRAKE GEARS. SVEN JULIUS STRID, Chicago, Ill., assignor to Fred Mathews, Chicago, Ill. Filed Aug. 5, 1925. Serial No. 48,425. 3 Claims. (Cl. 74—121.)

1. A brake gear mounting comprising top and bottom castings, said casting each consisting of a horizontal plate having lateral end flanges that are connected to each

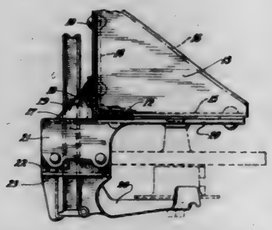
other, said bottom casting having a bracket extending from the same intermediate its ends, and said top casting having a box-like extension projecting above its horizon-



tal plate whereby the same is fitted pendent upon the end sill with said extension disposed back of the sill and vertically alongside the same.

---

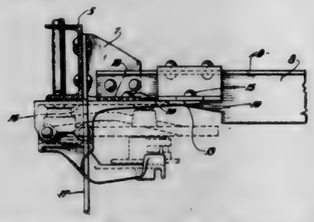
1,557,736. MOUNTING FOR BRAKE GEARS. SVEN JULIUS STRID, Chicago, Ill., assignor to Fred Mathews, Chicago, Ill. Filed Aug. 5, 1925. Serial No. 48,426. 4 Claims. (Cl. 74—121.)



1. In combination with a car end-sill of channel section, of a gusset secured to the end-sill and extending inwardly therefrom longitudinally of the car, a top casting consisting of a plate disposed underneath the lower flange of the sill, an extension projecting inwardly from said plate and connected to said gusset, an upstanding member on said plate outside said sill and engaged therewith and a bottom casting connected to said top casting and cooperating therewith to mount a gearing mechanism between the same.

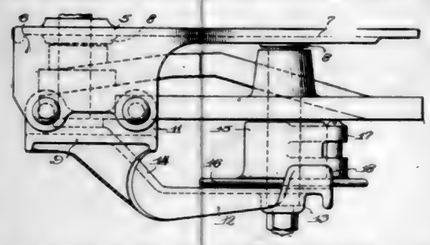
---

1,557,737. MOUNTING FOR BRAKE GEARS. SVEN JULIUS STRID, Chicago, Ill., assignor to Fred Mathews, Chicago, Ill. Filed Aug. 5, 1925. Serial No. 48,429. 4 Claims. (Cl. 74—121.)



1. A mounting for railway car brake gears comprising a car end-sill, a sill connected to and extending transverse thereto and longitudinally of the car, a substantially Z-shaped plate secured to said longitudinal sill and to one of the horizontal members a portion of the gear housing is secured, a plate secured to the inner face of said end-sill, and a lateral extension projecting inwardly from said plate above and secured to the gear housing.

1,557,738. HOLDER OR SUPPORT FOR BRAKE GEARS. SVEN JULIUS STRID, Chicago, Ill., assignor to Fred Mathews, Chicago, Ill. Filed Aug. 5, 1925. Serial No. 48,430. 6 Claims. (Cl. 74—121.)



1. A device of the kind described comprising a top member, and a bottom member connected therewith, said bottom member provided with a bracket arm, and horns projecting laterally from the outer portion of said bracket arm.

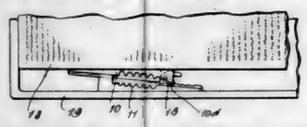
---

1,557,739. ARTIFICIAL TOOTH. HANS STURM, Reichenberg, Czechoslovakia. Filed Feb. 11, 1925. Serial No. 8,319. 1 Claim. (Cl. 32—9.)

The combination with an artificial tooth having a recess, of a back plate, a polygonal loop adapted to receive cement and connected to the back plate, said loop fitting within the recess and interlocked with the tooth, and a vertical pin extending through the back plate and fitting within the loop at the front thereof and additionally fastening the loop to the back plate.

---

1,557,740. LOCK WEDGE DEVICE. WILLARD A. SULLIVAN, Jamaica, N. Y. Filed June 3, 1925. Serial No. 34,533. 4 Claims. (Cl. 254—42.)



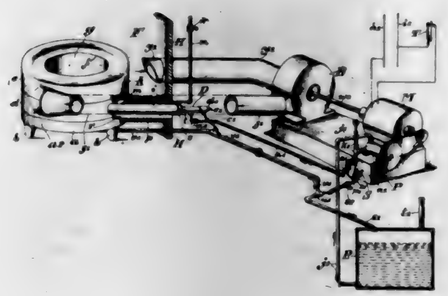
1. A device of the class described comprising two wedge-shaped bodies adapted to be placed one upon the other, means for retaining said bodies against lateral displacement, cooperative means on said bodies for retaining the same against movement longitudinally of one another in one direction, said means comprising a plurality of teeth arranged longitudinally of one of said bodies, a pawl fashioned from sheet metal folded to form two similar and spaced side portions, said pawl being pivoted to the other of said bodies and cooperating with said teeth, and the side portions of said pawl having spring properties adapted to frictionally engage the body in connection with which it is mounted to retain the pawl in predetermined positions.

---

1,557,741. METHOD OF AND APPARATUS FOR BURNING FUEL. JAMES B. SWORD, Philadelphia, Pa., assignor to Sword & Kimber Company, Philadelphia, Pa., a Corporation of Delaware. Filed Mar. 1, 1924. Serial No. 696,119. 12 Claims. (Cl. 158—28.)

1. The method of burning liquid fuel, which comprises atomizing the fuel, effecting mixture thereof with a

stream of whirling hot gaseous products of combustion containing oxygen sufficient only partially to burn the fuel, and thereafter effecting substantially complete com-



bustion in a different region in contact with oxygen of air freshly added at a point beyond the region of mixture.

---

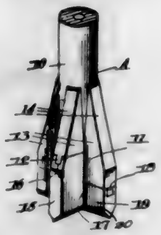
1,557,742. POKE. AUGUST W. SYNOGROUND, Nortonville, N. Dak. Filed Jan. 6, 1925. Serial No. 889. 2 Claims. (Cl. 119—140.)

1. An animal poke comprising a yoke adapted to be fitted about the neck of the animal, a lever fulcrumed between its ends upon the upper end of the yoke and adapted at its front end to engage a fence wire and be rocked thereby, a spur carried by the rear end of the lever, a contractile spring attached at one end to the lever in front of the yoke and at its opposite end to the front side of the yoke to yieldingly hold the spur away from the animal, and a flexible connection between the rear portion of the lever and the rear side of the yoke to limit the movement of the lever under the influence of the spring.

---

1,557,743. STEEL BIT FOR ROCK DRILLS. ALBERT TERRILL, Haileybury, Ontario, Canada. Filed June 30, 1923. Serial No. 648,760. 4 Claims. (Cl. 255—64.)

1. In a device of the character described, a steel bit for rock drills comprising a slotted stem formed with a tongue in said slot and tongues on each side of the slot, a bit for the stem formed with a groove to engage with the tongued slot in the stem, a tongued slot in said bit,



a second bit having a groove adapted to slidably engage with the tongued slot in the first bit whereby the bits are securely retained in position on the stem.

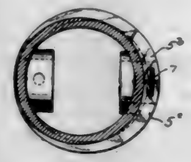
---

1,557,744. SALIVA TUBE. MARION L. TOBRINER, San Francisco, Calif. Filed July 17, 1922. Serial No. 575,498. 1 Claim. (Cl. 32—33.)

A saliva tube comprising a tubular stem formed with a U-bend and an end extension, a one piece cap enclosing the terminal end of the stem and into which a portion of the stem end extension projects to a point near the bottom of the cap, with the stem end extension and cap side walls in spaced relation, the wall of the cap being of substantially self-sustaining material and provided with a plurality of perforations arranged at spaced points throughout its area.

---

1,557,745. ANTISLAP PISTON RING. BRUCE W. TRAYLOR, Philadelphia, Pa. Filed Aug. 23, 1924. Serial No. 733,805. 12 Claims. (Cl. 74—108.)

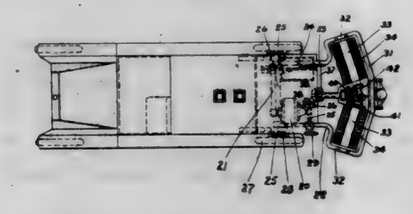


1. In combination, a piston provided with a peripheral groove decreasing in depth from one point to a point diametrically opposite, a piston ring of decreasing thickness seated in said groove, and means to cause movement of said ring in said groove and in a direction around the piston.

1,557,746. FLASH-LIGHT HOLDER. LEE J. VOORHEES, Binghamton, N. Y., assignor to National Carbon Company, Inc., a Corporation of New York. Filed Jan. 4, 1921. Serial No. 434,945. 9 Claims. (Cl. 240—52.)

2. A flashlight holder comprising, in combination, a substantially U-shaped spring clip adapted to fit a flashlight casing, a pair of independently movable legs foldable alongside said casing, means including a single rivet pivotally connecting said legs to said clip centrally between the limbs of the latter, and means for coupling said legs together.

1,557,747. VACUUM STREET CLEANER. MATHIAS WAGNER, Kokomo, Ind., assignor to Albert G. Wagemmenn, Alexandria, Ind.; Lucia Wageman, administratrix of said Albert G. Wagemmenn or Albert G. Wageman. Filed July 2, 1921. Serial No. 482,129. 1 Claim. (Cl. 15—11.)

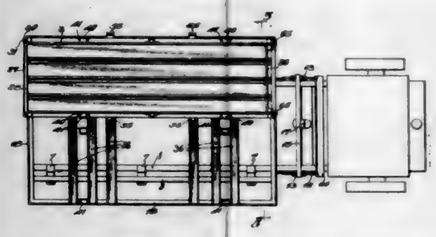


In a street cleaner, the combination of a vehicle framework, of a supporting framework pivotally supported at each end by said vehicle framework, a pair of elongated cleaning members positioned end to end angularly of each other and in spaced relation and pivotally supported at their outer ends by said supporting framework, a suction device terminating at the spacing between said cleaning members and rearwardly thereof and carried by the supporting framework, a universal joint connection between the adjacent ends of said cleaning members, a bevel gear between the members for driving said universal joint connection, a power operable bevel gear on said vehicle framework, a shaft having a bevel gear at each end constantly meshing with the aforesaid bevel gears, a source of suction on the vehicle framework and connected to the suction device through a flexible connection, and means for simultaneously moving said supporting framework, cleaning members and suction device into cleaning or noncleaning position without disconnecting the power drive to said cleaning members or the suction device from the source of suction.

1,557,748. CONCRETE PLAQUE AND METHOD OF MAKING SAME. IRENE MARTHA WASHINGTON, Brooklyn, N. Y. Filed Oct. 24, 1924. Serial No. 745,601. 8 Claims. (Cl. 18—61.)

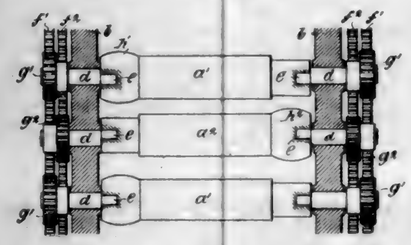
1. The method of producing in a cement plaque a reproduction of a design resembling a painting on any particular fabric which method comprises outlining the design on a sheet of such fabric, applying masses of cement colored to correspond to different portions of said design on the corresponding areas of said fabric in a layer of proper thickness, allowing the cement to set and finally stripping off said fabric from the face of the plaque so formed.

1,557,749. VEHICLE. CLARENCE J. WEBER, Chicago, Ill., assignor to National Brick Co., Chicago, Ill., a Corporation of Illinois. Filed July 24, 1922. Serial No. 577,023. 4 Claims. (Cl. 296—28.)



1. In a vehicle of the class described, the combination of a frame, a plurality of separately removable compartments mounted upon said frame, each of said compartments extending longitudinally of the frame from the front to the rear thereof, means between the frame and the bottom of the compartments for holding the compartments against longitudinal movement, and removable stake means along opposite sides of the frame and longitudinally along the intermediate portion of the frame for coopegation with the opposite longitudinal sides of the compartments for holding same in place.

1,557,750. NAP-RAISING MACHINE. EMIL WENZEL, Aue, Germany. Filed Sept. 4, 1923. Serial No. 660,790. 2 Claims. (Cl. 26—34.)

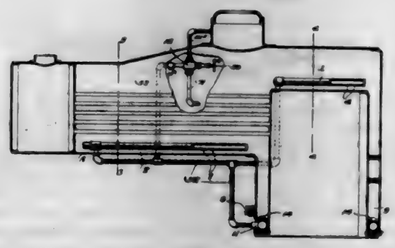


1. A nap raising machine of the card roller type, comprising the combination with a raising cylinder, nap raising rollers provided on said cylinder and means for rotating said raising rollers about their axes, of means interposed between the raising rollers and the ends of the raising cylinder for imparting eccentric movements to the individual nap raising rollers, whereby said rollers are caused to move towards and away from the cloth during their usual rotation.

1,557,751. TOY BALL. WALTER H. WINKS, Baltimore, Md., assignor of one-half to William M. Pariett, Baltimore, Md. Filed July 2, 1925. Serial No. 41,151. 6 Claims. (Cl. 213—106.)

6. A ball including a plurality of sections, means for hinging the sections together, means for causing the sections to fly apart, catch means for holding the sections together, and means projecting beyond the periphery of the ball and operable upon impact for releasing the catch means.

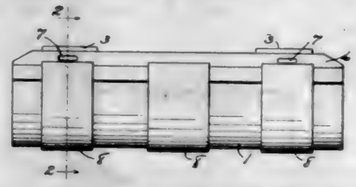
1,557,752. MUD RING FOR BOILERS. HENRY V. YOWELL, El Reno, Okla., assignor of one-half to Sarah A. Garrity, El Reno, Okla. Filed Apr. 6, 1920. Serial No. 371,645. 4 Claims. (Cl. 122—383.)



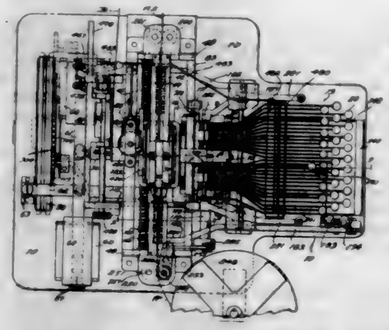
1. The combination with a locomotive boiler, of a hollow mud ring interposed between and connected to the boiler sheets at the bottom of the legs and having apertures in its upper wall in communication with the interior of the legs and also having above said apertures caps disposed to assist in the passage of water toward a blow-off valve connected to one leg at a point slightly above the mud ring, and mean for causing water to pass through the mud ring.

1,557,753. MEAT COOKER. HENRY CARL ZAUN, Oakland, Calif. Filed Oct. 10, 1924. Serial No. 742,855. 4 Claims. (Cl. 100—57.)

3. A meat cooker comprising a split spring tube, reinforcing segments at the meeting edges thereof, outstanding flanges on said segments designed for contacting engagement for limiting the springing of the tube to closed position, a removable segmental plate in the tube below the confronting edges thereof, longitudinally disposed angle plates secured to the first mentioned segments and to the tube, and split spring bands surrounding the tube and contacting the angle plates, for the purpose set forth.

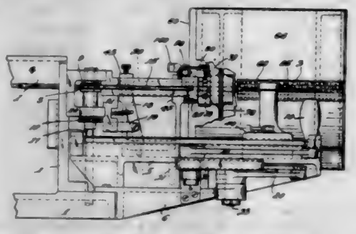


1,557,754. EMBOSSING MACHINE. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 9, 1922. Serial No. 535,311. 205 Claims. (Cl. 197—6.2.)



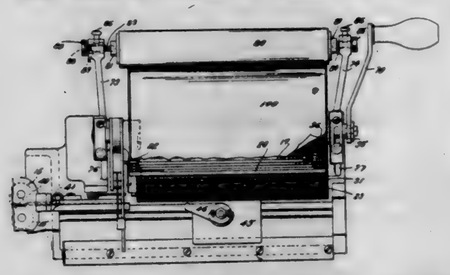
1. In a machine of the character described, the combination of a die carrier movable as a unit and carrying cooperating male and female dies arranged in straight rows facing each other, means for periodically feeding a continuous ribbon between male and female dies in the direction of the length of the rows, and a keyboard for controlling the position of the die carrier.

1,557,755. MECHANISM FOR ASSEMBLING PRINTING STRIPS. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 21, 1922. Serial No. 583,188. 24 Claims. (Cl. 101—1.)



1. The combination with means for delivering a printing strip, of a curved printing form having means for receiving and holding the strip, means for moving the strip from the delivering means onto the form, and means for turning the form about the axis of curvature thereof.

1,557,756. DEVICE FOR TAKING PRINTERS' PROOFS. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 14, 1923. Serial No. 674,653. 21 Claims. (Cl. 101—3.)



1. The combination, in one machine, of mechanism for producing printing members, mechanism for assembling them in a form, and mechanism for taking a proof of them while assembled.

1,557,757. PROCESS FOR PREVENTION OF DECAY IN FRUITS AND VEGETABLES. HARRY R. FULTON and JOHN J. BOWMAN, Washington, D. C., dedicated, by mesne assignments, to the People of the United States. Filed July 9, 1925. Serial No. 42,552. 2 Claims. (Cl. 99—17.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A process for preparing fresh fruits and vegetables for market which comprises the application to the surface of such articles of a solution of an alkaline hydroxide, to retard the growth or development of the organisms causing stem-end rot, blue-mold rot or other forms of decay.

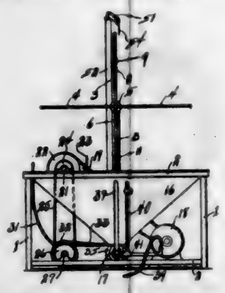
1,557,758. PROCESS FOR THE PREVENTION OF DECAY IN FRUITS AND VEGETABLES. HARRY R. FULTON and JOHN J. BOWMAN, Washington, D. C., dedicated, by mesne assignments, to the People of the United States. Original application filed July 9, 1925, Serial No. 42,552. Divided and this application filed Sept. 11, 1925. Serial No. 55,862. 3 Claims. (Cl. 99—1.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A process for preparing fresh fruits and vegetables for market which comprises the application to the surface of such articles of a solution of a salt of lithium in which the lithium base is combined with a strong acid radical, to retard the growth or development of the organisms causing stem-end rot, blue-mold rot, and other forms of decay.

1,557,759. CROSSWISE-REENFORCED-CONCRETE RIBBED CEILING WITH HOLLOW OR LIGHT BLOCKS. MAX GALKE, Eisenach, Germany. Filed Feb. 7, 1925. Serial No. 7,678. 3 Claims. (Cl. 72—66.)

1. A crosswise reenforced concrete ribbed ceiling comprising in combination light filling bodies spaced to form continuous longitudinal and transverse intervals between the filling bodies, said intervals standing at right angles to one another, projections on the upper surface of said filling bodies, said projections having approximately the height of a commonly used compression girder and being spaced at regular intervals, reenforcing rods in the longitudinal and transverse intervals between said filling bodies, and a concrete filling of the intervals both between said filling bodies to form longitudinal and transverse stress ribs and between said projections of the filling bodies to form a continuous lattice work like compression girder of desired compressive or tensile strength situated in the surface of the ceiling.

1,557,760. GLAZING MACHINE. ALONZO H. GREENE, Fort Worth, Tex. Filed Dec. 1, 1924. Serial No. 753,206. 9 Claims. (Cl. 18—3.5.)

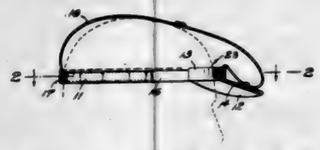


1. A glazing machine comprising an upright frame, a reel and a shaft therefor journaled in said frame, means for mounting a sash on said reel, a hopper and mechanism for mixing ingredients in said hopper including a pump in communication with said hopper and a pipe communicating with said pump and with said hopper, and gearing for driving said pump.

1,557,761. CLAMPING BUCKLE. ALLEN H. KEENGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed July 12, 1924. Serial No. 725,544. 3 Claims. (Cl. 14—191.)

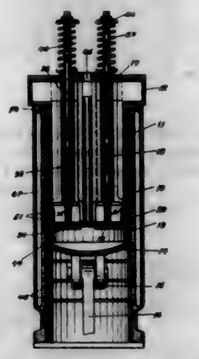
3. In a clamping buckle of the type described, a duplex clamping member having laterally extending projections, and a floating clamping member having its opposite sides slitted and the slitted portions turned over to form housings for loosely engaging the said laterally extending projections to permit a rolling motion of the floating clamping member on said projections, an angular edge member on said floating clamping member and of the full width thereof and a narrower edge member arranged between the slits and extending from the floating clamping member in a direction opposite to the full-width edge.

1,557,762. ANTIBALDNESS CAP. GEORGE S. MACLEOD, Seattle, Wash. Filed Oct. 10, 1923. Serial No. 667,626. 3 Claims. (Cl. 2—176.)



2. In a head covering, a crown, a stiff visor secured throughout its rear edge directly to said crown, said edge being formed centrally of its width with a reentrant angular recess between two concave portions whereby said crown is retained within said recess in spaced relation with the head of the wearer, said concave portions affording bearing surfaces to the crown with respect to the head at opposite sides of said recess.

1,557,763. INTERNAL-COMBUSTION ENGINE. ANTHONY J. METZ, Davenport, Iowa. Filed Sept. 9, 1922. Serial No. 587,160. 13 Claims. (Cl. 123—173.)



7. In an internal combustion engine of the class described, a valve-supporting member comprising a cylindrical casing containing companion spaced-apart intake and exhaust conduits of substantially tri-angular formation, occupying approximately one-half of the circumferential space in said casing, and provided at their inner ends with valve-openings off-set from the main passages of said conduits; the wall of said casing forming one wall of each of said conduits, and the other two walls of each thereof being exposed to heat-modifying elements contained within said casing.

1,557,764. MEANS FOR INHIBITING THE DETERIORATION OF YEAST CELLS. MAUD E. NEIL, Washington, D. C. Filed Oct. 4, 1921. Serial No. 505,388. 2 Claims. (Cl. 99—10.)

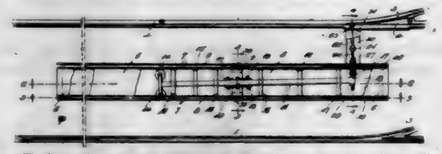
2. Means for inhibiting the deterioration of compressed yeast comprising a mixture of two parts of said yeast, two parts of a powder obtained by the evaporation of cows' milk, one-eighth part of cooked arrowroot powder and sufficient water to thoroughly mix said substances.

1,557,765. AUTOMATIC STOP. HARRY E. NICHOLAS, Los Angeles, Calif. Filed Oct. 14, 1920. Serial No. 416,861. 11 Claims. (Cl. 198—34.)

1. In combination, a movable conveyer on which articles are adapted to be conveyed, and article operated means for stopping movement of the articles on the conveyer, said means being disposed at intervals along the conveyer so that the stopping of one article will occur in spaced relation to the stopping of an adjacent article.

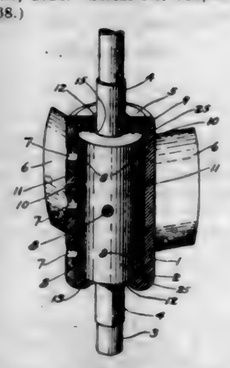
1,557,766. AUTOMATIC RAILWAY SWITCH. ALVA S. NORMENT, Richmond, Va. Filed July 22, 1925. Serial No. 45,323. 3 Claims. (Cl. 246—323.)

2. A switch operating mechanism comprising a jointed rod pivotally attached to the switch-point to permit any rocking motion of the switch-point, said rod carrying spiral springs on both sides of a connecting block which provide a cushioning action in throwing the switch-point, a bar attached to the connecting block and carried in a saddle pivotally attached to the base of the underground framework, said bar also carrying rollers on



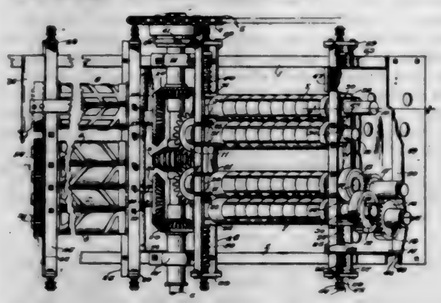
its T-shaped end which protrude through slots into the grooves, a set of two plungers, each having affixed at the lower end a shoe which is pushed into the groove when the plunger is depressed, and which contacts with the roller carried by the underground bar.

1,557,767. GUIDE BEARING FOR VERTICAL PUMP SHAFTS. IMMANUEL ALVIN OLIVER, Pomona, Calif. Filed Sept. 20, 1924. Serial No. 738,919. 13 Claims. (Cl. 308—168.)



1. In combination, in a pump, a vertical guide bearing for a vertical revoluble pump shaft, including a supporting element having a central cylindrical recessed chamber, and a resilient bearing sleeve revolubly mounted within said chamber and around the revoluble vertical pump shaft.

1,557,768. MEANS FOR OPERATING THE ROLLS OF CORN-HUSKING MACHINES. THEODORE H. OPPENHEIM and BERNARD SELHORST, Coldwater, Ohio, assignors to New Idea Spreader Co., Coldwater, Ohio, a Corporation of Ohio. Filed Dec. 22, 1924. Serial No. 757,533. 8 Claims. (Cl. 130—5.)

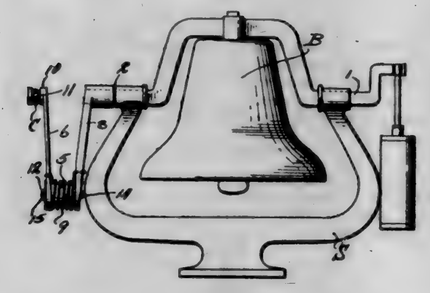


1. In a corn-husking machine, the combination of snapping rolls, husking rolls, a driving shaft disposed transversely of the machine between the opposed ends of the husking rolls and the snapping rolls, opposed

gears carried by said driving shaft, and gears carried by some of the husking rolls and some of the snapping rolls meshing with the opposed gears whereby all the rolls will be driven.

---

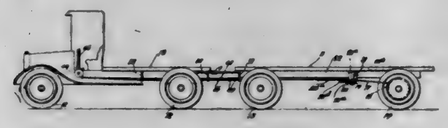
1,557,769. CORD ARM. FREDERICK F. PALMORE, El Reno, Okla. Filed Aug. 22, 1925. Serial No. 51,856. 3 Claims. (Cl. 116—150.)



3. In combination with a bell, a rock arm operatively engaged therewith, a second arm pivotally connected with the rock arm, said second arm being provided with means for attaching a bell cord therewith, means for normally maintaining the second arm in overlying relation with respect to the first named arm, both of said arms being provided with coacting means whereby the second named arm has limited swinging movement in one direction relative to the rock arm when pull is imposed upon said second arm.

---

1,557,770. BRAKE-OPERATING DEVICE FOR TRAILERS. ANDREW L. PARRISH, Long Beach, Calif. Filed Mar. 31, 1923. Serial No. 629,032. 23 Claims. (Cl. 188—3.)



1. In combination with a leading vehicle and a trailer coupled thereto, brakes operatively connected to the wheels of the trailer, brake applying means carried by said trailer and connected to said brakes, brake setting means on said trailer adapted to co-act with said applying means to retain brake application, control means carried by said leading vehicles and adapted to be selectively operated, a flexible member operatively connecting to said applying means and said control means, means on said trailer adapted to release said setting means, a second flexible member connecting said releasing means and said control means whereby selective actuation of the control means is adapted to operate said applying and releasing means selectively, and yieldable take-up means for maintaining the two flexible members in taut condition.

---

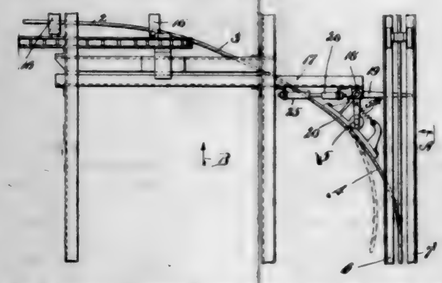
1,557,771. FISH LURE AND METHOD OF MAKING SAME. ERNEST H. PECKINPAUGH, Chattanooga, Tenn. Filed Aug. 28, 1922. Serial No. 584,850. 10 Claims. (Cl. 43—48.)

1. An artificial bait comprising a cork body combined with a hook, and means for uniting these two parts comprising a plate of material united to the shank of the hook so as to provide two bendable wings normally disposed in the plane of the hook, and a water resistant coating of enamel applied over the outer surface of the

buoyant body to fill the pores thereof and also filling the kerf whereby the interior of the bait is protected against the action of the water.

---

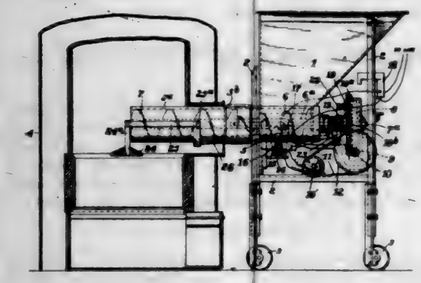
1,557,772. STOP DEVICE FOR CONVEYER SYSTEMS. FRANK B. PEEBLES, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Apr. 19, 1923. Serial No. 633,133. 6 Claims. (Cl. 104—104.)



3. A conveyer system comprising a pair of tracks converging to a junction point, a freely turning shaft extending across and above one of said tracks, a stop member secured to said shaft and normally depending into the path of carriers moving along said track, an arm secured to the shaft, and an actuator movable by a carrier approaching the junction point along the other track and having an element engageable with said arm for restraining the latter and thereby the stop member, from movement.

---

1,557,773. FUEL-FEEDING APPARATUS. ALLEN CLIFTON PILCHER, JOHN FRANCIS BABBITT, and JOHN VASHE PILCHER, Louisville, Ky., assignors to Efficiency Mfg. Co., Louisville, Ky., a Corporation of Kentucky. Filed Apr. 3, 1922. Serial No. 549,125. 13 Claims. (Cl. 214—21.)

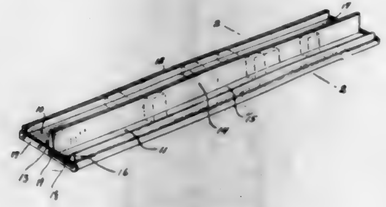


1. Apparatus for feeding fuel to furnaces, comprising a supply hopper and delivery conduit, a support therefor, means for feeding fuel therefrom, a tamping device beneath the end of the conduit, and means for imparting vertical movement to said device.

13. Fuel feeding apparatus, comprising a hopper having a delivery conduit, primary and secondary feeding devices in said conduit, means for operating both said devices in unison for a determined length of time and for stopping the primary device and continuing the feed of the secondary device for a further determined length of time.

---

1,557,774. TILE RACK FOR PLAYING GAMES. NATHAN D. POOL and ANTHIME J. LEVEQUE, Lead, S. Dak. Filed Mar. 15, 1924. Serial No. 699,473. 4 Claims. (Cl. 273—150.)



1. A tile rack of the character described comprising two separate parallel members, one of said members being formed to provide a longitudinally extending channel for the support of a series of exposed tiles, the other member being disposed at all times behind the first named member and being formed to support a series of tiles with their faces concealed from all but one of the players, the two members being so connected that the last named member may be turned over upon the table substantially at right angles to its normal position to expose the tiles carried therein without affecting the position of the first named member.

---

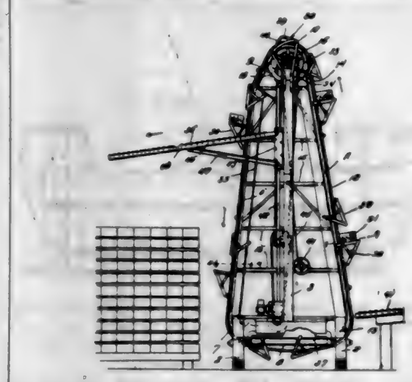
1,557,775. GASKET FOR INTERNAL-COMBUSTION ENGINES. WILLIAM ROBERTSON, Cambuslang, Scotland. Filed Feb. 4, 1925. Serial No. 6,849. 4 Claims. (Cl. 288—1.)

4. A gasket for internal combustion engines comprising an outer plate having a series of openings formed therein, annular tapering flanges formed integral with said plate adjacent said openings, a packing received upon said outer plate, an inner plate engaged over said packing, the marginal portions of said outer plate being extended beyond the marginal portions of said inner plate and curved upon themselves and clampingly engaged over the adjacent marginal portions of such inner plate whereby to compress the same upon the packing, the inner plate and sheet of packing having openings therein for snugly receiving the extended portions of the annular tapering flanges therethrough, and means engaged in the intermediate portions of the several plates for further clampingly engaging the same upon the sheet of packing.

---

1,557,776. ELEVATING AND LOWERING CONVEYER. PERRY C. RUSSELL, Somers, Mont. Filed Nov. 15, 1924. Serial No. 750,098. 12 Claims. (Cl. 198—158.)

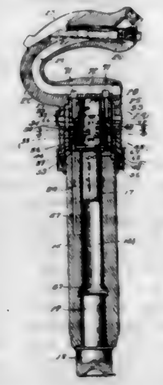
1. A conveyer comprising a frame, endless conveyer members movable on said frame in a substantially vertical plane having upwardly movable flights and downwardly movable flights, means movably mounted on said endless members movable into operative position on one



of said flights for conveying purposes, and movable to inoperative position on the other flight, said movable means guiding the conveyer members on the frame.

---

1,557,777. PNEUMATIC TOOL. JOHN R. L. SANTOS, Baltimore, Md., assignor to George Oldham and Son Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 15, 1920. Serial No. 374,013. 15 Claims. (Cl. 121—28.)



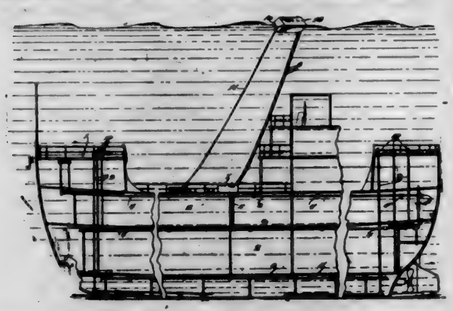
1. In a pneumatic tool having a piston with a stroke greater than its own length, a valve to control the admission and the entire exhaust of fluid pressure to and from opposite ends of the piston, said valve having a central passage into which the piston enters, said valve also being provided with differential presure areas, and means for subjecting the said differential pressure areas to live fluid pressure directed alternately from opposite directions whereby said valve will be moved in both directions by live fluid pressure.

---

1,557,778. DEVICE FOR LOCATING AND RAISING SUNKEN SHIPS. ARTHUR J. SARGENT, Providence, R. I. Filed June 3, 1925. Serial No. 34,704. 5 Claims. (Cl. 114—50.)

1. The combination with a boat having compartments normally water-tight, of air inlet pipes mounted in said boat and having valve-controlled outlets to deliver air into said compartments, said pipes having their inlet ends

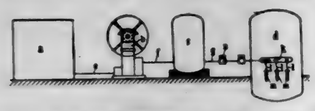
extended externally of said boat, feed pipes connected with the inlet ends of said air inlet pipes, a float connected



with said feed pipes, outlet pipes leading from said compartments to a point externally of said boat, and control valves at the outer ends of said outlet pipes.

---

1,557,779. PROCESS AND APPARATUS FOR THE PRESERVATION OF OBJECTS OF ANIMAL ORIGIN (MEAT, FOWL, FISH, ETC.). GEORG SCHEIB, Berlin, Germany, assignor of one-fourth to Hans Guntherberg, one-fourth to Richard Ihlenfeldt, and one-fourth to Max Koch, all of Berlin, Germany. Filed Sept. 25, 1920. Serial No. 412,888. 10 Claims. (Cl. 99—1.)



9. A process for the preservation of objects of animal origin (meat, fowl, fish, etc.) in whole carcasses or portions thereof consisting in forcing a liquid or gaseous preservativo substance into the interior of the object to be preserved at any spot, under constant or varying internal pressure and constant or varying exterior pressure, the limits of both said pressures being selected in such a manner that the exterior pressure is always equal or slightly less than the internal pressure.

10. Apparatus for the preservation of objects of animal origin (meat, fowl, fish, etc.) comprising a storage receptacle, a pump, an air chamber, a closed treatment tank, a plurality of nozzles in said closed treatment tank, pipe-lines leading from said storage receptacle to said pump, from said pump to said air chamber and from said air chamber to said nozzles and to said treatment tank, safety valves, inserted in said pipe-lines leading to said nozzles and to said treatment tank, return pipes from said safety valves to said storage receptacle and a pressure regulator, inserted in said pipe-line to said treatment tank.

---

1,557,780. PARTS FOR OPHTHALMIC MOUNTINGS. ELMER L. SCHUMACHER, Southbridge, and WILLIAM H. BOUTELLE, Sturbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Feb. 23, 1922. Serial No. 538,635. 3 Claims. (Cl. 88—52.)

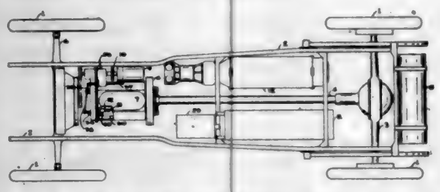
3. A temple of the character described comprising nonmetallic members grooved on one surface, said grooved surfaces being joined together, and a metallic core embedded in the grooves and having a hinge butt extending beyond the end of the nonmetallic members.

1,557,781. WEIGHT INDICATOR. FLOYD L. SCOTT, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex. Filed July 5, 1921. Serial No. 482,311. 7 Claims. (Cl. 265—1.)

1. A weight indicator for well drilling, comprising a derrick, a derrick platform, a dial, an indicating hand pivoted to move relative to said dial, a cable secured at one end to said derrick platform, the other end being passed over a pulley at the upper end of the derrick and brought down and attached resiliently to said hand adjacent its pivotal point, and means to steady the action of said hand.

---

1,557,782. STEAM AUTOMOBILE. LEWIS L. SCOTT, St. Louis, Mo. Filed Sept. 23, 1921. Serial No. 502,660. 2 Claims. (Cl. 180—67.)



2. In a steam driven automobile, a steam engine, an elongated horizontal boiler for furnishing steam to said engine, located lengthwise in the frame of said automobile, said boiler having the heat producing medium located at the front end of same and arranged to discharge the products of combustion at the back end of same.

---

1,557,783. VEHICLE CONSTRUCTION. ARNOLD SEIDEL, Berlin-Charlottenburg, Germany. Filed May 5, 1925. Serial No. 28,251. 3 Claims. (Cl. 280—106.5.)

1. A transverse spring arrangement for motor cars without supporting axle, comprising in combination four holders for the four axle or steering swivel journals, two groups of plate springs at each side of the car said

two groups of each set being arranged the one at a certain distance above the other each group comprising at least two plate springs placed the one on the other the freely oscillating ends of said plate springs being rolled each to form one eye, and a hinge bolt in each eye and effecting the necessary connection with the holder of the corresponding axle journal.

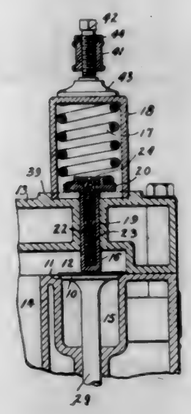
---

1,557,784. CAR FEEDER. ROY S. SHARPNACK, Dilliner, Pa. Filed June 21, 1924. Serial No. 721,490. 2 Claims. (Cl. 104—92.)

2. Car feeding apparatus comprising a supporting bracket adapted to be mounted above a track along which cars are to be moved, a winding drum mounted on said support, a guiding sheave disposed at a point beneath said support, a guiding sheave horizontally removed from said first-named sheave and adjacent to the track along which cars are to be moved, a cable extending around said sheaves and reversely wound on said drum, a coupling member secured to said cable at a point between said sheaves, and a worm drive for said drum, serving both as an advancing and a retarding medium for cars being moved.

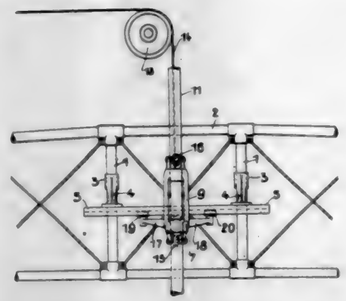
---

1,557,785. INTERNAL-COMBUSTION ENGINE. FRANK D. SHEPHERD, Aurora, Ill. Filed Dec. 1, 1919. Serial No. 341,655. 7 Claims. (Cl. 123—188.)



1. The combination of an internal combustion engine having a port, of a valve for closing the port, a hollow valve stem that bears against the valve and is separate therefrom, and means operating against the stem for actuating the valve.

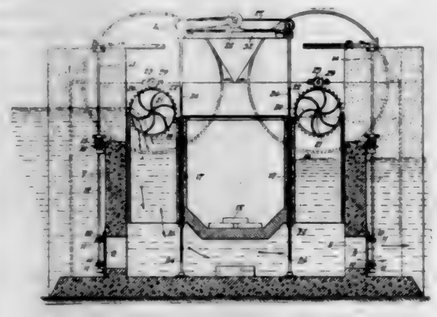
1,557,786. CENTRAL SUSPENSION FOR THE MOVABLE FABRIC FRAMES OF EMBROIDERY MACHINES. GOTTWALT SIEBER, Plauen, Germany, assignor to Vogtländische Maschinenfabrik (vormals J. C. & H. Dietrich) Aktiengesellschaft, Plauen, Saxony, Germany. Filed June 2, 1922. Serial No. 565,486. 2 Claims. (Cl. 112—90.)



1. In an embroidery machine, the combination with the movable fabric frame, of a horizontal rail attached to said frame in front of it; a vertically movable supporting member for said rail; at least one roll carried by said member and forming the supporting means proper for the rail; a vertical guide rod for the said member, and means for moving the member up and down along said rod, and means for laterally bracing the supporting member on said rail.

---

1,557,787. TIDE MOTOR. FREDERICK D. TAYLOR, Cranston, R. I. Filed Oct. 22, 1921. Serial No. 509,494. 10 Claims. (Cl. 61—20.)



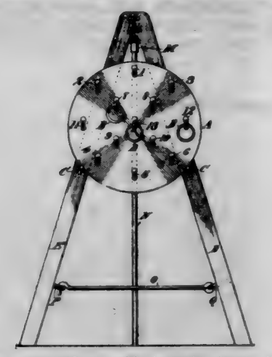
1. A tide motor including a pair of spaced walls, a movable mounting arranged between said walls, motor wheels carried by said mounting, openings formed in said mounting, screw threaded shafts extending through said openings, means for rotating said shafts, and means associated with said mounting and operatively connected with said shafts whereby rotation of the shafts adjustably positions the mounting.

---

1,557,788. GAME. JOSEPH C. ATKIN, San Francisco, Calif. Filed Feb. 20, 1920. Serial No. 360,061. 2 Claims. (Cl. 273—101.)

1. As an article of manufacture, a game board comprising a vertical stationary target made of one piece of material and of a circular shape, hooks circularly disposed upon said target, one of said hooks being centrally located, eight hooks secured near its circular edge

and four intermediate hooks on its oblique radii, in combination with rings adapted to be thrown by the players to engage said hooks, an easel provided with studs for



removably supporting said target above the floor and hooks on said easel engaging rings on said target adapted to hold firmly said target in a vertical position.

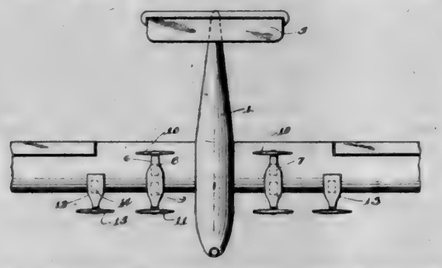
---

1,557,789. HELICOPTER AIRPLANE. THURMAN H. BANE, Dayton, Ohio. Filed Apr. 30, 1923. Serial No. 635,749. 4 Claims. (Cl. 244—15.)

1. In a flying machine in combination, two aerofoils at each side of the forward portion of the machine, two aerofoils at each side of the rear part of the machine, means for rotating all of said aerofoils about approximately vertical axes, means for stopping all of said aerofoils at predetermined positions, means for adjusting the angle of incidence of said aerofoils so that they all have equal positive angles of incidence for functioning as stationary lifting planes or so that some of the aerofoils may have a reverse angle of incidence for acting as lifting propellers, said last mentioned means including mechanism for simultaneously changing the angle of incidence of one front aerofoil at each side of the machine for lateral stability while the remaining front aerofoils remain fixed.

---

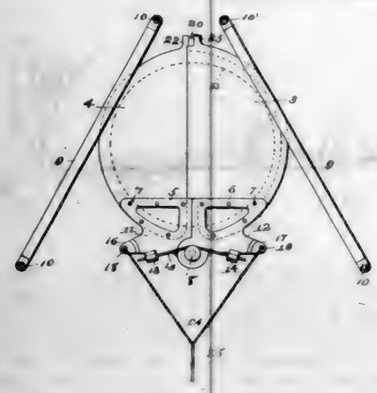
1,557,790. MOTOR ARRANGEMENT FOR AIRCRAFT. WALTER H. BARLING, Dayton, Ohio. Filed Apr. 8, 1924. Serial No. 705,013. 5 Claims. (Cl. 244—14.)



1. In an aircraft in combination, a central fuselage, a supporting plane, a pair of propelling units spaced one on each side of the central longitudinal plane of the aircraft, and a second pair of propelling units spaced one on each side of the fuselage, the distance between the units of the second pair being substantially twice the distance between the units of the first said pair, and the normal power of each said first unit being substantially twice the power of each second unit.

---

1,557,791. DUST SHUTTER FOR CAMERAS IN AIRPLANES. ELMATH A. BARRE and LAWRENCE A. KEPLER, Dayton, Ohio. Filed June 9, 1923. Serial No. 644,468. 8 Claims. (Cl. 244—1.)



2. A device for protecting the lens of a camera mounted in an airplane fuselage, comprising a pair of cooperating shutters, pivot means for mounting the shutters for movement toward and away from each other, spring means for holding the shutters closed, carried on said pivot means, and means for opening the shutters against the spring means.

---

1,557,792. SOOT BLOWER FOR BOILERS. LEO JOHN BAYER, St. Louis, Mo. Filed Nov. 13, 1922. Serial No. 600,610. 3 Claims. (Cl. 122—392.)

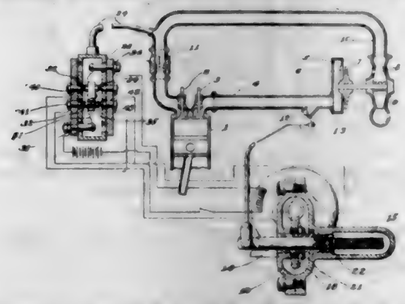
1. In a soot blower for boilers, a steam supply pipe, a valve for controlling the steam supply in said pipe, and a blower unit, in communication with the supply pipe, said blower unit comprising a blower pipe composed of a plurality of relatively movable section and a cooling jacket surrounding the blower pipe, said cooling jacket also being composed of a plurality of relatively movable sections.

---

1,557,793. AUTOMATIC REGULATOR FOR TURBO SUPERCHARGERS. ADOLPH L. BERGER and DAVID GREGG, Dayton, Ohio. Filed Sept. 12, 1923. Serial No. 662,361. 1 Claim. (Cl. 103—11.)

An automatic control for a turbine driven supercharger for internal combustion engines in which the engine exhaust is used for driving the supercharger fan, comprising in combination, a waste gate in the exhaust manifold of the engine, an electromotor having reversible connections to reverse the direction of rotation thereof, speed reducing means connecting said motor to said

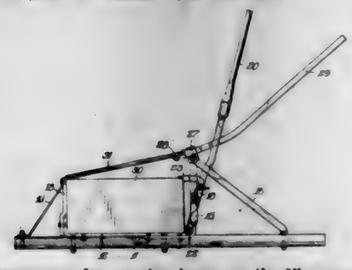
waste gate to cause the waste gate to be slowly moved by said motor, and an automatic switch controlling the reversible connections of said motor, said switch having



a movable element actuated by difference in pressure between the outlet of said supercharger fan and normal atmospheric pressure.

---

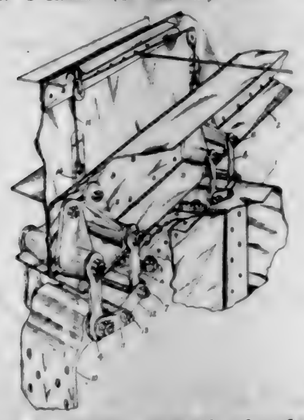
1,557,794. POWDER-BOX OPENER. JOSEPH BLACKWELL, Ironwood, Mich. Filed July 24, 1924. Serial No. 727,900. 3 Claims. (Cl. 145—21.)



1. Apparatus for opening boxes or the like comprising a box holding frame, hook members associated with the frame adapted to engage the box to retain it in the frame, and an opener blade pivotally supported from the frame and adapted to be inserted between the box and lid to move the lid away from the box.

---

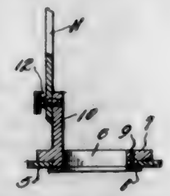
1,557,795. RELEASE DEVICE. JOHN F. BOLOGANO, Dayton, Ohio. Filed Mar. 29, 1923. Serial No. 628,528. 1 Claim. (Cl. 258—1.)



A device for releasing an article adapted to be suspended from an airplane, comprising, a plurality of rods interconnected by toggle links for supporting the article, a plurality of hook members on the article adapted to engage the rods, the weight of the article maintaining the hook members and rods in engaged relation, and a single positively actuated means for simultaneously actuating the toggle links to simultaneously cause the rods to approach each other whereby the rods are quickly released from the hook members.

---

1,557,796. DENTAL FILM SUPPORT. WILLIAM A. BONAR and HOWARD F. EMERSON, Nevada, Mo. Filed Nov. 23, 1923. Serial No. 676,632. 1 Claim. (Cl. 250—34.)



A dental film support comprising a plate having a circular opening, a collar rotatably mounted in said opening and having at one end a flange which bears against one face of the plate, a flange applied to the other end of the collar and bearing against the opposite face of the plate, means for drawing said flanges in frictional contact with the surfaces of the plate, an ear mounted upon the first mentioned flange, a bar adjustably connected with the ear, and an arm adapted to retain a film and pivotally and adjustably connected with the free end of said bar.

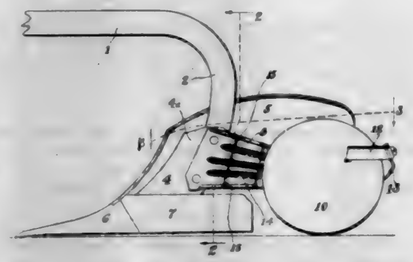
---

1,557,797. PROCESS FOR COMPACTING, BATTING, OR FELTING CELLULOSE FIBROUS MATERIALS OUT OF LIQUIDS. WILLIAM F. BOYSEN, Buffalo, N. Y. Filed Apr. 19, 1920. Serial No. 374,869. 6 Claims. (Cl. 92—54.)

1. The process of forming articles of fibrous material by extracting the liquid and compacting said material on a perforated former by means of a suddenly applied vacuum, the application of a chemical reagent drawn through said fibrous material by said vacuum, and followed by the impregnating of said fibrous material by a final application of an adhesive and cementing material by means of said vacuum.

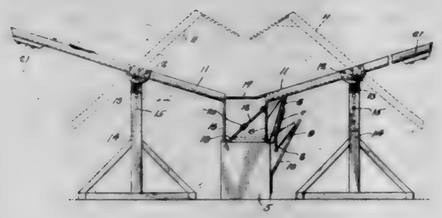
---

1,557,798. ROLLING LANDSIDE. THEOPHILUS BROWN, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Dec. 7, 1921. Serial No. 520,646. 9 Claims. (Cl. 97—132.)



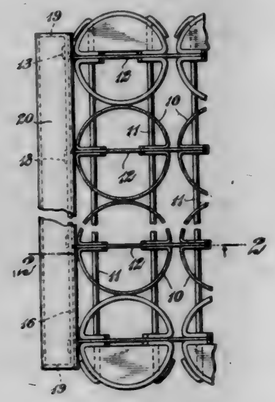
1. In a plow, the combination of a beam and standard having a positioning surface at its landward side, a plow body, a frog for attaching the plow body to the standard and having a surface adapted to fit against and be secured to said positioning surface, a rolling landside, and a bracket supporting said landside and adapted to overlie and be secured to the landward side of the frog.

1,557,799. DIP TANK. MICHAEL B. BULGER, Beaver Dam, Wis. Filed Oct. 27, 1924. Serial No. 746,219. 3 Claims. (Cl. 91—46.)



1. In a device of the character described, a tank, a closure for the tank, a sectional drip table mounted above the tank, a securing means including a fusible link for holding the drip table in its active position, a spring for normally urging the closure to its closed position, and said fusible link adapted to be destroyed by fire to release the drip table and allow the closure to move to its active position.

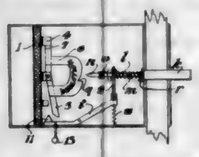
1,557,800. METALLIC FLOOR COVERING. SPENCER C. CARY, Brooklyn, N. Y., assignor to Cary Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 9, 1916, Serial No. 130,345. Renewed June 18, 1923. 7 Claims. (Cl. 15—239.)



1. A metallic floor covering embodying units in rows, links attached to said units, each marginal link having shoulders and a prong, a stay member extending continuously with respect to the marginal row of units, said stay member being attached by the prongs to the links and being spaced with respect to the units, and a channeled marginal member encasing the stay member, said channeled member having flanges which by compression of the member are positioned to occupy the spaces between the units and the stay member.

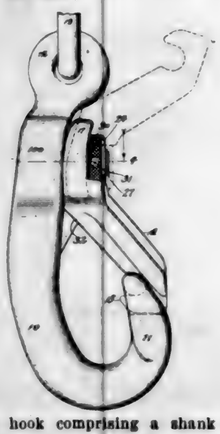
1,557,801. KEYLESS AUTO AND ALARM SWITCH. CHARLES PERCY CHAMBERLIN, Calgary, Alberta, Canada. Filed May 8, 1920, Serial No. 379,847. Renewed July 27, 1925. 2 Claims. (Cl. 200—43.)

1. In an article of the class described, a multiplicity of push buttons mounted through a face plate in the interior ends of which push buttons are pivoted short arms the said short arms projecting through a guide to engage upon contact makers mounted adjacent to the said arms, a plurality of pivoted members adapted to simultaneously break and make contact upon one way action from the



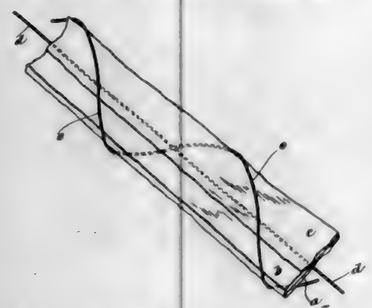
push button, and a predetermined number of knife switches adapted to make and break contact upon successive operations from the push buttons.

1,557,802. HOISTING HOOK. JOHN CLARK, Buffalo, N. Y. Filed May 28, 1925. Serial No. 33,402. 6 Claims. (Cl. 24—241.)



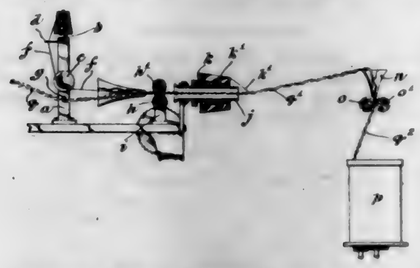
1. A hoisting hook comprising a shank and a beak, and a keeper movable into and out of a position across the mouth of said hook and having one end pivotally connected with said shank so as to be capable of turning in a plane at right angles thereto and adapted to be detachably connected at its opposite end with said beak and said shank being provided on its front side with a shoulder adapted to engage with the underside of said keeper.

1,557,803. SLIVER FOR INSULATING WIRES. WILLIAM E. COOK, New York, N. Y. Filed Dec. 12, 1924. Serial No. 755,376. 5 Claims. (Cl. 117—52.)



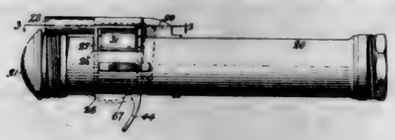
1. Sliver for insulating wires embodying therein a strip of loosely matted fibers having at spaced distances longitudinally and superficially thereof, portions of a continuous strand of sufficient strength to check the accumulation of surface fibers into a bunch or ball.

1,557,804. SLIVER-FORMING MACHINE. WILLIAM E. COOK, New York, N. Y. Filed Dec. 12, 1924. Serial No. 755,377. 10 Claims. (Cl. 117—34.)



1. A sliver forming machine adapted to co-operate with a carding machine, embodying therein a folding horn, the entrance of which is positioned toward the carding machine and adapted to receive a wide sheet of sliver, feed rollers beyond said folding horn for flattening the folded sheet, a hollow bearing, a spindle for a cop of thread rotatably mounted upon said bearing, means rotating said spindle, and means feeding the strip away from said hollow bearing and delivering it to the coiling mechanism of a container.

1,557,805. COMBINED LIGHT AND FIREARM. SYLVESTER P. COTTRELL, Buffalo, N. Y. Filed July 11, 1925. Serial No. 42,991. 9 Claims. (Cl. 42—59.)

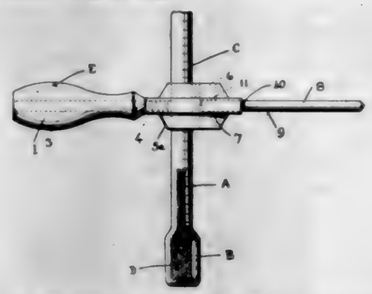


1. A combined light and fire arm, comprising a tubular casing having openings in its top and bottom, a frame extending from the upper side of said casing downwardly through said top opening and provided on its front side with a barrel which projects forwardly over the casing and on its rear side with a hood projecting rearwardly over said casing, a cartridge cylinder pivotally mounted in said frame and provided with an annular row of chambers adapted to receive cartridges and to be brought successively in line with said barrel, a hammer pivoted on the rear part of the frame and provided with a firing pin adapted to strike the cartridge in the respective chamber which is in line with said barrel and having its upper end covered by said hood, and a hammer operating mechanism mounted on the lower part of said frame and having a finger piece adapted to project downwardly through said bottom opening.

1,557,806. TOWING CABLE. NEWTON O. COUTS, Bucyrus, Ohio. Filed Aug. 16, 1924. Serial No. 732,529. 3 Claims. (Cl. 280—33.14.)

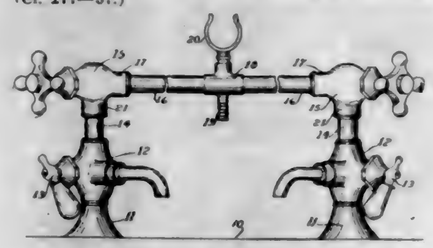
1. A towing cable comprising a plurality of stiff rod sections, loop members formed on the extremities of the said rod sections, links positioned through the said loop members and connecting the said rods, chain sections mounted on the extreme ends of the rod sections, means for covering the said chain sections and means for securing the said cable upon vehicles.

1,557,807. IMPLEMENT FOR RETURNING THE TEMPERATURE-INDICATING SUBSTANCE OF THERMOMETERS TO NORMAL. FLORENCE L. CUMMINGS, Asheville, N. C. Filed Jan. 6, 1925. Serial No. 819. 4 Claims. (Cl. 73—52.)



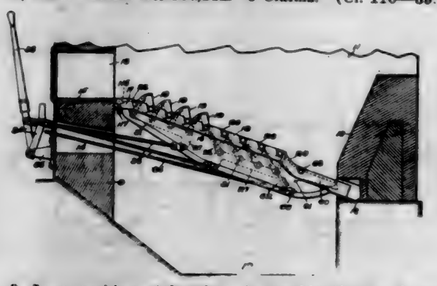
1. An implement of the type described comprising a body formed with an opening for receiving a thermometer, a plurality of members carried by the body and extending outwardly therefrom to form hand grips, one of said members carrying a jaw for releasably engaging a thermometer and being adjustably mounted on the body for the purpose defined.

1,557,808. COMPRESSION SHAMPOO FIXTURE. WILLIAM BIRD DALE, Winnetka, Ill., assignor to Street & Kent Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1924. Serial No. 687,481. 3 Claims. (Cl. 277—57.)



2. In a shampoo fixture, compression basin cocks for hot and cold water supply, bypasses therein, nipples connected to said bypasses, elbow valves thereon, a spray connection between said elbow valves, and angularly disposed valve stems for said elbow valves aligned with the valve stems of said basin cocks.

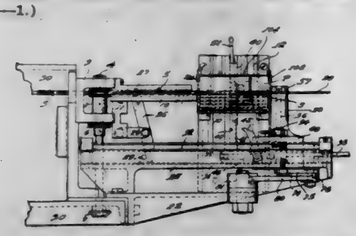
1,557,809. HAND STOKER. EDWIN S. DECKER, Malden, Mass., assignor to Gibby Foundry Company, Boston, Mass., a Corporation of Massachusetts. Filed June 9, 1922. Serial No. 567,132. 9 Claims. (Cl. 110—39.)



2. In a rocking stoker bar, in combination, a frame comprising end portions and a member connecting the end portions and forming a shield adapted to swing

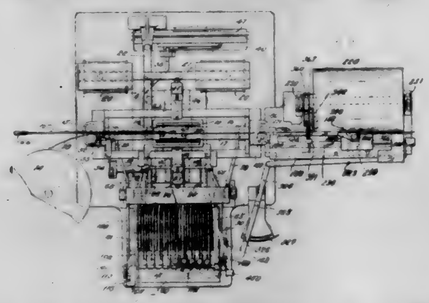
above the surface of the stoker when the bar is tipped, and a freely removable grate portion in one piece overlying the shield and receiving support from said end portions.

1,557,810. MECHANISM FOR ASSEMBLING PRINTING STRIPS. WILLIAM JOHN DEMMING, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 21, 1922. Serial No. 583,192. 40 Claims. (Cl. 101—1.)



1. A machine for delivering printing strips, a guideway leading therefrom, a flat printing form and means supporting said form adjacent the guideway, means on the form for receiving the strips, means for aligning the last named means with the guideway, and means for periodically feeding the form in its own plane to enable it to receive new lines.

1,557,811. DELIVERY MECHANISM FOR EMBOSSING MACHINES. WILLIAM J. DEMMING, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 14, 1923. Serial No. 674,649. 60 Claims. (Cl. 101—1.)

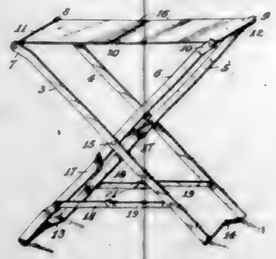


1. The combination with mechanism for embossing a printing strip, of mechanism for loading it into a page form.

1,557,812. DIRIGIBLE AIRSHIP. HENRY C. DENTURK, Huntington, N. Y. Filed Sept. 8, 1924. Serial No. 736,577. 2 Claims. (Cl. 244—6.)

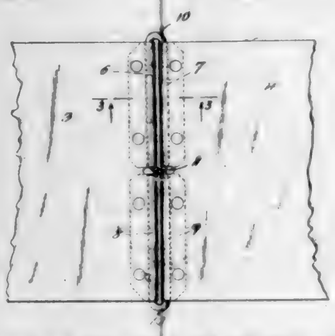
1. A dirigible airship comprising a pair of substantially rectangular frames spaced apart and having a covering impervious to air and gas to form elongated chambers, gas bags arranged in said chambers, tapering sustaining planes arranged to each side of said bags and said chambers and folding planes arranged to each side of said tapering planes.

1,557,813. FOLDING CHAIR. ARTHUR F. DERSE, Union Course, and WILLIAM B. WILSHUSEN, Mount Vernon, N. Y. Filed Sept. 17, 1920. Serial No. 410,840. 1 Claim. (Cl. 155—150.)



A folding chair comprising: two substantially rectangular open frames each frame having side portions offset at their upper ends and each frame having transverse connecting end portions at the upper and lower ends of the side portions, said frames nesting one within the other except the offset ends of the side portions and the upper transverse connecting portions, a pivotal connection between said side portions at a point intermediate their ends, and a centrally hinged seat pivotally connected to the upper end portions and foldable within the compass of the frames.

1,557,814. HINGE FOR FOLDING CHAIRS. ARTHUR F. DERSE, Union Course, and WILLIAM B. WILSHUSEN, Mount Vernon, N. Y. Filed Aug. 5, 1921, Serial No. 489,981. Renewed Feb. 28, 1925. 1 Claim. (Cl. 16—163.)

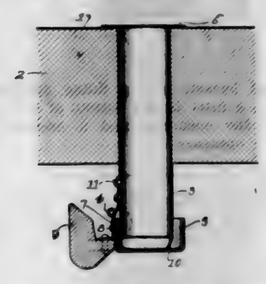


A hinge including a wire bent into two sets of parallel lengths, said sets being arranged end to end, and the lengths of each set being connected together, one length of one set being connected by a cross-over portion to that length of the other set that is not coaxial therewith.

1,557,815. TRUCK TIE PLATE. ROBERT L. DORSEY, Indianapolis, Ind., assignor to Tucker & Dorsey Mfg. Co., Indianapolis, Ind., a Corporation of Indiana. Filed June 20, 1923. Serial No. 646,536. 5 Claims. (Cl. 280—49.)

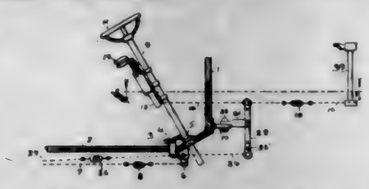
4. A truck having an end brace, a center brace transverse to the end brace and spaced therefrom to provide an intervening space, a bearing mounted on said end brace in said intervening space, a roller supported in said bearing, and a tie plate for securing said center brace to said end brace, said tie plate comprising a portion adapted to extend across said intervening space below said bearing and being attached to both said end brace and said center brace.

1,557,816. REFRIGERATOR-CAR DRAIN. PAUL S. DOUGHERTY, Chicago, Ill., assignor to Standard Galvanizing Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1924. Serial No. 749,001. 1 Claim. (Cl. 182—8.)



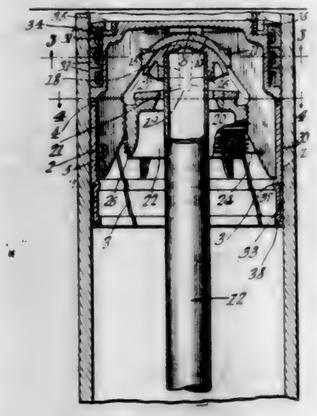
A refrigerator car trap comprising a drain pipe having its lower portion extending below the bottom of the car, a two-leaf hinge having one of its leaves secured to the projecting portion of the drain pipe above the lower end thereof, the other leaf of the hinge being movable, a bowl secured at one of its side walls to the movable leaf of the hinge, and normally arranged in a horizontal position at the lower end of the drain pipe and receiving the same, a bracket carried by the bowl and projecting outwardly from the same exteriorly thereof adjacent the movable leaf of the hinge, an approximately L-shaped weight secured at one arm to the projecting portion of the bracket and fitted against the exterior of the bowl contiguous to the bracket and normally maintaining the bowl in the said horizontal position, the other arm of the weight projecting upwardly and being of the size to clear the car and permit the bowl to swing entirely clear of the lower end of the drain pipe for cleaning the device.

1,557,817. AUTOMOBILE SIGNALING DEVICE. BARTOLOMEO ELIGGI and LUIGI LORENZI, San Francisco, Calif. Filed Oct. 2, 1922. Serial No. 591,875. 3 Claims. (Cl. 116—36.)



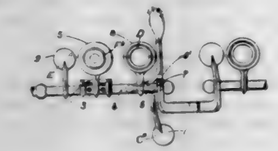
1. A vehicle direction signal comprising in combination a vertical oscillable member pivotally mounted upon the dash board of a vehicle, said member operatively connected with an illuminated pointer at the front end of the vehicle and with hinged lids at the rear end thereof, said lids when opened exposing direction signals corresponding with said pointer.

1,557,818. COMBUSTION ENGINE, PISTON, AND BEARING. EDWARD J. ELSAS, Kansas City, Mo. Filed Dec. 6, 1924. Serial No. 754,381. 4 Claims. (Cl. 74—108.)



1. The combination of a hollow piston and a connecting rod, an abbreviated form of ball and socket joint uniting said rod and piston, the ball member of said joint being held in universal rotative union with its socket, radial webs mounted in said piston and supporting said socket member, the ball member of said joint being carried by said rod, means for supporting the rod carried bearing member to permit rocking of said member when the engine is in motion also to permit rotative reciprocable action of said member in its bearing socket, and means for automatically tightening said joint members and retaining them in operative position.

1,557,819. KEYED WIND INSTRUMENT. LEON MAURICE EVETTE, Paris, France, assignor to Societe Evette and Schaeffer, Paris, France, a Company of the French Republic. Filed Oct. 24, 1921. Serial No. 510,051. 3 Claims. (Cl. 84—382.)

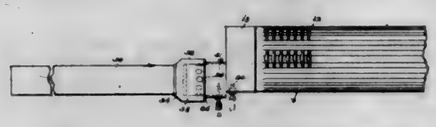


1. An improvement in keyed wind musical instruments, such as clarinets and the like, comprising a normally raised pad for C sharp G sharp opening, a normally raised ring for the forked E flat forked B flat opening, and means connecting the pad and ring to cause the said pad to close its opening when said ring is depressed.

1,557,820. BLAST TUBE FOR MACHINE GUNS. WALLACE R. FLETCHER, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,269. 3 Claims. (Cl. 89—42.)

3. The combination with a muzzle attachment for a machine gun having a series of apertures formed therein.

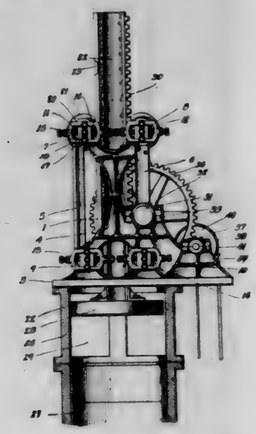
a blast tube having a portion thereof mounted on said muzzle attachment and being provided with an aperture for alignment with one of said apertures in said muzzle



attachment, and means passing through said aligned apertures to retain said tube and said muzzle attachment in operative position.

---

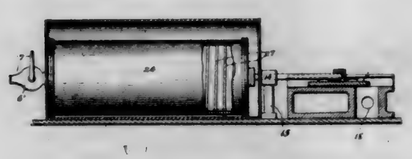
1,557,821. CLAY-PIPE-FORMING PRESS. SAMUEL I. FLOURNOY, Kansas City, Mo., assignor, by mesne assignments, to W. S. Dickey Clay Manufacturing Company, Kansas City, Mo., a Corporation of Delaware. Filed Apr. 9, 1925. Serial No. 21,940. 7 Claims. (Cl. 25—15.)



1. A clay pipe forming press comprising a pipe-forming cylinder having means whereby clay may be introduced into the cylinder, a plunger for forcing the clay through the cylinder, a rack bar on the plunger, having grooves in its respective edges, sets of rollers at opposite edges of the rack bar, the rollers of each set having flanges engaging the edge grooves, and means for actuating the rack bar.

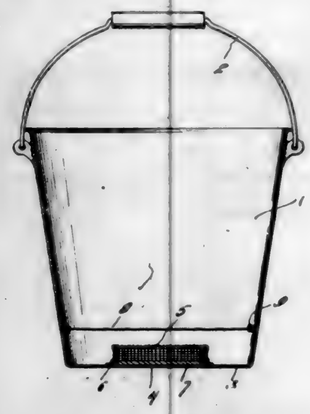
---

1,557,822. PRESSURE REGULATOR, SYLPHON TYPE. ALBERT C. FOULK, Dayton, Ohio. Filed Dec. 3, 1920. Serial No. 428,163. 11 Claims. (Cl. 137—153.)



1. In combination, in a pressure regulator, means containing an expansive fluid under constant predetermined pressure, and a valve means operable thereby, and a heat insulating container for said operating means.

1,557,823. WELL-BUCKET CONSTRUCTION. THEODORE R. FRATTALLONE, New York, N. Y. Filed Sept. 11, 1924. Serial No. 737,191. 4 Claims. (Cl. 294—69.)



1. In a well bucket, having filling openings in the bottom thereof, a filter in the bottom of the bucket disposed around the openings, and a pressure operated closure for the openings.

---

1,557,824. GAME. EMIL F. LEWIS FRITS, Michigan City, Ind. Filed Feb. 17, 1923. Serial No. 619,731. 3 Claims. (Cl. 273—152.)

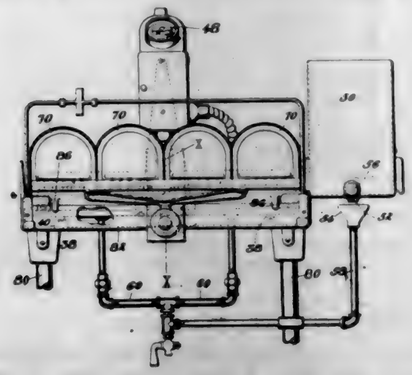
1. A game comprising a series of cards each having a letter formed thereon and a number at the head of the letter relating to the alphabetical numerical position of the letter, objects formed on one side of the card to suggest words to be formed, and numbers formed on the reverse side of the card relating to the numerical position of the letter on the other side.

---

1,557,825. APPARATUS FOR TREATING SHOE MATERIALS. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 20, 1924. Serial No. 738,883. 37 Claims. (Cl. 12—1.6.)

8. An apparatus for treating shoe materials comprising a metal tray, means forming a series of work-treating stations arranged to stand in said tray, heating means arranged to heat said tray, and means to supply equal individual streams of water at negligible velocity to said stations respectively, the delivery portions of the latter said means being in heat-conducting relation to said tray to vaporize some or all of the water before it is emitted.

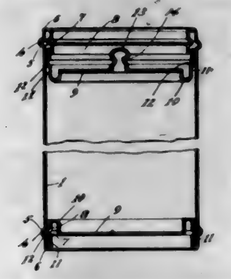
31. In an apparatus comprising heat-radiating means and regulatable means to supply water at a constant but variable rate to said heat-radiating means to be vaporized thereby, an absorbent, refractory element arranged to be



heated by the first said means and to absorb vapor generated thereby, said element having a cowl portion forming a work-receiving chamber the internal surface of which is porous to exude vapor to the work.

---

1,557,826. CONTAINER. HENRY F. GEIGER, Loveland, Ohio, assignor of one-half to Walter R. Rauck, Cincinnati, Ohio. Filed Oct. 17, 1923. Serial No. 669,177. 2 Claims. (Cl. 220—66.)

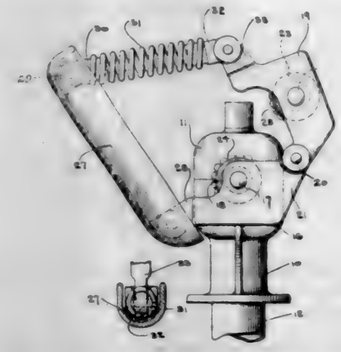


1. A metal container having inturned flanges at the ends, each end of the body and each inturned flange being provided with a groove and a bead, respectively, and heads for the container provided with flanges each having a bead and a groove adapted to interlock with those first mentioned when the heads are moved into closing position.

---

1,557,827. WRINGER. JOHN N. GOULD, Fredericktown, Ohio, assignor, by mesne assignments, to The F. B. Zieg Mfg. Company, Fredericktown, Ohio, a Corporation of Ohio. Filed May 28, 1921. Serial No. 473,272. 4 Claims. (Cl. 68—32.)

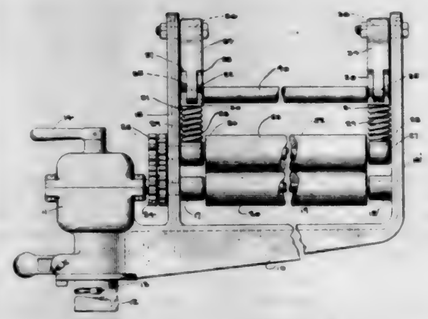
1. A wringer comprising a pair of supports pivotally engaged at one end and adapted to swing relatively to each other, a pair of rolls journalled intermediately of the ends of said supports respectively, a member pivoted to one of said supports having a rigid structure of U-shaped cross section forming a lateral recess, another member pivoted to the other of said supports and to said first mentioned member, and having a resilient structure, said members being swingable into one position wherein their pivot centers are in approximate alinement with said resilient member lying in said recess and tending to force said supports toward each other, and into another position wherein said pivot centers are considerably displaced out of alinement to cause the



pivot between the resilient member and one support to close the line between the pivot of the two supports and the pivot of the resilient member with a U-shaped member whereby to release said supports for separation.

---

1,557,828. WRINGER. JOHN N. GOULD, Fredericktown, Ohio, assignor, by mesne assignments, to The F. B. Zieg Mfg. Company, Fredericktown, Ohio, a Corporation of Ohio. Filed June 3, 1921. Serial No. 474,736. 5 Claims. (Cl. 68—32.)



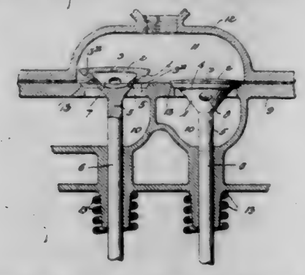
1. A wringer comprising a frame, a pair of rolls in said frame, mounting means permitting motion of one of said rolls toward and away from the other, and a pair of toggle members supported on each side of said frame in planes transverse to the axis of the rolls, one member of each toggle being longitudinally compressible, and a member parallel to said rolls connecting each pair of toggles substantially at the joint, each pair of toggle members when in alinement being operative to effect compression beween said rolls and when broken to release said rolls from compression whereupon the movable roll is free for separation from the other of said pair of rolls by movement in said mounting means.

---

1,557,829. VALVE. ADOLPH GEBINER and CORNELIUS J. LONG, Detroit, Mich. Filed Feb. 8, 1924. Serial No. 691,859. 5 Claims. (Cl. 123—188.)

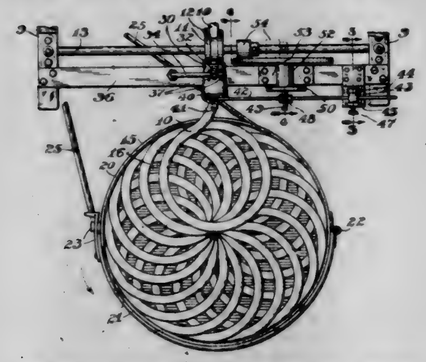
1. As a new article of manufacture, a puppet valve for controlling either the intake or the exhaust of an internal combustion engine comprising a hollow one

piece head having converging walls terminating in a stem with said walls apertured and constituting the sole connection between said head and stem, the apertures permitting the circulation of intake or exhaust gases through said head, whereby heat from the head is dissipated.



---

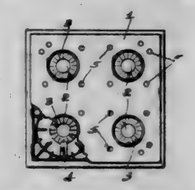
1,557,830. SLIVER-HANDLING DEVICE. JOHN W. GURLEY, Indianapolis, Ind. Filed Feb. 6, 1922. Serial No. 534,445. 12 Claims. (Cl. 19—159.)



1. In combination with a sliver-treating machine, a cam, and means for automatically guiding the sliver discharged from said machine into said can in a coil, the speed of said means being adjustable relative to the rate of discharge of the sliver to vary the size of the coil.

---

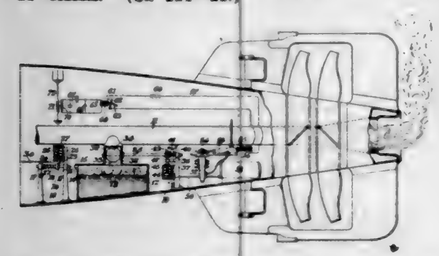
1,557,831. PROTECTIVE TOP FOR STOVES. JULIA HAMILTON, Minneapolis, Minn. Filed Nov. 22, 1924. Serial No. 751,681. 1 Claim. (Cl. 126—214.)



A protective top for stoves formed of a thin sheet of metal having large apertures therein adapted to be positioned concentric with the burners of the stove to which it is applied, and a plurality of smaller apertures positioned about each of the said larger apertures for allowing air to be drawn therethru for combustion in the burners, said top being adapted to lie flat on the top of the stove so as not to raise the cooking utensils set thereon appreciably from their normal position when used without said top.

---

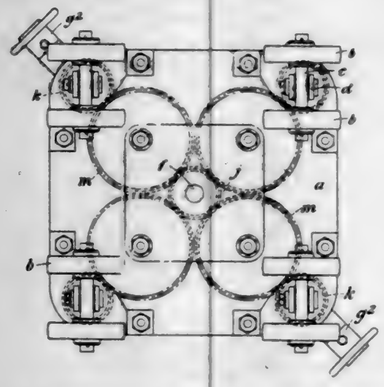
1,557,832. POSITION-REVEALING SYSTEM. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Apr. 4, 1919, Serial No. 552,182. Renewed Apr. 13, 1922. 21 Claims. (Cl. 114—21.)



1. In a position revealing system, a submerged body, a smoke producing substance carried by said body, means to cause said substance to produce smoke, and means to release said smoke from said body at will.

---

1,557,833. HAND-PROPELLED TRUCK, TROLLEY, AND THE LIKE. WILLIAM GEORGE HARRIS, Bristol, England, assignor of one-third to Albert James Owen and one-third to Harry Groome Vassall, both of Bristol, England. Filed Sept. 5, 1922. Serial No. 586,184. 3 Claims. (Cl. 280—99.)

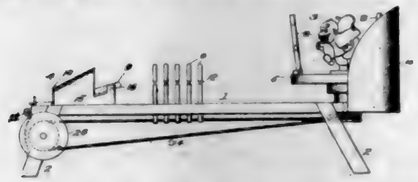


1. A hand-propelled truck comprising, in combination, a non-rotatable frame, at least three brackets turnably mounted about pivots on said frame, a transport wheel carried by each said bracket, a gear-wheel mounted on each of said bracket-pivots, a shaft rotatably supported on, and centrally of, said frame with one end projecting beyond the frame, a sleeve rotatably positioned on said frame and about said shaft, a gear-wheel on said sleeve, idle gear-wheels corresponding in number with said brackets and each mounted on said frame adjacent a bracket and adapted to gear with the gear-wheel on said sleeve and with the gear-wheel of the adjacent bracket, a table superimposed above said frame and rotatably mounted on said central shaft, means for clutching said table to, and declutching it from, said sleeve and adapted to operate the sleeve, and a platform on said table adapted to actuate said sleeve through said clutching and declutching means.

---

1,557,834. TOY. GEORGE HASSIG, Philadelphia, Pa. Filed Feb. 6, 1923, Serial No. 617,269. Renewed July 24, 1925. 4 Claims. (Cl. 273—101.)

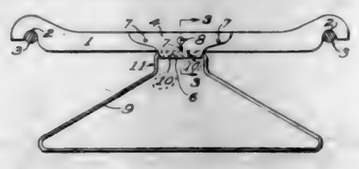
1. In a device of the class described, the combination with a platform, of a rotatable table provided with figures on said platform, a belt wheel, means connecting said belt wheel to said rotatable table, a firing device on said platform including projectile ejecting means spring pressed in an ejecting direction, a second belt wheel contiguous to said firing device, said second belt



wheel provided with a hub and with fingers for engaging the projectile ejecting means and moving the same against the action of its spring and then releasing the ejecting means during rotation of the second belt wheel and a belt mounted upon said belt wheels.

---

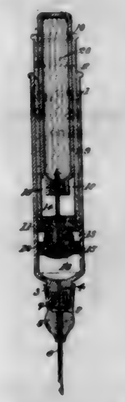
1,557,835. GARMENT HANGER. MORRIS A. HEIMANN, St. Louis, Mo. Filed Apr. 24, 1924. Serial No. 708,605. 2 Claims. (Cl. 211—13.)



1. In a garment hanger, the combination with a yoke provided with supporting means, a plate of substantially triangular shape having one side edge reversely bent to rest upon one longitudinal edge of the yoke and having the apex of the triangle rolled and binding against the remaining longitudinal edge of the yoke to hold the plate against accidental displacement from the yoke, and a loop removably secured to said rolled portion of the plate.

---

1,557,836. HYPODERMIC SYRINGE WITH AMPULE-RECEIVING PISTON. GEORGE N. HEIN, San Francisco, Calif. Filed Jan. 19, 1925. Serial No. 3,217. 3 Claims. (Cl. 128—220.)



1. A hypodermic syringe including a barrel open at one end and provided with a hypodermic needle extending from its other end, a chambered piston reciprocably mounted therein and provided with a bore communicating with the interior of the barrel, a tubular needle extending inwardly into the chamber of the piston and connecting with the bore, and a phial for reception within the piston chamber and provided with a puncturable closure for penetration by said needle.

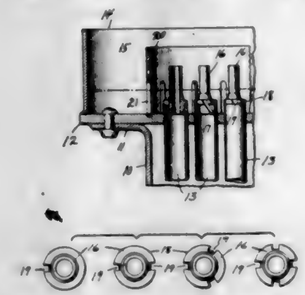
---

1,557,837. HYPODERMIC SYRINGE. GEORGE N. HEIN, San Francisco, Calif. Filed Mar. 28, 1925. Serial No. 19,034. 5 Claims. (Cl. 128—218.)

1. A syringe of the type described, comprising a piston, a barrel therefor having a stabilizing portion for the entering piston extending beyond the upper limit of its solution content, said stabilizing portion having a vent for the escape of air driven therefrom by said piston as it enters.

---

1,557,838. WATER DISTRIBUTOR FOR CONDENSERS. NICOLAI H. HILLER, Carbondale, Pa. Filed May 1, 1925. Serial No. 27,130. 6 Claims. (Cl. 257—224.)



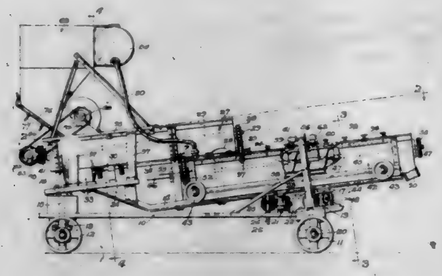
1. A vertical tube condenser having an upper tube sheet, a plurality of tubes projecting downwardly therefrom, a wall co-acting with the tube sheet to form a container for cooling liquid above the tube sheet, said condenser being provided with a plurality of distributors within said container, each distributor having a passage for the flow of water from said container to the interior of the corresponding tube, the cross sectional area of the passages of said distributors varying in accordance with the distance from the water inlet of said container.

---

1,557,839. MIXING MACHINE. CARL W. HODGSON, Chicago, Ill. Filed Apr. 25, 1924. Serial No. 708,842. 15 Claims. (Cl. 83—73.)

1. An apparatus of the character described including a supporting structure, a supplemental support mounted thereupon for pivotal movement with respect thereto and in a substantially horizontal plane, two mixing

chambers mounted upon the supplemental support one discharging into the other, one of the said chambers being movable with and with respect to the supplemental support, the last said chamber having a delivery outlet,



a combined mixer and conveyor in each of the chambers, and means for bodily moving one of the chambers with respect to the other chamber and with respect to the supplemental support when the latter is moved about its pivot.

---

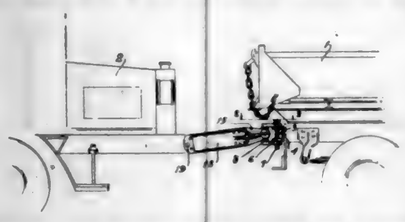
1,557,840. HOLDER FOR BROOM HEADS. IRA J. HOLLENBEB and EARL F. SHELLEY, Greensburg, Ind. Filed Feb. 25, 1924. Serial No. 695,038. 1 Claim. (Cl. 15—177.)

A holder for broom heads formed of a single piece of sheet material, said holder comprising a main socket portion, a handle receiving neck extending from the central portion of said main socket portion, a pair of opposed socket forming jaws normally extending in diverging relation from the main socket portion, said jaws being provided with opposed outwardly struck beads to provide grooves to receive the binding ring on a broom head, and said jaws being provided below said head with projections adapted to overlap when the jaws are brought into socket forming relation, and cooperating means formed on said projections and adapted when the projections are brought into overlapped relation to move into locking position.

---

1,557,841. TRACTOR HITCH. HARLEIGH R. HOLMES, Littleton, Colo. Filed Jan. 31, 1925. Serial No. 6,012. 1 Claim. (Cl. 280—33.44.)

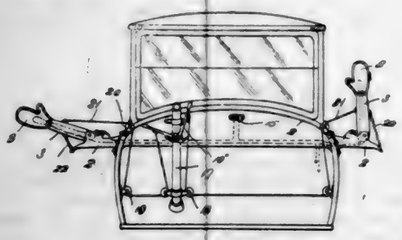
A tractor hitch comprising a member adapted to be attached to the rear portion of a tractor, said member having a vertical opening adapted to receive a pin, a U-shaped member having a base and two parallel spaced arms adapted to embrace the first mentioned member, said arms having their ends perforated for the reception of a pin, the base having its inner surface flat and provided with a central opening, a disk rotatably secured to the base by means of a bolt that extends through the open-



ing, said disk having two diametrical lugs extending beyond the base and a traction bar pivotally connected to the lugs, said bar having two separable attaching members secured thereto.

---

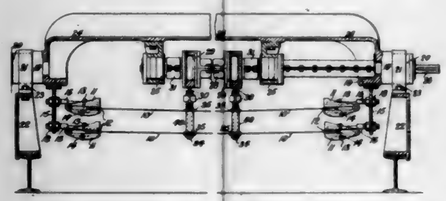
1,557,842. TURN SIGNAL FOR AUTOMOBILE MACHINES. MARVIN M. HOUSTON, Mercer, Mo. Filed Mar. 1, 1924. Serial No. 696,313. 1 Claim. (Cl. 116—54.)



In a turn signal device, a bracket member adapted to be fixed at one end to a vehicle, said bracket member being U-shaped in cross section, an arm pivoted between the sides of the bracket member intermediate its ends, a contact extending from the arm, a second contact extending from the bracket member, the first contact adapted to engage the second contact for holding the arm in an extended substantially horizontal position, a spring attached to one end of the bracket member and to the arm of normally holding the arm in an extended substantially horizontal position with the contacts engaged, and means for raising the arm.

---

1,557,843. SCREENING APPARATUS. HENRY PATRICK HOYLE, Durham, England. Filed Dec. 18, 1923. Serial No. 681,352. 7 Claims. (Cl. 83—56.)



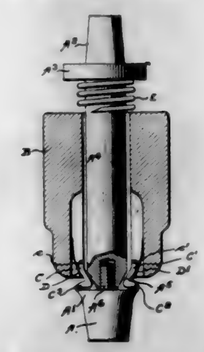
1. The combination of a screening surface with arms connected thereto, a shaft located above the screening surface, and eccentrics placed apart on the shaft and formed with their axes in a line which passes through the center point of the axis of the portion of the shaft between the eccentrics which eccentrics give the arms and screening surface a movement to, fro and crosswise.

1,557,844. TANNING COMPOSITION. CARL IMMERHEISER, Ludwigshafen-on-the-Rhine, and HUGO WOLFF, Mannheim, Germany, assignors, by mesne assignments, to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Bavaria, Germany, a Corporation of the Grand Duchy of Baden. Filed July 9, 1920. Serial No. 395,127. 5 Claims. (Cl. 149—5.)

1. As a new composition of matter, a new form of sulfonated crude anthracene which product on hide suspended in its dilute acid solution slowly produces a pure brown coloration.

---

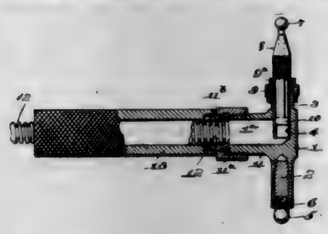
1,557,845. FASTENER-INSERTING DEVICE. THOMAS J. JOHNSTON, White Plains, N. Y. Filed Apr. 26, 1923. Serial No. 634,814. 12 Claims. (Cl. 218—14.1.)



1. A device for setting blind eyelets in a selected part of several layers of material, comprising a set provided with a setting shoulder adapted for insertion in the material for spreading the skirt of an eyelet between two of the layers and means carried by the device and movable relatively to the set for separating the two layers to permit the spread portion of the eyelet to pass between them.

---

1,557,846. PRECISION GAUGE, FLEXIBLE TYPE. CHARLES G. KALLENSEB, Dayton, Ohio. Filed May 29, 1923. Serial No. 642,225. 4 Claims. (Cl. 33—178.)

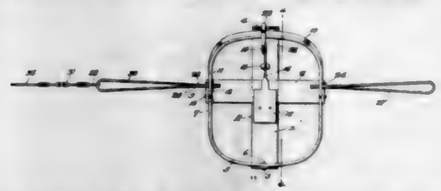


1. In a precision measuring instrument, a contact member including a piston, an indicating means including a piston, and a flexible tube containing fluid for transmitting the motion of said first piston operated by said contact member to said second piston.

---

1,557,847. ANIMAL TRAP. ANDREW KERR, Tefft, Ind. Filed Sept. 11, 1924. Serial No. 737,083. 2 Claims. (Cl. 43—81.)

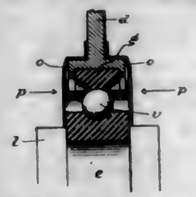
1. In a device of the character specified a frame consisting of a longer and a shorter longitudinal and transverse bar, a stationary jaw of approximately U-shaped form rigidly secured to the shorter bar of said frame, a correspondingly movable jaw also hinged at its ends to the ends of the shorter frame bar and coacting with said stationary jaw, a bait holder pivoted to the longitudinal frame bar and comprising a perpendicular



arm formed in its upper end and outer edge with a notch, a trigger pivoted to the longer frame bar and engageable with the notched portion of said trigger arm, and springs exerting a tension on the hinged jaw when the trap is set.

---

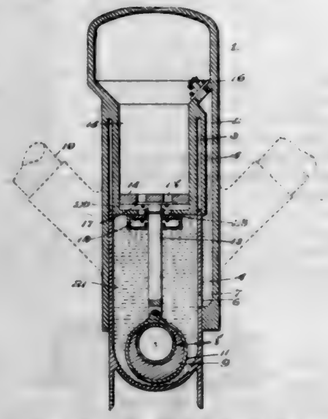
1,557,848. BEARING. JOSEF KIENBE, Stuttgart, Germany, assignor to the Firm: Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden. Filed June 18, 1923. Serial No. 645,942. 6 Claims. (Cl. 308—184.)



1. Bearing comprising in combination, outer and inner main races, a plurality of bodies adapted to roll between and in contact with said races and an auxiliary race applied to the outer main race and arranged to maintain said bodies in permanent contact with the inner main race.

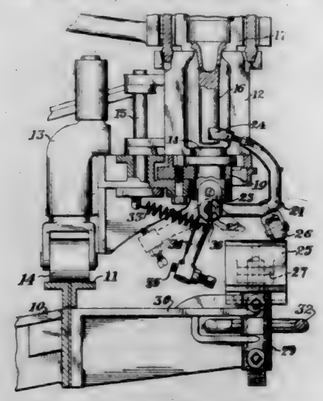
---

1,557,849. HYDRAULIC SHOCK ABSORBER. ISAAC MACKLIN LADDON and FREDERICK E. FLADER, Dayton, Ohio. Filed June 27, 1923. Serial No. 648,022. 8 Claims. (Cl. 188—88.)



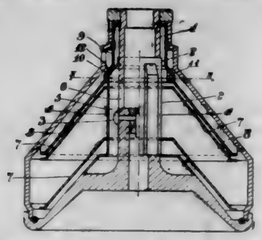
2. In a shock absorbing means for use on vehicles, a dashpot shock absorber and means operated by the motion of the vehicle for restoring said shock absorber to its operative position after the shock has been absorbed.

1,557,850. BLANK-CENTERING DEVICE FOR GLASS-FORMING MACHINES. RICHARD LA FRANCE, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed May 2, 1923. Serial No. 636,038. 12 Claims. (Cl. 49—9.)



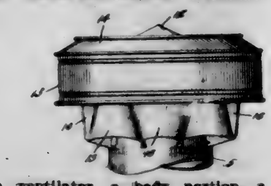
2. In a glass forming machine, the combination of means to suspend a blank of plastic glass, a centering device, means to move said device transversely of the blank into engagement with the lower end thereof while the blank is suspended, and a mold to enclose said blank.

1,557,851. SEPARATOR BOWL. ERIC VILHELM LARSON and HUGO LINDEBERG, Eskilstuna, Sweden, assignors to Eskilstuna Separator Aktiebolag, Eskilstuna, Sweden, a Swedish Company. Filed July 16, 1924. Serial No. 726,250. 3 Claims. (Cl. 233—35.)



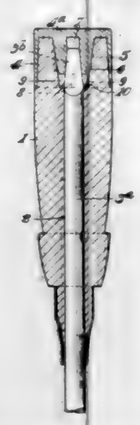
1. In a separator bowl the combination of a central feed tube, projections on said tube, liner plates surrounding said tube, an upper plate on top of said liner plates and surrounding said tube, said upper plate having a lower face substantially conforming in shape to the upper face of said liner plates, and said upper plate being provided with recesses for receiving the upper ends of said projections.

1,557,852. GALVANIZED-IRON VENTILATOR. CLARENCE HAINES LAUERMAN, Galesburg, Ill. Filed Aug. 15, 1922. Serial No. 582,064. 2 Claims. (Cl. 98—4.)



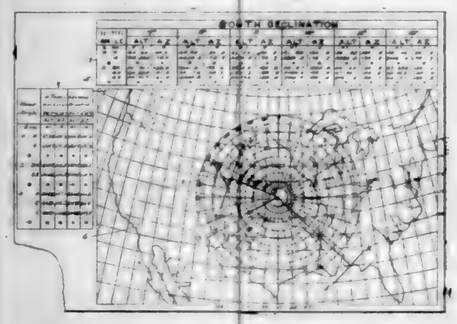
2. In a ventilator, a body portion, a plurality of louvers secured to the body portion and having contracted lower ends, a plurality of louvers secured between adjacent first mentioned louvers at points intermediate the side edges of the side walls thereof to provide outer and inner passageways, a collar surrounding the upper ends of the louvers, and a deflecting member secured to the upper end of the body portion.

1,557,853. TOOL HANDLE. ABRAHAM B. LIPSCOMB, Wheeling, W. Va., assignor of one-half to W. C. Lipscomb, St. George, W. Va. Filed Apr. 7, 1925. Serial No. 21,292. 3 Claims. (Cl. 145—61.)



3. A tool handle designed for use interchangeably with a plurality of tools having shanks of round-rod form, said handle comprising a body having an axle bore for the reception of such shanks and having a central counterbore in its outer end, a cap mounted on said outer end of said body, a member carried centrally by the boss portion of said cap and within said counterbore, said member having a tapered non-circular socket therein for the reception of the correspondingly shaped rear end of the tool shank, said member being slitted to form resilient fingers adapted to be sprung outward by said end into binding relation to the tapered portion of said shank.

1,557,854. METHOD AND MEANS FOR FINDING GEOGRAPHICAL POSITION IN NAVIGATION. GEORGE W. LITTLEHALES, Washington, D. C. Filed Sept. 30, 1921. Serial No. 504,480. 19 Claims. (Cl. 283—34.)

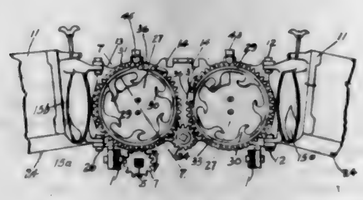


1. An astronomical position-finding chart bearing a representation of a geographical area, and means for indicating azimuth with respect to a known position on the said representation.

1,557,855. ALL-METAL AIRPLANE STRUCTURE. FLAVIUS E. LOUDY, Mobile, Ala. Filed Nov. 2, 1921. Serial No. 512,275. 10 Claims. (Cl. 244—30.)

1. In an aircraft fuselage, an outer skin composed of two side plates co-extensive in length with the length of the fuselage and seamed together along the top and bottom of the fuselage, said plates being shaped to provide a vertical offset forming an abutment for wings.

1,557,856. SEED PLANTER. OSCAR H. LUEBBING, Harrison, Ohio, assignor to The Campbell-Hausfeld Company, Harrison, Ohio, a Corporation of Ohio. Filed Apr. 13, 1922. Serial No. 552,124. 32 Claims. (Cl. 221—122.)



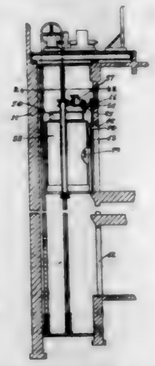
1. In a seed planting device, the combination with a hopper for supplying seed, a base for said hopper having a hole therein, and an adjustable member in said hopper and adapted to form a chute from the hopper terminating in an aperture to register with the orifice, and also adapted to form a larger hole registering with said orifice.

2. In a seed planting device, the combination with means for supplying seed, of a seed ring for feeding seeds to a delivery point, a plate over which said seed ring seats, said plate having a circular upwardly curved portion, and hooks on the ring overlying said portion, and forming two sides of a pocket of which the curved portion of the plate forms a third.

3. In combination, in a machine of the character described, a plurality of seed supplying means, seed feeding means adapted to deliver seeds intermittently, one of such means for each supply, means for driving said feeding means, adapted to operate said means to deliver seeds alternately, and means for stopping either feeding means and starting it up again without interfering with the alternate delivery.

1,557,857. SAFETY LOCKING APPARATUS FOR ELEVATORS. HAROLD V. MCCORMICK, Cincinnati, Ohio, assignor to The Warner Elevator Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 3, 1925. Serial No. 431. 10 Claims. (Cl. 187—31.)

5. In an operating mechanism for retiring cams the combination with a reciprocating cam, spring means for normally projecting said cam, a tank for containing oil, an electric stall motor mounted within the tank, an extended rotor shaft for the stall motor and projecting above the tank, paddles mounted on the rotor shaft for rotating in oil contained in the tank, a pinion on the end of the rotor shaft, an arm mounted for oscillation above the tank, a gear segment carried by one end of the



arm and meshing with the pinion on the rotor shaft, and means connecting the arm and cam for retiring the cam against the resistance of the spring means when the stall motor is energized.

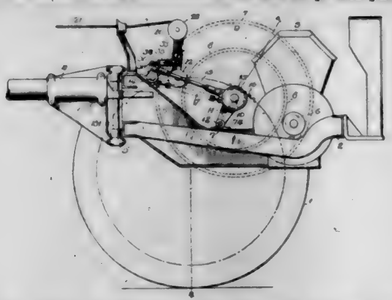
1,557,858. HINGE CLAMP FOR ATTACHING INTERCHANGEABLE FEED CHUTES TO AMMUNITION BOXES. DWIGHT C. MAIER, Bryan, Ohio. Filed Jan. 20, 1922. Serial No. 530,722. 3 Claims. (Cl. 16—171.)

3. In combination with a pair of adjacent members having abutting ends, means for clamping said members together, said means comprising a clamping member formed of convolutions, the alternates of which are journaled in the end of one of said adjacent members, the remaining convolutions being adapted to releasably engage the abutting end of the other adjacent member, said adjacent members being adapted to be disengaged from each other by a rotation of said clamping member.

1,557,859. AUTOMOTIVE VEHICLE. WARREN M. MANSFIELD, Moline, Ill., assignor, by mesne assignments, to Moline Implement Company, a Corporation of Illinois. Filed June 14, 1920. Serial No. 388,988. 21 Claims. (Cl. 180—77.)

1. A tractor having a power plant, drive wheels, driving pinions for said wheels mounted so as to swing bodily about an axis parallel to the wheel axis, and driving connections between the power plant and the

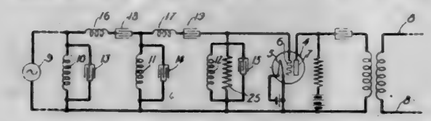
driving pinions, said connections including a driving friction member and a driven friction member, both of said members being positioned to rotate in planes parallel



to the plane of the drive wheels, said driven friction member being mounted so as to swing bodily about the same axis as the driving pinions.

---

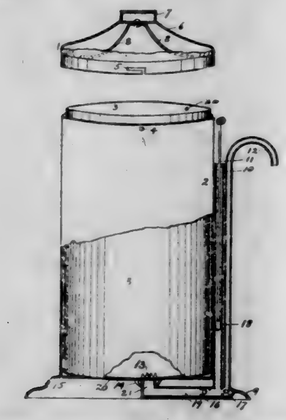
1,557,860. ELECTRIC CIRCUITS. ROBERT C. MATHES, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 15, 1920, Serial No. 351,605. Renewed Feb. 20, 1924. 16 Claims. (Cl. 179—171.)



1. In combination, a wave filter and an electrical discharge device associated therewith, said device having an effective internal impedance comprising a resistance component and a reactance component, said wave filter having a plurality of impedances of such values with respect to each other and to said reactance component as to cause said filter and said device to transmit certain desired frequencies while suppressing others, and one of said filter impedances having such a value as to effectively suppress said reactance component.

---

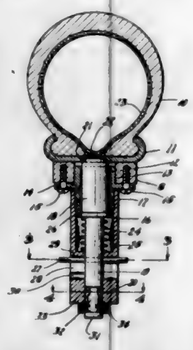
1,557,861. MILK-CAN HOLDER AND MILK DISPENSER. ROBERT O. MORRIDA, Fresno, Calif. Filed Feb. 8, 1923. Serial No. 617,753. 1 Claim. (Cl. 221—80.)



The combination with a milk-can of a container adapted to hold said can, a piston pump adapted to discharge fluid through a spout, attached to the container and having the intake opening of the pump positioned within the container and adjacent to the bottom thereof, and means for connecting the pump to the milk can consisting of a plurality of sharp projections surrounding the intake opening adapted to pierce the bottom of the can, and a suction cup fitted around the intake opening under the projections and adapted to engage the bottom of the can into which the projections have been forced.

---

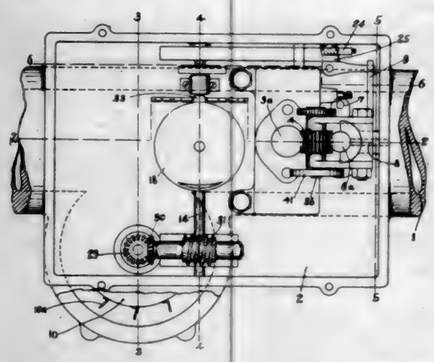
1,557,862. WHEEL WITH DEMOUNTABLE RIM. WILLIAM F. MORGAN, Chicago, Ill. Filed Mar. 26, 1923. Serial No. 627,583. 3 Claims. (Cl. 301—28.)



1. A device of the class described, comprising a sleeve mounted on the felloe of a wheel, a cap removably mounted on the end of said sleeve, a plunger slidably mounted in said sleeve and cap and engaging in a tire carrying rim mounted on said felloe, a slot with transverse notches provided in said cap, and a pin on said plunger movable in said slot and engageable in one of said notches to lock said plunger in its operative position or in the other of said notches to lock said plunger in released position.

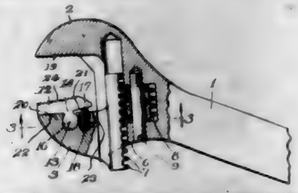
---

1,557,863. AUTOMATIC CUT-OFF VALVE. BLAGGOYA MAVOSH, Erie, Colo. Filed Apr. 21, 1923. Serial No. 633,816. 3 Claims. (Cl. 137—139.)



1. An automatic cut-off valve comprising in combination a conduit, an impact device associated with the conduit and adapted to be operated by the passage of a fluid therethrough, a valve in the conduit, and means operated by the impact device for operating the valve, said last mentioned means including a lost motion device through which the normal operation of the impact device will not affect the valve but an abnormal speeding up of the impact device will operate the valve.

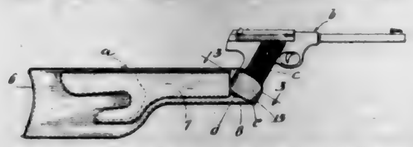
1,557,864. WRENCH. RAYMOND A. MULL, Benton Harbor, Mich. Filed June 16, 1924. Serial No. 720,204. 1 Claim. (Cl. 81—180.)



In a wrench, the combination of relatively movable jaws, a one-piece engaging member on one jaw, formed with a transverse integral portion which is oscillatory in the jaw, said member being removable only by axial displacement thereof, a compression spring engaging the inner end portion of said member to keep its outer end normally pressed against the jaw, said integral portion having a notch, and a retainer inserted in the jaw and extending into said notch, said jaw having said member being removable from said wrench, said retainer being a concealed loose pin inserted from the inner side of the removable jaw at one side of said spring, so that the pin cannot be removed while the wrench is assembled.

---

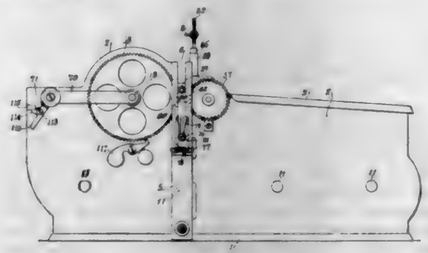
1,557,865. COMBINED STOCK EXTENSION AND HOLSTER FOR FIREARMS. THOMAS W. NEBL and ALBERT G. SHAFFEL, Ventura, Calif. Filed Dec. 29, 1924. Serial No. 758,579. 3 Claims. (Cl. 42—72.)



3. A combined stock-extension and holster for a firearm comprising, a stock-extension portion, a member forming in conjunction with said portion a pocket to receive the barrel portion of a firearm, and a split spring clip secured to the stock-extension portion and having an integral cross member to engage the heel of the stock of the firearm, the opposite sides of the clip adjacent to the split being notched to receive the forwardly and downwardly projecting toe of the stock to prevent in conjunction with the cross member tilting of the firearm upwardly and rearwardly.

---

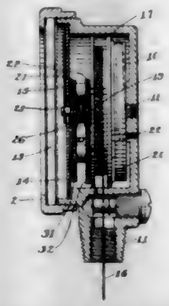
1,557,866. AUTOGRAPHIC REGISTER. GEORGE J. NETH, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed June 13, 1924. Serial No. 719,706. 28 Claims. (Cl. 282—15.)



1. In an autographic register having a plurality of sheets, a writing table, means to maintain said sheets on the table, means to be inserted in perforations in said paper at spaced intervals, means to wrap said paper at its free end, said aligning means preventing it from becoming detached from the wrapper, elevating means to elevate the free end of the paper so wrapped, means to hold the wrapper in wrapped position, means to unlock the wrapper at a predetermined elevation so that the paper will be discharged from the wrapper and aligning means and means to permit the elevator, wrapper and aligning means to descend and reengage perforations in said paper.

---

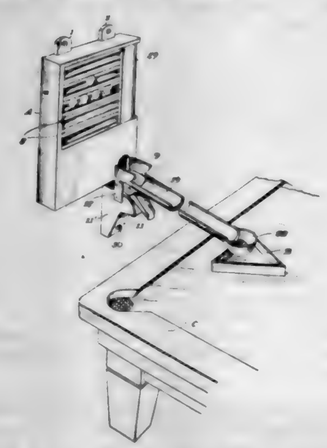
1,557,867. GASOLINE-LEVEL GAUGE. FLOYD B. NEWELL, Dayton, Ohio. Filed Oct. 24, 1923. Serial No. 670,501. 9 Claims. (Cl. 116—129.)



3. The combination in a gauge, of an index member, a gear for operating the same, a disc rotatable in the operation of said gauge and planetary gears of different sizes mounted on said disc to operate in circular orbits in the rotation of said disc and movable selectively into meshing engagement separately with said index gear.

---

1,557,868. POOL-BALL RACKER. NOAH O. OARD, Columbus Grove, Ohio. Filed Mar. 29, 1923. Serial No. 628,428. 1 Claim. (Cl. 273—16.)

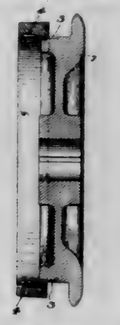


In a device of the character specified, the combination with a rack having a lower compartment provided with upper and lower downwardly and oppositely inclined ball races and a delivery opening, of a supporting leg depending from the bottom of the lower compartment and provided with a forwardly projecting shoulder having a convex face, a delivery trough or chute hinged to the upper edge of the supporting leg in position to swing in a vertical plane and adapted to receive the pool balls discharged through the delivery opening of the rack

when in lowered position, a mouth piece at the free end of the trough or chute, a hinge having one leaf rigidly secured to the lower end of the delivery trough or chute and its other leaf free to ride over the convex face of the forwardly projecting shoulder of the supporting leg and a coil spring disposed around the cross pin of the hinge and tending to hold the trough or chute in raised position.

---

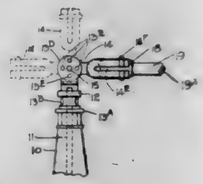
1,557,869. DEMOUNTABLE-RIM LOCK. RICHARD H. O'BRIEN, Forest City, Pa. Filed June 9, 1925. Serial No. 36,018. 1 Claim. (Cl. 295—19.)



The combination with a wheel rim of a tire comprised of soft steel and shrunk on the rim, of a hole half in the rim and half in the tire, and of means for interlocking the rim and tire together consisting of a dowel pin driven into the hole, the dowel pin being less in length than the depth of the hole, and being firmly held in place by means of a threaded plug screwed into the hole at the end of the pin.

---

1,557,870. SPARK-PLUG TERMINAL CABLE CONNECTION. ADOLPH PACHMAN, Chicago, Ill. Filed Feb. 25, 1924. Serial No. 694,914. 2 Claims. (Cl. 173—269.)

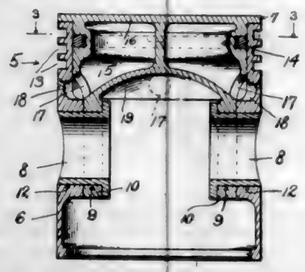


1. In a spark plug terminal connection, the combination of a member adapted for attachment to a spark plug terminal, a cable connection pivotally mounted to said member, and adjustable means for retaining said connection in varying angular position to the plug terminal, said connection having projections adapted for seating into said member for inter-locking same together.

---

1,557,871. PISTON. FRED S. PAINTER, Bloomfield, Conn., assignor of one-half to Howard W. Morse, Hartford, Conn. Filed Oct. 25, 1924. Serial No. 745,844. 3 Claims. (Cl. 74—108.)

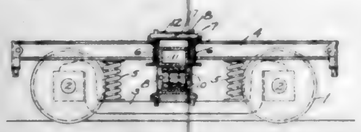
1. A piston of the character set forth comprising a ring carrying sleeve having aligned apertures and an internally disposed annular passage therein, a head loosely fitted in the bore of the sleeve from the top thereof, lugs protruding inwardly from the head and having aligned apertures registering with those of the sleeve, headed bushing passing through the apertures of the sleeve and head from the inside thereof, a packing ring disposed between the head and sleeve, an arched oil deflector spanning the space between the aligned apertures of the lugs and sleeve, an air chamber above the oil deflector, ports forming communication between



the air chamber and annular passage of the sleeve, and ports forming communication between the annular passage of the sleeve and the exterior thereof.

---

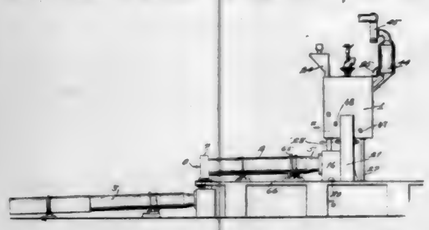
1,557,872. RAILWAY TRUCK. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Mar. 19, 1924. Serial No. 700,323. 2 Claims. (Cl. 105—190.)



1. In combination with a truck frame, its wheels and axles, transoms integral with the side members of said truck frame, a bolster arranged between said transoms, swinging links for supporting said bolster, a pin passing through the upper ends of said links and being seated upon said transoms and held against longitudinal movement, and a sleeve secured on said pin for spacing the upper ends of said swinging links from said transoms and bolster.

---

1,557,873. CONTINUOUS METHOD AND APPARATUS FOR CALCINING AND CLINKERING. ROBERT D. PIKE, San Francisco, Calif. Filed Dec. 1, 1920. Serial No. 427,466. 4 Claims. (Cl. 222—7.)



2. An apparatus for the described purpose, the same comprising a vertically disposed stationary calcining furnace, means therein for propelling pulverulent material to be treated therethrough, means for intermixing with the pulverulent material a fuel medium, means for introducing within the furnace a heat medium having a temperature sufficient to cause calcination of the material passing therethrough and flowing counter-current to the stream of material passing through the said furnace for calcination, a rotary clinkering furnace associated with the calcining furnace, means for transferring the calcined material discharging from the calcining furnace directly into the rotary clinkering furnace without exposure to the outside atmosphere, means for introducing into the clinkering furnace a heat medium of a temperature to cause clinkering of the calcined material as passed therethrough and counterwise to the flowing stream of the heat medium, means for conveying the products of combustion from the clinkering furnace into the calcining furnace, a cooler associated with the clinkering furance and adapted to receive the clinkered material discharging therefrom, and means for delivering air passing through the cooler into the clinkering furnace for supporting combustion therein.

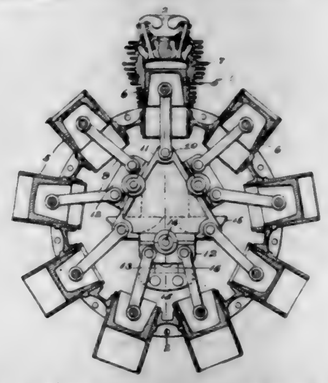
---

1,557,874. BAFFLE FOR BOILERS. JOHN PRENTICE, Bayonne, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Feb. 15, 1922. Serial No. 536,696. 16 Claims. (Cl. 110—98.)

1. An inclined cross baffle for water-tube boilers having horizontally inclined tubes arranged to form horizontal and diagonal aisles, having tiles each substantially quadrilateral in elevation and having a recess at each angle of the quadrilateral, each recess being adapted to fit snugly around a tube the entire thickness of the tile, with two of the sides quadrilateral horizontal and the two remaining sides substantially parallel to a diagonal aisle.

---

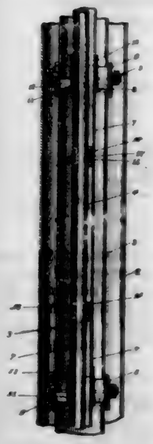
1,557,875. PARALLEL-CRANK MOTION FOR RADIAL ENGINES. CHARLES I. PRESTON, Davenport, Iowa. Filed Dec. 14, 1922. Serial No. 606,979. 8 Claims. (Cl. 74—14.)



1. In a radial engine, the combination of a rotary shaft, a circular series of cylinders, cooperating pistons, and transmission means between the pistons and the engine shaft, comprising connecting rods, a knuckle pin yoke to which the connecting rods are attached, and crank-like members which direct said yoke in an annular path, one or more of said crank-like members having driving connection with the engine shaft.

---

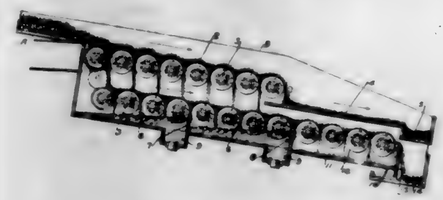
1,557,876. PUMP-SHAFT-CASING COUPLING. GOMER W. PRICE, San Francisco, Calif., assignor to G. W. Price Pump and Engine Company, San Francisco, Calif. Filed Feb. 11, 1924. Serial No. 691,993. 6 Claims. (Cl. 103—111.)



6. In a well pump, the combination with a drive shaft and discharge casing formed from a plurality of sections, of flanges connecting the ends of sections forming said discharge casing; a spider formed integral with one of the flanges upon each section; a shaft casing formed from a plurality of sections to enclose the shaft; sleeves connecting adjacent ends of the shaft casing sections, each sleeve being arranged to engage one of the spiders to subject one of the shaft casing sections to tension; and a plurality of shaft bearings mounted within each casing section, said bearing being spaced away from the spiders to give flexibility of the casing relative to the shaft.

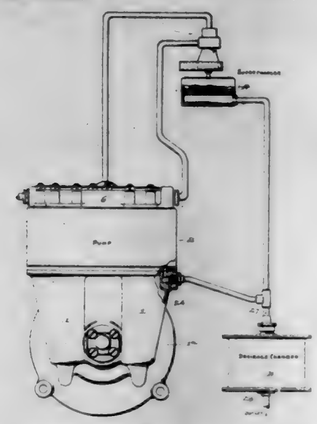
---

1,557,877. AMALGAMATING AND CONCENTRATING MACHINE. JULIO H. RAE, Dayton, Nev., assignor of one-third to Julio H. Rae, jr., and one-third to Louisa M. Rae, both of Dayton, Nev. Filed June 30, 1924. Serial No. 723,092. 4 Claims. (Cl. 83—67.)



1. A device of the character described comprising a sluice box, said sluice having a compartment formed in the bottom thereof for the reception of mercury, a plurality of rollers journalled crosswise of the sluice and partially submerged in the mercury, said rollers being interspaced to permit them to function as separating and conveying rollers, and means for rotating the rollers.

1,557,878. PUMP. DONALD H. REEVES, Dayton, Ohio. Filed Dec. 3, 1920. Serial No. 428,097. 3 Claims. (Cl. 103—148.)



1. In a pump, an enclosing pump chamber, two bellows contained in said chamber and having intake and exhaust ports, means for simultaneously compressing one bellows and expanding the other bellows, a drainage chamber in communication with said pump chamber, and means for maintaining equal pressure in both of said chambers.

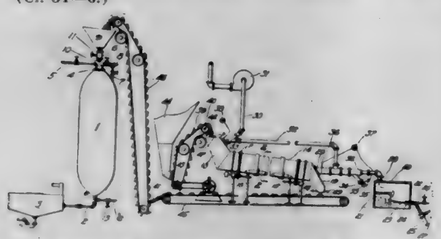
---

1,557,879. PROCESS FOR SEPARATING COBALT FROM NICKEL. CHARLES G. RICHARDSON, Elizabeth, N. J. Filed Nov. 8, 1921. Serial No. 513,849. 7 Claims. (Cl. 75—66.)

1. In the treatment of speisses containing nickel, cobalt, arsenic and antimony, the process which consists of roasting the said speiss to such a point that an amount of arsenic equivalent to the amount necessary for combination with the cobalt has been eliminated.

---

1,557,880. TREATMENT OF RAW MATERIAL IN THE MANUFACTURE OF CHEMICAL WOOD PULP. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Aug. 25, 1920. Serial No. 405,914. 2 Claims. (Cl. 34—6.)



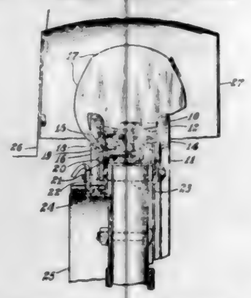
1. A method of conditioning wood chips for the manufacture of chemical wood pulp, which comprises burning a fuel to produce hot flue gas, cooling such flue gas by an externally-derived cold gas to produce a dry medium having a predetermined relatively low temperature, subjecting the chips directly to the desiccating action of the mixed gases by causing such gases and said chips to flow continuously through a closed container in direct contact, returning more or less of the previously used gas for admixture with the incoming mixed gases, and regulating the flow of gases and chips whereby the water content of the chips is reduced to a predetermined low point.

1,557,881. BALE. MORRIS E. ROGERS, Norwood, La. Filed Sept. 10, 1924. Serial No. 736,928. 1 Claim. (Cl. 100—14.)

A bale comprising a substantially cubical body, a bag encasing the body, and having its head portion folded over the top side thereof, two of the opposite side edge portions of the bag being secured together by a lacing seam which is disposed approximately diagonally with relation to the top side of the body, and the intervening side edge portions of the bag being connected with the first mentioned side edge portions of the bag by angular lacing seams, the apices of the angles of the last mentioned lacing seams joining with the ends of the first mentioned lacing seams, and the end portions of the angular lacing seams approximately bisecting the corner angles at the top side of the body.

---

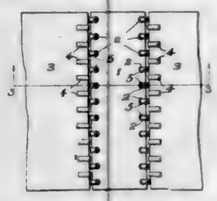
1,557,882. APPARATUS FOR GAUGING VEHICLE PARTS. JAMES W. SCHADE, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 20, 1924. Serial No. 714,671. 4 Claims. (Cl. 33—174.)



1. A wheel gauge comprising a portion adapted to be positioned upon the periphery of a wheel structure and a portion adapted, when the gauge is so positioned, to represent the position which would be occupied by a substituted wheel part of determinate dimensions.

---

1,557,883. BOOK COVER. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership, having as trustees F. B. Towne, E. S. Towne, J. M. Towne, and F. W. Wilson. Filed Oct. 11, 1924. Serial No. 742,984. 1 Claim. (Cl. 281—29.)



A book cover, comprising a metal back and penetrable side covers, said back having formed in its marginal side edges a series of spaced openings, elongated metal strips from whose opposite side edges project spaced

fingers and clinching members in staggered relation, said members being driven through the inner marginal edges of said covers and then clinched thereto, while said fingers are inserted through said openings in the back and curled around to form hinge connections.

---

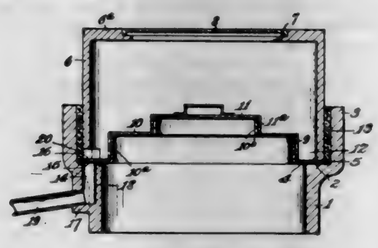
1,557,884. BAKER'S PEEL. LEON SCHLAGER, New York, N. Y. Filed July 14, 1924. Serial No. 725,769. 8 Claims. (Cl. 107—67.)

2. In a baker's peel, a blade having a metallic body portion and a non-metallic sheet secured on the bottom side thereof, the bottom side of said portion and sheet providing sliding surfaces for freely sliding the peel in and out of the oven without objectionable noise.

8. A baker's peel comprising a blade having a metallic body portion, longitudinal runners formed on the bottom side thereof, and a non-metallic sheet secured to an extended section of the body portion adjacent said runners, said sheet and runners providing sliding surfaces for freely sliding the peel in and out of the oven without objectionable noises, a member fastened to the upper side of the extended section, said member having a forwardly sloping ramp to facilitate the loading and unloading of the bake from the rear end of the blade and having a rear holder portion forming with said section a socket and a handle for the socket, and means for clamping the handle in the socket to prevent accidental displacement therefrom, said extended section and sheet being slotted to permit the clamping means to contract the socket to eliminate looseness of fit between the latter and the handle.

---

1,557,885. COVER BOX FOR METERS. STEPHEN SHANAHAN, Cincinnati, Ohio, assignor of one-half to Crowley-Prairie Realty Company, Charleston, W. Va. Filed Dec. 1, 1924. Serial No. 753,226. 4 Claims. (Cl. 137—13.)

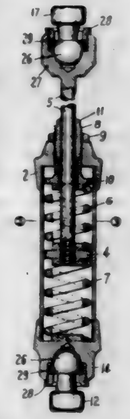


1. An enclosure for meters, comprising a casing having at its upper end an upright flange and having an internal annular ledge located inwardly with respect to said flange, an inner covering having a base flange seated on said ledge, an outer cover seated upon said base flange and spaced from said inner covering to form an intermediate annular channel, and a drain passage leading outward from said channel through the casing wall.

---

1,557,886. SHOCK ABSORBER. CHARLES W. SHARTLE, Jr., Middletown, Ohio. Filed Aug. 15, 1923. Serial No. 657,627. 1 Claim. (Cl. 267—60.)

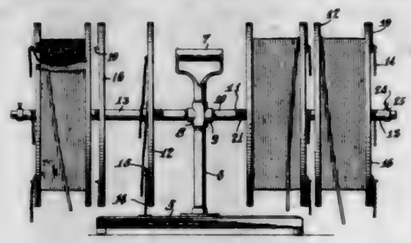
A shock absorber comprising mounting brackets spaced one from the other and secured respectively to the frame and axle of a motor vehicle, a shock absorber interposed between said brackets comprising a cylindrical housing and spring elements within the housing counteractive one of another, means for regulating the tension of the spring elements, connections between the shock absorber and said brackets comprising end caps for the shock absorber housing, a universal joint in the lower end cap whereby the same is operatively connected to the lower of said brackets a piston operable in the other end cap and coactively between said spring elements, a



universal joint connection between the piston and the other of said brackets including a member adapted to be adjusted rotatably and axially relative to said bracket to align the piston and shock absorber housing axially and regulate the distance between said connections, whereby the shock absorber as an operable unit will have free compensating action at both ends thereof between said relatively movable members.

---

1,557,887. ADJUSTABLE REEL. HOWARD E. SHEELEY, Michigan City, Ind. Filed Nov. 28, 1924. Serial No. 752,819. 1 Claim. (Cl. 242—85.)



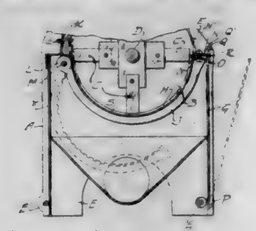
A reel structure of the class described including a base, a standard rising from the base, and terminating at its upper end in a handle, a pair of spindle arms radiating in opposite directions from an intermediate portion of the standard and being reduced at their outer portions so as to form shoulders, reels on the reduced portion, springs between the reels and the shoulders, and collars at the ends of the reduced portions to hold the reels in place.

---

1,557,888. GRINDER AND SHREDDER. HARRY J. SHELTON, St. Louis, Mo. Filed Nov. 1, 1922. Serial No. 598,356. 5 Claims. (Cl. 83—11.)

1. A grinder and shredder comprising a housing having a grinding chamber with revolvable hammers mounted therein, a cage hingedly supported at its rear end, a

perforated plate removably mounted in said cage to form the lower circumferential wall of said grinding chamber,



and means for detachably securing the front end of said cage to the upper circumferential wall of said housing whereby said plate is maintained in operative position.

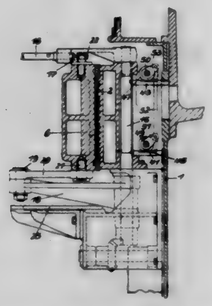
---

1,557,889. SAFETY RAZOR. BUFORD J. STERN, San Antonio, Tex. Filed June 26, 1925. Serial No. 39,830. 6 Claims. (Cl. 30—12.)

1. A razor including a handle formed with spaced bearings, a head carried by one end thereof whose outer side is convex, a frame capable of movement into either of said bearings, and formed with side arms, a blade holder mounted between said arms, a blade mounted in and detachable from said holder.

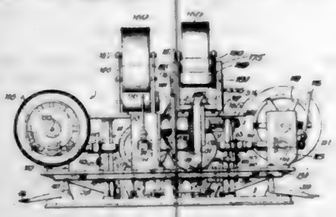
---

1,557,890. MACHINE FOR CASTING STEREOTYPE PLATES. VIKTOR STEPHAN, Plauen, Germany. Filed Apr. 3, 1925. Serial No. 20,431. 7 Claims. (Cl. 22—5.)



1. In a machine for casting stereotype plates, in combination: a shell-mantle; a vertical spindle located laterally from said mantle and being hinged to it; another vertical spindle; a joint-lever mechanism jointed at one end to the shell-mantle and at the other end to said latter spindle; and means to turn this spindle, the arrangement of the parts being such that the said shell-mantle can be opened and closed, as well as locked in its closed position, by said joint-lever mechanism substantially as set forth.

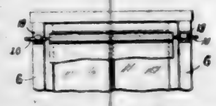
1,557,891. TIRE-BUILDING MACHINE. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 1, 1918. Serial No. 256,429. 132 Claims. (Cl. 154—10.)



1. In a machine for the manufacture of tire casings, a movable table, a core support on said table, a shaping mechanism arranged at one point about the table, a second shaping mechanism arranged at another point about the table, each of said shaping mechanisms operating upon the fabric progressively radially from the tread to the bead, and means to move the table to present the core support to the said shaping mechanisms in succession.

---

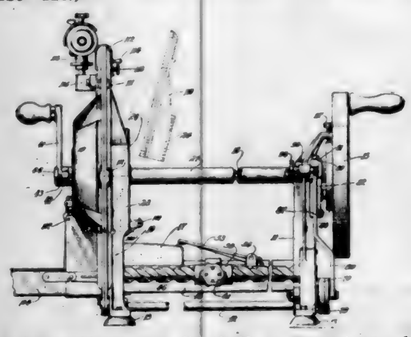
1,557,892. SHADE AND CURTAIN-POLE SUPPORT. CHARLES L. STUBBS, Akron, Ohio. Filed Dec. 4, 1919. Serial No. 342,338. 3 Claims. (Cl. 156—24.)



1. In a window fixture, a bracket comprising in combination, a body, means to non-rotatably attach said body to a window casing, so the same will project at a right angle thereto, said body being provided with two horizontal bores which extend laterally therethrough, one of said bores located near the free end thereof and adapted to receive a curtain rod, a cylindrical supporting pin slidably mounted in the other bore; means mounted directly on said body to hold said pin in said bore, said means also adapted to prevent a rotary movement of said pin, the said pin provided at one end with means to operatively support a shade roller substantially as herein described.

---

1,557,893. BREAD SLICER. HENDRIK STUKART, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed July 10, 1922. Serial No. 573,861. 19 Claims. (Cl. 126—113.)



1. In combination, a disc knife, a support on which said knife is journaled, means for rotating said support to move said knife bodily, means for rotating said knife upon its journal during the movement of said support,

means for holding said support in fixed position, means for rotating said knife while still journaled on said support when said support is held in fixed position, and a sharpener for engaging the edge of said knife when so rotated.

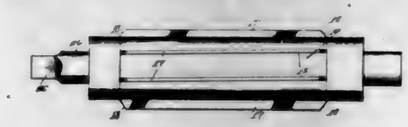
---

1,557,894. MOP-HANDLE FIXTURE. HERBERT M. STURGIS, Kansas City, Mo. Filed Nov. 14, 1924. Serial No. 749,816. 1 Claim. (Cl. 306—1.)

A mop handle fixture comprising a ferrule having a collar, a socket member connected to the ferrule provided with a collar distant from the collar on the ferrule, a ring nut on the socket member confined in its longitudinal movement between the two collars the distance between the collars being sufficient to permit longitudinal movement of the ring nut, a distance substantially the width of the nut, the free end of the nut extending beyond the end of the socket member, projections on the socket member and a threaded mop head having slots for engagement by the projections, the threads on the head being engageable by the threads on the nut.

---

1,557,895. REAMER. MICHAEL L. SUTTON and DONALD HEYER, Hollywood, Calif. Filed May 6, 1924. Serial No. 711,426. 1 Claim. (Cl. 77—76.)

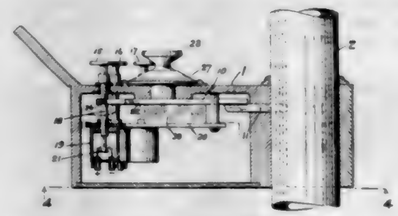


An expanding reamer including a longitudinally slotted holder having an intermediate transverse wall in each slot, cutter blades disposed in the slots of the holder and having inner inclined faces and outer beveled ends, the intermediate portion of the inner edge of each cutter blade having an elongated recess receiving a transverse wall therein and by which the blade is positively guided in its radial movements, means engaged on the ends of the holder and engaging with said beveled ends of the cutter blades, a tapered spreader bar movable within the holder and engaged with the inclined faces of the cutter blades at opposite ends of the said recesses, and a nut engaged on one end of the spreader bar and bearing against the adjacent end of the holder for moving the bar to adjust the blades through the slots of the holder, said nut being retained in position by one of said holder engaged means.

---

1,557,896. AUTOMOBILE LOCK. MICHAEL SWORASKI, Philadelphia, Pa. Filed July 8, 1924. Serial No. 724,750. 2 Claims. (Cl. 70—127.)

1. Means for use with the movable controlling member of an automobile and with a lock the bolt of which may engage said controlling member and prevent movement thereof, comprising in combination, a plurality of electric circuit closing members, each embodying a longitudinally movable rod having a section of restricted diameter, and means secured to the bolt of said lock and movable therewith and adapted to engage said rods and prevent longitudinal movement thereof and to free the rods, said means comprising a plate apertured for the passage



therethrough of said rods and for locking the plate and having slots of restricted width communicating with the apertures and adapted to embrace the portions of the rods of restricted diameter to permit of movement of the plate but not of the rods, said portions being so positioned in respect to the length of the rods that when engaged by the slots in said plate the electric circuits adapted to be closed by movement of the rods are open.

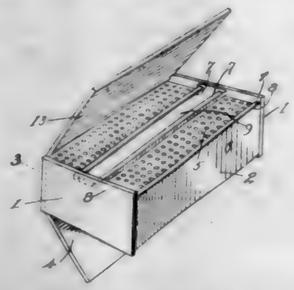
---

1,557,897. COMPOSITION FOR THE TREATMENT OF DOG MANGE. LEWIS L. TAYLOR, Orlando, Fla. Filed Sept. 7, 1921. Serial No. 499,046. 1 Claim. (Cl. 167—10.)

A dog mange remedy for external use, consisting of a solution of turpentine, linseed oil and sulphur in substantially equal proportions.

---

1,557,898. CIGAR BOX. ROGER W. TAYLOR, Cincinnati, Ohio. Filed Apr. 9, 1924. Serial No. 705,381. 2 Claims. (Cl. 131—80.)



1. A cigar box having a hinged top and a hinged bottom, a foraminated closure in the bottom of the box, downwardly extending flanges from opposite two sides of said closure of sufficient length to provide space for the insertion of liquid absorbent material, and outwardly extending flanges from the bottom of the downwardly extending flanges for securing said plate between walls of the box and the bottom cover thereof.

---

1,557,899. AUTOMOBILE LOCK. SAMUEL L. TERRY, Chicago, Ill., assignor to Terry-McCluskey Auto Lock Co., a Corporation of Illinois. Filed Oct. 3, 1921. Serial No. 505,162. 2 Claims. (Cl. 74—56.)

2. A gear casing of the character described, comprising an upper and lower cup complementarily threaded, the upper cup enclosing the lower cup, and a

spring pawl locking device secured at one of its ends in the top of the upper cup, the other end sharpened and

bent down to bitingly engage the upper edge of the lower cup when screwed into position and to prevent their separation thereafter.

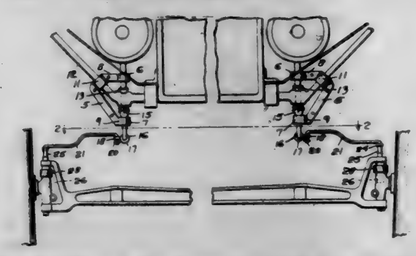
---

1,557,900. AUGER AND BIT. CLIFFORD J. THOMPSON, Chicago, Ill., assignor of one-half to Thomas J. Holmes, Chicago, Ill. Filed Sept. 8, 1924. Serial No. 736,386. 4 Claims. (Cl. 145—116.)

1. A wood-boring tool having a leading-in screw and cutting elements at its forward end for producing a hole slightly less in diameter than the hole to be bored and having screw-threaded elements defining substantially the radius of the hole to be bored and positioned posterior to said cutting elements for engaging the wood and leading the tool forward when in use, and a cutter posterior to said thread elements for cutting away the threads produced in the wood by said thread elements when the tool is normally used.

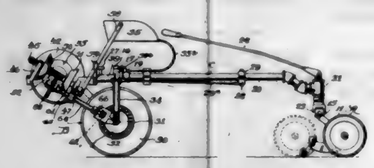
---

1,557,901. MOVABLE-HEADLIGHT MOUNTING. FRANK L. THOMPSON, Oklahoma City, Okla. Filed June 26, 1924, Serial No. 722,509. Renewed Sept. 15, 1925. 2 Claims. (Cl. 240—62.)



1. A device of the character described comprising a bracket having a pair of aligned eyes a third eye to embrace the fender brace of an automobile the said last named eye lying at such an angle as to support the first two eyes in alignment in a vertical plane, a lamp having its stem passed through the upper of said eyes an L shaped member journaled in the lower of said eyes and internally threaded for the reception of the usual threaded lower end of the stem of the lamp; said last named member comprising a crank portion and a pivoted sleeve said sleeve carrying a lateral ear thereon, a member clamped to the spindle body of an automobile and having a crank at its upper end and a rod connecting said crank and the lateral ear.

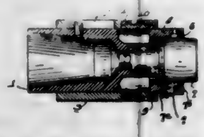
1,557,902. LAWN MOWER. HERBERT L. THOMPSON, Elgin, Ill. Filed Feb. 2, 1922. Serial No. 533,506. 12 Claims. (Cl. 56—26.)



1. In a device of the character described, the combination of a mowing element, a power element, a beam having pivotal connection at each end with said elements, means for controlling the position of said beam with respect to said power element and independently operative means for moving said mowing element about a vertical axis with respect to said beam.

---

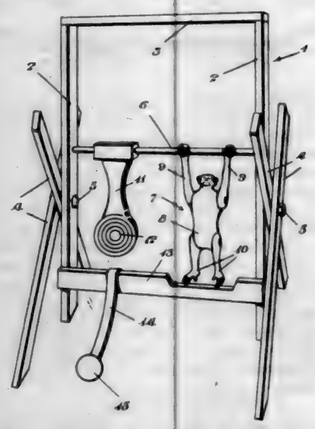
1,557,903. MEANS FOR TESTING THE PROGRESS OF WORK IN MACHINES FOR GRINDING BODIES OF REVOLUTION. HENNING TEODOR TORNBERG, Flushing, N. Y., assignor to Aktiebolaget Svenska Kullagerfabriken, Goteborg, Sweden, a Corporation of the Kingdom of Sweden. Filed Apr. 18, 1921. Serial No. 462,377. 6 Claims. (Cl. 33—163.)



1. Means for testing the progress of grinding operations in grinding machines having a rotary spindle to carry the body to be ground, said means comprising a gage, and means for mounting said gage relatively to the spindle to rotate with the body to be ground, said gage being movable into gaging relation to the body to be ground.

---

1,557,904. TOY. WALTER BOYD VANDIGRIFT, Dunwoody, Ga. Filed Mar. 28, 1922. Serial No. 547,497. 1 Claim. (Cl. 273—98.)

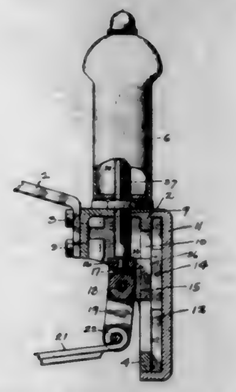


A toy comprising a pair of standards, a rotary shaft mounted in said standards, a cross bar secured to said standards below the shaft, an articulated figure carried by said shaft, an arm secured to said shaft and depending

therefrom, said arm having a target at its lower end, an elastic secured to said cross bar below said target, and a member secured to said elastic to strike said target when properly directed over the cross bar, said figure and arm being disposed between the standards to rotate with the shaft above the cross bar.

---

1,557,905. AIR SPRING. VERLE V. VAN NATTAN and CARLTON R. GRAY, San Francisco, Calif. Filed July 11, 1923. Serial No. 650,852. 8 Claims. (Cl. 267—65.)



1. A cushioning device comprising a closed cylinder fixed to a vehicle frame and adapted to contain a pressure; a substantially closed guide frame depending from and connected to said cylinder; a piston slidably retained within said cylinder; a slide, slidably retained in said guide frame; a connecting rod extending through an end of said cylinder, and pivotally connected at its opposite ends to said piston and slide; and a movable vehicle spring connected to said slide and adapted to move said interconnected slide and piston axially with respect to said cylinder and guide frame.

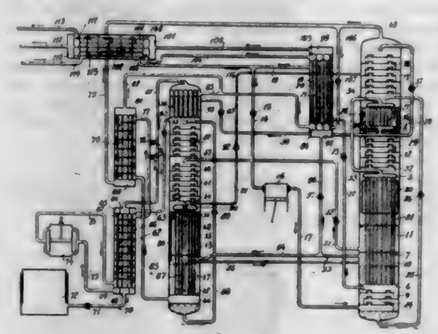
---

1,557,906. END-GATE FASTENER. DEWEY G. VANNORSDEL, Kingsley, Iowa. Filed Mar. 28, 1923. Serial No. 628,163. 1 Claim. (Cl. 292—283.)

In a device of the class described, the combination with a wagon box body and a vertically slidable end gate therefor; of a fastening means for the end gate comprising rigid arms secured to the outer face of the side walls of said body and projecting beyond the rear end edges thereof, the projecting free ends of said arms being formed with bearings disposed in a horizontal plane below the upper edge of said end gate and above the transverse central plane of the wagon box body, said bearings being disposed in a vertical plane forward of the plane of the outer face of the end gate, a pair of hasps pivotally mounted at their inner ends in the bearings of the aforesaid arms and having upwardly and obliquely extending shank portions formed thereon, the extreme outer ends of said shank portions terminating in laterally disposed yokes, bolts mounted in said end gate adjacent the upper and side edges thereof, nuts engaged with the inner ends of said bolts adapted for contact with the inner face of the end gate, enlarged flat head portions formed on the outer ends of said bolts providing shoulders between the head portions and the bolts adapted to abut the outer face of the end gate to permit the head portions to project beyond the latter, said head portions being adapted for reception through the openings in said yokes and provided with lateral slots therein, the outer ends of said flat head portions being rounded, and pins adapted to be inserted through the slots in the head portions after the yokes have been applied thereto, as and for the purposes described.

---

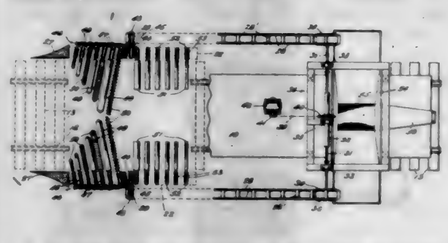
1,557,907. SEPARATION OF THE CONSTITUENTS OF GASEOUS MIXTURES. CLAUDE C. VAN NUYS, Cranford, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 24, 1923. Serial No. 641,035. 21 Claims. (Cl. 183—115.)



1. A method of separating the constituents of gaseous mixtures, which comprises subjecting the compressed and cooled mixture to selective liquefaction to separate a liquid enriched in the less volatile constituents and a residual gas, liquefying the residual gas, rectifying the liquid product of the rectification to an auxiliary rectification of the liquefied residual gas, subjecting the liquid product of the rectification to auxiliary rectification, and cooling the gaseous product of the auxiliary rectification by heat exchange with the balance of the liquefied residual gas to separate the least volatile constituent therefrom.

---

1,557,908. RAILWAY-TRACK-REBALLASTING APPARATUS. PASQUALE URSINO, Seattle, Wash. Filed Mar. 2, 1925. Serial No. 12,551. 6 Claims. (Cl. 104—7.)



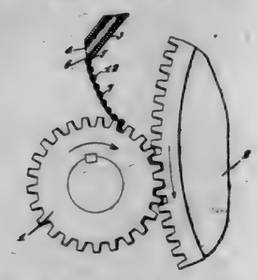
2. In apparatus for removing ballast from beneath a track, a car mounted to travel upon said track, conveyors carried by the car and adapted to be employed beneath said track for excavating material therefrom, and rollers also carried by the car and rendered operative by the progressive travel of the car for effecting the raising and lowering successively of the track.

1,557,909. FLY SCREEN. EDWARD I. WALLACE, Florence, Ala. Filed Apr. 7, 1924. Serial No. 704,793. 1 Claim. (Cl. 156—37.)

A screen including a frame, an upper and a lower woven wire fabric section secured thereto, said sections having spaced free edges, a fly escape supported between the edges of said sections, said fly escape including a metallic plate bent back upon itself to provide a folded portion extending alongside of and in spaced relation to the upper portion of the lower section, the ends of said plate being secured to the respective free edges of said sections, a lateral extension formed on the upper portion of the folded portion of the plate and disposed adjacent the upper edge of the lower section, said lateral extension having an orifice formed therein providing an exit to the outside of the screen, the ends of said plate being spaced to provide an exit communicating with the aforementioned exit.

---

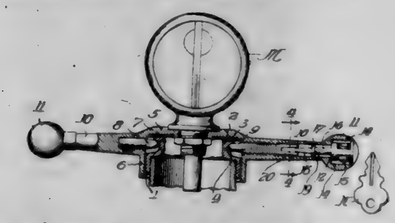
1,557,910. CHAIN-GEAR OILER. AMOS H. WEAVER, Kinross, Iowa. Filed Aug. 29, 1923. Serial No. 659,979. 2 Claims. (Cl. 184—16.)



2. A device for lubricating gear wheels and the like, comprising a tube, a forked yoke connected intermediate its ends with the tube, and flexible elements assembled with the ends of the yoke.

---

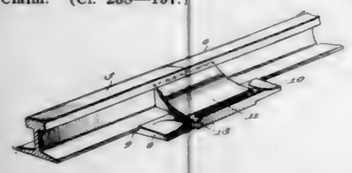
1,557,911. RADIATOR CAP. JOHN F. WHITE, Chicago, Ill., assignor to White Products Company, Chicago, Ill., a Corporation of Illinois. Filed June 30, 1921. Serial No. 481,510. 2 Claims. (Cl. 70—90.)



1. In a closure of the sort described, the combination of a nipple affording a mounting, and a cap affording a closure for the nipple, said cap being provided with oppositely-extending arm portions whereby it may be manipulated, said nipple being provided with a peripheral retaining ledge, retaining members on said cap in alignment with respective arms thereof, said retaining members being engageable with said retaining ledge to hold the cap against removal from the nipple, and means operable in one of said arms for shifting one of said retaining members on the cap to permit removal of the cap from the nipple by movement imparted to the cap through the instrumentality of an arm.

---

1,557,912. RAIL JOINT. WILLIE T. WILLIAMS, Buena Vista, Fla. Filed Aug. 26, 1924. Serial No. 734,835. 1 Claim. (Cl. 238—197.)



In a device of the character described, the combination with the abutting ends of two adjoining rails having transverse openings through their web, of a base extending transversely beneath the rail ends and having a longitudinal groove to receive said ends, a rail engaging flange formed integral with one side of said base and having notches along its upper edge adapted to register with the openings through the web of the rails, a recess in the opposite side of said base having communication with said longitudinal groove, a locking member adapted to be seated in said recess and firmly contact with the web of said rails, said locking member having a series of studs etending through said openings in the web and seated in said notches, and a notch formed along the edge of said recess for the insertion of a tool to remove said locking member.

---

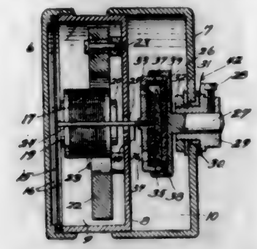
1,557,913. COMBINATION TROLLEY WHEEL AND SHOE. ALBERTO I. WOODRING, Waterloo, Iowa, assignor, by mesne assignments, to National Safety Devices Company, Waterloo, Iowa. Filed Jan. 3, 1922. Serial No. 526,726. 5 Claims. (Cl. 191—59.1.)

1. In combination, a trolley-harp, a slide-contact device tiltably mounted thereon reversibly, and a rolling-contact device mounted on said slide-contact device out of alinement with the slide surface thereof.

---

1,557,914. ELECTROMAGNETIC SOUND-WAVE-INTENSIFYING DEVICE. ALFRED WYATT, Kansas City, Mo., assignor of one-third to Samuel J. Cochran and one-third to Frank A. Cochran, both of Kansas City, Mo. Filed Apr. 10, 1922. Serial No. 550,902. 1 Claim. (Cl. 179—171.)

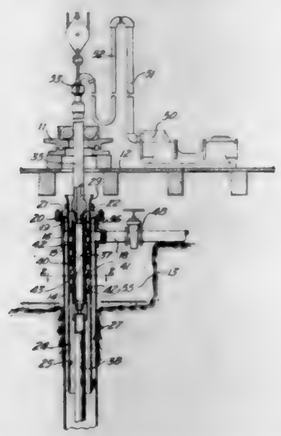
A sound amplifying device comprising a pair of housing sections having a partition forming separate housing compartments, an electromagnet supported by said partition within one of said compartments and having terminals adapted for connection with an electric circuit including sound producing means, a vibratory diaphragm carried by the housing section enclosing said electromagnet in position for forming the armature for said electromagnet, a microphone supported by the other housing section within the other of said compartments and in central axial alinement with said diaphragm and



having an operative connection extending centrally through said partition to the center of said diaphragm, said microphone having terminals adapted for connection with an electric circuit including a loud speaking or amplifying instrument.

---

1,557,915. PRESSURE CONTROLLER FOR OIL WELLS. VICTOR YORK, Los Angeles, Calif., assignor of one-half to Walter G. Black, Whittier, Calif. Filed Aug. 28, 1922. Serial No. 584,919. 9 Claims. (Cl. 166—15.)

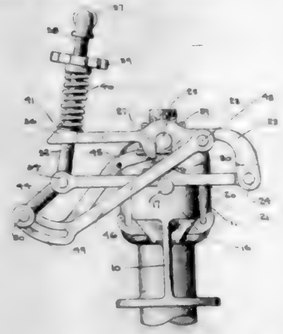


1. In a device of the character described, the combination of: a casing; a tubular member secured to and extending inside said casing; a string of drill pipe adapted to pass into said tubular member and casing; and means secured between the successive sections of said drill pipe for making a fluid tight joint between the exterior of said drill pipe and the interior of said tubular member.

---

1,557,916. WRINGER. FRANK B. ZIEG, Fredericktown, Ohio, assignor, by mesne assignments, to The F. B. Zieg Mfg. Company, Fredericktown, Ohio, a Corporation of Ohio. Filed May 25, 1921. Serial No. 472,361. 10 Claims. (Cl. 68—32.)

6. A wringer comprising a stationary roll, a movable roll, releasable tension means operable upon said movable roll for forcing said rolls together, and links connected with said tension means and said movable roll whereby said rolls may be forced apart with the release of said tension means, said links being inoperative while said tension means is in operative position.



10. A wringer comprising a lower roll, stationary end bearings for said roll, an upper roll, movable end bearings for said upper roll, a pair of members pivoted respectively to each of said stationary bearings, tension means carried by each of said members operable to force said movable bearings toward said stationary bearings, said means being releasable by the swinging of said members, and a bar extending between said members operable to swing said members simultaneously.

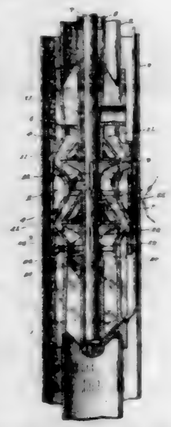
---

1,557,917. BEVERAGE EXTRACT. BERNARD H. ZIEHLER, Dayton, Ohio. Filed Oct. 26, 1920. Serial No. 419,615. 2 Claims. (Cl. 99—11.)

1. The herein described process of preparing solidified extract for beverage purposes comprising making a fluid extract of the soluble portions of a malted vegetable product and subsequently heating the extracted matter to partially carbonize and caramelize such extractive material.

---

1,557,918. IMPELLER SPACER AND BUSHING. CURT F. ZIMANSKY, San Francisco, Calif., assignor to G. W. Price Pump and Engine Company, San Francisco, Calif. Filed Feb. 11, 1924. Serial No. 692,027. 4 Claims. (Cl. 103—111.)

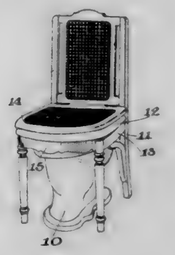


1. The combination with the bowls and shaft of a rotary well pump of a runner feathered upon the shaft within each bowl; a retaining collar secured upon the shaft; spacing members mounted upon the shaft for po-

sitioning the runners with respect to the collar; a member secured upon the shaft adjacent the runner remote from the collar; and a bushing screw threaded onto said member, said bushing being movable upon said threads to engage and compress the runners and spacing members against the retaining collar for rigidly securing said runners against longitudinal movement upon the shaft.

---

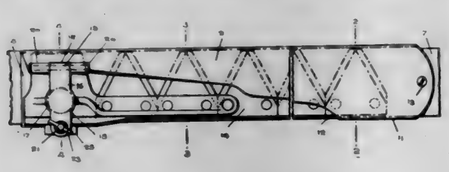
1,557,919. WATER-CLOSET CHAIR. EUGENE A. ZUNDEL, Sheboygan, Wis., assignor to Crocker Chair Company, Sheboygan, Wis., a Corporation of Wisconsin. Filed Apr. 9, 1924. Serial No. 705,353. 2 Claims. (Cl. 4—134.)



1. A water closet chair comprising a chair frame with open front adapted to extend around the sides and back of a water closet bowl and provided with a chair back and with side members having no cross connection at the front, a closet seat hinged to the frame and adapted to rest on the side members, interlocking connections between the closet seat and the side members to prevent the side-members from spreading, and a chair seat hinged on the frame and forming a cover for the closet seat in a closed position and bearing on the chair back in an open position.

---

1,557,920. SICKLE SCABBARD. FRANCIS J. BUDROE and JOHN J. MCCORMICK, Jr., Uva, Wyo. Filed Feb. 27, 1923. Serial No. 621,580. 3 Claims. (Cl. 224—2.)

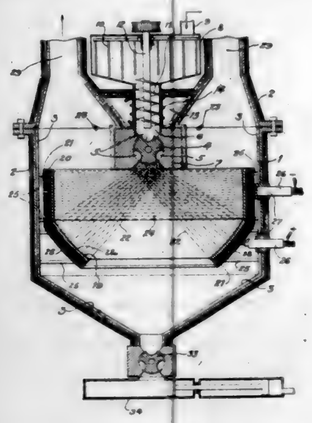


3. A scabbard of elongated form having a longitudinal opening for the insertion of a member into the scabbard, a hasp and a bolt hingedly connected with said scabbard at opposite edges of said opening, said hasp being formed to engage the member when inserted in the scabbard and having an aperture to receive said bolt, and means on the bolt for clamping the hasp against said member.

---

1,557,921. PROCESS OF AND APPARATUS FOR DRYING MATERIALS. HILLHOUSE BUEL, Seattle, Wash. Filed Apr. 18, 1921. Serial No. 462,439. 25 Claims. (Cl. 34—30.)

24. A drying apparatus comprising in combination a chamber, means for maintaining a partial vacuum in said chamber, means for supplying heat within said chamber and transferring it solely by radiation to the material to be dried, a positive means for introducing material to be dried into the field of radiation within said chamber, and means for removing material from said chamber, both said introducing and said removing



means preventing the admission of substantial amounts of air or other gases, said means for supplying heat comprising a surface a portion of which has at least a dark blood red temperature.

---

1,557,922. AUTOMATIC GARAGE-DOOR OPENER. CARL ANTON CARLSON, Fort Dodge, Iowa. Filed Aug. 7, 1924. Serial No. 730,612. 2 Claims. (Cl. 268—9.)

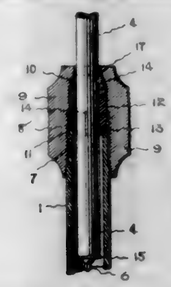
1. A mechanism of the character described comprising intermediate and end tread members, the inner ends of the end members resting on the end portions of the intermediate member, hinge rods mounted at the outer ends of the end members, said outer ends of the end members having slotted portions to detachably engage said hinge rods by the movement of the end members away from the intermediate member, said end members being located between said hinge rods and intermediate member, means for supporting the intermediate member for vertical movement, and an operative connection for connecting said intermediate member with a door for opening the door when said intermediate member is depressed.

---

1,557,923. FRICTION JOINT FOR WINDOW ADJUSTERS AND THE LIKE. WILLARD R. CARROLL, New Haven, Conn., assignor to The Lyons Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Dec. 19, 1922. Serial No. 607,842. 1 Claim. (Cl. 287—114.)

In a device as described, a tubular body; a member adapted to slide within said body; adjustable friction means interposed between said body and member; said means comprising an external nut mounted on a threaded end of said body; a contractible and self-expanding bush-

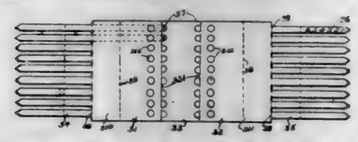
ing slidably mounted on said members; said bushing having a tapered end engaging a tapered seat whereby contraction of said bushing is effected and means pro-



vided on the inner end of said member arranged to engage said bushing to limit the outward movement of said member.

---

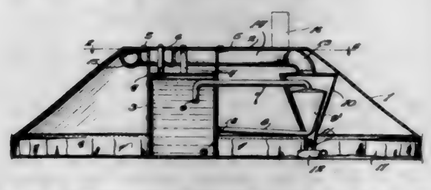
1,557,924. RECORD CARD. BURNIE J. CRAIG, Cleveland, Ohio. Filed Sept. 7, 1920. Serial No. 408,450. 11 Claims. (Cl. 40—63.)



1. A record card comprising a polygonal front portion having a plurality of apertures therein and a polygonal back portion united with the front portion along all edges thereof and having slits along one of the edges at the junction of the front and back portions and recording tabs extending through said slits and having indicia thereon visible through said apertures.

---

1,557,925. BROODER. JOSEPH F. DISTEL and FRANK KLENKEN, Wilmont, Minn. Filed Sept. 8, 1924. Serial No. 736,609. 2 Claims. (Cl. 119—32.)

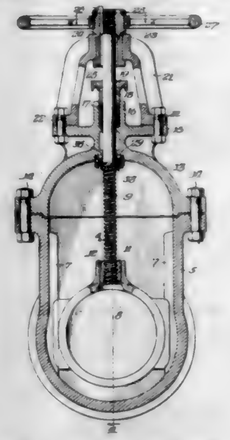


1. In a brooder, the combination of an enclosing structure, a storage tank disposed within the structure, means whereby the enclosing structure will be supported by the tank, a heating tank, circulating pipes connecting the heating tank with the storage tank, a housing supported by said pipes around and in spaced relation to the heating tank, means for applying heat to the lower end of the heating tank, and an outlet pipe rising from said housing and extending around the enclosing structure immediately below the top of the same.

---

1,557,926. GATE VALVE. CARL A. DOPP, Chicago, Ill., assignor to Crane Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 20, 1923. Serial No. 681,694. 14 Claims. (Cl. 251—62.)

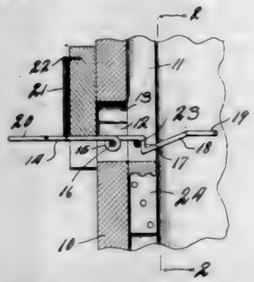
1. In a gate valve the combination of a casing, a bonnet mounted thereon and provided with a stuffing box, a yoke mounted on said bonnet, an operating wheel rotatably carried by said yoke, a valve stem of substantially uniform diameter fixedly connected to said wheel and projecting through said stuffing box and bonnet



into said casing, a valve disc threadedly connected with said stem, and means for effecting a seal between said bonnet and said stem.

---

1,557,927. DOOR LATCH. EVERETT R. FARLEY, Paoli, Ind. Filed Jan. 17, 1925. Serial No. 3,124. 3 Claims. (Cl. 292—228.)



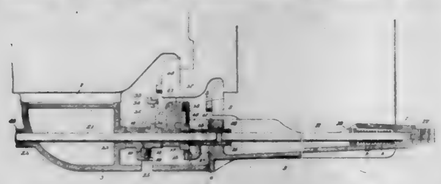
1. The combination with a door and a frame against which the door closes, the frame having an outstanding pin extending parallel to the face of the door when closed, of a latch mounted on the door, the latch having a horizontal portion terminating at its inner end in a handle and extending beyond the outer face of the door, the latch then extending straight downward and being adapted to engage over the pin, the latch then extending upward and outward to a point beyond the level of said pin and terminating in a handle, and a spring urging the inner end of the latch upward.

---

1,557,928. CYCLE-CONTROL MECHANISM. ROBERT M. GALLOWAY, Richmond, Ind., and PAUL C. BURTON, Clarendon Hills, Ill., assignors to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed Aug. 14, 1923. Serial No. 657,384. 19 Claims. (Cl. 192—139.)

1. A control instrumentality for cyclic mechanism combining an element connected with said cyclic mechanism and adapted in one position to cause said mechanism to function and in another position to suspend its operation; a shaft upon which said element is journaled; a member fixed to said shaft and having a lost-motion connection with said element; manual means to rotate said

shaft and said member in one direction, to shift said element to its operative position; and automatic means actuated by said cyclic mechanism to periodically rotate



said shaft in a reverse direction to return it to its initial position, the last of said periodic movements acting through said member, to shift said element to its inoperative position.

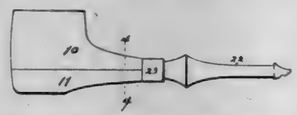
---

1,557,929. DIVIDER FOR MOWING MACHINES. GUY M. GREEN, Walla Walla, Wash. Filed June 28, 1924. Serial No. 722,915. 1 Claim. (Cl. 56—318.)

In a divider for mowing machines, the combination with a dividing shoe having a removable guide board and fender arm, and a dividing rod having a finger portion, suitably attached to said shoe, of a yielding guard supported at one end by the said finger portion and at its other end by a sliding connection attached to said finger arm, said guard being formed in a generally horizontally curved line and position to produce a continuous, uninterrupted guard from the finger portion to the end of the fender arm.

---

1,557,930. TOBACCO PIPE. HARRY W. GRIFFITH, Ault, Colo. Filed Feb. 1, 1924. Serial No. 690,082. 3 Claims. (Cl. 131—12.)



1. A tobacco pipe formed of separable members adapted to be moved relative to each other on right lines and parallel planes, said members being formed with mating portions of a smoke duct and also being formed with inter-engaging dove-tail grooves and ribs, the plane of separation between said members intersecting the bowl of the pipe.

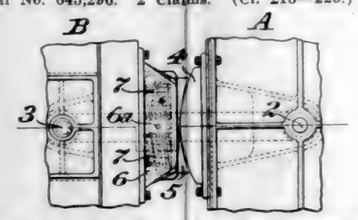
---

1,557,931. ELECTROLYTIC ELECTRICITY METER. MAX GROSSMANN, Jena, Germany, assignor to the Firm Schott & Gen, Jena, Germany. Filed July 20, 1923. Serial No. 652,855. 2 Claims. (Cl. 171—266.)

1. In an electrolytic electricity meter an anode vessel, a liquid anode, a cathode vessel below the anode vessel and communicating with it, the anode vessel and the cathode vessel adjoining each other in a wall consisting of fritted glass, a solid cathode, and an electrolyte contained in both vessels.

---

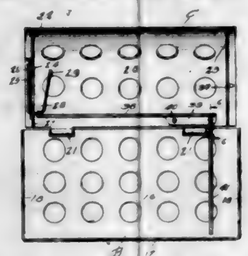
1,557,932. RAILROAD DRAFT APPLIANCE. ROBERT F. HALL, Schenectady, N. Y. Filed June 14, 1923. Serial No. 645,296. 2 Claims. (Cl. 213—220.)



1. In a draft gear for railroad vehicles, the combination of a buffer case, open at its front and rear faces and having laterally extending flanges on its rear face; a buffer slidably mounted in said case and extending through the opening in the front face thereof; springs within the case and extending through the opening in the rear face so as to exert outward pressure on the buffer; a removable pin fixedly connecting the buffer and buffer case; adjusting bolts, fixed to the frame of the vehicle on which the buffer case is supported and passing through said lateral flanges and nuts engaging said adjusting bolts.

---

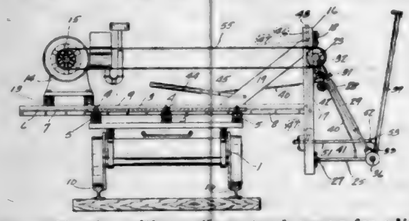
1,557,933. ANIMAL TRAP. CHARLES O. HARKER, Grand Junction, Iowa. Filed Sept. 6, 1923. Serial No. 661,192. 7 Claims. (Cl. 43—67.)



1. In an animal trap, upper and lower portions, means for pivotally connecting them together for permitting the upper portion to be swung into the lower portion, a trap door pivotally mounted in the upper portion having a counter weight pivotally supported thereon, and normally hanging into the lower portion, said counterweight being adapted to be swung to position adjacent to the trap door when the trap portions are collapsed.

---

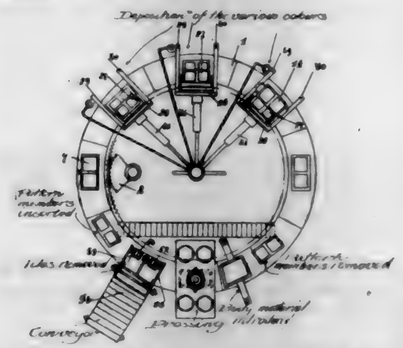
1,557,934. RAILWAY WEED CUTTER. JULIUS HEINZ, Sutton, Nebr. Filed Jan. 5, 1924. Serial No. 684,537. 1 Claim. (Cl. 56—232.)



In combination with a railway truck means for adjustably and operatively mounting the cutting elements of a grass mower upon said railway truck, said means comprising a frame on the truck adapted for lateral sliding movement thereupon; a sickle supporting frame attached at an end of the sliding frame and depending at the side of the truck; a brace connecting the sickle head to the lower end of the sickle frame for vertical pivotal movement; means for elevating the sickle bar, said means comprising a vertical bar pivoted to the sickle frame and formed with a crank arm at the top and a lever arm at the bottom, said lever arm being connected to the sickle bar by means of a link; independent means for elevating the said connecting brace, said means comprising a chain which is secured to the said connecting brace, passed over a pulley and secured to a lever pivoted to the sliding frame; and means for driving the usual sickle drive shaft, said means being telescopically and pivotally adjustable to meet the relatively raised or lowered position of the said connecting brace.

---

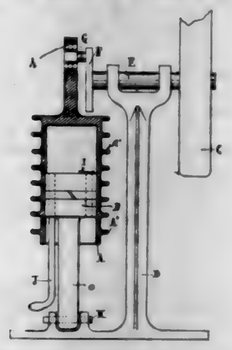
1,557,935. APPARATUS FOR THE MANUFACTURE OF CERAMIC TILES. ARTHUR HENROZ, Brussels, Belgium. Filed Oct. 5, 1921. Serial No. 505,472. 15 Claims. (Cl. 25—42.)



1. In apparatus for manufacturing ceramic tiles, the combination of a hopper; a movable strainer therebeneath; and a device connected to the strainer to impart a succession of sudden shocks or vibrations thereto, said device comprising a differential piston having working surfaces of unequal areas, and a distributor for automatically supplying a fluid under pressure to act constantly upon the surface of smaller area and intermittently upon the surface of greater area.

---

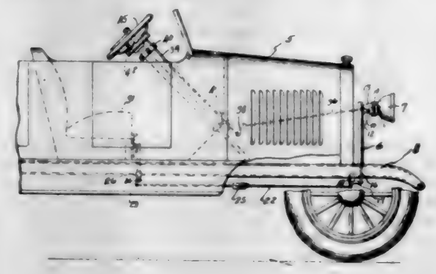
1,557,936. COMPRESSOR FOR FLUIDS. PIERRE JOUANNEAUX, Paris, France. Filed Feb. 25, 1924. Serial No. 695,062. 1 Claim. (Cl. 230—27.)



A fluid compressor, comprising a standard provided with a base; a piston having the lower end of its rod pivoted to said base, and having suction and delivery ducts for the fluid formed through its head, the suction duct being provided with a check valve; a cylinder wherein said piston works having a closed upper end provided with a lug, and an open lower end; a drive shaft journaled in the upper end of the standard; a crank disk attached to said shaft and provided with a pin engaged with said lug, thereby to positively impart to said cylinder, simultaneously, both an endwise reciprocatory movement and a lateral oscillatory movement; and a delivery pipe for the compressed fluid connected to the outer end of the delivery duct and extending through the open end of the cylinder.

---

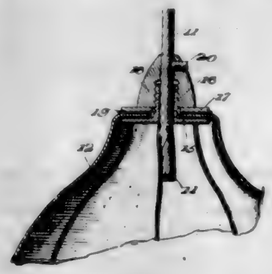
1,557,937. CONTROL MECHANISM FOR HEADLIGHTS. EDWARD B. KAYLOR, Detroit, Mich. Filed Sept. 10, 1923. Serial No. 661,737. 8 Claims. (Cl. 240—61.)



1. Control mechanism for headlights comprising a pair of headlight supporting standards mounted on a vehicle, a bracket pivotally mounted in each standard and movable in a vertical plane, a second bracket pivotally mounted upon the first mentioned bracket and adapted to swing thereupon, a headlight secured to said last mentioned bracket, manually operated means connected with the first mentioned bracket for lifting and lowering the headlight, and means actuated from the steering mechanism of the vehicle for swinging the headlight relatively to the first mentioned bracket.

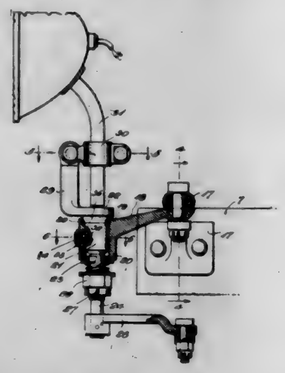
---

1,557,938. STRIKING BAG. BERT KENNEDY, Gloversville, N. Y. Filed May 26, 1925. Serial No. 33,002. 2 Claims. (Cl. 272—77.)



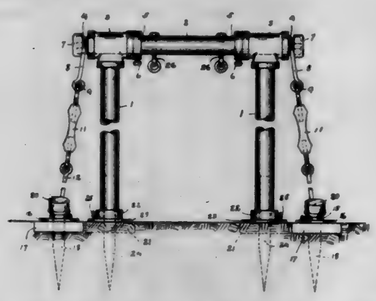
1. A striking bag having a laced side opening and a reduced upper end provided with an aperture in line with the axis of the bag, the said reduced upper end being closed between said side opening and said top aperture, and a top piece clamped through and around the top aperture, having a central bore in line with the axis of the bag to receive a suspension cord and including an external clamping nut having a cord gripping element.

1,557,939. DIRIGIBLE HEADLIGHT. LEO KING and ODIE CROISSETIERE, Sault Ste. Marie, Mich. Filed Aug. 4, 1924. Serial No. 730,060. 2 Claims. (Cl. 240—62.)



1. In a dirigible headlight, a bracket, a sleeve carried by said bracket, a head rotatable in the sleeve, said head and sleeve having beveled contact surfaces at their upper ends holding the head from downward movement, a spring-pressed abutment upon the head engaging the lower end of the sleeve, an arm at the upper end of the head offset therefrom and lying in a vertical plane parallel therewith, a clamp extending laterally from said arm, a lamp having a standard depending therefrom parallel with the arm and engaged by the clamp and resting at its lower end upon the head, and means connected with the head for imparting rotary motion thereto and to the lamp.

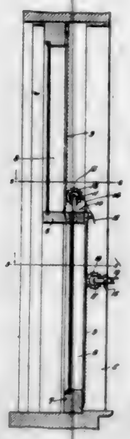
1,557,940. SWING. PETER J. LA PLANT, Duluth, Minn. Filed Dec. 27, 1924. Serial No. 758,358. 2 Claims. (Cl. 155—58.)



1. A fabricated support of the character described comprising two spaced upright members, a horizontally disposed cross piece longitudinally adjustably mounted within the upper ends of the uprights, the extreme ends of the cross piece adjustably carrying bridles externally of the upright members, and adjustable guy lines attached to the bridles.

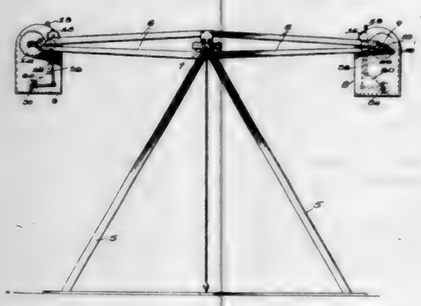
1,557,941. WINDOW-SASH LOCK. GROVER C. MASON, Jacksonville, Ill., Filed May 18, 1923. Serial No. 639,755. 2 Claims. (Cl. 292—280.)

1. A window sash lock of the character set forth, comprising rack bars secured to the inner faces of the sashes, forked brackets having their free ends apertured and extending adjacent the rack bars, gear wheels supported in the forked ends of the brackets, ratchet wheels secured to the gear wheels and carried within the forks of the brackets, pawls secured to the sides of the



brackets and having their inner ends offset in alignment with the ratchet wheels, and expansible coil springs secured to the sides of the brackets and bearing against the opposite ends of the pawls.

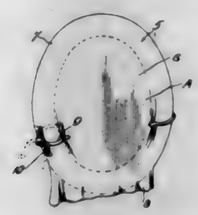
1,557,942. AMUSEMENT DEVICE. LEE CORYDON MATTHEWS, San Quentin, Calif. Filed Sept. 11, 1922. Serial No. 587,365. 3 Claims. (Cl. 272—49.)



1. An amusement device comprising a frame, a shaft having connection with the frame, beams connected intermediate their ends to the shaft, carriages having stub shafts connected to the terminal portions of said beams, main gears fastened rigidly to said beams, shafts carried by said carriages and having gears connected to said first-named gears, said last-named shafts being provided with hand cranks by means of which the second-named gears may be manually turned for changing the center of gravity of the carriages.

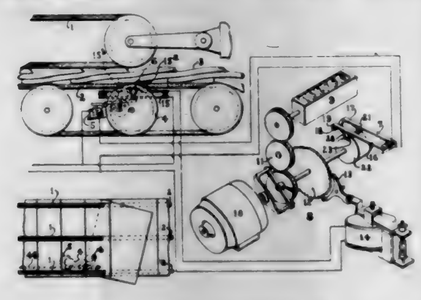
1,557,943. TIRE AND WHEEL PROTECTOR. ALFRED E. MUSTO, Vancouver, British Columbia, Canada. Filed Nov. 26, 1924. Serial No. 752,462. 1 Claim. (Cl. 150—54.)

A sun protector for automobile tires and wheels comprising a flexible body including a front wall and a substantial annular side wall of arcuate shape in cross section, the lower end of the side wall being left open and provided with a flap to permit the same to be slipped over a tire and wheel, brackets carried by the



opposite sides of the side wall, and resilient U-shaped clips carried by the brackets for gripping the side walls of a tire with which the cover is associated.

1,557,944. CONVEYER. GUSTAVE B. REISBACH, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 26, 1920. Serial No. 426,339. 14 Claims. (Cl. 98—93.)

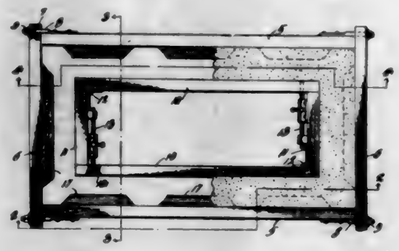


1. The combination with a conveyer, of means under the control of the articles carried by said conveyer to engage and effect deflection of certain of the articles upon movement of a given number of such articles past a given point, said means including means to insure a predetermined degree of deflection of such articles under conditions of variation in dimensions or spacing of the articles.

1,557,945. ROD PACKING. CHARLES A. SCHLOTTER, Avalon, and MILO T. SCHOLL, Pittsburgh, Pa., assignors, by mesne assignments, to Flexomet Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 10, 1922. Serial No. 559,866. 3 Claims. (Cl. 288—1.)

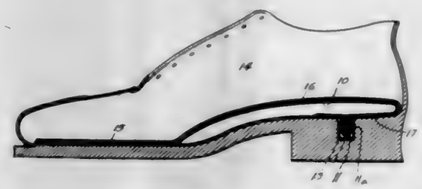
3. A packing-ring comprising an annular metallic channel member of flexible metal having substantially uniform thickness adapted to contact with a movable rod embraced thereby, the channel member being open peripherally, and a ring of yielding packing seated in the channel, the base of the channel member bulging outwardly to form an annular wave and the portions of the base at each side of the said wave bulging inwardly to form annular waves whereby, when the ring is compressed, its base bulges outwardly in a uniform manner and compresses the packing, and the portions at each side of the base bulge inwardly.

1,557,946. MONUMENT MOLD. LEWIS SMITH, Wayne City, Ill. Filed Mar. 7, 1925. Serial No. 13,853. 1 Claim. (Cl. 25—123.)



A mold for forming a concrete monumental enclosure having integral walls, including inner and outer members adapted to be disposed in spaced concentric relation, the outer member comprising separable walls, and the inner member comprising side and end walls, one end of each end wall of the inner member being hinged to one end of one side wall of the inner member, said end walls of the inner member being disposed between the ends of the side walls thereof and being provided with sliding bolts, the free ends of the side walls of said inner member being formed with transverse openings for reception of said bolts to maintain the inner member in set up condition.

1,557,947. ARCH SUPPORT AND HEEL CUSHION. BENJAMIN STEWART, Des Moines, Iowa. Filed Jan. 29, 1924. Serial No. 689,212. 1 Claim. (Cl. 36—71.)

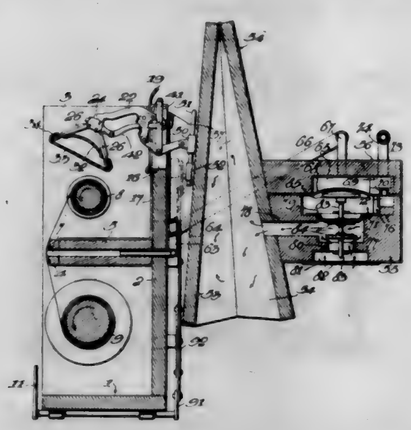


In a structure of the class described, the combination of an arch support and heel cushion, comprising a pneumatic resilient air container having on its under side near its rear portion a small, downwardly projecting tubular extension, and a valve structure received in said extension, with a shoe having a recess in its heel opening into the shoe for receiving said extension and valve structure, a loose flexible sock lining for covering the pneumatic member having at its rear portion a tongue folded around and under the rear portion of the pneumatic member and provided with a hole receiving said tubular extension.

1,557,948. PLAYER-PIANO REROLL STOP. ARTHUR TINDLE, Nokomis, Ill. Filed June 28, 1924. Serial No. 721,775. 37 Claims. (Cl. 84—122.)

1. In player pianos, the combination with the music roll which includes a spool and a music sheet wound thereon, the tracker bar, the take-up roll and the means

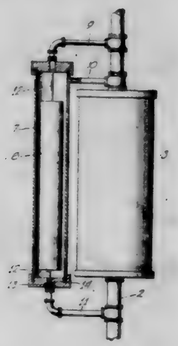
for re-rolling the music roll; of means for engaging the music strip to restrain the free end thereof from flapping when released from the take-up roll, and mechanism



governed by the music strip for applying said engaging means to the music roll as the end of the music strip is leaving the take-up roll.

---

1,557,949. ANTIFREEZING PUMP. MARK WALTON, Ullin, Ill., assignor of one-half to Alonzo S. Dale, Ullin, Ill. Filed Apr. 9, 1924. Serial No. 705,283. 3 Claims. (Cl. 137—34.2.)

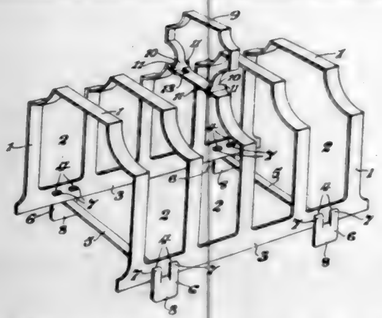


1. The combination with a pump cylinder, a vertical pipe in communication with one end of said cylinder and a second pipe in communication with the other end of said cylinder, of an auxiliary cylinder in communication with said pipes, said auxiliary cylinder adapted to permit the water to flow from the pipe disposed above said pump cylinder through the auxiliary cylinder and into said second named pipe and means disposed in said auxiliary cylinder for retaining a sufficient quantity of water for priming.

---

1,557,950. LETTER AND LIKE RACK. SIEGFRIED WASSERMANN, Birmingham, England. Filed Jan. 24, 1925. Serial No. 4,470. 3 Claims. (Cl. 45—4.)

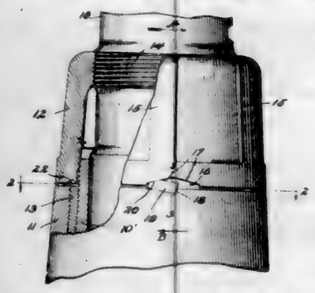
1. A letter or like rack comprising, in combination, a flexible body part of inverted U formation, slots provided in opposite side edges of the U-shaped body, a base part transversely connecting said edges, and inward projections provided at opposite ends of the base part engageable within said slots, whereby the body and



base parts are held in engagement by the outward flexible expansive tendency of the body and are readily separable by contraction of said body.

---

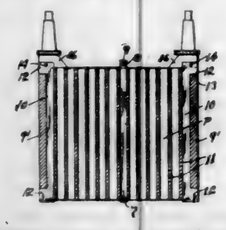
1,557,951. LOCKING DEVICE FOR MANTLE NUTS. WILLIAM S. WESTON, Columbia, S. C. Filed July 19, 1922. Serial No. 576,146. 6 Claims. (Cl. 83—10.)



1. In a device of the class described, in combination, a shaft having a threaded portion, a mantle mounted on the shaft, a mantle nut having threads interengaging with the threads on the shaft, and a device interposed between the nut and mantle, said device preventing contact of the mantle and nut and causing the nut to move with the mantle during movement of the latter in one direction.

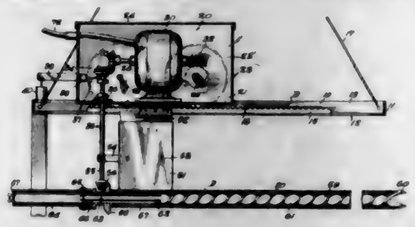
---

1,557,952. BATTERY. WILLIAM L. WHIDDEN and LORENZO MCCARTNEY, Morgan Hill, Calif. Filed Aug. 13, 1923. Serial No. 656,992. 8 Claims. (Cl. 136—147.)



1. In a battery having a positive plate, a negative plate and a grooved wood separator interposed between the same with the grooves facing one of the plates, an insulating strip adapted to receive an edge of the positive plate and lying in a groove of the adjacent wood separator.

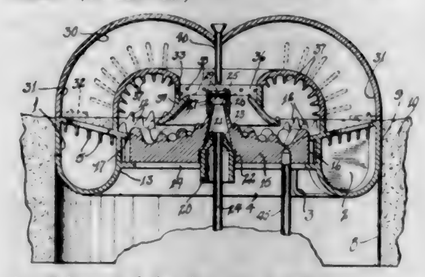
1,557,953. TAPPING MACHINE FOR STATIONARY OPEN-HEARTH FURNACES. WALTER B. WITKOWSKI, Hays, Pa. Filed Mar. 17, 1925. Serial No. 16,244. 8 Claims. (Cl. 266—42.)



8. A machine for tapping open hearth furnaces comprising a frame arranged in a horizontal plane, tracks mounted upon the frame, a carriage disposed upon the tracks for movement toward and away from the furnace, depending brackets carried by the carriage, a hollow casting arranged below the frame and connected with the brackets, a rotatable bit arranged in the hollow casing, and means arranged within the carriage for operating the carriage on said track and for rotating said bit.

---

1,557,954. OIL BURNER. ROY E. WOOD, Syracuse, Nebr. Filed May 16, 1924. Serial No. 713,803. 1 Claim. (Cl. 158—66.)

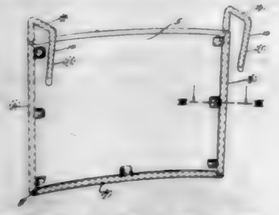


An oil burner of the character described comprising a horizontal generator plate, having upwardly extending conical projections, a vaporizing chamber associated with said generator plate for vaporising liquid fuel, a distributer cap forming one end of said chamber for distributing said vaporized fuel over said generator plate, air passages having heat absorbing fins disposed above said generator plate for pre-heating and conducting air to said generator plate adjacent to said distributer cap, whereby said vapor may be consumed by combustion in the region of the generator plate, and whereby the generator plate may thus become incandescent to further insure vaporization in said chamber, said air conducting passage having auxiliary passages associated therewith for conducting heated air toward the outermost regions of said generator plate, remote from that region occupied by said vaporizing chamber.

---

1,557,955. SIGN. LESLIE H. YOUNG, Visalia, Calif. Filed May 31, 1924. Serial No. 717,150. 1 Claim. (Cl. 40—125.)

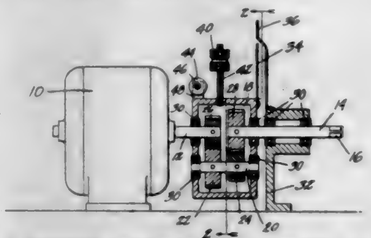
A door sign for motor vehicles comprising a substantially U-shaped frame formed of a single length of bendable wire adapted to be arranged upon the outer face of a door of the vehicle and having the end portions of its opposite sides bent to provide hooks for supporting the frame by engaging the upper edge of the vehicle door, a panel disposed over the outer face of the frame and formed of a single sheet of bendable metal and having its marginal portions curved around and secured to the base at opposite sides of the frame, pad supporting hooks disposed so as to be interposed between the panel and the vehicle door when the sign is connected to the door, the terminal portions of the shanks of said hooks being bent around the frame, and



pads surrounding the bills of said hooks adapted to bear upon the panel and outer surface of the vehicle door when the sign is in set up position.

---

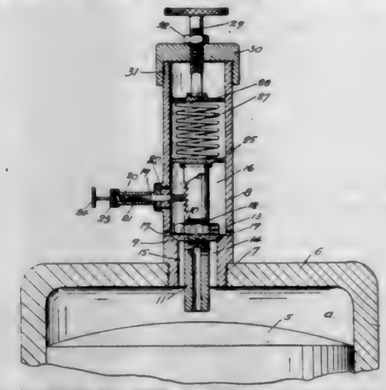
1,557,956. PENDULUM TORQUEMETER. JOSEPH ZUBATY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Dec. 12, 1924. Serial No. 755,477. 6 Claims. (Cl. 265—25.)



1. A pendulum type torquemeter comprising, in combination, a motor having a driving shaft, a shaft axially alined with the driving shaft and constructed and arranged to be connected to mechanism whose torque is to be measured, a drum freely and eccentrically journaled on the two alined shafts to constitute a pendulum whose angular movement is a function of the torque to be measured, planetary gearing in the drum connecting the shafts and part of which is carried by the drum in a manner to react on the drum, and means to indicate the angular movement of the drum caused by the torque being measured.

---

1,557,957. MACHINERY ALARM. HENRY AMRHEIN, Oxnard, Calif. Filed June 22, 1925. Serial No. 38,866. 3 Claims. (Cl. 116—67.)



3. An alarm for indicating reduction of the clearance of a cylinder having a reciprocating piston and comprising sound producing means including a casing con-

nected to the cylinder, a plunger supported by the casing and extending into the clearance of the cylinder and operable by the piston for setting the sound producing means in operation.

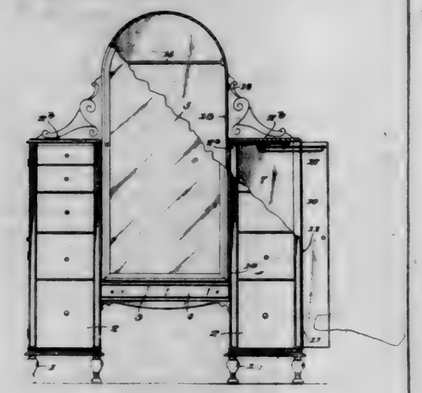
---

1,557,958. FLEXIBLE COUPLING. CARL E. ANDERSON, Brooklyn, N. Y., assignor to American Machine and Foundry Company, a Corporation of New Jersey. Filed Aug. 26, 1924. Serial No. 734,188. 2 Claims. (Cl. 64—96.)

1. A flexible coupling comprising a sleeve provided with a series of transverse slots in relatively angular disposition about its perimeter, a series of segments loosely mounted in some of said slots, and a series of pins engaging said segments and said sleeve.

---

1,557,959. COMBINED VANITY DRESSER AND WARDROBE. JAMES A. ANDERSON, Grand Rapids, Mich. Filed Dec. 12, 1924. Serial No. 755,546. 2 Claims. (Cl. 45—5.)



1. The combination with a dresser comprising suitable supporting feet and a top carried thereby, a stack of drawers at each side of said top, said stacks being spaced apart, a mirror disposed at the rear edge of and upon said top between said drawer stacks, a cabinet arranged behind each stack of drawers and conforming substantially in height and width therewith, a door at the side of each cabinet, said doors lying substantially in the plane of the sides of the drawer stacks, and a central cabinet arranged between the other two behind said mirror and conforming substantially in height and width therewith, said mirror being hinged about one edge and constituting a door for said central cabinet.

---

1,557,960. FLUID-MEASURING APPARATUS. JAMES R. ARMSTRONG, Ingram, Pa., assignor to Equitable Meter Company, Ingram, Pa., a Corporation of Pennsylvania. Filed Dec. 27, 1922. Serial No. 609,210. 7 Claims. (Cl. 234—34.)

6. Apparatus for measuring fluids comprising a pair of meters connected in parallel with a common supply, gearing for each meter driven thereby according to the volume of fluid passing therethrough, a chart moving mechanism, means for transmitting motion from the gearing on one meter to said chart moving mechanism, a static pressure actuated pen adapted to record on a

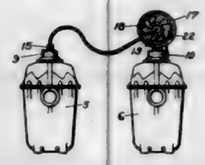


chart moved by said chart moving mechanism, and another pen connected with the gearing of the other meter and moved transversely of a chart carried by said chart moving mechanism to make a record thereon.

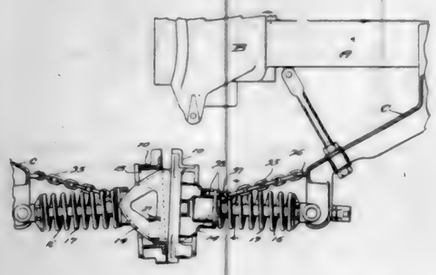
---

1,557,961. VARNISH FORMULA. STEPHEN P. ASHMORE, Russellville, Ark. Filed Jan. 23, 1923. Serial No. 614,485. 4 Claims. (Cl. 134—26.)

1. A hard transparent cleaning and quick drying varnish comprising powdered English rosin, sodium salicylate, ether, a drier, and a drying oil vehicle for said ingredients.

---

1,557,962. LOCK FOR AUTOMATIC TRAIN-PIPE CONNECTERS. MARTIN A. BARBER, Cleveland, Ohio, assignor to The American Automatic Connector Company, Wyoming, Del., a Corporation of Delaware. Filed Mar. 22, 1922. Serial No. 545,666. 12 Claims. (Cl. 285—24.)



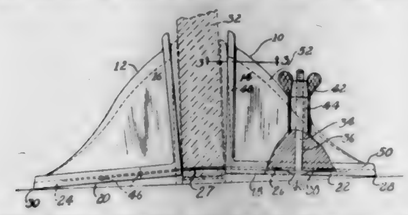
1. In an automatic train pipe connecter, the combination with connecter heads having coacting projections and recesses positioned side by side, and having orifices for receiving steam pipes adjacent the bottom of the heads, of means for locking coacting projections and recesses, said means comprising a plunger slidably mounted on each projection adjacent the bottom thereof and in the region of the steam pipe orifice, and a cooperating shoulder on the coacting recesses, and means for normally holding said plunger in engagement with the shoulder when the heads are coupled together.

---

1,557,963. DOOR CLAMP. LEWIS J. BARGER, Maplewood, N. J. Filed Aug. 14, 1923. Serial No. 657,314. 1 Claim. (Cl. 144—296.)

A device of the type described which comprises, a pair of blocks having a lower plate, an upright plate, and a vertical strengthening rib integral with said plates, said upright plates being widened at their upper ends, the bottom faces of said lower plates having aligned longitudinal grooves and being adapted to rest

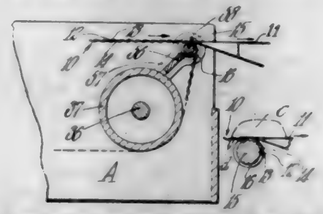
throughout their lengths on a supporting surface, a spring strap member common to said grooves and connecting said blocks in spaced relation to each other and with their opposing edges tilted slightly upwardly, said strap having an elongated slot, a bolt in one of said



blocks passing through said slot to adjustably attach said strap to said block, said strap and the head of said bolt being contained in said groove, and a resilient surface on the opposed faces of the upright plates of said blocks.

---

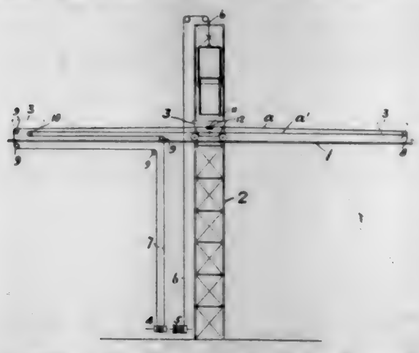
1,557,964. CONFECTION-COATING MACHINE. ALONZO LINTON BAUSMAN, Springfield, Mass., assignor to National Equipment Company, Springfield, Mass., a Corporation of Massachusetts. Filed Oct. 31, 1922. Serial No. 598,220. 9 Claims. (Cl. 91—3.)



1. In a confection coating machine, of the type wherein the coated confections are transferred from the upper lap of a pervious conveyer to another conveyer while their coatings are still workable, driving means for said conveyers, a roll underlying the upper lap of the pervious conveyer at its delivery end, and means for driving said roll at a surface speed greater than that of said pervious conveyer.

---

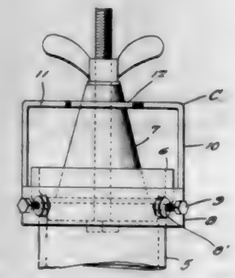
1,557,965. TWO-WAY TRAMCAR SKIP-HOIST APPARATUS. ROBERT H. BEAUMONT, Radnor, Pa., assignor to R. H. Beaumont Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 9, 1925. Serial No. 29,059. 2 Claims. (Cl. 214—40.)



1. Twoway tram car skip hoist apparatus comprising a tramway with skip hoist located at intermediate travel, a car, interconnected winding drums and their hoist and car cables, means for guiding oppositely moving reaches of the car cable along the tramway, and devices for connecting and disconnecting the car with either of said reaches, substantially as described.

---

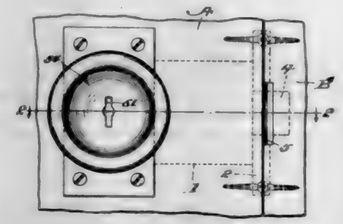
1,557,966. GUIDE CLAMP FOR PLUMBERS' TESTING PLUGS. OTTO BENSHADLE, Buffalo, New York. Filed Dec. 29, 1924. Serial No. 758,780. 1 Claim. Cl. 137—76.)



In combination, a ring having a plurality of reinforced threaded openings, screws in the openings for engagement with a pipe section, a U-shaped yoke having its ends fixed to the ring and its intermediate portion enlarged at its center and provided with an opening having a beveled edge, and a cone-shaped filling plug for association with the pipe section with which the screws are engaged and adapted to be received in the opening of the U-shaped yoke and rest against the beveled edge thereof.

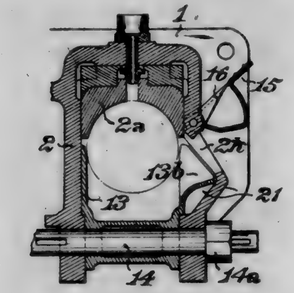
---

1,557,967. LOCK. WILLIAM T. BLOUNT, Washington, D. C., assignor of one-half to William G. Barnwell, Savannah, Ga. Filed June 16, 1924. Serial No. 720,405. 7 Claims. (Cl. 70—81.)



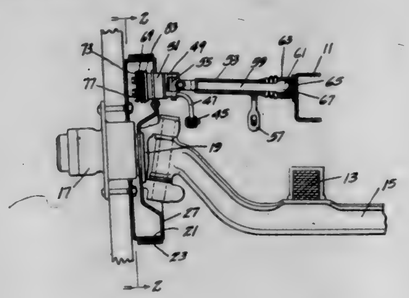
1. In combination with a lock, its bolt and the means for locking the bolt in projected position, a rotatably and slidably mounted tumbler, locking means for holding the tumbler against rotary movement, spring means for holding the tumbler in engagement with its locking means and a key for sliding the tumbler out of engagement with its locking means and then rotating the tumbler to cause it to engage the bolt locking means to move the same to locking position.

1,557,968. JOURNAL BOX FOR RAILROAD VEHICLES. JAMES G. BLUNT, Schenectady, N. Y. Original application filed Sept. 18, 1923, Serial No. 663,855. Divided and this application filed Sept. 25, 1924. Serial No. 739,795. 3 Claims. (Cl. 308—83.)



1. In a journal box for railroad vehicles, the combination with guides on the inside of the box legs, of a lubricant cellar supported on said guides, a feed spout on one side of said cellar, one of the box legs having a feed opening opposite said spout, and a lid for said opening.

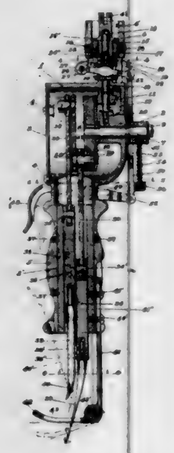
1,557,969. MOTOR VEHICLE. CLIFFORD ARCHIE BOOM, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 14, 1924. Serial No. 732,026. 5 Claims. (Cl. 188—205.)



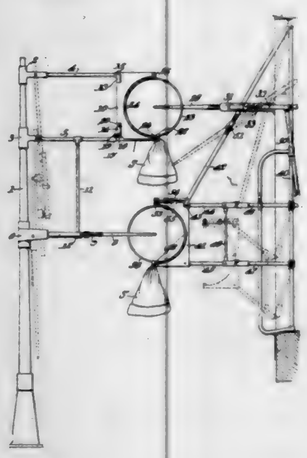
3. A brake comprising, in combination, frictionally engaging members, and connections controlling the engagement of said members including a rock member, a support, a stop carried by said rock member engaging a slot in the support for limiting the return movement of said rock member.

1,557,970. MACHINE FOR HOOKING RUGS AND THE LIKE. JOHN A. BORROWS, Portland, and CHESLEY T. SABINE, Lewiston, Me., assignors, by mesne assignments, to Jessie B. Bibber, Portland, Me. Filed May 19, 1925. Serial No. 31,436. 4 Claims. (Cl. 112—80.)

1. In a machine for hooking rugs and the like, a body member, means on said body member for the purpose of grasping the same with the hand, a disc rotatably mounted within said body, a double throw crank on said disc, slides reciprocable within said body, rods connecting said crank with said slides, a needle fixed on one of said slides, a follower fixed on another of said slides, the lower portion of said follower being bent toward said needle, a leg depending from said body and from the rearward side thereof, a presser-foot secured to the lower extremity of said leg and extending forwardly a spaced distance therefrom, and having an aperture therein in which said needle and said follower may operate, and means to vary the distance between consecutive stitches made by said machine.

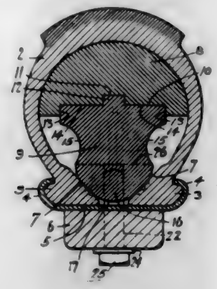


1,1,557,971. RAILWAY-MAIL DELIVERY AND RECEIVING APPARATUS. ROGER BOSTICK, Benoit, Miss., and WILLIAM E. WOODSON, Jackson, Tenn., assignors of one-third to J. Y. Fauntleroy, New Orleans, La. Filed Oct. 22, 1923. Serial No. 670,204. 14 Claims. (Cl. 258—15.)



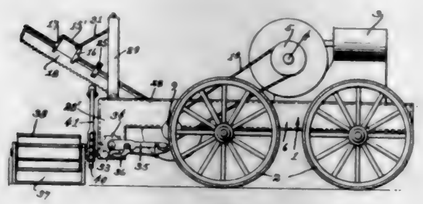
1. In a railway mail transferring apparatus, a collapsible parallel-motion framework lying substantially in a plane perpendicular to the right of way, said framework comprising a standard, rods pivoted to said standard, a ring receiving member, and pivotal connections between said member and each of said rods completing said parallel-motion framework.

1,557,972. VEHICLE TIRE. ROLLA B. BOSTWICK, Duquesne, Pa. Filed Aug. 13, 1923. Serial No. 657,224. 2 Claims. (Cl. 152—5.)



1. In a vehicle tire, the combination of a casing adapted to seat upon a wheel rim and a resilient core contained within said casing, said core comprising an outer portion of substantially semi-circular cross section and composed of rubber or an equivalent elastic material, and an inner substantially annular portion of softer rubber, normally spaced from the wheel rim, said inner core portion having its inner surface rounded to form a wedging nose engaging said casing adjacent to the free edges thereof.

1,557,973. PORTABLE LOG-SAWING MACHINE. HORACE H. BOWDEN, Prior, Mo. Filed Nov. 3, 1923. Serial No. 672,518. 2 Claims. (Cl. 143—163.)

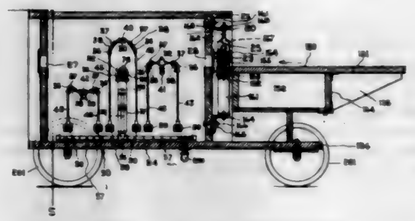


1. In a log sawing machine, a saw guide consisting of a yoke having parallel end portions provided at their extremities with slots, said slots being alined with each other, guide rods connected with the end portion of the yoke at points between the ends of the slots and the intermediate portion of the yoke, said guide rods being disposed beyond the opposite sides of the yoke and alined longitudinally with each other and saw clamps slidably mounted upon the guide rods and located one at each side of the yoke.

1,557,974. METHOD OF COMBINING SODA ASH AND WATER. JOSEPH A. BRADBURN, Syracuse, N. Y., assignor to National Chemical Company, Syracuse, N. Y., a Corporation of New York. Filed July 14, 1921. Serial No. 484,760. 1 Claim. (Cl. 23—63.)

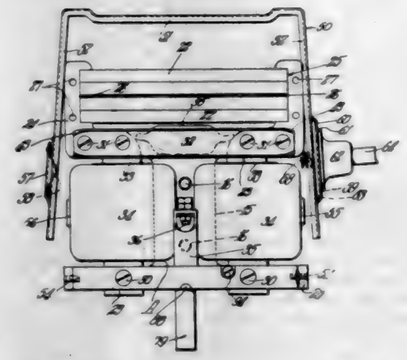
The process of combining soda ash and water comprising introducing soda ash and water into one end of a container of substantially circular cross-section, causing a relative circular movement of said substances and the interior surface of the container, maintaining the combining substances in a broken up condition during such relative movement by constant contact with a plurality of comparatively heavy pieces of metal loosely carried within the container and movable with reference to both the combining substances and the container, cooling the combining substances during treatment, causing said combining substances to move from the inlet and toward the outlet end of said container, and discharging the combined substances at the outlet end of the container in the form of a powder.

1,557,975. PAINTING MACHINE. LEVANDER BROWN, Jr., Montreal, Quebec, Canada. Filed Dec. 21, 1922. Serial No. 608,383. 24 Claims. (Cl. 91—45.)



1. In a portable tank for the treatment of articles with a substance, said tank having an entrance in one wall and an exit in an opposite wall for permitting the passage of the articles in a straight line through the box, means for atomizing the substance within the chamber, said means consisting of a plurality of relatively fixed atomizers, means for subjecting the articles to the atomized substance within the chamber and means for exhausting the atmosphere from the chamber.

1,557,976. MAGNETO. PHELPS BROWN and TERRENCE G. LOUIS, Springfield, Mass.; said Louis assignor to Wico Electric Company, West Springfield, Mass., a Corporation of Massachusetts. Filed July 18, 1923. Serial No. 652,356. 18 Claims. (Cl. 171—209.)



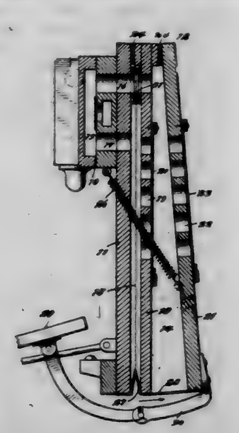
1. In a magneto, a frame, a source of magnetic flux, cores connected therewith, and coils associated with the cores, all supported from said frame, bottom housing means through which the ends of said cores protrude, front and rear housing plates on opposite sides of said means and contiguous therewith near their lower edges, and a substantially U-shaped housing member extending between the plates along their top and side edges and cooperating with said means and plates to incase said source and coils and the cores, except for said ends.

7. In a magneto, having a magnetic source, cores connected therewith, and coils associated with the cores; a terminal provided on one of the coils, a detachable plate adjacent said terminal, having an opening, an insulator swiveled in said opening, a wire passing through the insulator, and a spring connected with said wire adapted to contact with said terminal.

1,557,977. MANUFACTURE OF BOOTS AND SHOES. LESLIE HURST BURROWS, Hobart, Tasmania, Australia. Filed Jan. 16, 1923. Serial No. 612,948. 1 Claim. (Cl. 36—15.)

A boot or shoe having a welt sole secured to the insole, and provided with countersinks on the inside surface thereof, an outer half sole, having on its outer surface countersinks coincident with those in the welt sole, a hollow socket piece having a central cone or spreader in each countersunk opening in the welt sole and a bifurcated rivet that pases through the outer sole and is driven into the hollow socket and is recessed in one of the countersinks of the outer half sole.

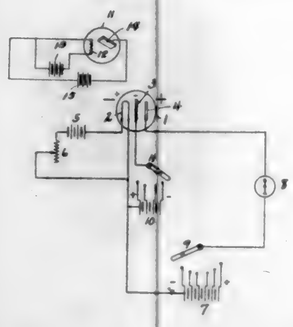
1,557,978. WIND-INDUCING BELLOWS. CHARLES E. CAMERON, East Orange, N. J. Filed Aug. 9, 1922. Serial No. 580,625. 11 Claims (Cl. 230—2.)



1. In a wind inducing device for self-playing musical instruments, the combination of a wind-chest, a front board fixed thereto, a secondary bellows on the front board opposite the wind-chest, and with said front board as one side of the secondary bellows, an air passageway in said board placing said secondary bellows in communication with the wind chest, a primary bellows with a pivotally mounted hoating board common to both bellows constituting the movable side of the secondary bellows and a relatively fixed side of the primary bellows, and another board constituting the movable side of the primary bellows, both of said movable boards provided with valve controlled ports extending therethrough and a pedal operatively connected to the movable side of the primary bellows and acting through the primary bellows when distended to move the movable side of the secondary bellows.

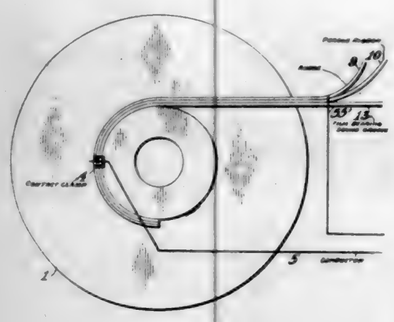
1,557,979. APPARATUS FOR MEASURING AND DETECTING X RAYS. THEODORE WILLARD CASE, Scipio, N. Y., assignor to Case Research Laboratory Incorporated, Auburn, N. Y., a Corporation of New York. Filed Mar. 31, 1921. Serial No. 457,284. 8 Claims. (Cl. 250—34.)

1. An apparatus for determining X-rays comprising the combination with a source of X-rays of an evacuated bulb, a pair of spaced electrodes arranged within the bulb, means for heating one of the electrodes, a circuit connecting the electrodes and including a source of potential, and a third electrode within the bulb adapted



to give off electrons under the influence of X-rays to thereby vary the current flowing between the first two named electrodes in accordance with the intensity of the X-rays to which the third electrode is exposed.

1,557,980. ELECTRODEPOSITION PROCESS. ALOYSIUS J. CAWLEY, Pittston, Pa. Filed Apr. 17, 1922. Serial No. 554,112. 6 Claims. (Cl. 204—1.)

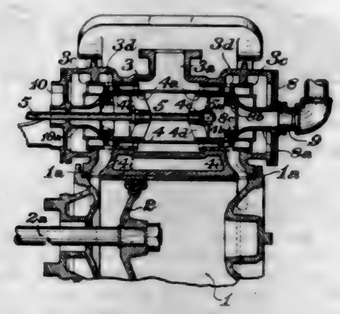


1. The process of electrodeposition, which consists in applying a layer of absorbent material of a specific form impregnated with electrolyte over a conducting surface and in fixed contact therewith, placing a strip of the metal to be deposited on top of said layer and establishing electrical connection between said metal strip and said conducting surface to deposit metal over a specific area of said conducting surface in accordance with the specific form of said layer.

1,557,981. NONRUSTING ALLOY. MONROE S. CLAWSON, Upper Montclair, N. J. Filed Feb. 27, 1924. Serial No. 695,583. 2 Claims. (Cl. 75—1.)

1. A non-rusting alloy consisting of nickel 82 to 96 percent, silicon 3 to 10 percent, manganese 1 to 5 percent, chromium 1 to 5 percent, carbon .85 to 3½ percent, iron 1 to 6 percent, and copper ½ to 4 percent, together with a small proportion of reducing, deoxidizing and denitrogenizing elements.

1,557,982. EXHAUST-STEAM COLLECTOR. ROGER W. CLIFFORD, Schenectady, N. Y. Filed Sept. 8, 1924. Serial No. 735,593. 3 Claims. (Cl. 60—89.)



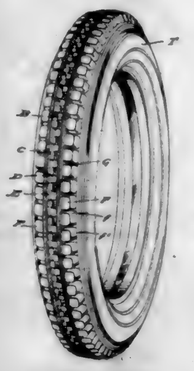
1. In a reciprocating steam engine, the combination of a steam cylinder; a tubular piston distribution valve, communicating, by induction and eduction, ports therewith; a valve chest, in which said valve is fitted to reciprocate; bull rings, fitted in the distribution valve and having ports adapted to communicate with the cylinder ports and stationary valve members, fixed in the valve chest and controlling the ports of the bull rings.

1,557,983. WASHING MACHINE. LEWIS M. COKER and GEORGE L. FELIX, Springdale, Pa. Filed Nov. 7, 1924. Serial No. 748,485. 5 Claims. (Cl. 68—37.)

1. In a device of the character described, a casing open at both ends and including at its upper end a downwardly and inwardly inclined flat wall and a vertical straight wall extending from the lower edge of the inclined wall, a nozzle extending into the casing at the side opposite to the vertical wall and in substantial alignment with the upper portion thereof, and means for connecting said nozzle to a source of supply of water under pressure.

1,557,984. AUTOMOBILE TIRE TREAD. JACKSON D. COMSTOCK, Chester, W. Va. Filed Oct. 20, 1922. Serial No. 595,721. 8 Claims. (Cl. 152—14.)

6. A tire tread construction consisting of parallel circumferential ribs, separated at either side of the medial plane of the tire and rising to a height nearly as great as the width of the ribs, and bracing blocks curving slightly toward the axis of the tire but forming a substantially flat surface even with the ribs, and extending from the outer side of each rib and all terminating in sharp edges and preventing lateral tipping of these ribs as well as affording traction and braking action.



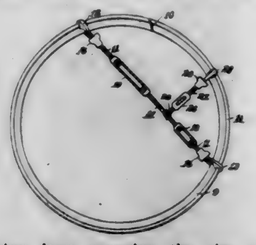
1,557,985. TWINE-TENSIONING DEVICE. RUFUS R. CONDRA, Nashville, Tenn. Filed Apr. 14, 1925. Serial No. 23,091. 6 Claims. (Cl. 254—1.)

1. A twine tensioning device of the character described including a support, a depressible member having a hook and mounted upon the support, and operator operable means whereby the depressible member may be depressed on the support.

1,557,986. TIRE-RIM TOOL. EDWARD G. COOK, Wilmington, Del., assignor of two-thirds to Ralph L. Reese and Henry J. Ellis, both of Wilmington, Del. Filed Aug. 30, 1921. Serial No. 496,870. 1 Claim. (Cl. 157—1.)

A rim tool comprising a pair of rods, a pair of clamping jaws at the end of each rod, means for forcing said

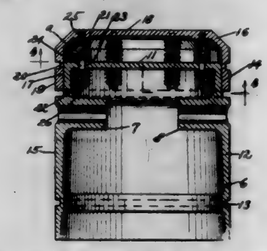
jaws into engagement with the rim, a turnbuckle threaded on each rod, a coupling rod threaded into the turnbuckles, a brace attached at one end to the coupling



rod and having jaws engaging the rim at the other end, and means for adjusting the effective length of the brace.

---

1,557,987. PISTON. STANLEY CORYELL, Oxnard, Calif. Filed Oct. 29, 1923. Serial No. 671,420. 6 Claims. (Cl. 74—108.)



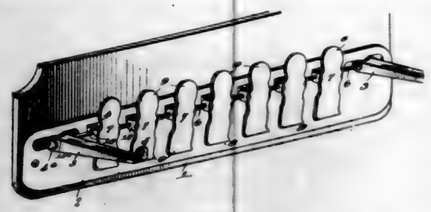
1. A piston head, including an annular wall formed with an annular reduced portion, said annular reduced portion being provided with an inwardly projecting flange, a cap member upon such annular reduced portion, said inwardly projecting flange being formed with a series of transversely spaced perforations, pin members associated with the cap and passed through such perforations, and independent spring members mounted on opposite sides of the inwardly projecting flange and surrounding such pin members, certain of such springs bearing against the cap member.

---

1,557,988. DENTAL GAUGE. JOHN A. DEVINE, Cheyenne, Wyo. Filed Mar. 28, 1924. Serial No. 702,604. 7 Claims. (Cl. 33—174.)

1. A dental gauge comprising adjustable means encompassing the head of a patient for maintaining the gauge thereon, means pivotally connected to said adjustable means for engaging and supporting the chin of the patient, and a bite registering device carried by said adjustable means.

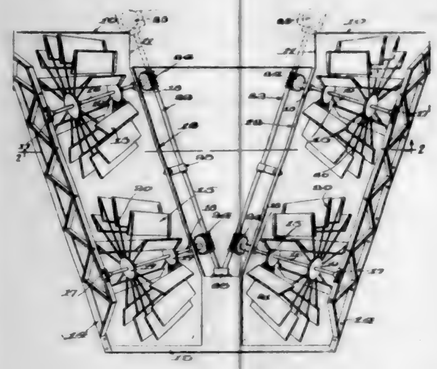
1,557,989. RACK FOR COLLARS AND NECKTIES. ALEXANDER DOMBROWSKY, Balboa, Canal Zone. Filed Jan. 29, 1924. Serial No. 689,283. 2 Claims. (Cl. 211—17.)



1. A rack comprising a base member, ears cut from the base member and projecting outwardly, resilient clamping jaws pivotally connected with certain of the pairs of ears, posts pivotally connected with other pairs of ears and provided with a projecting lug adapted to snap over the upper edge of the base member for locking the posts in an inoperative position said post when locking in an operative position being adapted to be employed as a clamping member.

---

1,557,990. BOAT. FRED D. DOTY, New Orleans, La. Filed Dec. 5, 1924. Serial No. 754,147. 3 Claims. (Cl. 115—49.)



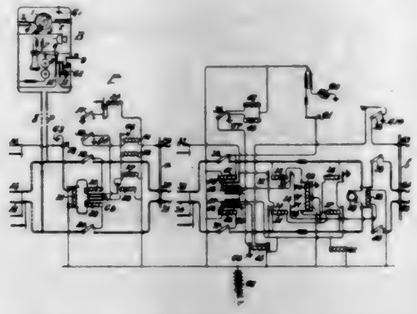
2. In a boat of the character described, a hull having an extended stern, the extended stern having a central body portion provided with rearwardly tapering sides, and a plurality of paddle wheels mounted on the boat for rotation about an axis extending at right angles to the tapering sides of the extended stern.

---

1,557,991. AUTOMATIC TELEPHONE-EXCHANGE SYSTEM. ALFRED H. DYSON, Chicago, Ill., assignor, by mesne assignments, to Kellogg Switchboard & Supply Company, a Corporation of Illinois. Filed Mar. 24, 1906. Serial No. 307,845. 28 Claims. (Cl. 179—18.)

1. An automatic telephone exchange system including a calling subscribers' line and a called subscriber's line, a connector adapted to be operated responsive to currents controlled at the calling substation to connect directly with the called line, talking conductors for said connector having normally open switching contacts, a central source of current, a pair of relays, an electromagnet associated with said connector effective when connection is made with the called line to close said switching contacts whereby a circuit of said source is

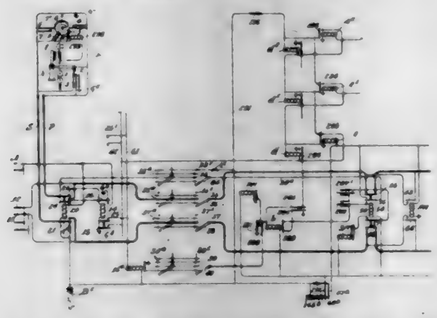
closed through said relays to energize them, mechanism at the exchange adapted to be operated responsive to the simultaneous de-energization of said relays to cause the bell of the called subscriber's line to ring, mechanism responsive to the de-energization of one only of said



relays, the second remaining energized, for disconnecting said lines, and switching means at the calling substation adapted to effect the de-energization of both said relays or the de-energization of the one only according to the election of the subscriber.

---

1,557,992. TELEPHONE SYSTEM. ALFRED H. DYSON, Chicago, Ill., assignor, by mesne assignments, to Kellogg Switchboard & Supply Company, a Corporation of Illinois. Filed June 4, 1906. Serial No. 320,158. 192 Claims. (Cl. 179—18.)

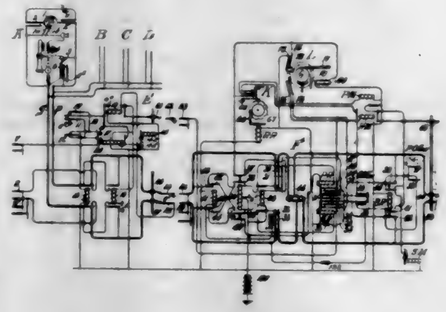


1. A telephone exchange system comprising a plurality of subscribers' telephone lines divided into groups, a plurality of interconnecting link-circuits, a plurality of electrically controlled switches for completing connections between any calling lines and any called lines, said switches including line selectors assigned by groups to groups of lines, and the total number of said switches being less than the total number of said telephone lines no matter how many of the latter there may be in the exchange, said electrically controlled switches being controllable over the two sides of the subscribers' lines in series, and means for establishing as many simultaneously existing conversational circuits between pairs of lines all in the same group as there are line selectors for the group.

---

1,557,993. AUTOMATIC TELEPHONE-EXCHANGE SYSTEM. ALFRED H. DYSON, Chicago, Ill., assignor, by mesne assignments, to Kellogg Switchboard & Supply Co., a Corporation of Illinois. Filed July 12, 1906. Serial No. 325,830. 125 Claims. (Cl. 179—17.)

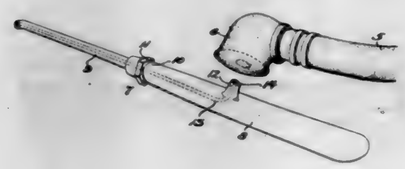
1. An automatic telephone system including a plurality of lines connecting stations with the exchange, passive contacts for said lines at the exchange, a less plurality of link-circuits, selective switches at the ends of said circuits adapted to automatically connect a link-circuit with a passive contact of a calling line, passive terminals for said switches, a master switch common to said switches and lines, a movable contact member therefor adapted to move over said passive terminals and normally resting in engagement with a terminal of an idle one of said plurality of switches, a cir-



cuit adapted to influence said master switch operated responsive to currents over a calling line to cause it to initiate travel of said idle one of said plurality of switches, means automatically effective thereon to initiate and continue travel of said master switch past terminals of busy switches to come to rest engaging a terminal of an idle one of said switches, and means for arresting travel of said idle switch when it engages terminals of a calling line.

---

1,557,994. BLOWING DEVICE. ROBERT G. DYSON, Trooper, and HARVEY S. PLUMMER, Fairview Village, Pa., assignors to Franklin Air Compressor Works, Norristown, Pa., a Corporation of Pennsylvania. Filed Dec. 9, 1924. Serial No. 754,755. 3 Claims. (Cl. 299—107.)



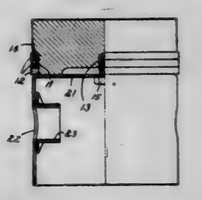
3. A blowing device for the purpose described including an elongated body portion having a valve-opening coupling nipple projecting laterally therefrom, said body portion forming a hand grip and having an air outlet passage which extends through said nipple and then longitudinally through the body portion, and a spout connected to said body portion and registering with said passage.

---

1,557,995. INTERNAL-COMBUSTION-ENGINE PISTON. WILLIAM B. EARNSHAW, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 18, 1923. Serial No. 669,244. 1 Claim. (Cl. 74—108.)

A piston for internal-combustion engines, comprising an aluminum head in the form of a cylindrical block

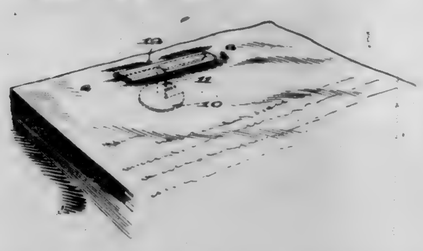
having a portion of reduced diameter; a sheet metal skirt of larger diameter than the head, the reduced head portion and the upper end of the skirt forming



a groove for a plurality of packing rings; pin bosses secured in said skirt; and means for securing the head and skirt together.

---

1,557,996. FASTENER. GEORGE HENRY ENNIS, New York, N. Y. Filed Sept. 27, 1924. Serial No. 740,353. 3 Claims. (Cl. 24—153.)



1. In a fastener of the character described, a base comprising a flat plate of metal, a penetrating tongue stamped from the base and folded to provide a rounded tubular structure, and a tubular locking bar having a socket for said penetrating tongue.

---

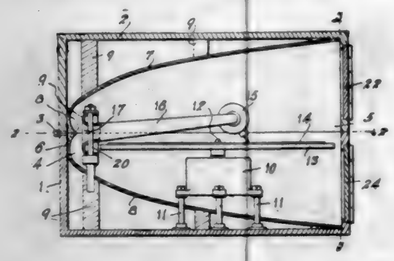
1,557,997. HUMIDITY PAN. WARREN JOHN ERICKSON, Chicago, Ill. Filed Oct. 28, 1922. Serial No. 597,629. 2 Claims. (Cl. 237—78.)

1. The combination with a heating radiator, of a humidity pan, a supply pipe in said pan having connection with the outlet end of the radiator to permit water and air to flow from the radiator into the pan, a trap formed in said pipe to prevent the return of air into the radiator, a float valve structure for controlling the flow of water and air from the pipe into the pan, and an automatically operated safety valve structure for further controlling the flow of air and water from the pipe into the pan.

---

1,557,998. SOUND-REPRODUCING INSTRUMENT. RUSSELL M. EVERETT, Bloomfield, N. J. Filed July 7, 1921. Serial No. 482,902. 5 Claims. (Cl. 274—2.)

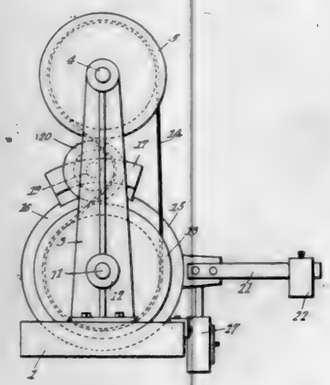
2. A sound reproducing instrument, comprising a sound amplifying horn divided longitudinally into two complemental hingedly connected sections, and sound reproducing mechanism mounted within said horn so that the horn serves as a casing for said mechanism and one of said sections serves as a cover to permit access to said mechanism, said sound reproducing mechanism being



mounted to direct sound waves into the small end of said horn so that the sound is discharged by the horn annularly around said mechanism.

---

1,557,999. DRIVE-CONTROL MECHANISM. BION B. FARNHAM, Buffalo, N. Y. Filed Mar. 22, 1924. Serial No. 701,120. 2 Claims. (Cl. 192—150.)



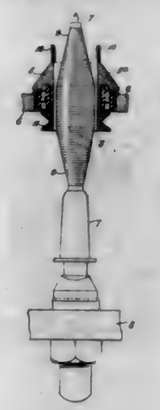
1. In a mechanism of the class described, the combination with aliining shafts, spaced pulleys one of which is secured to one of the shafts, and a belt connecting the pulleys, of driven mechanism connected to the other shaft, a weighted rotatable housing mounted upon one of the shafts, an idler movable with the housing and engaging the belt to hold it normally taut, an annular gear rotatable with one of the shafts, an intermediate gear meshing therewith and movable with the housing, and a gear upon the other shaft meshing with the intermediate gear.

---

1,558,000. METHOD OF MAKING TUNGSTEN WIRES. HARRY M. FERNBERGER, Asbury Park, N. J., assignor to General Electric Company, a Corporation of New York. Filed Feb. 10, 1922. Serial No. 535,639. 6 Claims. (Cl. 176—132.)

1. The step in the process of producing a tungsten filament substantially free from sagging and off-setting which consists in dissolving tungstic oxide in an alkaline solution containing potassium, obtaining from said solution crystals of a double salt containing potassium and tungsten, and using said crystals for the production of tungsten metal.

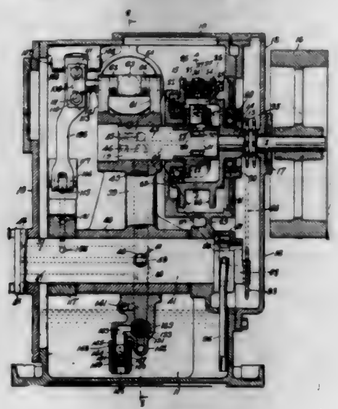
1,558,001. MACHINE FOR SPINNING OR DOUBLING YARNS AND THREADS. FRED FERRAND, Southport, England. Filed Dec. 9, 1922. Serial No. 605,813. 4 Claims. (Cl. 118—56.)



1. In machines for spinning or doubling yarns and threads, according to the method referred to, a positively-driven ring mounted in a stationary rail so as to project above and below same, said ring being driven at its lower end below the rail and being provided at its upper end above the rail, with an eye for conducting the yarn or thread to the spindle which is rotatably mounted so as to be rotated by the pull of the yarn or thread and is given a vertical reciprocation and progressive descent or rise to build up the yarn or thread into a cop or bobbin thereon.

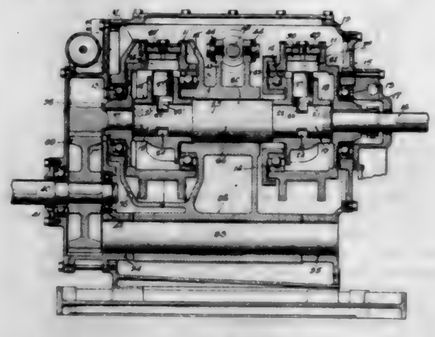
---

1,558,002. HYDRAULIC TRANSMISSION. WALTER FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 21, 1923. Serial No. 682,056. 35 Claims. (Cl. 138—23.)



1. In a hydraulic transmission the combination of a hydraulic motor, a stationary member having a passage communicating therewith, a variable displacement pump, and a second member rockably associated with said stationary member for regulating pump displacement, said second member having a fluid passage therein communicating with said pump and with said first named passage.

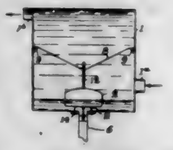
1,558,003. HYDRAULIC TRANSMISSION. WALTER FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 24, 1924. Serial No. 701,354. 8 Claims. (Cl. 60—53.)



1. In a hydraulic transmission the combination of a variable displacement pump, a hydraulic motor driven thereby, an adjustable support for said motor, and a member connected with said pump and movable with said support for varying pump displacement.

---

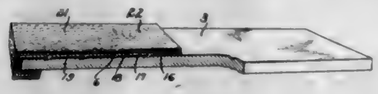
1,558,004. SEPARATOR. ERNEST FEUGÈRE, Boulogne-sur-Seine, France. Filed Oct. 14, 1922. Serial No. 594,531. 1 Claim. (Cl. 210—54.)



In a separator for treating carburetting liquid, the combination with a casing having an inlet and a discharge pipe attached thereto, of a float in said casing of greater specific gravity than the carburetting material, but less than water, and equipped with a rod, a bell provided on the lower face of said float and adapted to close the said discharge pipe, an annular vessel provided on the said casing and containing a liquid of great density, and adapted to receive the lower rim of the said bell thereby forming a water tight seal around the same, thus preventing the liquid in the vessel from being spilled, and a partition in said casing having a central opening therein for said rod and forming a guide therefor.

---

1,558,005. CONSTRUCTION MATERIAL. DOZIER FINLEY, Oakland, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Aug. 18, 1921. Serial No. 493,344. 1 Claim. (Cl. 108—8.)

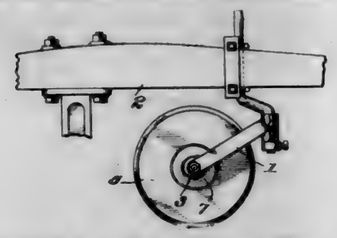


A covering unit comprising a wooden base, a priming coat of low melting point bituminous compound on said base, barb raised on said coated base, and an armoring plate of high melting point bituminous compound united to said base by said priming coat and said barbs.

1,558,006. VACUUM CLEANER. PEDER ANDERSEN FISKER, Copenhagen, Denmark, assignor to Messrs. Fisker & Nielsen A/S, Copenhagen, Denmark. Filed Mar. 22, 1922. Serial No. 545,648. 4 Claims. (Cl. 15—16.)

4. An improvement in vacuum cleaners of that kind which are held by the hands during the cleaning comprising a filter chamber and a machine chamber, means for detachably connecting the two chambers, a filter completely contained in the filter chamber said filter chamber being provided with a cylindrical extension for the attachment of a nozzle, an intermediate plate dividing the machine chamber into two compartments, a motor and an axially aligned suction fan in the other compartment, peripherally located means maintaining the intermediate plate in position and securing the two compartments to each other, said compartments joining each other along the edge of the intermediate plate.

1,558,007. COLTER-WHEEL BRACKET. WILLIAM S. FREDERICK, Cylinder, Iowa. Filed June 11, 1923. Serial No. 644,745. 1 Claim. (Cl. 97—209.)



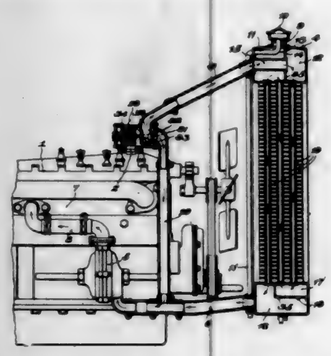
A mounting for rolling colters comprising a pair of parallel arms, a shaft carried by the arms, a pair of oppositely disposed sleeves arranged on the shaft, opposed annular flanges formed on the inner ends of the sleeves, a colter disposed on the shaft and held between the flanges, and a pair of hub members arranged on the sleeve and disposed upon opposite sides of the colter, such hub members being provided with opposed flared ends which engage the colter and the ends of the hub members being provided with notches which receive the ends of the arms.

1,558,008. SEALING LIQUID FOR COMPRESSED-AIR CONTAINERS AND METHOD OF MAKING THE SAME. SAMUEL FREEDMAN, Philadelphia, Pa. Filed June 24, 1924. Serial No. 722,075. 2 Claims. (Cl. 134—17.5.)

1. The herein described method of making a sealing liquid for compressed air containers consisting in mixing glue, saw dust, sodium carbonate, rubber shavings and resin, and cooking 20 to 26 parts of the mixture in about 5 pints of water until the total compound is reduced to about 2 quarts.

1,558,009. COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Oct. 20, 1919. Serial No. 331,893. 15 Claims. (Cl. 123—178.)

1. In a cooling system for an internal combustion engine, in combination with the engine jacket, a system for circulating a liquid cooling medium through said jacket including means for controlling circulation of the cooling medium through the system so as to maintain said medium in the jacket at a relatively high temperature at which vapor may be formed therefrom and a radiator in communication with said jacket and constructed to cause the cooling medium to traverse the same at least once in the direction of a major dimension thereof before being vented to the atmosphere, whereby any vapor from said medium is condensed before it can escape.

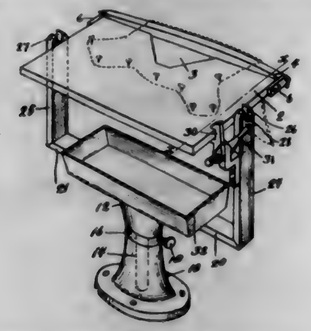


1,558,010. FUSE PLUG. ANTON GOEMANN, Baltimore, Md., assignor of one-half to Paul A. Bokel, Baltimore, Md. Filed Dec. 22, 1924. Serial No. 757,430. 2 Claims. (Cl. 200—125.)

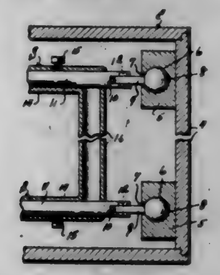
1. A multiple fuse plug comprising, in combination, a body of insulating material having a plurality of longitudinal passages concentrically arranged, and a depression about one of the openings of each passage, a metallic shell mounted on the surface of said body, a plurality of fusible elements mounted in said passages, each in electrical contact with said shell, a contact plate seated in each depression and in electrical connection with the respective elements, a disk-like head of insulating material, a metallic disk secured to a surface of said head, a conductor secured to and projecting from said metallic disk journaled in the body and projecting therefrom to provide a central plug contact, a spring finger struck from the material of said disk and adapted to enter said depressions upon revolution of the head to place the contact plates in electrical connection with the conductor.

1,558,011. SUPPORT FOR STRETCHING AND DRYING SKINS. LOUIS H. HAMBL, Haverhill, Mass. Filed Nov. 20, 1923. Serial No. 675,803. 10 Claims. (Cl. 149—21.)

2. A device for supporting skins comprising a flat holder having its opposite sides adapted for the attachment of the end portions of the skins thereto and a rail extending longitudinally of one edge of the holder and pivotally mounted thereon to swing about a longitudinal axis towards either side from a middle position as the skin is drawn thereover from one side to the other, said rail being arranged to extend transversely beyond each side to support the skin out of contact with the adjacent portions of said sides.

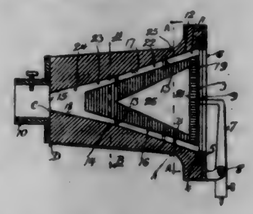


1,558,012. CABINET BED. OLIVER C. HENRY, Pocatello, Idaho. Filed Apr. 12, 1924. Serial No. 706,063. 2 Claims. (Cl. 5—151.)



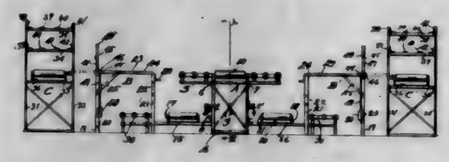
1. A device of the class described comprising a cabinet having a face open, vertically disposed guideways carried by the opposite face of the cabinet, arms slidably engaged within said guideways, rods pivotally engaged with said arms, a foldable bed structure comprising side rails with which the rods are telescopically engaged, said bed structure when compacted being housed within the cabinet, and means for holding the rods and side rails against relative movement.

1,558,013. REPRODUCER FOR PHONOGRAPHS. CHARLES G. HENSLEY, Brooklyn, N. Y. Filed June 30, 1919, Serial No. 307,692. Renewed Jan. 21, 1925. 13 Claims. (Cl. 274—27.)



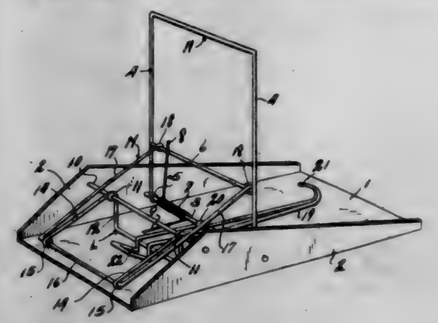
1. A reproducer comprising a shell having a tapered space therein, a diaphragm at the larger end thereof and a core member in said shell and spaced from said diaphragm and shell to provide an air or sound space, the inner surface of said shell tapering on a more obtuse angle relatively to the plane of the axis of the bore of the shell near the larger end of the shell and tapering on a more acute angle relatively to said plane near the smaller end of the shell.

1,558,014. CONVEYING AND PACKING TABLE. WILLIAM H. JAENICKE, San Francisco, Calif., assignor to Mailler Searles, Incorporated, San Francisco, Calif., a Corporation of California. Filed July 17, 1923. Serial No. 652,098. 6 Claims. (Cl. 198—19.)



1. An apparatus as described comprising a conveyer table, several series of substantially horizontal rollers at the side of the conveyer, a packing stand with a clear space at the ends and on both sides of its upper portion spaced from each set of rollers, an angle bar connecting the packing stands and forming a support for filled boxes in conjunction with one of the rollers at the side of the conveyor, a roller support for a cull receiving box under each packing stand and a roller conveyor below the side box supporting rollers, the clear space at the end of the stand allowing the boxes to be dropped down directly on the lower conveyor.

1,558,015. TRAP. JOHN T. JONES, Stanford, Ky. Filed Feb. 26, 1925. Serial No. 11,829. 5 Claims. (Cl. 43—81.)

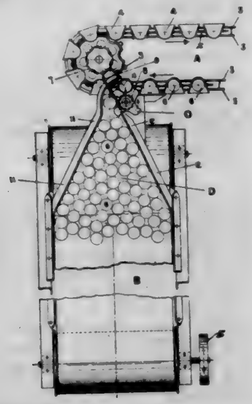


1. A trap comprising a base member provided with spaced outstanding walls, a jaw positioned between and pivotally supported by the walls, means for forcibly throwing the jaw toward the base member, a rod extending between and supported by the outstanding walls, a substantially U-shaped frame having its side arms freely engaged with the jaw, a substantially U-shaped trigger loop having side members pivotally engaged with the rod, the pivoted portions of said side members being continued by angularly related arms, the extremities of said arms being pivotally connected with the intermediate portion of the frame, a trigger engageable with the loop member when in one position to hold the jaw in set position.

1,558,016. CONVEYING DEVICE. KARL KIESER, Cincinnati, Ohio. Filed July 10, 1920. Serial No. 395,190. 6 Claims. (Cl. 198—31.)

1. In a conveying device, a conveyor holding articles in single file at regular intervals, a star wheel engaging the articles on said conveyor and taking the articles therefrom, a continuously moving collecting con-

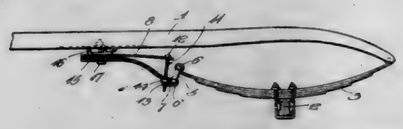
veyor, and fixed means engaged by the articles whereby said star wheel spreads said articles across said collecting conveyor.



2. In a conveying device, a supply conveyor and a receiving conveyor, a rigid spreading plate, and lateral guides diverging along said plate from said supply conveyor to said receiving conveyor.

---

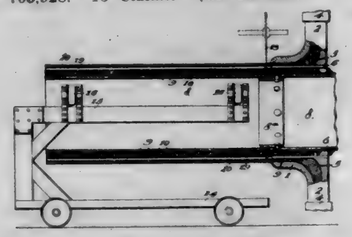
1,558,017. RECOIL-ABSORBING SPRING SUSPENSION. HERBERT KINTZ, Sharpsburg, Pa., assignor of forty-nine per cent to Eugene C. Mosti, Bridgeville, Pa. Filed Sept. 18, 1924. Serial No. 738,473. 4 Claims. (Cl. 267—45.)



1. A recoil absorbing spring suspension comprising a main leaf spring, an auxiliary leaf spring having a free end connected to one end of said main spring, a recoil absorbing leaf spring having a free end spaced vertically from the free end of said auxiliary spring, and connecting means between the free ends of said auxiliary spring and said recoil absorbing spring permitting movement of the former toward the latter but serving to limit the movement of the auxiliary spring away from the recoil absorbing spring.

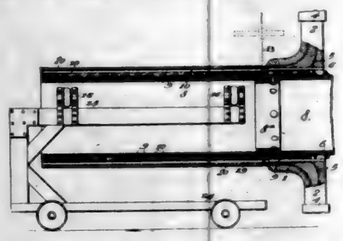
---

1,558,018. APPARATUS FOR MAKING CUSHION TIRES. HENRY MILLER LAMBERT, Portland, Oreg., assignor to Lambert Tire & Rubber Co., Akron, Ohio, a Corporation of Arizona. Filed Apr. 11, 1924. Serial No. 705,928. 15 Claims. (Cl. 18—13.)



1. In tire making apparatus, a tubular die having provisions for expressing a seamless tube of rubber, and a mandrel adapted to carry a series of rims thereon through the die to receive the envelope of rubber.

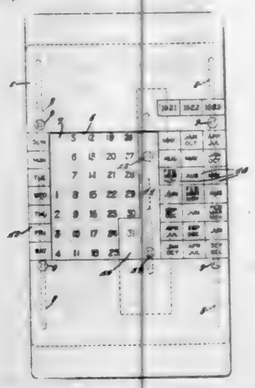
1,558,019. METHOD OF MANUFACTURING CUSHION TIRES. HENRY M. LAMBERT, Portland, Oreg., assignor to Lambert Tire & Rubber Co., Akron, Ohio, a Corporation of Arizona. Filed Apr. 11, 1924. Serial No. 705,929. 8 Claims. (Cl. 18—59.)



1. In a method of manufacturing cushion tires, the steps which consist in arranging a series of rims adjacent one another with their axes substantially coincident, and covering the mass with an envelope of rubber of the thickness of the desired tire-blank, then cutting the envelope in planes normal to the axis of the rims and between adjacent rims thereby to separate the mass into individual rim-tire blanks.

---

1,558,020. CALENDAR. PAUL O. LAUER, Easton, Pa. Filed Nov. 10, 1921. Serial No. 514,866. 1 Claim. (Cl. 40—109.)



A calendar including a body portion having a central cut out portion, the portion of the body adjacent to the side edges of the cut out portion being ruled to provide columns for the reception of indicating characters indicating the days of the week and the months of the year, a movable member having numbers and having elongated openings formed therein, rivets carried by the body portion and disposed in the elongated openings to slidably connect the body portion and movable member, and a movable member having elongated openings movable between the body portion and first mentioned movable member, rivets carried by the first mentioned movable member and disposed in the elongated openings of the last mentioned movable member, and the last mentioned movable member having a shoulder formed on one of the side edges thereof, and said shoulder adapted to be moved to align with the numbers on the first mentioned movable member.

---

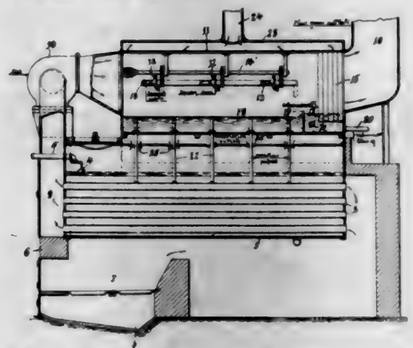
1,558,021. SAFETY RAZOR. JOHN J. LIBI, San Francisco, Calif. Filed May 6, 1925. Serial No. 28,331. 3 Claims. (Cl. 30—12.)

1. A razor comprising, in combination, a handle bearing resilient blade-engaging tines, and a blade provided with slots adapted to be engaged by said blade-engaging tines, one of said tines bearing locking means adapted for

engagement with the blade, said tines being adapted to normally engage and rest in the blade slots and, upon compression, to be removed therefrom.

---

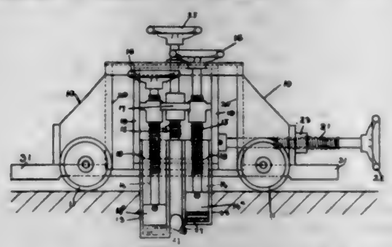
1,558,022. METHOD OF EVAPORATION. ADOLPH W. LISSAUER, Louisville, Ky., assignor to Louisville Drying Machinery Co. Inc., Louisville, Ky., a Corporation of Kentucky. Filed July 29, 1924. Serial No. 728,849. 4 Claims. (Cl. 159—48.)



3. In a method of evaporation or concentration, steps which consist in bringing a liquor into heat exchange with products of combustion so that the products of evaporation from the liquor do not mix with the products of combustion, forming a current of flue gases resulting from combustion and free of vapors from the liquor, and spraying into the said current of flue gases of the said liquor.

---

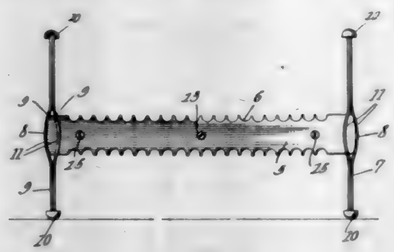
1,558,023. MACHINE FOR PLACING METAL REENFORCEMENT. JOHN WILLIAM LIVERSEDGE, Halton, near Leeds, England. Filed Nov. 6, 1924. Serial No. 748,123. 4 Claims. (Cl. 94—39.)



1. An apparatus of the character described, comprising a movable carriage, means carried by said carriage for supporting a plurality of reenforcing elements in spaced parallel relation, means for raising and lowering said supporting means, and means for moving the supporting means horizontally with relation to the carriage.

---

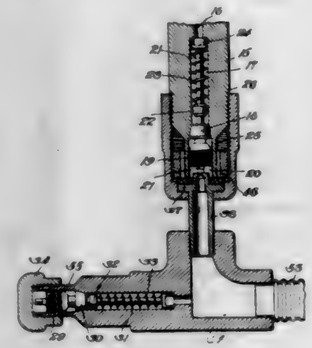
1,558,024. BRIDGE FOR BILLIARD CUES. GUST LOGAN, Elmore, Ohio. Filed Mar. 28, 1925. Serial No. 19,137. 2 Claims. (Cl. 273—23.)



1. A bridge including spaced leg members, a body portion having its ends connected with the leg members, said body portion having a plurality of semi-circular cut out portions formed in its side edges, and a handle connected with the body portion.

---

1,558,025. TIRE-VALVE ATTACHMENT FOR DUAL TIRES. HERBERT V. LUDWICK, Philadelphia, Pa., assignor, by mesne assignments, to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 2, 1921. Serial No. 497,855. 3 Claims. (Cl. 152—12.)



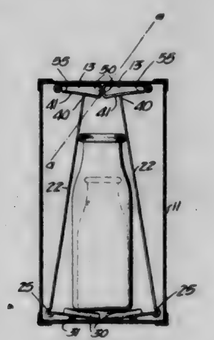
1. The combination with a wheel comprising a pair of discs each carrying a tire having the usual tire valve, an inflating tube carried by said wheel, a fitting at the outer end of said tube, a check valve in said fitting, and coupling members detachably connecting the tube to said tire-valves and holding the tire-valves open.

---

1,558,026. MILK-BOTTLE RECEPTACLE. CLARENCE W. LYONS, Los Angeles, Calif., assignor of one-half to Lois K. Kimball, Los Angeles, Calif. Filed June 18, 1923. Serial No. 646,129. 4 Claims. (Cl. 232—41.)

1. In a receptacle of the class described, the combination of: a housing providing a chamber to which communication is gained through an opening in the top of said housing; lever members extending upwardly on opposite sides of and within said chamber, said lever members having inwardly projecting shelves at their

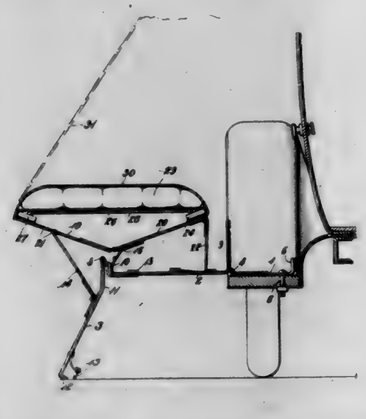
lower ends and being pivoted at their lower ends so that the upper ends of said lever members will swing inwardly when said shelves are depressed; and a door member pivoted at each side of



said opening and adapted to hang down in front of the upper end of one of said lever members, the under faces of said doors being arcuated to conform with the arcs described by the upper ends of said lever members as they swing inwardly.

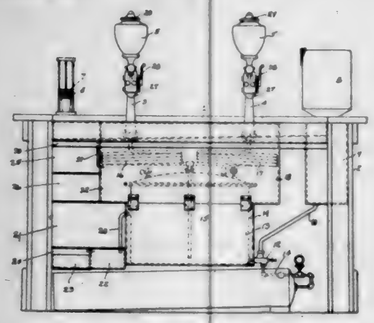
---

1,558,027. AUTOMOBILE BED ATTACHMENT. JOHN A. MCBRADY, St. Paul, Minn. Filed Oct. 20, 1923. Serial No. 671,791. 5 Claims. (Cl. 5—119.)



1. An automobile bed attachment comprising foldable supporting brackets attached to the running board of the automobile and adapted to be either folded up upon the running board or extended outwardly therefrom, said brackets including attaching sections and leg sections, a collapsible bed frame carried by the said brackets and positioned thereon so as to be enfolded between the said leg sections and the attaching sections when the latter are folded up upon the running board, said attaching sections having upstanding extremities provided with openings and said leg sections having angularly disposed apertured ends adapted to penetrate the said openings when the brackets are folded, and a locking pin carried by each leg section for insertion in the aperture of the said angular end of the latter when the same has penetrated the said opening.

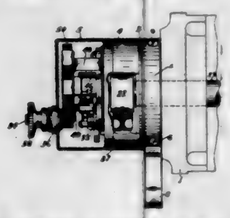
1,558,028. DRINK-DISPENSING STAND. HARRY J. MCCUE, Cleveland, Ohio, assignor to The H. J. McCue Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 30, 1922. Serial No. 597,825. 1 Claim. (Cl. 225—28.)



In apparatus of the character described, the combination of a dispensing stand, an ice-receiving cooling chamber mounted therein, a well forming a bottom extension of said cooling chamber, a cooling coil mounted in said chamber, a carbonator seated in said well and projecting into said cooling chamber, and a drain conduit leading from said well adjacent the upper edge thereof.

---

1,558,029. IGNITION-CIRCUIT BREAKER. ALBION D. T. LIBBY, East Orange, and SAMUEL C. MCKEOWN, Newark, N. J., assignors to Splitdorf Electrical Company, Newark, N. J. Filed Jan. 25, 1921. Serial No. 439,717. 1 Claim. (Cl. 200—30.)



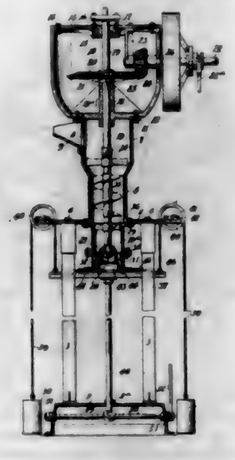
In a circuit breaker, a breaker base, a base plate adjustable thereon and secured thereto, a cam cover mounted on said base plate, means for securing said cam cover to said base plate, an insulated bracket plate mounted on the cam cover, a grounding post mounted on said bracket plate, said grounding post being rigidly held in place in electrical engagement with the insulated bracket plate, a circuit breaker cover mounted on the cam cover positioned by and insulated from the grounding post, means for securing the last mentioned cover in place, a plurality of studs mounted on the base plate, a bearing mounted on one stud having rigidly secured thereto a bumper arm, a bumper in said arm, a cam mounted on a shaft extending into the cam cover cooperating with said bumper, spring means secured to the bumper arm and the remaining stud to urge the bumper into engagement with the cam, said bearing extending through a packed opening into the compartment enclosed by the circuit breaker cover, and a contact carried by said bearing cooperating with a contact mounted on the bracket plate.

---

1,558,030. MOLDING APPARATUS FOR THE MANUFACTURE OF TUBULAR EARTHENWARE OR STONEWARE ARTICLES. MICHAEL MARTIN, Ballarat, Victoria, Australia. Filed Aug. 19, 1924. Serial No. 732,910. 7 Claims. (Cl. 25—39.)

1. In apparatus for the manufacture of earthen or stoneware pipes, a charging barrel, the stationary die

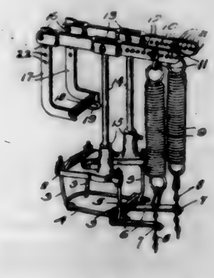
affixed to said barrel, a rotatable shaft extending through said barrel, feed devices mounted on said shaft and rotatable therewith, a core fitted to said shaft and ro-



tatable therewith, and an inner mold member adapted to be rotated by the force-fed material when said inner mold-member is separated from said core.

---

1,558,031. ATTACHMENT FOR PUMPS. HENRY MASBRUCH, Platteville, Wis. Filed Mar. 24, 1925. Serial No. 17,944. 5 Claims. (Cl. 74—71.)

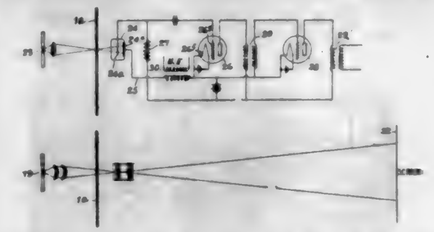


1. In an attachment for pumps, the combination of a bracket, means for attaching the bracket to a pump head, posts on the bracket, pivotally mounted arms on the ends of the posts, the aforesaid arms extending in the same direction and being disposed in a spaced parallel relation to each other, means operatively connecting the ends of the arms with the pump rod to cause the arms to move synchronously with the pump rod, springs adjustably suspended from any one of several apertures in the other ends of the pivoted arms, and means for fastening the lower ends of the springs against upward movement under tension.

---

1,558,032. ARRANGEMENT FOR ACOUSTIC CINEMATOGRAPHY. JOSEPH MASSOLLE, Grunewald, HANS VOGT, Berlin-Schoneberg, and JOSEF ENGL, Grunewald, Germany, assignors to Tri-Ergon Limited, Zurich, Switzerland. Filed Apr. 4, 1921. Serial No. 458,629. 3 Claims. (Cl. 179—100.1.)

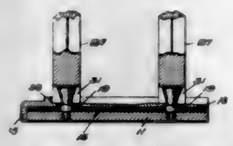
1. In acoustic-cinematographic apparatus, including an electric device adapted to cause electro-magnetic disturbances in adjacent electrical apparatus, the combination of means for producing an acoustically-modulated electric current, thermionic amplifying means and



coupling means between various of said means constructed to prevent the disturbing effect of said device in the circuit of said amplifying means.

---

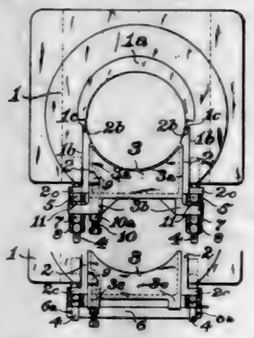
1,558,033. SAFETY RAZOR. HARLAN J. MAYNARD, Newton, Mass., assignor to Specialty Sales Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 17, 1923. Serial No. 669,071. 11 Claims. (Cl. 30—12.)



2. A safety razor having blade holding means, a substantially rigid detachable handle having branched ends, an interlocking formation presented by the blade holding means, and a cooperative interlocking formation on each end of the handle, the latter being adapted by a bodily sliding movement of the ends of the handle in the same direction to engage with the blade holding means and bind the parts together.

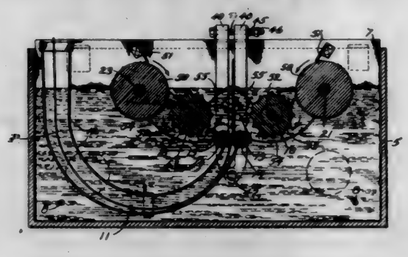
---

1,558,034. LOCOMOTIVE DRIVING BOX. CARL J. MELLIN, Schenectady, N. Y.; The Schenectady Trust Company executor of said Carl J. Mellin, deceased. Filed Feb. 11, 1924. Serial No. 691,878. 5 Claims. (Cl. 308—83.)



1. The combination of a locomotive driving box; a crown brass therein; supplemental bearings, slidable on the vertical inner faces of the driving box, below its horizontal axial plane; and adjusting means, comprising bolts, the heads of which are seated in recesses in the said faces of the box, and the bodies of which pass through outwardly projecting lugs on the sides of the supplemental bearings.

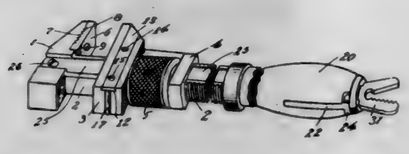
1,558,035. METAL-COATING APPARATUS. EDWIN ROSS MILLRING, Orange, N. J., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Apr. 2, 1925. Serial No. 20,220. 14 Claims. (Cl. 91—12.6.)



1. The combination with means for supporting a bath of molten coating-metal, of means continuously removing dross from its surface at the position where coated material emerges from said bath.

---

1,558,036. TOOL. ROBERT E. MOFFITT, Cincinnati, Ohio. Filed Mar. 23, 1925. Serial No. 17,575. 6 Claims. (Cl. 7—7.)



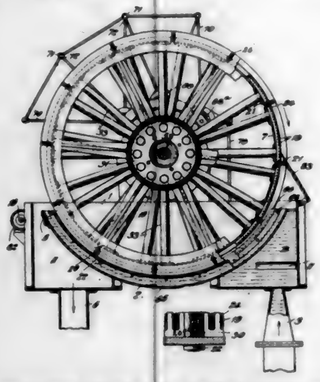
1. In a tool of the character specified, provided with an operating handle and a shank portion, a fixed outer jaw on said shank, and a movable inner jaw thereon, with means for adjusting and holding the movable jaw with relation to the outer jaw, the movable jaw being grooved longitudinally with a slidable bar carrying a projecting stud seated in said groove, and an arm pivoted to the handle with a corresponding stud thereon, said bar and arm adapted to be projected to form a frame for a saw blade, with the jaw adjusting means adapted to tighten said frame.

---

1,558,037. SURGICAL NEEDLE AND SUTURE ASSEMBLY AND METHOD OF MAKING THE SAME. HARRY D. MORTON, New York, N. Y. Filed June 17, 1925. Serial No. 37,599. 19 Claims. (Cl. 128—339.)

1. The method of attaching a suture to a needle which consists in forming in said needle a blind recess having a constricted opening, inserting an end of a suture in said recess and thereafter attaching said end to said needle by an anchorage of greater diameter than the constricted opening of said needle.

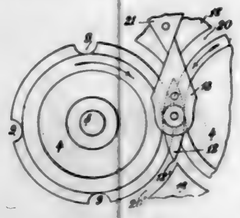
1,558,038. FILTER. WILLIAM D. MOUNT, Lynchburg, Va., assignor of one-half to Joseph E. Mount, Ithaca, N. Y. Filed May 3, 1923. Serial No. 636,365. 14 Claims. (Cl. 210—201.)



1. In continuous filtering the method which comprises producing linear travel of the filtering surface and passing a stream of the magma to be filtered in the same direction and in contact with said surface.

---

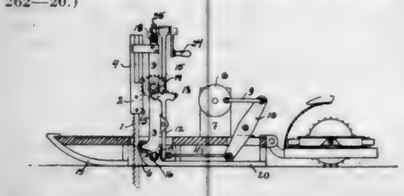
1,558,039. BRAIDING MACHINE. GUSTAVE PERRON, Paris, France. Filed June 30, 1922. Serial No. 571,922. 3 Claims. (Cl. 36—8.)



1. In a braiding machine, a table, a series of horn gears rotatable thereon, means for rotating said gears in unison, spindles driven by said gears, a guiding piece secured to each spindle, stationary guides adapted to coact with said guiding pieces and direct said spindles from one horn gear to the adjacent horn gear, and other stationary guides adapted to coact with said guiding pieces and maintain the spindles on the horn gears with which they are associated when such conction takes place.

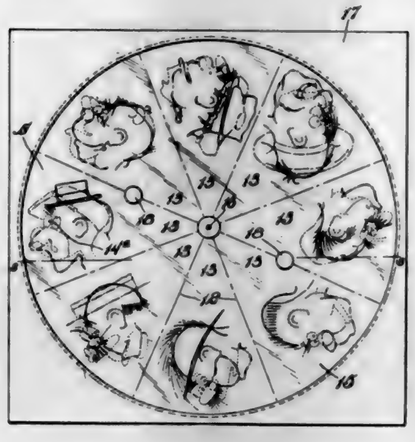
---

1,558,040. MECHANICALLY-WORKED ICE SAW. ERNST EMIL PETERSEN, Copenhagen, Denmark. Filed Nov. 26, 1923. Serial No. 677,019. 5 Claims. (Cl. 262—20.)



1. A mechanically operated ice saw comprising, a sleigh, a saw, a saw guide pivoted at one end to the sleigh, a slide connection between the saw and the guide, and means for maintaining the saw in vertical position regardless of tilting of the sleigh.

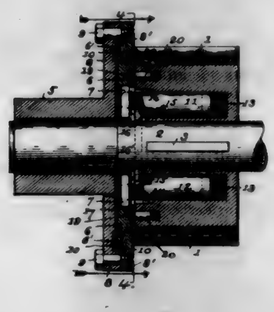
1,558,041. DRAWING DEVICE. HAROLD PHARES, Elizabeth, N. J. Filed Nov. 25, 1924. Serial No. 752,201. 6 Claims. (Cl. 35—12.)



1. A drawing device comprising a base having thereon a series of outline figures, a transparent sheet superposed on the base and having thereon a series of figures in outline, the superposed sheet being adjustable to carry any of its figures into superposed approximately registering relation to any of the figures on the first sheet whereby a tracing may be made of the composite outlines.

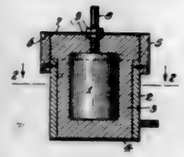
---

1,558,042. SAFETY MECHANISM FOR HOISTING APPARATUS. EDWARD J. POWERS, Oak Park, Ill. Filed Apr. 20, 1925. Serial No. 24,382. 6 Claims. (Cl. 192—15.)



1. In a safety mechanism of the type described, the combination of a fixed support, a power shaft journalled in said support, a driven member mounted on said shaft, means for permitting limited independent turning movement between said shaft and driven member, a ratchet disk carried by the fixed support, reversely arranged pawls carried by the driven member for stop engagement with said ratchet disk, cam projections on the power shaft having alternating engagement with said pawls to retract the same, and an orificed guard disk associated with the power shaft and driven member for alternating retracting engagement with said pawls.

1,558,043. ELECTRICAL CONDENSER. WILLIAM H. PRIESS, Belmont, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Apr. 28, 1921. Serial No. 465,137. 7 Claims. (Cl. 250—41.)



1. In an electrical condenser, concentric metal armatures, the outer armature constituting a casing, a cover of insulating material for said casing, a terminal projecting centrally through said cover and connected to an inner terminal, and an embedment of sulfur within said casing.

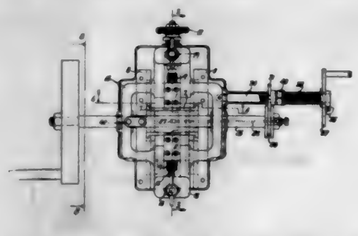
---

1,558,044. CLOSURE FOR COLLAPSIBLE TUBES AND OTHER RECEPTACLES. HAROLD E. ROBERTS, Overbrook, Pa. Filed Sept. 10, 1924. Serial No. 736,859. 8 Claims. (Cl. 221—60.)

1. A closure for a receptacle, comprising a head having an internal passage extending from its base to its exterior surface and there terminating in a discharge orifice, a cap adapted to seat over said orifice, a ball operative to support the cap, means carried by the head adapted to guide the ball when moved with respect thereto, and means on the head operative to draw said ball longitudinally when the ball is forced thereover to thereby seat the cap snugly against the orifice.

---

1,558,045. WORKHOLDER AND TOOL MOUNTING FOR USE IN FINISHING BEARINGS. EDWARD F. ROBERTSON, Glasgow, and JOHN H. FRASER, Greenock, Scotland. Filed Sept. 5, 1924. Serial No. 736,019. 4 Claims. (Cl. 77—2.)



3. A work-holding device and tool-mounting of the type refered to, comprising, in combination, a bed, jaws slidable on said bed, a spindle having screw-threads of opposite hand engaging said jaws for effecting relative reciprocating movement of said jaws by rotation of said spindle, said spindle formed with a collar, a sleeve on said spindle threaded into said bed and engageable with said collar, a pintle threaded into said bed and en-

gageable with one end of said spindle, a jaw-clamping frame having at one end arms pivoted to said bed on an axis transverse to the path of movement of said jaws, a swing bolt fitted to said bed and engageable with the opposite end of said frame, and means fitted to said bolt and adapted to bear on said frame.

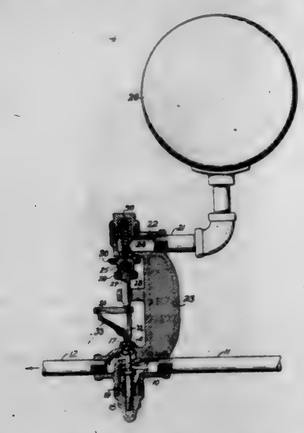
---

1,558,046. METHOD OF PRODUCING OXIDES OF NITROGEN. HENRIK GUSTAV ALLAN RAMSAY, Linkoping, Sweden, assignor to Stockholms Superfosfat Fabriks Aktiebolag, a Corporation of Sweden. Filed Sept. 20, 1923. Serial No. 663,925. 10 Claims. (Cl. 23—162.)

1. Method of producing oxides of nitrogen, consisting in burning solid metallic compounds which contain CN in presence of an oxygen containing gas.

---

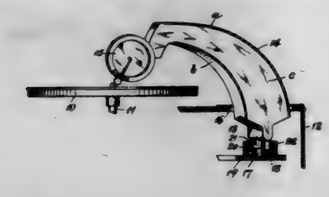
1,558,047. FIRE-CONTROLLING APPARATUS. GEORGE I. ROCKWOOD, Worcester, Mass. Filed Aug. 24, 1920. Serial No. 405,619. 5 Claims. (Cl. 169—2.)



1. A fire control apparatus, having, in combination, a device controlling the supply of liquid fuel to an internal combustion engine, a device controlling the delivery of a fire extinguishing compound to the atmosphere, and a single heat controlled unit effective to positively lock and hold both of said devices in normal position at normal temperature.

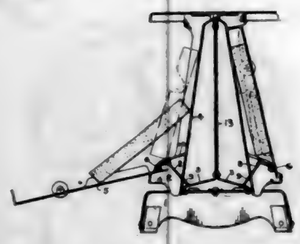
---

1,558,048. PHONOGRAPH. HERMAN ROTHKIRCH, New York, N. Y. Filed Nov. 8, 1921. Serial No. 513,747. 1 Claim. (Cl. 274—23.)



In a phonograph, a tone arm of unbroken curved continuity constructed of wood, said tone arm being of polygonal cross-section and having its walls curved in lengthwise directions and also bowed outwardly at predetermined points in transverse directions to place the wood fibres under tension.

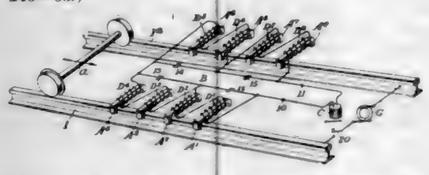
1,558,049. TOASTER. EDWIN A. RUTENBER, Milwaukee, Wis., assignor to A. J. Lindemann & Hoverson Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 28, 1924. Serial No. 716,335. 7 Claims. (Cl. 53—5.)



1. In a device of the character described, the combination with a grate disposed in plane approximately parallel with an upright heating element and means for holding articles against said grate, of a laterally disposed support for articles to be toasted, such as slices of bread, said support extending outwardly and downwardly, and having connected therewith a depending member extending below the same and forming a damper to prevent upward draft.

---

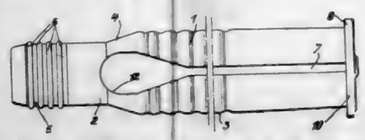
1,558,050. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HARRY M. RYDER, Forest Hills Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 2, 1924. Serial No. 710,520. 5 Claims. (Cl. 246—63.)



1. Vehicle carried receiving apparatus comprising a plurality of receiving elements in inductive relation with the track rails, each such element being tuned to approximate resonance at the same frequency, and all said elements being so connected that voltages induced in said elements by alternating currents flowing in opposite directions in the two track rails are additive.

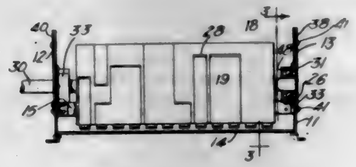
---

1,558,051. BOBBIN CASING FOR LOOMS WITH AUTOMATIC COP-CHANGING MECHANISM. EDWIN SCHOCH, Ruti, Switzerland, assignor to Maschinenfabrik Rüti, formerly Caspar Honegger of Rüti, Zurich, Switzerland. Filed June 23, 1925. Serial No. 39,125. 8 Claims. (Cl. 139—207.)



1. A bobbin casing for tubular cops, for insertion in the shuttles of looms with automatic cop changing mechanism, comprising a sleeve which is provided at one end with rings or pads for insertion into the shuttle and which sleeve is slotted longitudinally from the other end in order to form springy tongues, at least one of the slots being widened at its rear end for the admission of a feeler, and a detachable clamp being adapted to hold together the said springy tongues.

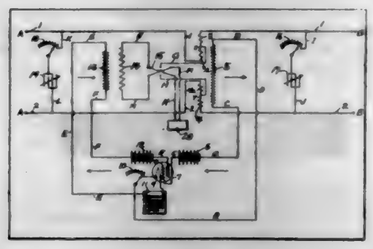
1,558,052. CONTROLLER FOR ELECTRIC MOTOR VEHICLES. JACOB SCHURCH, Los Angeles, Calif., assignor to Benjamin C. Tunison, Pittsburgh, Pa. Filed Sept. 15, 1922. Serial No. 588,490. 4 Claims. (Cl. 200—8.)



1. In a controller, the combination of: a drum; a rotatable shaft for mounting said drum; a pair of suitably spaced supporting members; a bearing receptacle in each of said supporting members, said bearing receptacles each having an open end; a bearing placed in each of said receptacles through said open ends, said bearings rotatably supporting said shaft, there being a channel, of slightly greater width than the diameter of said shaft, extending from the outer edge of each of said supporting members inwardly through one side of each of said bearing receptacles, so as to permit said shaft to be removed radially from said supporting members after the moving of said bearings upon said shaft out of said receptacles.

---

1,558,053. TWO-WAY REPEATER AND AMPLIFIER. WILL G. SEXAUER, San Antonio, Tex. Filed Jan. 25, 1923. Serial No. 614,875. 2 Claims. (Cl. 179—170.)

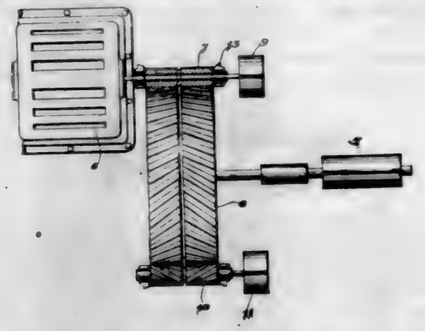


1. In a two-way repeater and amplifier of voice currents, an input transformer, an output transformer, one of said transformers having a pair of primary coils connected respectively to two lines, means for connecting each of the pair of coils to the secondary coil of the companion transformer, variable balancing circuits on the remote sides of the two transformers, and means for connecting in a receiving instrument on said first means.

---

1,558,054. GEAR DRIVE. IRA SHORT, Essington, Pa., assignor, by mesne assignments, to Westinghouse Gear and Dynamometer Company, a Corporation of Pennsylvania. Filed Jan. 3, 1923. Serial No. 610,527. 2 Claims. (Cl. 74—7.)

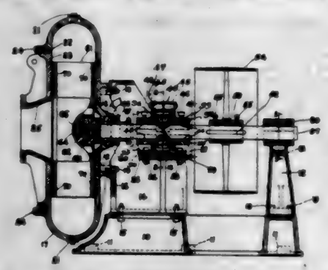
1. The combination with means providing a torque load subject to abrupt vibration, of means for driving said load including a gear, a plurality of pinions meshing with the gear, said pinions being spaced at substantially equal distances about the periphery of the gear,



a plurality of freely rotatable inertia members driven by the respective pinions, and driving means connected to one of said pinions.

---

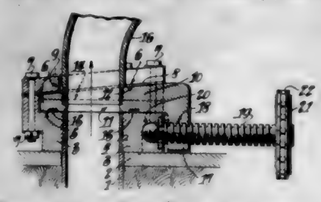
1,558,055. PUMP. GEORGE SMITH, Baltimore, Md., assignor to Ellicott Machine Corporation, Baltimore, Md., a Corporation of Delaware. Filed Aug. 30, 1924. Serial No. 735,107. 2 Claims. (Cl. 103—11.)



1. In a pump, a pedestal bracket, a thrust and radial bearing adjustably carried by said bracket, an annular runner casing, also carried by said bracket having an axially located inlet port and a tangentially extending outlet port, releasable means for adjustably securing said casing to said bracket with its outlet port extended in any one of a plurality of radial directions, said casing being rigidly spaced from the bearing by an intermediate portion of the bracket, a driven shaft entirely supported by said bearing at its end closely adjacent the pump casing and projecting axially into said casing, a thrust element secured to the shaft having a pair of end faces engaging said thrust bearing, and a runner secured to said shaft within said casing.

---

1,558,056. WELL CAPPER AND FLOW DISTRIBUTOR. GEORGE F. SOCKMAN, Woodlawn, Pa. Filed Mar. 5, 1925. Serial No. 13,286. 10 Claims. (Cl. 166—15.)



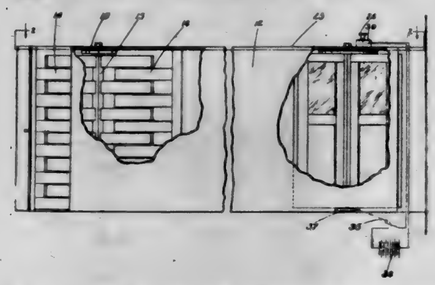
1. Apparatus of the class described comprising a gate movable over the discharge end of a well casing and having a passage therethrough adapted to be brought

into registration with said casing, a distributor pipe adapted to communicate with the well casing through the gate aperture and which is carried by and movable with said gate.

1,558,057. WATER-PAN ALARM. LEO SOMMER, St. Lin, Quebec, Canada. Filed Oct. 24, 1924. Serial No. 745,664. 2 Claims. (Cl. 116—109.)

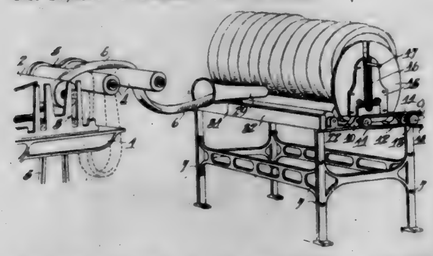
2. In a water pan alarm, a double horseshoe wire loop forming base and pan rest loops, the latter having a minor finger loop a finger projecting from a sleeve adjustably mounted on said finger loops, said loops being formed in a continuous length of wire, and a bell secured to ends of said base loop and having a press button adapted to be engaged by said finger, said horseshoe loops being joined at the extremities of the horseshoe.

1,558,058. SAFETY VESTIBULE. EDWIN EGMONT SPOTTSWOOD, Cincinnati, Ohio. Filed Jan. 2, 1925. Serial No. 116. 9 Claims. (Cl. 20—1.01.)



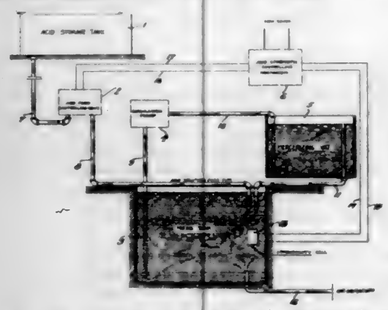
1. In a device of the class described the combination with a casing having a pair of longitudinally disposed noncommunicating corridors therein, a revolving door controlling entrance to and exit from the casing at one end, a turn stile structure controlling exit from one of the corridors and entrance to the other of the corridors at the opposite end of the casing, and controllable means for locking the revolving door against movement whereby a locked chamber is provided in the second mentioned corridor.

1,558,059. ROLL-WINDING DEVICE. MAURICE JOSEPH STACK, Cohoes, N. Y. Filed Mar. 16, 1925. Serial No. 16,080. 3 Claims. (Cl. 19—158.)



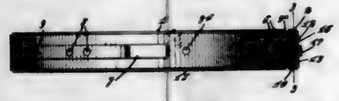
2. A roll winding device comprising a supporting framing, winding and supporting rollers mounted upon the framing, a winding core adapted to rest upon the winding and supporting rollers for receiving the roll being wound and to be supported and rotated by said rollers for effecting the winding of said roll, vertically slotted wings for abutting the roll ends and for guiding vertical movement of the core as said roll is wound, said core comprising a hollow cylindrical core adapted to remain in the wound roll and a supporting rod suitably spaced centrally removably therein and having its ends vertically movable in the slots of the wings, and means for imparting rotation to said winding and supporting rollers.

1,558,060. ACID-CIRCULATING SYSTEM FOR MERCERIZING YARN. LAWRENCE A. STEAD, Chester, Pa. Filed Aug. 1, 1924. Serial No. 729,446. 2 Claims. (Cl. 23—253.)



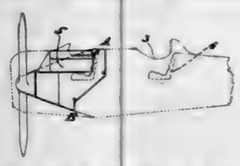
1. An acid circulating system for mercerizing including a storage tank; a solenoid actuated feed-controlling valve; a pipe leading from the storage tank to the valve; a mixing tank; a pipe leading from the valve to the mixing tank; a mercerizing unit; a pump adapted to draw acid from the mixing tank and deliver it to the mercerizing unit; an overflow pipe leading from the mercerizing unit to the mixing tank; a conductivity cell in the mixing tank, and means, controlled by the conductivity cell, for actuating the feed-controlling valve.

1,558,061. AUTOMOBILE BRAKE. THOMAS H. SUTHERLAND, Washington, Pa. Filed Apr. 21, 1924. Serial No. 707,958. 2 Claims. (Cl. 188—249.)



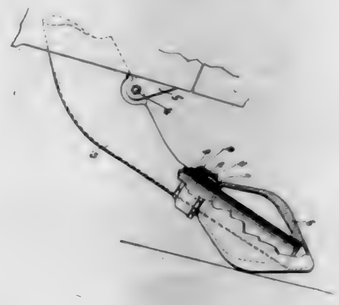
2. A brake band for vehicles having its ends folded outwardly and rearwardly and secured to form bearings, portions of said bearings being cut away intermediate their ends, and cam attaching pins mounted in said bearings and having cotter pin receiving apertures extending transversely therethrough.

1,558,062. CONVERTIBLE AIRPLANE. BENJAMIN DOUGLAS THOMAS, Ithaca, N. Y., assignor of one-tenth to Thomas-Morse Aircraft Corporation, Ithaca, N. Y., a Corporation of New York. Filed Apr. 14, 1922. Serial No. 552,583. 3 Claims. (Cl. 244—30.)



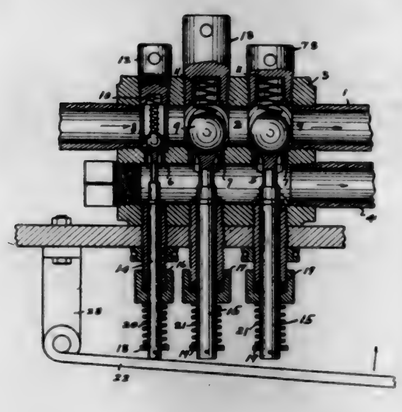
1. An airplane adapted for use as a single-seater or as a two-seater, comprising a fuselage terminating in front of the single-seater cockpit, and a nose portion, containing a second cockpit and a lighter motor, adapted to be fitted on and secured to the end of the fuselage in place of the nose portion containing a heavier motor.

1,558,063. TAIL SKID FOR AIRPLANES. BENJAMIN DOUGLAS THOMAS, Ithaca, N. Y., assignor of one-tenth to Thomas-Morse Aircraft Corporation, Ithaca, N. Y., a Corporation of New York. Filed July 11, 1922. Serial No. 574,140. 7 Claims. (Cl. 244—2.)



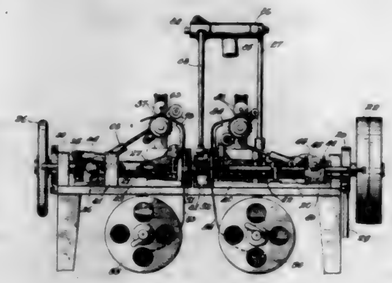
5. In an airplane, a tail skid the rear end of which is cylindrical in cross section, bearings on each end of said cylindrical portion, a hollow shoe of double truncated cone shape mounted to rotate on said bearings transversely to tht axis of said cylindrical portion, and means at the forward end of said shoe to prevent leakage of lubricant from the interior thereof.

1,558,064. PRESSURE-CONTROLLING MECHANISM. HOMER C. THRIFT, Houston, Tex. Filed Dec. 10, 1923. Serial No. 679,656. 7 Claims. (Cl. 277—20.)



1. A device of the character described including a pressure line having a plurality of relief parts, formed with seats, valves controlling said seats, yieldable means normally tending to seat said valves to close said ports, and a common means for unseating the valves successively.

1,558,065. MACHINE FOR ATTACHING STRING FASTENERS TO ENVELOPES. STANLEY B. URBANOWITZ, Chicago, Ill., assignor to American Envelope Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 14, 1922. Serial No. 552,657. 37 Claims. Cl. 93—61.)

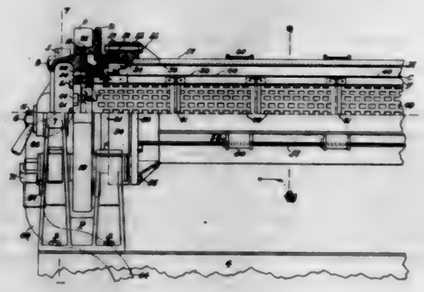


18. String feeding mechanism for machines for securing eyelets, perforated washers and strings to envelopes, comprising an oscillatory arm, string feeding rollers carried by said arm, and devices for rotating said rollers.

1,558,066. METHOD OF MAKING LIGHT METAL ALLOYS. WILLIAM R. VEAZEY, Cleveland, Ohio, and Edward C. Burdick, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Nov. 26, 1921. Serial No. 517,950. 13 Claims. (Cl. 75—1.)

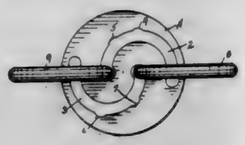
1. In a method of making a light metal alloy in which magnesium largely predominates, the steps which consist in first interfusing the desired amount of the alloying metal with a relatively small quantity of magnesium, and then adding the resulting alloy to the remaining quantity of magnesium in molten state.

1,558,067. MANUFACTURE OF ARTICLES CENTRIFUGALLY. CHARLES WILLIAM WATSON, St. Kilda, Victoria, Australia. Filed June 20, 1923. Serial No. 646,727. 18 Claims. (Cl. 25—30.)



12. An apparatus for forming agglomerate structures comprising a pair of revoluble annuli, a seat carried by each annulus, a second annulus carried by each seat, a mould carried by said second annuli, and a core carried by said seats and comprising a plurality of arcuate sections, interior strengthening ribs for said sections, and wedging means for connecting said sections.

1,558,068. ADJUSTABLE CHAIN LINK. WILLIAM E. WEEKS, Salt Lake City, Utah. Filed Feb. 14, 1925. Serial No. 9,108. 1 Claim. (Cl. 59—84.)

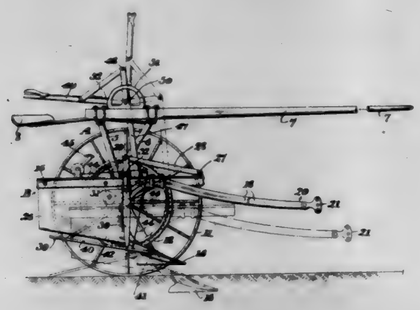


A device of the class described comprising a circular plate having two semi-circular slots cut therein; notches in the outside edges of said slots; and links of a chain engaged with said plate through said slots.

1,558,069. PROCESS OF MAKING COOKING COMPOUND. FRED D. WILLIAMS, Cooperstown, N. Dak. Filed Feb. 15, 1923. Serial No. 619,268. 2 Claims. (Cl. 99—13.)

2. A process for mixing honey with a fatty food compound, which consists in cooling the honey nearly to the granulation point and warming the fatty compound until it may be easily stirred, and then thoroughly mixing substantially equal parts of the two ingredients together by stirring to form an intimate and uniform mixture in which each particle of the fatty compound is thoroughly permeated with and covered by the honey and thereby protected against the air.

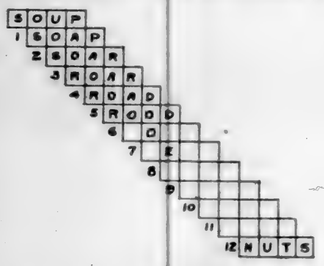
1,558,070. PEANUT DIGGER. CHARLES F. WIRSCHING, Washington, D. C. Filed May 25, 1923. Serial No. 641,347. 5 Claims. (Cl. 55—53.)



1. In a machine of the class described, a main frame, a pair of stub axles carried thereby, a wheel mounted upon each stub axle, a sub-frame pivotally connected to the stub axles interiorly of the main frame and adapted to swing thereabout to be raised or lowered, a plow frame detachably carried by the sub-frame, and manually operated means mounted upon the main frame and connected to the sub-frame whereby the sub-frame may be retained substantially parallel to the surface traversed.

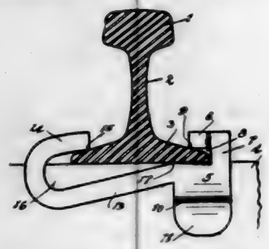
1,558,071. PUZZLE OR GAME. ARTHUR WYNNE, Mountain Lakes, N. J., assignor to King Features Syndicate, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 23, 1925. Serial No. 4,136. 1 Claim. (Cl. 283—1.)

As an improved article of manufacture, a cross word puzzle card embodying a multiple series of stepped enclosures for the reception of letters, there being the same number of enclosures in each horizontal series, each series having thereon a letter to form a basic letter of



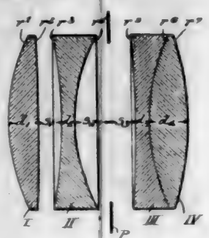
the word to be placed in said series, each series to receive letters to form progressively from the top to the bottom series, different words.

1,558,072. RAIL ANCHOR. WILLIAM A. R. ANGUS, Winnipeg, Manitoba, Canada. Filed Dec. 20, 1924. Serial No. 757,230. 4 Claims. (Cl. 238—330.)



1. A one-piece anchor presenting a vertically disposed body plate having the lower end thereof terminating in an offset pressure plate, a jaw formed at the upper edge of the body plate, an inclining shank extending laterally from the body plate and a jaw formed at the free end of the shank, the latter jaw being contained in the same vertical plane as the body plate.

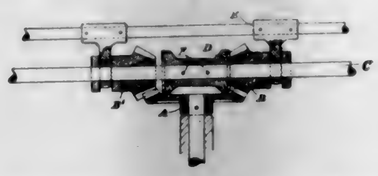
1,558,073. OBJECTIVE-LENS SYSTEM. WILLIAM F. BIELICKE, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 18, 1922. Serial No. 530,160. 1 Claim. (Cl. 88—57.)



An objective lens system for photographic, microscopic, projection and similar purposes, consisting of four lenses, a collective and a dispersive lens separated by an air space situated on one side of the diaphragm and a dispersive and a collective lens cemented together and situated on the other side of the diaphragm, the cemented collective lens being made of glass having a refractive

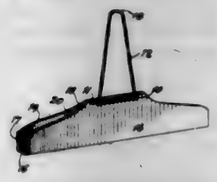
index of not less than 1.61 and the refractive index of the dispersive lens cemented to it being smaller than the refractive index of the collective lens by at least 0.05 but not more than 0.06, the ratio of the power of the lenses composing the front doublet to the power of the lenses composing the back doublet being between 0.10 and 0.35.

1,558,074. SLIDING-JAW CLUTCH. JULIEN A. BRIED, Oakland, Calif., assignor of one-half to Samuel L. Rogers, San Francisco, Calif. Filed Dec. 6, 1921. Serial No. 520,363. 1 Claim. (Cl. 192—67.)



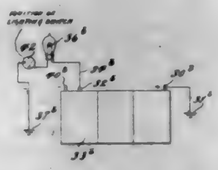
A jaw clutch arrangement comprising a bevel gear fixed to a shaft, a second shaft at right angles thereto, a bevel gear loose on said second shaft in mesh with the first mentioned gear and having its teeth extending beyond the working face thereof, a power transmitting element on said second shaft adapted to engage the extending teeth of the second mentioned gear, and means for holding said element and gear in such engagement.

1,558,075. GARMENT HANGER. ISABEL N. CAVE, Brooklyn, N. Y. Filed June 10, 1921. Serial No. 477,907. 8 Claims. (Cl. 211—13.)



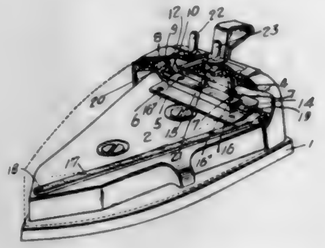
1. A one piece garment hanger consisting of a spacing element and two oppositely disposed normally upstanding members integral therewith shaped to conform to the shape of the article to be hung, and a suspension element passing through supporting and automatically maintaining said members in said upstanding position, said suspension element passing from one of said members to the other member.

1,558,076. INDICATING DEVICE FOR STORAGE BATTERIES. RUFUS N. CHAMBERLAIN, Chicago, Ill. Filed Apr. 18, 1924. Serial No. 707,402. 7 Claims. (Cl. 177—311.)



7. In a system of indicating the level of the electrolyte of storage batteries, the combination of a circuit including a battery, an antimonial lead electrode in a cell of the battery having a relative negative polarity and a lamp and means having another function in the operation of the automobile for controlling said circuit.

1,558,077. ELECTRIC IRON. ALBERT RANDOLPH CHEESEMAN, Toronto, Ontario, Canada. Filed Jan. 5, 1924. Serial No. 684,565. 3 Claims. (Cl. 219—25.)



1. In an electric iron, the combination with the body and the element thereof, of a stationary contact carried by the body and connected to one element terminal, a movable contact also carried by the body and connected with the other terminal, a mono-metal rigid bar connected to the iron body at one end and to the movable contact at the opposite end and capable of expansion longitudinally in its own plane when subjected to heat whereby the movable contact brakes contact with the stationary contact during the expansion of the bar and makes contact during the contraction of the bar.

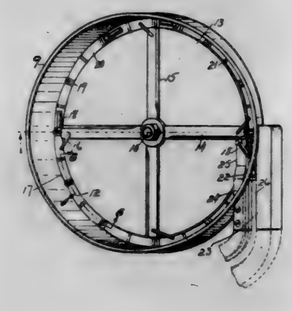
1,558,078. GOLF-TEE MARKER. EDWARD A. DARBY, Philadelphia, Pa. Filed July 9, 1925. Serial No. 42,378. 2 Claims. (Cl. 273—32.)

2. A golf tee marker including a standard: a flange on the upper end of the standard: a stud on the flange; a hood fitting over the stud and resting over the flange; means on the stud for securing the hood to the flange; a second flange on the lower end of the standard, and a spike depending from said flange.

1,558,079. FEEDER FOR AUTOMATIC METAL-WORKING MACHINES. ERNEST W. DUSTON, Cleveland, Ohio, and REUBEN S. CROSBY, Hartford, Conn., assignors to The Asa S. Cook Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 30, 1922. Serial No. 585,217. 15 Claims. (Cl. 10—169.)

9. A feeder comprising a case, a tubular support for said case, a shaft projecting through said support and

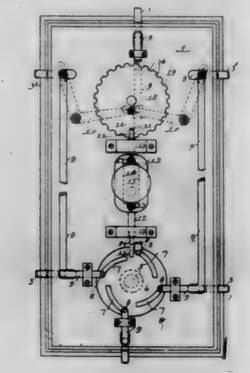
rotatably mounted therein, a feed plate secured to said shaft, a rectifying plate loosely supported on said shaft and of a size to form a groove with said feed plate as



the bottom thereof, and a delivery chute in engagement with said rectifying plate to prevent rotation thereof and positioned to receive articles from said groove.

---

1,558,080. COMBINATION LOCK. JAMES L. FOUTS, Muskegon, Mich. Filed Sept. 25, 1924. Serial No. 739,791. 2 Claims. (Cl. 70—53.)

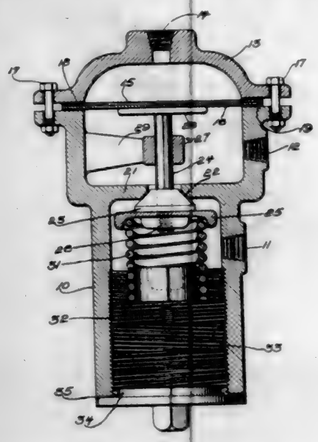


1. In a lock; a locking bar movable into and out of locking position; a rotatable member having a spirally-formed cam and a recess; means engaging the cam for moving the locking bar; a locking bolt movable into and out of engagement with said recess to hold said member against rotation.

---

1,558,081. DEVICE FOR CONTROLLING THE FLOW OF FLUIDS. HARLAN S. GANO, Wilkinsburg, and MATSON C. TERRY, Philadelphia, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 12, 1923. Serial No. 662,301. 11 Claims. (Cl. 236—92.)

1. In a device for controlling the flow of fluid, the combination of a flexible diaphragm composed of materials having relatively different coefficients of expansion, means for subjecting that portion of the diaphragm having the greater coefficient of expansion to the temperature of a fluid, means for subjecting that portion of the diaphragm having the lesser coefficient of expansion to



the temperature of a medium, and means for controlling the flow of the fluid in response to movements of the diaphragm.

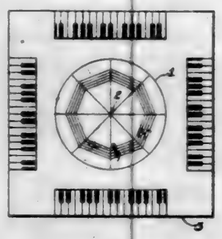
---

1,558,082. MANUFACTURE OF PAINTS. DANIEL GARDNER, Weybridge, England. Filed Aug. 21, 1922. Serial No. 583,378. 8 Claims. (Cl. 134—51.)

2. In the production of liquid coating compositions from bitumens, asphaltites and similar materials, the step of maintaining said material at a temperature of 125 to 140° C., while preventing local overheating, such operation being conducted in a nonoxidizing atmosphere.

---

1,558,083. EDUCATIONAL GAME. GRACE GITTENS, East Orange, N. J. Filed July 22, 1921. Serial No. 486,734. 4 Claims. (Cl. 373—135.)

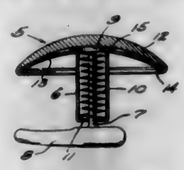


1. An educational game comprising a representation of a keyboard: a number bearing a plurality of musical notations, said member being movable to bring any of said notations into position for observance and in adjacency to said keyboard, and a set of cards bearing designations different from but related to the notations on said member.

---

1,558,084. CUFF BUTTON. ARTHUR R. GLIDDEN, Seattle, Wash. Filed Feb. 4, 1924. Serial No. 690,532. 1 Claim. (Cl. 24—102.)

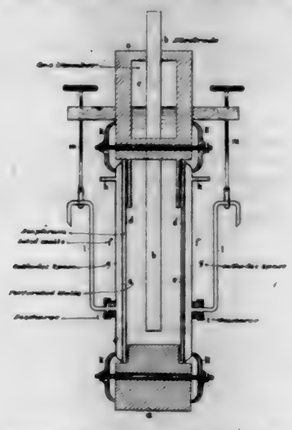
A cuff-button comprising two rigid members, each having a head element, one of said members being provided with a hollow post element having a flange at its outer end, the other of said members being provided with a stem extending axially into said post element and having a flange within the latter, and an expansion spring provided within said post and between said flanges, said



spring acting to yieldingly retain said stem of the associated member in contact with the head element of the other member.

---

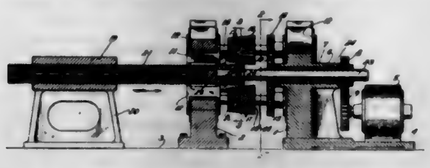
1,558,085. CIRCULATION ELECTROLYZER FOR ALKALINE CHLORIDES. FRANCESCO GIORDANI and UMBERTO POMILIO, Naples, Italy. Filed Oct. 18, 1922. Serial No. 595,220. 4 Claims. (Cl. 204—58.)



1. A circulation electrolyzer for alkali chlorides, comprising an anodic chamber, cathodic chambers, vertical diaphragms separating the said anodic chamber from the cathodic chambers provided at their upper ends with hydrogen outlets, a feeding device for admitting the electrolyte to the anodic chamber, means for discharging the liquid arriving in the cathodic chambers, and means for regulating the speed of the liquid passing through the said diaphragms, irrespective of the changes of the porosity of the said diaphragms.

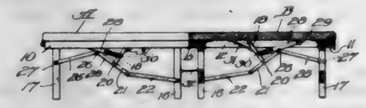
---

1,558,086. MACHINE FOR ROLLING GEARS. CHARLES O. GUSTAVSEN, Canton, Ohio. Filed Dec. 23, 1922. Serial No. 608,655. 12 Claims. (Cl. 80—16.)



1. A machine for rolling gears including a plurality of forming rolls, means for rotating said rolls and means for passing a heated blank axially between said rolls and means for positively rotating the blank in unison with the rolls.

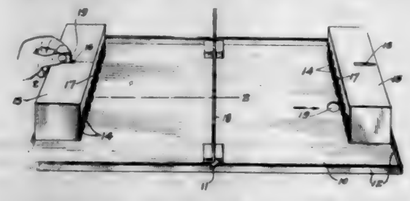
1,558,087. FOLDING BENCH AND TABLE. EARL G. HANEY, Chicago, Ill. Filed Sept. 2, 1924. Serial No. 735,246. 4 Claims. (Cl. 155—151.)



4. In a folding bench or table, the combination of two body sections hinged together to fold one upon the other in substantially parallel relation, each section having an outer leg hinged thereto to fold substantially against the body section to which hinged, each section having also an inner leg, the inner legs being closely adjacent to each other, said sections being free to fold together when the legs are off of the floor, and being held against such folding by the resting of the device with its legs normally upon the floor and means dependent upon the movement of the sections toward each other and the impingement of the inner legs upon each other for causing the legs to fold substantially parallel with the sections respectively when the sections are folded substantially parallel to each other.

---

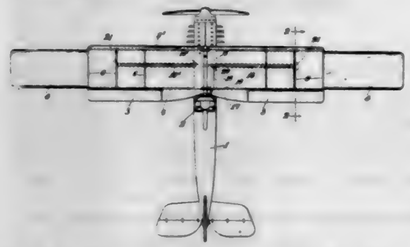
1,558,088. GAME APPARATUS. JOHN W. HANLEY, New York, N. Y. Filed Aug. 4, 1924. Serial No. 729,886. 5 Claims. (Cl. 273—126.)



1. In game apparatus of the nature set forth, the combination with a field and remote mechanism, of a combined projector and target manipulatable as a unit over the field, said projector being adapted for directing a game piece toward said remote mechanism while the taget constitutes a goal with respect to a game piece projected from said remote mechanism.

---

1,558,089. AEROPLANE. ALBERT S. HEINRICH, Freeport, N. Y. Filed Feb. 20, 1922. Serial No. 538,081. 6 Claims. (Cl. 244—12.)



1. In an aeroplane, the combination of laterally extending wings, said wings having forward and rear longitudinal beams and transverse beams secured to said longitudinal beams, said wings having interior spaces extending longitudinally thereof and confined between said longitudinal beams, and auxiliary wing sections slidably mounted within said spaces in said wings, adapted to be extended laterally beyond the same, said

transverse beams being positioned to extend vertically outside the surface of said wings and arranged to directly receive all upwardly and downwardly directed stresses from said auxiliary sections and transmit the same to said forward and rear longitudinal beams.

---

1,558,090. ELECTRICAL TRANSFORMER. AUSTIN A. HOWARD, Chicago, Ill. Filed Jan. 23, 1924. Serial No. 687,963. 4 Claims. (Cl. 175—359.)

1. A device of the character described comprising a cylindrical support having a spiral groove in its outer surface, a wire laid in the bottom of said groove, the depth of said groove being greater than the diameter of the wire laid therein, and another wire wound on the outer surface of said support and not lying in said groove.

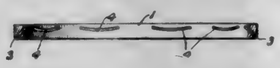
---

1,558,091. PISTON RING. CHARLES E. JOHNSON, Muskegon, Mich., assignor to The Piston Ring Company, Muskegon Heights, Mich., a Corporation of Michigan. Filed Mar. 24, 1924. Serial No. 701,245. 4 Claims. (Cl. 74—109.)

1. A piston ring of substantially circular outline having a plurality of slots cut therein from its outer curved side to its inner curved side, said slots being cut upwardly and inwardly at an angle and having ends joining whereby a continuous groove of varying depth is made around the ring with a plurality of openings in spaced relation extending through the ring from said groove.

---

1,558,092. PISTON RING. CHARLES E. JOHNSON, Muskegon, Mich., assignor to The Piston Ring Company, Muskegon Heights, Mich., a Corporation of Michigan. Filed May 19, 1924. Serial No. 714,256. 6 Claims. (Cl. 74—109.)

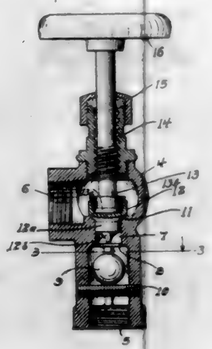


1. A piston ring of substantially circular outline having a plurality of slots cut therein from its outer curved to its inner curved side, said slots being cut upwardly and inwardly at an angle to the upper and lower sides of the ring, the ends of the slots being spaced short distances apart and said slots being cut at spaced apart points from the outer lower corners of the ring whereby portions of the metal are removed from the ring at the lower side thereof adjacent the outer curved side thereof.

---

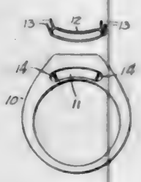
1,558,093. AUTOMATIC SHUT-OFF VALVE. WAYBURN E. JOHNSTON, Minneapolis, Minn. Filed Nov. 21, 1924. Serial No. 751,283. 4 Claims. (Cl. 277—27.)

1. An automatic shut-off valve for fluid comprising a body having a fluid passage therethrough, a check valve at one side of said passage adapted to seat on an excessive flow of fluid, and a manually movable valve at the other side of said passage adapted to close said passage, said valve having means thereon fitting said passage substantially to close the same, and means carried by said first mentioned means extending through said passage for engaging said check valve when closed to open the same before said second mentioned valve seats.



---

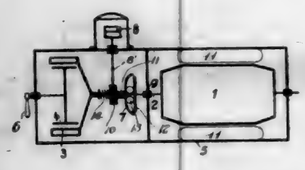
1,558,094. JEWELRY. ISAAC E. KALISHER, New York, N. Y., assignor to Kalisher Mfg. Co., New York, N. Y., a Firm composed of Samuel Wein, Louis Leopold, and Isaac E. Kalisher. Filed Apr. 8, 1925. Serial No. 21,547. 1 Claim. (Cl. 63—15.)



As a new article of manufacture, a finger ring having a space between the finger embracing opening and the periphery of the ring, posts within and extending transversely of the space, an insert for said space, and prongs carried by said insert and adapted to be clinched about and unclinched from said posts.

---

1,558,095. DYNAMO-ELECTRIC MACHINE. FRANZ KRATZ and MAX SCHÄFER, Stuttgart, Germany, assignors to the Firm: Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Aug. 11, 1921. Serial No. 491,554. 13 Claims. (Cl. 123—149.)

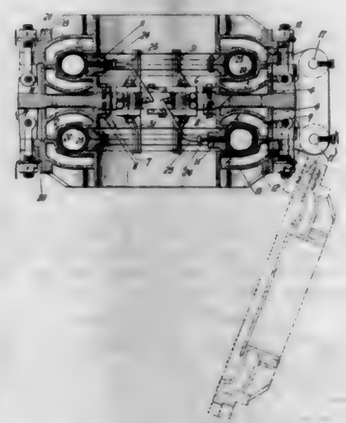


1. Combined direct current and high tension ignition current generator, comprising, in combination, a field structure and an armature for generating direct current of low tension, a shaft for the said armature, bearings

for the said shaft, said shaft having an extension overhanging one of said bearings, a magneto-electric ignition device provided with a rotor, the rotor of said ignition device being mounted on the said extension of the armature shaft so as to rotate therewith.

---

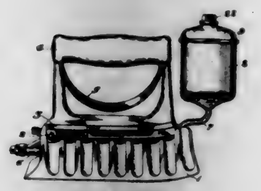
1,558,096. VULCANIZER. OTTO J. KUHLKE, Akron, Ohio, assignor to The Kuhlke Machine Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 24, 1925. Serial No. 25,487. 5 Claims. (Cl. 18—38.)



3. In a vertical mold of the swinging type, a support, a stationary mold section attached to the support, a swinging mold section hinged upon the support, and lateral arms to carry a tire assembly within the mold, the arms being adjustable to support tire assemblies of different internal diameters.

---

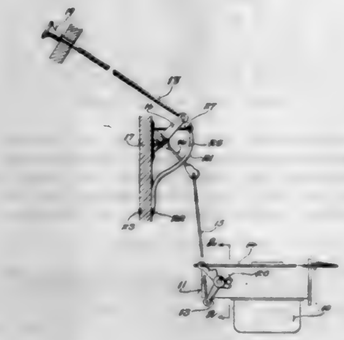
1,558,097. SELF-HEATING SADIRON. BERTUS A. LAKE, Big Prairie, Ohio. Filed Aug. 18, 1921. Serial No. 493,403. 1 Claim. (Cl. 220—39.)



In a tank for a self heated sad iron, an inwardly and downwardly inclined, annular flange, and an internally threaded nipple arranged to be inserted from the outside of the tank and located within said flange and provided with an annular groove having an inwardly and downwardly inclined edge receiving the inner edge of the flange, the nipple being connected to the flange by solder surrounding the nipple within the flange, the soldering operation being performed wholly from the outside of the tank.

---

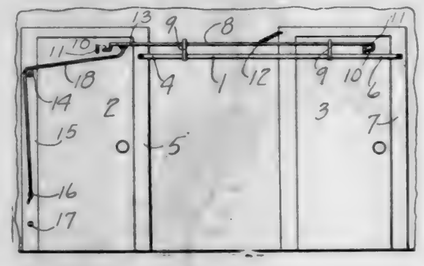
1,558,098. ADJUSTMENT FOR CARBURETOR CHOKES. HARRY LANGER, Milwaukee, Wis. Filed Nov. 28, 1922. Serial No. 602,792. 1 Claim. (Cl. 137—139.)



In an automobile the combination of a choke valve for a carburetor, a lever operatively connected thereto, a dashboard, a bell crank lever pivotally supported upon said dashboard and having a downwardly and outwardly extending arm connected by means of a link with said first mentioned lever, a pull rod connected to the other arm of said bell crank lever, a retainer having a curved portion provided with a serrated edge with the serrations formed by gradually curving portions, said retainer having a straight portion pivoted to said dashboard, and a spring connected to the free end of said retainer and rocking said retainer about the pivot point to cause the notched edge thereof to engage the downwardly and forwardly extending arm of the bell crank lever.

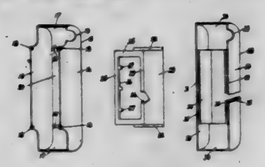
---

1,558,099. DOORLOCK. JOSEPH B. LEBRUN, Berlin, N. H. Filed Oct. 12, 1922. Serial No. 594,008. 1 Claim. (Cl. 292—157.)



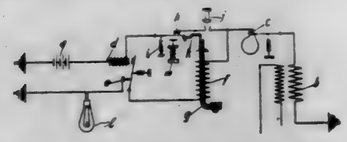
A door lock for two doors spaced apart, comprising a brace fastened across the tops of the doors; a rod slidingly connected with the brace; resilient means for holding the rod toward the right hand side; a screw eye in each door adjacent the rod; a hook in each end of the rod and directed so as to engage said screw eyes on the left hand movement of the rod; a roller and a knob attached to the left hand door casing; and a cord fastened to the sliding rod and extended over the roller, with its lower end adapted for fastening to said knob.

1,558,100. CAMERA. LEW W. LESSLER, Johnson City, N. Y., assignor to Ansco Photoproducts, Inc., Binghamton, N. Y. Filed May 4, 1925. Serial No. 27,795. 6 Claims. (Cl. 95—32.)



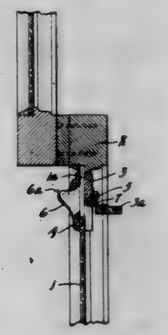
1. A camera body comprising a member provided with sides and end pieces, a second member between said sides and ends, light traps between said second member and said end pieces, and a third member providing light traps between said second member and said sides.

1,558,101. AUTOMATIC CIRCUIT-BREAKING DEVICE. GUSTAV LIEB, Stuttgart, Germany, assignor to Robert Bosch Aktien-Gesellschaft, Stuttgart, Germany. Filed Jan. 8, 1923. Serial No. 611,529. 8 Claims. (Cl. 123—146.5.)



1. In an automatic circuit breaking device for internal combustion engines, the combiantion, with an ignition circuit, a battery forming the source of current for it, and a thermostat, of a contact arranged in the said ignition circuit and depending on the movement of the said thermostat, an auxiliary circuit having the heating coil of said thermostat inserted into it, and a circuit closing device arranged in said auxiliary circuit and adapted to be actuated by the current flowing through the ignition circuit, as set forth.

1,558,102. FLY-EXIT DEVICE. ELIZABETH LYNCH, Minneapolis, Minn. Filed July 3, 1924. Serial No. 724,080. 2 Claims. (Cl. 156—37.)



1. In combination with a window and the pane thereof, a device permitting the exit of a fly or other insect comprising a casing adapted to be secured adjacent the top of said window, said casing having a portion at the outside and inside of said pane, said outer portion having a chamber with a screen wall therein, which wall has an outwardly extending opening therethrough adapted to permit the exit but not the entrance of a fly or other insect, said pane having an opening therethrough communicating with said chamber and a hinged door on the portion of said casing at the interior side of said pane adapted to close the opening therethrough.

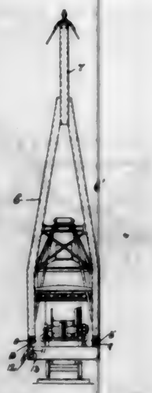
1,558,103. STOCKING. WALTER J. MCCLELLAND, East Orange, N. J. Filed Apr. 20, 1925. Serial No. 24,536. 1 Claim. (Cl. 2—239.)

A method for making stockings, which consists in knitting the leg portion of the stocking from uncolored yarn, dyeing the leg portion, knitting the top portion from ingrained yarn, and securing the top portion to the previously dyed leg portion.

1,558,104. PROCESS OF TREATING TEXTILE FIBERS AND IN THE PRODUCT RESULTING THEREFROM. JOSEPH CURRY MCDOWELL, Manchester, N. H. Filed May 8, 1922. Serial No. 559,464. 17 Claims. (Cl. 8—2.)

8. That step in the process of bleaching piece goods containing yarns dyed with vat colors which consists in boiling the goods in a medium containing sodium silicate and sodium carbonate.

1,558,105. CABLEWAY-SKIDDING MACHINE. JOHN R. MCGIFFERT, Duluth, Minn., assignor to Clyde Iron Works, Duluth, Minn., a Corporation of Maine. Filed Oct. 19, 1921. Serial No. 508,897. 2 Claims. (Cl. 189—16.)

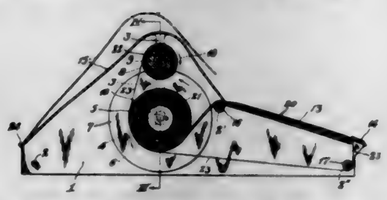


1. In a machine of the character described, the combination of a platform, a spar having spaced legs pivotally mounted in aligned brackets horizontally arranged on said platform, one of said brackets being pivotally mounted on said platform on an axis at right angles to the pivot of said legs, and the other of said brackets being mounted for vertical adjustment on said platform.

1,558,106. HAIR-CURLING DEVICE. MICHAEL J. MCGOWAN, Chicago, Ill., assignor to Dermatological Laboratories, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed May 19, 1924. Serial No. 714,439. 5 Claims. (Cl. 132—38.)

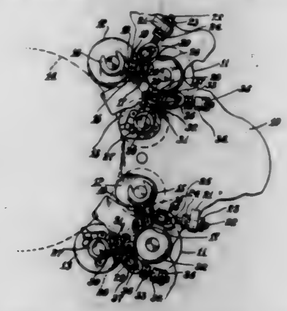
1. A hair curling device comprising a circular band adapted to fit around the head, and a plurality of substantially arcuate ribs of triangular cross section mounted on said band and adapted to extend over the head.

1,558,107. AUTOGRAPH REGISTER. MURDOCK MACDONALD, Cleveland, Ohio. Filed Jan. 5, 1923. Serial No. 610,742. 3 Claims. (Cl. 282—15.)



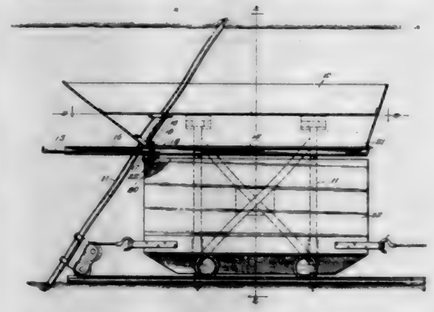
1. In an autographic register, the combination of a frame; a main feed roller mounted upon said frame; two driving wheels co-axial with and fixed to said roller and upon opposite sides thereof, a storage roller; and two pinions co-axial with the latter, fixed thereto upon opposite sides thereof and resting upon the said driving wheels respectively.

1,558,108. INKING MECHANISM FOR PRINTING MACHINES. FRANK C. MARQUARDT, Brooklyn, N. Y., assignor to American Bank Note Company, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 9, 1922. Serial No 535,159. 14 Claims. (Cl. 101—352.)



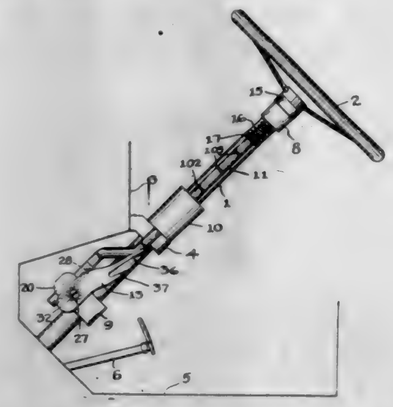
1. An inking mechanism for printing machines embodying therein a carriage adapted to have movement toward and from a form or plate cylinder, a distributing roller mounted therein, an inking roller associated with said distributing roller and adapted to be brought into and out of engagement with the form or plate upon said cylinder as determined by the movement of said carriage, means for imparting movement to said inking roller radially of said distributing roller to secure the proper relation of said rollers to each other, and means for imparting movement to said inking roller circumferentially of said distributing roller, and towards or from said form or plate cylinder to secure the proper relation of said inking roller to the form or plate, independently of said first named means.

1,558,109. RECEIVING AND LOADING HOPPER. HAROLD G. MEAD, Chicago, Ill., assignor to Car Dumper & Equipment Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 6, 1925. Serial No. 13,523. 6 Claims. (Cl. 214—41.)



1. A hopper adapted to receive a continuous supply of material; a car adapted to receive a load of material from the hopper; means for supporting the hopper a sufficient distance above the floor to permit the car to go under the same; means operated by movement of the car to a position under the hopper to open the hopper and discharge a load of material into the car; means operated by movement of the car in leaving a position under the hopper to close said hopper and prevent further discharge of material therefrom; and means whereby the hopper can be carried on the car.

1,558,110. AUTOMOBILE LOCK. JOSEPH MENCHEN, Summit, N. J., assignor to Madge Menchen, New York, N. Y. Filed Oct. 6, 1919. Serial No. 328,736. Renewed Mar. 19, 1925. 25 Claims. (Cl. 116—33.)

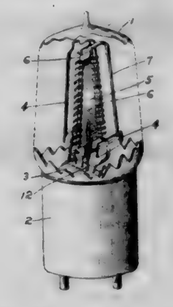


23. In an automobile theft-preventive device, the combination of a hollow operative member for rendering the automobile inoperative constituting a reservoir of compressed air, a holding dog cooperative with said member, a finger connected with the dog, a key-operated cam mem-

ber cooperating with said finger and having an opening for the passage of a key, a displaceable member behind the cam member adapted to be held against movement by the end of an authorized key, a warning signal controlled by said displaceable member, means whereby movement of the cam member in absence of an authorized key displaces the displaceable member, means whereby operation of said warning signal opens an outlet from the reservoir member to operate a second signal, a spring device normally held against operation by the pressure in the reservoir member, and means whereby said spring device actuates the cam member in event of the reservoir member being cut.

---

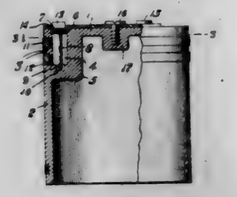
1,558,111. VACUUM TUBE. HERBERT E. METCALF, San Leandro, Calif., assignor to The Magnavox Company, San Francisco, Calif., a Corporation of Arizona. Filed Mar. 23, 1925. Serial No. 17,575. 6 Claims. (Cl. 250—27.)



3. In a vacuum tube the combination of a base support, a control electrode mounted thereon and comprising plate means having the opposite edges thereof serrated and upset to form a filament-receiving opening extending along each of such edges, a filament extending along in such openings, means for supporting a filament in place in the openings, and means secured to the plate means between the said edges and supporting the same in the tube.

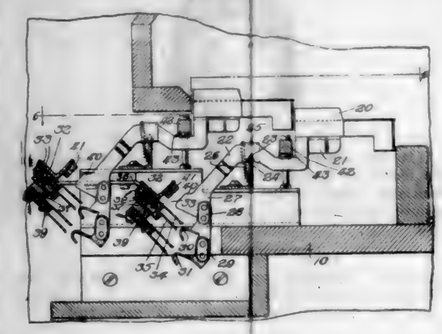
---

1,558,112. PISTON WITH ADJUSTABLE RING. ANDREW J. MILLER, Massillon, Ohio. Filed Apr. 18, 1922. Serial No. 555,085. 3 Claims. (Cl. 74—109.)



1. A piston of the character described provided with ring grooves, split rings located in said grooves, a polygonal spring within each groove engaging the inner face of the ring, eccentrics extending longitudinally through the ring grooves and engaging the inner surface of the polygonal springs for expanding the split rings, a squared head upon each eccentric extended through the top of the piston and a spider detachably mounted upon the top of the piston and having squared holes for engaging with the squared heads upon the eccentrics to hold the eccentrics in adjusted position.

1,558,113. REMOTE CONTROL OF THE PLAYING OF STRINGED INSTRUMENTS. BERTIE E. MILLS, Detroit, Mich., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed June 14, 1922. Serial No. 568,248. 23 Claims. (Cl. 84—326.)



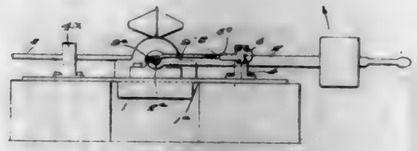
1. In a device for the remote control of the playing of musical instruments, means for sounding the individual notes for each of a plurality of stringed instruments of the viol class, a key-board provided with keys corresponding to the notes of said instruments, means actuated by each of said keys for actuating the corresponding note-sounding means of said instruments, and means for selecting the individual instruments upon which the notes are to be sounded.

---

1,558,114. TELESCOPING HANDLE FOR LIFTING JACKS. JOHN A. MORRISON, Mansfield, Ohio. Filed Feb. 11, 1925. Serial No. 8,440. 3 Claims. (Cl. 74—33.)

1. A folding handle for lifting jacks comprising a tubular member having a cross head at one end, a crank loosely carried by the cross head and arranged to be rigidly connected thereto at right angles to the tubular member, and a shank slidably mounted in the tubular member and arranged to be frictionally held in extended position.

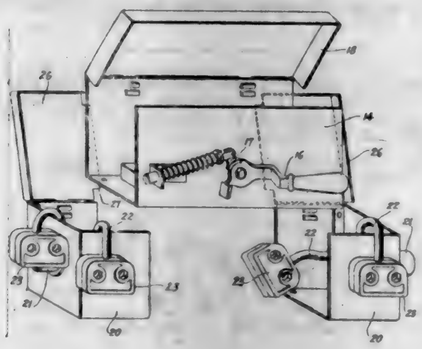
1,558,115. LOCK FOR SWITCH STANDS. CARMINE PALLONE, Girard, Ohio. Filed Nov. 10, 1924. Serial No. 750,898. 7 Claims. (Cl. 70—128.)



5. The combination with a pivoted switch lever and a keeper cooperating therewith provided with a key actuated locking means, of a slidable key retaining member associated with said locking means, and means whereby the movement of the lever operates said key retaining member.

---

1,558,116. ELECTRIC SWITCH. CLARENCE D. PLATT, Bridgeport, Conn. Filed May 13, 1922. Serial No. 560,593. 6 Claims. (Cl. 200—168.)



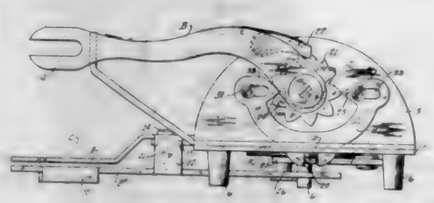
2. In an electric switch, a combination of a main switch and an enclosure therefor, an end member, a stationary conduit connected to said end member, a cover for said end member, a readily detachable connector for the conductor in said conduit, means for detachably securing said main switch enclosure to said end member and a cover for said enclosure serving to hold the cover of the end member in place.

---

1,558,117. COW BLANKET. GUSTAVE C. RASCH, Burlington, Wis., assignor to Burlington Blanket Company, Burlington, Wis., a Corporation of Wisconsin. Filed May 14, 1925. Serial No. 30,220. 3 Claims. (Cl. 54—79.)

3. The combination with a cow blanket provided with a breast strap and a stay, of surcingles secured to said stay at a point forward of the positions of a cow's hips and extending rearwardly and downwardly, and means for supporting a cow's tail from one of said surcingles.

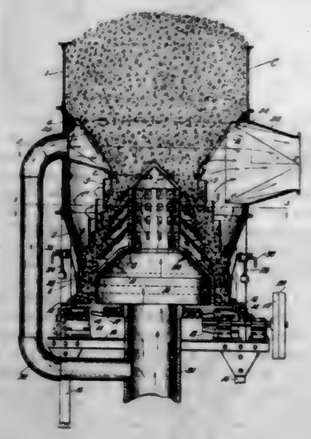
1,558,118. BUTTONHOLE MECHANISM FOR SEWING MACHINES. BERNARD F. SERAFINI, St. Louis, Mo. Filed Aug. 9, 1923. Serial No. 656,602. 17 Claims. (Cl. 112—77.)



1. A means for forming buttonholes, comprising a stitch forming mechanism, a work feeding element, means for causing said element to travel longitudinally in a zig-zag path forwardly and backwardly, and means whereby the needle of the stitch forming mechanism will be caused to penetrate the material at a different period with respect to the transverse movement of the work feeding element during the operation of inserting stitches at the ends of the buttonhole than said needle penetrates the material during the operation of inserting stitches at the sides of the buttonhole.

---

1,558,119. DRYING APPARATUS. DANIEL V. SHERBAN, Canton, Ohio, assignor to The Bonnot Company, Canton, Ohio, a Corporation of Ohio. Filed Nov. 6, 1924. Serial No. 748,099. 7 Claims. (Cl. 34—34.)



1. A drying apparatus including a receiving hopper, spaced ring plates beneath said hopper, a series of conical plates spaced from the ring plates, means for rotating the conical plates and means for passing hot gases between the conical plates and ring plates.

---

1,558,120. RADIO RECEIVING SYSTEM. FREDERICK GRANT SIMPSON, Seattle, Wash. Filed Apr. 3, 1922. Serial No. 549,056. 25 Claims. (Cl. 250—20.)

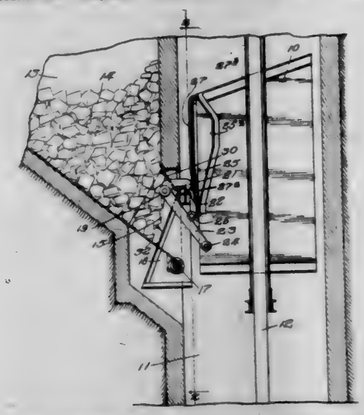
1. The method of converting energy in the form of electromagnetic waves to energy in a form perceptible to the sense organs of the human body, which consists

in part in generating alternating current by the movement of electrons in a magnetic field and in utilizing

said electromagnetic waves to vary the velocity imparted to said electrons by said magnetic field thereby varying the frequency of said alternating current.

---

1,558,121. AUTOMATIC SKIP-LOADING GATE. GEORGE N. SIMPSON, Chicago, Ill. Filed June 25, 1924. Serial No. 722,291. 12 Claims. (Cl. 214—125.)



1. In apparatus of the character set forth; the combination of a skip; a hopper provided with a discharge opening located adjacent to the path of movement of the skip; a gate pivoted at the lower edge of the discharge opening, said gate projecting beyond the front wall of the hopper when in its lowered or open position and adapted to be raised to a position closing said discharge opening; means for locking the gate in its closed position; and means whereby downward movement of the skip across the opening operates first to press the gate back out of contact with the locking mechanism, then unlock the locking mechanism and then permit the gate to swing outwardly and downwardly to open position.

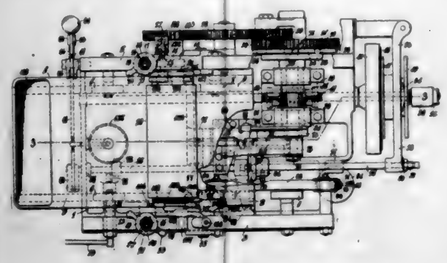
11. A hopper with a discharge opening; a gate pivoted at the lower edge of the discharge opening, said gate projecting beyond the front wall of the hopper when in its lowered or open position and adapted to be raised to a position closing said discharge opening, said gate having a bottom plate and being pivoted on a transverse shaft arranged a short distance from said bottom plate; a chute at the bottom of the discharge opening terminating flush with said shaft; and a filler plate attached to the gate and filling the space between the bottom plate of the gate and said shaft.

---

1,558,122. MOTHPROOF FELT, ETC. BERT A. STAGNER, Long Beach, Calif. Filed Nov. 22, 1923. Serial No. 676,284. 7 Claims. (Cl. 167—6.)

6. As a new product for disinfesting and proofing manufactured hair products against vermin, a solution containing an arsenical compound, soap and an adhesive, said solution being adapted to leave an adhering coating thereof on the fibers of the hair.

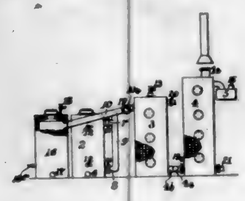
1,558,123. PLATE-PRINTING MACHINE. RUDOLPH SATTLER, Cincinnati, Ohio. Filed Nov. 3, 1923. Serial No. 672,507. 31 Claims. (Cl. 101—158.)



1. In a machine of the character described, in combination with a bed having a printing movement and a return movement, pressing means, and mechanism for causing one of said movements of said bed, a cam element actuated by said mechanism, and an operative connection to said pressing means, engaged by said cam for causing said pressing means to press stock on said bed during part of said printing movement.

---

1,558,124. METHOD AND MEANS FOR THE MANUFACTURE OF ILLUMINATING GAS. LINFORD S. STILES, Brooklyn, N. Y. Filed June 10, 1920. Serial No. 387,888. 12 Claims. (Cl. 48—80.)



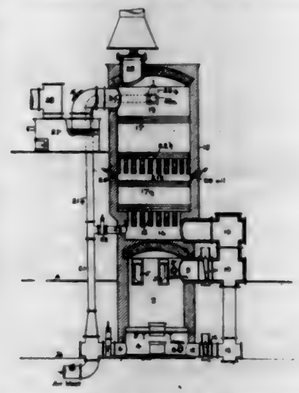
8. In a gas apparatus, a main generator for producing uncarburetted water gas, a carburetter, a superheater, a water seal, and communicating flues whereby the water gas may pass from the generator successively through the carburetter, superheater and water seal, combined with an auxiliary water and oil gas generator provided with steam supply at the bottom and oil supply at the top to produce a rich carburetted water gas, and having a flue for direct delivery of the gas into the carburetter where it is thoroughly commingled with the water gas from the main generator prior to fixation.

---

1,558,125. WATER-GAS APPARATUS. LINFORD S. STILES, Brooklyn, N. Y. Filed Aug. 18, 1921. Serial No. 493,246. 1 Claim. (Cl. 48—80.)

A water gas apparatus, comprising a generator for generating water gas, an upright combined carbureter and fixer, a combustion chamber in the lower part of the combined carbureter and fixer in communication with the generator, a superheating chamber in the upper part of the combined carbureter and fixer, said superheating chamber having a valve controlled escape flue for waste products of combustion and a separate outlet for the water gas, blast pipes with separate means of control opening separately into the combustion chamber and the superheating chamber for supplying air for primary and final combustion within the chambers during the heating up process, said carbureter and fixer being provided intermediate of its upper and lower chambers with checker brick work and an oil vaporizing chamber

intermediate of the upper and lower portions of said checker brick work, means for supplying oil to the oil vaporizing chamber, and a wash box in communication



with the water gas outlet from the upper superheating chamber for permitting the passage of the gases to be collected.

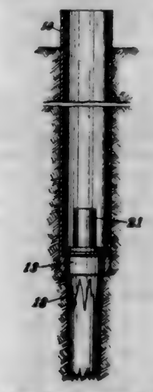
---

1,558,126. WIRE SPOKE. EDWARD W. STOLER, Mansfield, Ohio. Filed Dec. 4, 1924. Serial No. 753,898. 5 Claims. (Cl. 301—104.)

1. A wire spoke having enlarged straight end portions of predetermined diameters, one of which is threaded and the other headed, said spoke having a portion adjacent the headed end portion which is of materially less diameter than such end portion to provide a point of least resistance, that portion of the spoke adjacent the threaded end portion, being gradually tapered toward the center of the spoke; thence continuing from the center without increasing its diameter from said center to the enlarged headed and straight end portion.

---

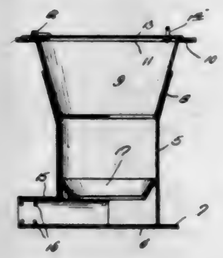
1,558,127. SETTING COMPOSITE PILES. MAXWELL M. UPSON, Englewood, N. J. Filed May 31, 1923. Serial No. 642,643. 8 Claims. (Cl. 61—53.)



1. An apparatus for the purpose described, comprising a driving pipe having an internal shoulder near its lower end, a boot closing the lower end of the pipe to exclude water, and a removable follower in the pipe, fitting the boot to support the same and prevent rupture thereof while the pipe is being driven into the ground, and having a shoulder cooperating with the shoulder on the pipe to limit the downward movement of the follower relative to the pipe.

---

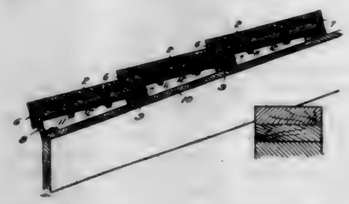
1,558,128. DUMP RECEPTACLE FOR DRILL CUTTING. PATRICK WALSH, Bartlesville, Okla. Filed Mar. 18, 1924. Serial No. 700,185. 1 Claim. (Cl. 220—1.)



A dump receptacle for drill cuttings comprising a hopper having a flared upper end and formed with an outlet spout, the bottom of the spout and the hopper being coextensive, said hopper including a lower section embodying an upper flared portion and a lower cylindrical portion, a flared section fitting within the flared upper portion of the lower section, a closure for the upper end of the flared section, and a tapered baffle ring fixed within the lower portion of the hopper above the plane of the outlet spout for preventing splashing of the cuttings deposited into the receptacle.

---

1,558,129. CONCRETE TILE. JOHN WRIGHT WARREN, Elizabethtop, Tenn. Filed June 11, 1923. Serial No. 644,662. 5 Claims. (Cl. 108—10.)



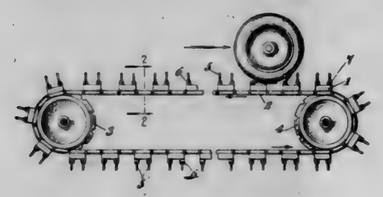
1. A tile including transverse downwardly extending cleat engaging end ribs and spaced downwardly extending transverse intermediate ribs, said latter ribs constructed and arranged to form cleat engaging ribs when the tile is transversely divided intermediate its ends.

---

1,558,130. VEHICLE LANDING APPARATUS. PLINY K. WESTCOTT, Brooklyn, N. Y., assignor to Mary A. Kenney, Brooklyn, N. Y. Filed Aug. 8, 1923. Serial No. 656,313. 5 Claims. (Cl. 244—2.)

1. A vehicle landing apparatus comprising a runway having stop members mounted above the same in position to engage and retard the motion of a vehicle passing thereover, supporting means for such members permitting the same to move to non-retarding position when engaged by a vehicle, and means yieldingly urging said members towards their vehicle retarding position whereby the vehicle moves the members to non-retarding position against the resistance of said last-mentioned means.

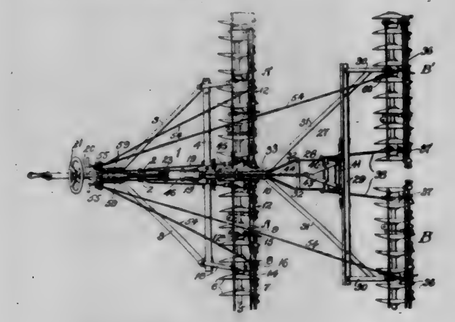
4. A vehicle landing apparatus comprising a continuously traveling web having transverse slats thereon and stop members movably mounted above said slats in



position to retard the motion of the vehicle passing thereover, and means yieldingly urging said stop members toward their vehicle retarding position.

---

1,558,131. DISK-HARROW MECHANISM. CHARLES H. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 7, 1919, Serial No. 309,008. Renewed Nov. 17, 1924. 19 Claims. (Cl. 55—83.)

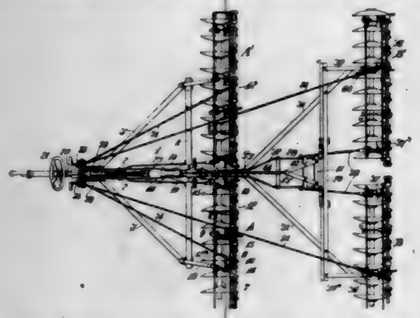


1. The combination of a front frame, the disk gangs connected thereto, the rear laterally swinging frame flexibly connected to the front frame, the rear gangs connected to the rear frame and adjustably movable relatively thereto, the adjusting device for the rear gangs having a rear element supported on and movable longitudinally of the rear frame, and a front element supported on the front frame and held on lines approximately fixed relatively to said frame, and adapted to exert draft on the rear element and on the rear gangs, the aforesaid front and rear elements being arranged to permanently have fixed operative connection with both rear gangs and to maintain substantially unchanged the adjusted cutting angle of the rear gangs during their lateral swinging and uniformly actuate them for adjustment in all angular positions of the rear frame.

---

1,558,132. DISK HARROW. CHARLES H. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Original application filed July 7, 1919, Serial No. 309,008. Divided and this application filed May 27, 1925. Serial No. 33,097. 5 Claims. (Cl. 97—224.)

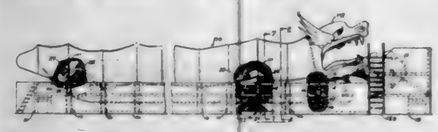
1. The combination of a front disk gang, a disk gang in rear thereof, each of said gangs being movable relatively to the lines of draft independently of the other and comprising a gang frame, a set of disks, a set of disk scrapers and a device for moving the said scrapers, a frame connected to both of said gangs, a manually operated device on the frame and a power transmitting device extending from the said manually operated device



to both of said scrapers holding devices and adapted to transmit thereto similar movements irrespective of the relative positions of the gangs.

---

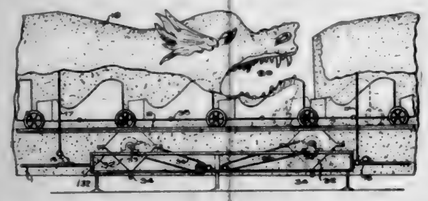
1,558,133. AMUSEMENT DEVICE. JAMES WHITELEY, North Tonawanda, N. Y., assignor to Maynes Corporation, Dover, Del., a Corporation of Delaware. Filed Feb. 21, 1924. Serial No. 694,369. Renewed June 10, 1925. 27 Claims. (Cl. 104—82.)



1. An amusement apparatus comprising an endless passenger conveying mechanism designed to traverse a substantially straight path, a tunnel structure mounted over said mechanism and connected thereto for movement, and means to operate said conveying mechanism.

---

1,558,134. AMUSEMENT DEVICE. JAMES WHITELEY, North Tonawanda, N. Y., assignor to Maynes Corporation, Dover, Del., a Corporation of Delaware. Filed Mar. 6, 1925. Serial No. 13,649. 10 Claims. (Cl. 104—53.)



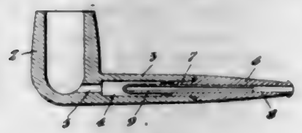
1. An amusement apparatus comprising a track, a plurality of passenger conveying cars adapted to run thereon, means for undulating the track whereby a rocking motion is imparted to the cars and means for imparting a side to side motion in horizontal plane to the track with a corresponding motion to the cars as they pass thereover.

---

1,558,135. TOBACCO PIPE. JASPER WHITING, Boston, Mass. Filed Nov. 3, 1924. Serial No. 747,419. 5 Claims. (Cl. 131—12.)

5. A pipe having a stem with a mouth piece at the end of said stem, said stem and mouth piece having holes

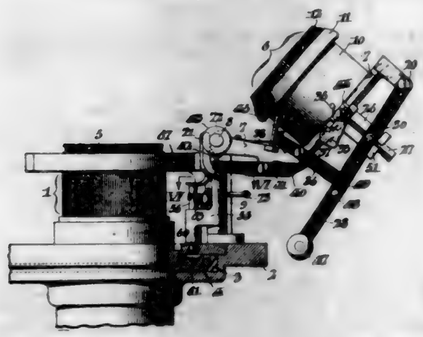
therethrough for the passage of smoke, and a split pin adjustable longitudinally in one of said holes, the legs



of said pin tending to spring apart whereby the pin is frictionally held in its adjusted position by its contact with the walls of the hole.

---

1,558,136. TRANSFER MECHANISM FOR KNITTING MACHINES. LOUIS N. D. WILLIAMS, Ogonts, Pa. Filed July 12, 1923. Serial No. 651,048. 16 Claims. (Cl. 66—32.)



1. The combination in a knitting machine having a complement of needles, of a movable carrier for positioning a transfer device in co-operative relation to the needles; and means operating incidentally to the actuation of the carrier for effecting slight rotative progression of the needles to ensure accurate alignment and registry of said needles with the quills of the transfer device.

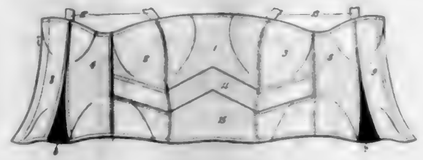
---

1,558,137. MATERIAL FOR DECOLORIZING LIQUIDS AND PROCESS OF MAKING THE SAME. PHILIP L. WOOSTER, Manhasset, N. Y.; Lillian D. Wooster administratrix of said Philip L. Wooster, deceased. Filed Nov. 19, 1919. Serial No. 339,169. 10 Claims. (Cl. 252—3.)

1. The process of making a decolorizing agent for liquids which consists in removing the carbon from bone char by heating and subjecting the resulting product to vapor arising from the incomplete combustion of a hydrocarbon carried on in a separate vessel.

8. The decolorizing agent for liquids comprising the inorganic structure of bone from which the organic matter has been removed, said structure being impregnated with carbonaceous matter of the character carried by the vapors resulting from the incomplete combustion of a hydrocarbon and with substantially no other carbonaceous matter.

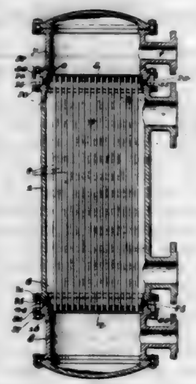
1,558,138. BRASSIÈRE. GABRIELLE M. P. YERKES, Brooklyn, N. Y. Filed Dec. 21, 1923. Serial No. 682,025. 2 Claims. (Cl. 2—42.)



1. A brassière composed of non-elastic middle and side front members, non-elastic side and middle back members, and elastic gores secured between the side and middle back members, the middle front member being provided with a flexible non-elastic diaphragm support free from stays extending across the lower portion thereof.

---

1,558,139. HEAT-EXCHANGE APPARATUS. HANS J. ZIMMERMANN, Philadelphia, Pa., assignor to Schutte and Koerting Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 5, 1922. Serial No. 565,925. 2 Claims. (Cl. 257—224.)



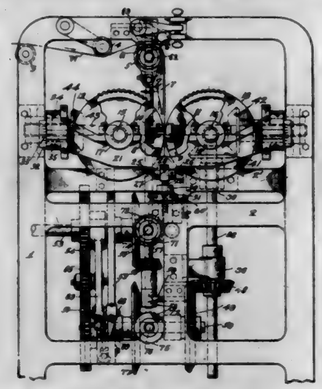
2. A heat exchange apparatus comprising in combination a casing, covers secured to the opposite ends of said casing, end plates situated intermediate the said covers and the said casing, the said plates each being provided with holes extending therethrough, a plurality of pipes, the opposite ends of which extend into said holes, a ring surrounding the outer edge of one of the said end plates, which plate is movable longitudinally of the said casing and with respect to the said ring which ring is situated between an adjacent end of the casing and the inner end of one of the said covers, the inner edges of the said casing and cover upon opposite sides of the said ring being beveled outwardly and packing rings situated in the spaces formed by such outward beveling, substantially as described.

---

1,558,140. WEB-CUTTING MECHANISM. ADOLPH M. ZUCKERMAN, New York, N. Y., assignor, by mesne assignments, to R. Hoe and Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 19, 1923. Serial No. 633,105. 10 Claims. (Cl. 164—67.)

1. The combination of web forwarding mechanism, means for varying the speed thereof to feed more or less

web, cutting mechanism for cutting sheets from the web, a support therefor, and means for adjusting the cutting



mechanism support while the machine is running to vary the length of the cutting action for cutting different length sheets.

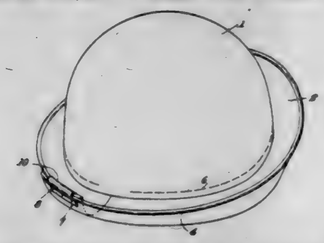
---

1,558,141. SPRING SUPPORT. GEORGE H. BEAUMONT and JOHN C. MONTEITH, Cleveland, Ohio. Filed Oct. 27, 1921. Serial No. 510,765. 1 Claim. (Cl. 267—54.)

The combination with an axle having ribbed portions and upwardly and outwardly extending end portions, of a spring arranged above said axle, oppositely disposed brackets connected near their inner ends to the top portion of the axle, each bracket having an inwardly extending portion which contacts with the top face of the axle, an upwardly and outwardly extending portion which contacts with the inner face of the upwardly extending portion of the axle and an inwardly and upwardly extending portion, and shackles for connecting the ends of the springs to the ends of said upwardly and inwardly extending portions of the brackets, the outwardly and upwardly extending portions of the brackets being grooved upon their faces contiguous to the axle and adapted to receive the ribbed portions of said axles and hold said brackets against lateral displacement, bolts for securing the inwardly extending portions to the axle, said inwardly extending portions being so shaped as to bind against said bolts and bear at their inner ends upon the top of axle as set forth.

---

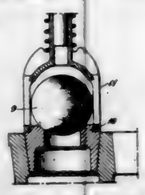
1,558,142. ADJUSTABLE HEAD-SIZE HAT. MOE BRENNER, Far Rockaway, N. Y. Filed Oct. 6, 1924. Serial No. 741,797. 1 Claim. (Cl. 2—197.)



An adjustable head size hat frame comprising a suitably formed strip arranged to overlap at its ends, and a clip folded around the outer edges of the overlapping ends and effecting sufficient frictional engagement between said ends to retain them in adjusted position, the inner face of one side of the clip being relatively smooth and the inner face of the other side of the clip having projections to engage the corresponding strip end and prevent movement thereof relative to the clip during adjustment to the side of the frame.

---

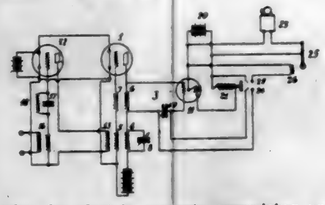
1,558,143. BALL VALVE AND METHOD OF PRODUCING SAME. STEWART R. BROWNE, Brooklyn, N. Y. Filed Aug. 24, 1922. Serial No. 583,988. 7 Claims. (Cl. 251—158.)



6. A ball valve for pumps and similar apparatus formed from a block of fibrous material, said material being produced by inseparably uniting a plurality of layers of fibrous material impregnated with an adhesive substance and subjected to pressure and heat.

---

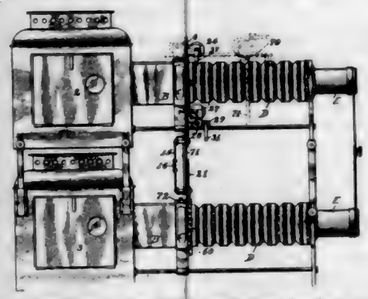
1,558,144. ELECTRIC RELAY. HENRI CHIREIX, Paris, France. Filed Aug. 29, 1921. Serial No. 496,668. 16 Claims. (Cl. 250—8.)



1. A relay for electric currents comprising an oscillation generator having two oscillating circuits connected thereto tuned to different frequencies, means associated with said generator for causing it to oscillate at either of said frequencies separately and a vacuum tube subjected to said currents having a circuit associated with one of said oscillating circuits.

---

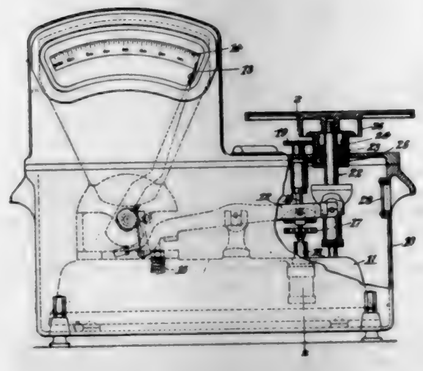
1,558,145. FILM ATTACHMENT FOR STEREOPTICON PROJECTING MACHINES. WILLIAM J. CITRON, San Francisco, Calif., assignor of one-half to Louis R. Greenfield, San Francisco, Calif. Filed Oct. 31, 1923. Serial No. 671,888. 12 Claims. (Cl. 88—26.)



1. An attachment for light projectors having a slide carrier, comprising means hingedly mounted in front of the slide carrier to receive and support a flexible film in position across the aperture therein, and means for operating said film, said operating means, film and support being adapted to be swung away from the slide carrier to permit the latter to be used in the ordinary way.

---

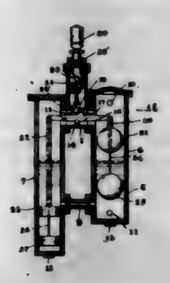
1,558,146. SCALE. ROBERT CRAIG, Dayton, Ohio, assignor, by mesne assignments, to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed June 13, 1921. Serial No. 476,995. 5 Claims. (Cl. 265—47.)



1. A weighing scale having movable parts and a housing completely enclosing the movable working parts of the scale and preventing the access of foreign substances thereto, a dash pot connected to a moving part of the scale, and means for adjusting devices which control the action of the dash pot from without the housing.

---

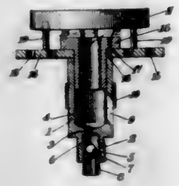
1,558,147. FLOAT ALARM. CHARLES J. DAVIDSON, Milwaukee, Wis. Filed July 14, 1922. Serial No. 574,983. 4 Claims. (Cl. 137—102.)



1. A float alarm, comprising a fluid chamber formed of two parts and having a normal liquid level, levers fulcrumed in said chamber, a substantially solid float connected to one of the levers and positioned in one of the chamber parts below the liquid level, a substantially solid float connected to the other lever and positioned above the liquid level in the same chamber, counterweight floats connected to the opposite ends of the respective levers and positioned below the liquid level in the other chamber part, and an alarm means engaging medial portions of both levers and actuated by the movement of either lever when the liquid level rises above or drops below the said level.

---

1,558,148. OIL BURNER. MYLAN DEMYANOVICH, New York, N. Y., assignor of one-half to Giovacchino Pieri, New York, N. Y. Filed July 28, 1924. Serial No. 728,557. 2 Claims. (Cl. 158—113.)



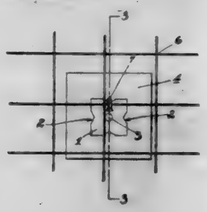
1. An oil burner unit comprising a hollow body member having a mixing chamber therein with air and gasified fuel inlets leading to said mixing chamber, a float valve associated with said gasified fuel inlet, an enlarged deflector head spaced from said body member to provide a laterally directed outlet passageway communicating with said mixing chamber, a plurality of baffle members being located in said outlet passageway to split up the jet of fuel into fan-shaped component parts and a draft washer underlying said passageway having openings communicating between its opposite side faces to supply supplementary air to the sheet of flame which issues between the deflector head and the draft washer.

---

1,558,149. VARIABLE-SPEED SHIFT MECHANISM. GEORGE P. DORRIS, St. Louis, Mo. Filed Nov. 9, 1923. Serial No. 673,643. 10 Claims. (Cl. 74—89.)

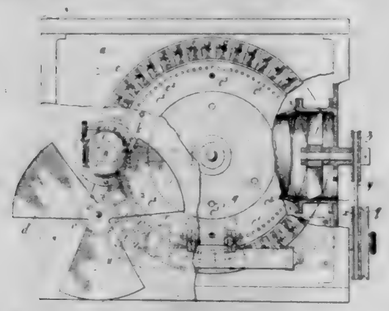
1. The combination with a longitudinally movable gear shifting rod, of a sliding rod supported at an angle with respect to said shifting rod and spaced therefrom, a lever movable into and out of operative connection with said sliding rod, a pivoted lever engaging said shifting rod, and a link having one end pivoted directly to said lever and the opposite end pivoted directly to said sliding rod beyond the point at which said first named lever engages said sliding rod.

1,558,150. FURRING NAIL. MICHAEL EBINGER, Oakland, Calif. Filed June 16, 1923. Serial No. 645,933. 3 Claims. (Cl. 72—118.)



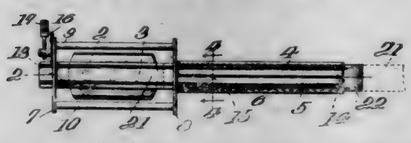
2. A furring nail comprising an angular shaped head, said head having notches in the sides thereof adapted to receive a nail, a plate back of said head and a nail adapted to extend through the head and the plate and into a wall.

1,558,151. APPARATUS FOR THE EXHIBITION OF PICTURES, ANNOUNCEMENTS, AND THE LIKE. JOHN EVANS, Eltham, England. Filed Apr. 18, 1922. Serial No. 555,283. 5 Claims. (Cl. 88—18.8.)



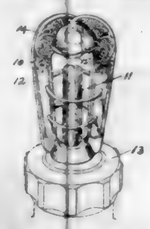
1. In exhibition apparatus, a rotatable disc having thereon pictures to be displayed and provided with a plurality of perforations, a pin movable transversely to said disc and engageable in the perforations therein, a slide in which said pin is movable, a cam having a groove in which said pin is engaged and which controls the transverse movement of said pin relative to said disc, means yieldably maintaining said pin in engagement with said groove, and means coacting with said pin and the sides of said groove for actuating said slide whereby said disc is progressively rotated.

1,558,152. RAZOR-BLADE STROPPER. BENJAMIN O. FANSLOW, New York, N. Y. Filed July 30, 1923. Serial No. 654,663. 10 Claims. (Cl. 51—153.)



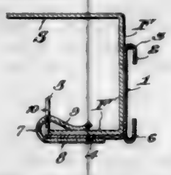
1. A device for stropping razor blades comprising a pair of bars, one of said bars slidable within the other, said bars adapted in one position to grip a razor blade between them and in another position to release the same, the outer bar forming a handle grip, a guard support carried by said bars, a guard carried by said support and arranged parallel to and spaced from said bars, said support being constructed and arranged to oscillate relatively to said bars and to present said guard a limited distance to opposite sides of the edge of the blade to protect the same when presented to the strop either side up.

1,558,153. TEMPERATURE-INDICATING MEANS. KARL A. FERKEL, Los Angeles, Calif. Filed Jan. 4, 1924. Serial No. 684,308. 6 Claims. (Cl. 116—114.)



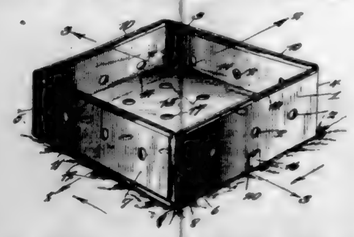
2. In a device of the character referred to, in combination, a container having a transparent window, an element therein visible through said window, and a substance which is normally opaque placed in said container to cover said element, said substance having the property of becoming transparent under heat, whereby to expose said element to view.

1,558,154. TICKET HOLDER FOR SHELVING. JASON A. FITCH, Youngstown, Ohio, assignor to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed May 20, 1924. Serial No. 714,612. 6 Claims. (Cl. 40—16.)



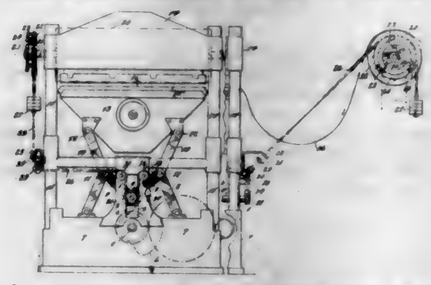
1. A ticket holder adapted for use on metal shelving having a retreating flange, comprising an angular body having an upright and horizontally extending portions, and a spring clip adapted to be applied to the latter portion and the retreating flange of the shelving thereby to sustain the holder in position.

1,558,155. BERRY BOX OR CONTAINER. PETER FLANSBURG, Manistee, Mich. Filed June 30, 1924. Serial No. 723,266. 3 Claims. (Cl. 229—16.)



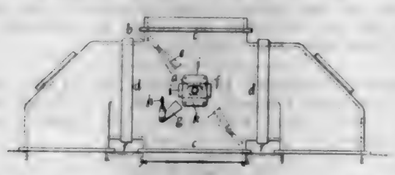
3. As an article of manufacture, a container constructed from a blank to form the sides of the container, U-shaped metal strips straddling the upper edges of the sides, a raised bottom with flaps, of which one is connected to one side of the container, the bottom being fitted between all sides of the container with the edges of the flaps substantially flush with certain edges of the sides, and S-shaped clips passing through the sides, downwardly between the inner faces of the sides and the flaps, over and around the edges of the flaps and upwardly against the inner faces of the flaps, thereby supporting the bottom, the portions which engage around the edges of the flaps acting to protect the edges and avoid wear thereon.

1,558,156. FABRIC-DELIVERING MECHANISM FOR EMBOSSING PRESSES. STUART M. FORD, Bridgeport, Conn., assignor to Durotex Corporation, Newark, N. J., a Corporation of New Jersey. Filed May 2, 1918. Serial No. 232,189. 3 Claims. (Cl. 101—3.)



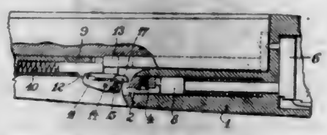
1. An embossing press having a fabric-delivering mechanism comprising a roll fast on a shaft, a ratchet wheel also fast on said shaft, a sprocket wheel loosely mounted on said shaft, ratchet feed dogs carried by said sprocket wheel, a freely suspended chain passing over said sprocket wheel, and means for moving said chain connected to the press bed for feeding the roll forward as the bed is lowered.

1,558,157. VALVE. ALFRED LINDSAY FORSTER, Smethwick, England, assignor of one-half to Chance Brothers and Co. Limited, Smethwick, England. Filed Jan. 6, 1925. Serial No. 935. 4 Claims. (Cl. 251—11.)



1. The combination comprising a valve case, a valve seat within the case, a flap valve pivotally movable within the case, a central spindle carrying the valve, slots in the case through which the ends of the spindle pass, and cover plates on the spindle adjacent to the said slots, substantially as described.

1,558,158. SPORTING GUN. RUDOLF V. FROMMER, Budapest, Hungary. Filed Aug. 29, 1921. Serial No. 496,377. 4 Claims. (Cl. 42—47.)



1. In a sporting gun of the pivoted barrel type, a shell extractor, means for forcing the extractor rearwardly of the barrel each time the barrel is swung about its pivot to open the rear end of the barrel, a unitary automatic ejector mechanism detachably associated with the barrel and adapted to forcibly move the extractor rearwardly when the barrel is swung about its pivot in one direction, and hand actuated means for locking the ejector mechanism in position, said hand actuated means permitting the operator to instantaneously attach or detach the ejector mechanism to or from the gun.

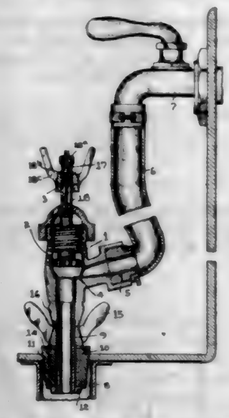
1,558,159. TEE FOR GOLF BALLS. THOMAS CAMPBELL FOTHERS and CHARLES JEFFREYS FORRESTER, Manchester, England. Filed July 24, 1925. Serial No. 45,938. 2 Claims. (Cl. 273—33.)

1. A tee for golf balls comprising a tapered stem having a plurality of flutes therealong and a top of saucer shape central with the stem, as set forth.

1,558,160. GUM-MASSAGE PREPARATION. CLYDE M. GEARHART, Washington, D. C. Filed Apr. 4, 1925. Serial No. 20,863. 6 Claims. (Cl. 167—9.)

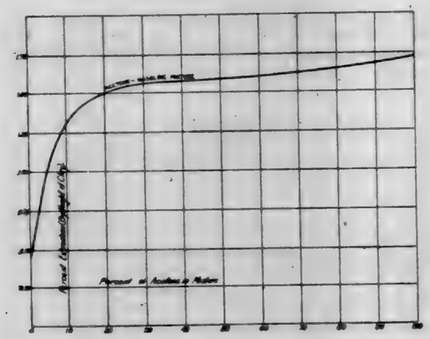
1. A gum massage cream or paste preparation, containing sulfur and an astringent.

1,558,161. WASTE AND DRAIN PIPE CLEANER. HERBERT GUNDERSON, Stanley, Wis. Filed Oct. 17, 1924. Serial No. 744,297. 1 Claim. (Cl. 4—256.)



A waste and drain pipe cleaner comprising a casing provided with a plug member for insertion in the mouths of waste pipes and the like, said casing having a water inlet leg operatively connected to a hydrant spigot for the admission of water under pressure, said casing having a valve seat on a level with the bottom of a passage through the inlet leg, control means comprising a valve cooperative with the seat for trapping a column of water between the obstruction in said waste pipe and the control valve, said valve having a hollow stem with operative threaded connections in the casing to hold the valve against its seat, the stem of the valve having a vertical passage for air under pressure, said valve stem having means at its upper end adapted for the operative connection of a tube from a pneumatic pump for forcing air under pressure through the casing at a point below the valve seat while the valve is closed, causing the removal of the obstruction and the trapped column of water, and a check valve mounted in the stem of the first valve to admit air under pressure and to prevent the back-flow of the trapped column of water.

1,558,162. REVIVIFYING FULLER'S EARTH. FRANK W. HALL, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Original application filed Apr. 20, 1921, Serial No. 462,986. Divided and this application filed Jan. 8, 1925. Serial No. 1,312. 3 Claims. (Cl. 252—2.)



1. The process of treating decolorizing clay which has been used in refining hydrocarbon oil which comprises removing occluded coloring matter by treating with a solvent comprising acetone and gasolene.

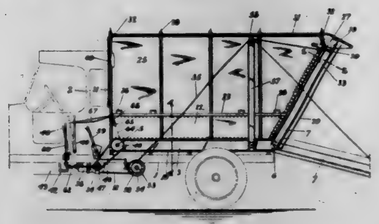
---

1,558,163. REVIVIFYING FULLER'S EARTH. FRANK W. HALL, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Jan. 8, 1925. Serial No. 1,314. 2 Claims. (Cl. 252—2.)

1. The process of treating decolorizing clays which have been used in refining hydrocarbon oil which comprises washing the clay with a solvent comprising acetone and benzol.

---

1,558,164. SELF-LOADING BURGLARPROOF TRUCK. EDWIN HORACE HANEY, San Francisco, Calif. Filed May 3, 1924. Serial No. 710,916. 5 Claims. (Cl. 214—65.)

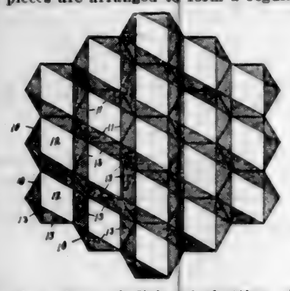


1. A self-loading truck structure including an endless horizontal member forming a load supporting surface, an apron pivoted adjacent the rear end thereof, means for raising and lowering the apron means for driving the supporting surface, and means whereby the surface cannot be driven while the apron is being moved, and vice versa.

---

1,558,165. PUZZLE. GEORGE HENRY HASWELL, New York, N. Y. Filed July 8, 1924. Serial No. 724,756. Renewed Sept. 11, 1925. 2 Claims. (Cl. 273—137.)

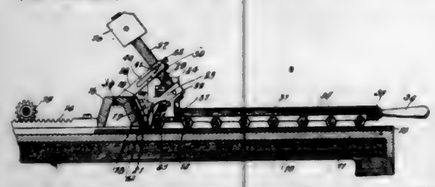
1. A set of hexagonal game pieces each having a set of six primary indicia adjacent to the six sides thereof, said pieces having secondary indicia so that when the game pieces are arranged to form a regular geometri-



cal figure the primary indicia of abutting edges will be paired, and the secondary indicia will have a predetermined relationship to the complete figure.

---

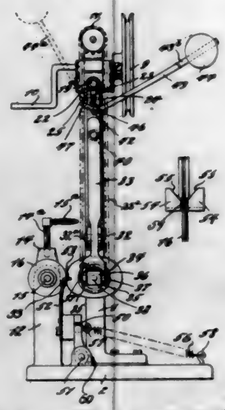
1,558,166. WORKHOLDER FOR SHAVING OR DRESSING MACHINES. HENRY A. HERR. Chicago, Ill. Filed Mar. 2, 1923. Serial No. 622,292. 13 Claims. (Cl. 90—27.)



1. In combination, a work supporting bed, a cutter beneath which the work is movable, a pressure frame pivotally mounted at one end, a plurality of rollers extending across the frame for engagement with the work, said frame extending for a considerable distance in advance of the cutter and having a hand hold at the free end whereby pressure may be exerted to force the rollers against the work, and a link pivotally anchored at one end and having a loose connection at its other end with the said frame for limiting the movement of the frame under such pressure.

---

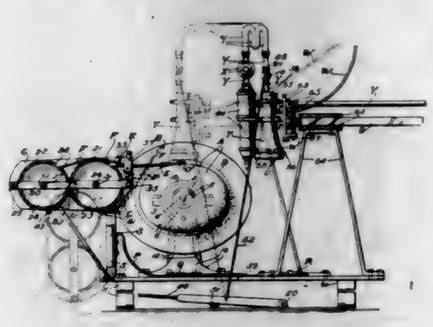
1,558,167. MACHINE FOR GROOVING GLASS. GERARDUS POST HERRICK, New York, N. Y. Filed Dec. 8, 1921. Serial No. 520,828. 18 Claims. (Cl. 51—105.)



2. A machine for cutting a groove in the edge of a lens comprising a cutter, a work-holder, means providing for relative movement between the cutter and the work-holder and work-actuated guide means maintaining the center of the path of the cutter equidistant from the edge corners of the lens, irrespective of variation in thickness thereof.

---

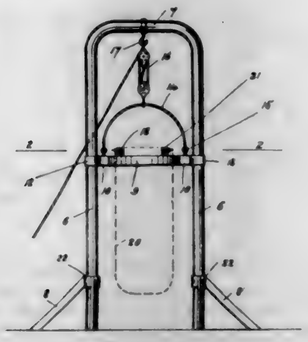
1,558,168. APPARATUS FOR BANDING HATS. ERNEST E. HODGSON, Nutley, N. J. Original application filed July 5, 1923, Serial No. 649,621. Divided and this application filed May 21, 1924. Serial No. 714,856. 27 Claims. (Cl. 223—27.)



1. An apparatus of the class set forth comprising a hat block, means for rotating the block about a horizontal axis, a vertically disposed steam discharge nozzle, means slidably supporting the nozzle to move laterally to and from a position overlying the block, and means adjacent the block for supporting rolled strip of band ribbon and rubber cement.

---

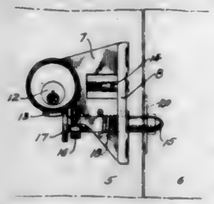
1,558,169. BAG HOLDER. GEORGE C. HUME, Chilton, Wis. Filed June 20, 1923. Serial No. 646,567. 1 Claim. (Cl. 83—26.)



A bag holder, comprising a frame having vertical uprights and a top crosspiece between them, a ring provided with means for supporting a bag and having two radial arms which project laterally from it one at each side at diametrically opposite points and terminate in forks which are slidable on the said uprights, a bail having its ends pivoted to the said arms between the ring and the forks, and a lifting and lowering device suspended pivotally from the crossbar over the center of the said ring and pivotally connected to the bail, said guides, crossbar, radial arms and bail being all arranged in a vertical plane which passes through the center of the said ring.

---

1,558,170. LOCK. NORMAN B. HURD, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Sept. 5, 1924. Serial No. 736,037. 1 Claim. (Cl. 70—46.)



In a lock, a lock frame, a locking bolt mounted for movement thereon, a key operated cylinder lock on said frame, a roll-back on the plug of said cylinder lock and adapted to project said locking bolt into locking position, a spring for moving said locking bolt in an unlocking direction, and means operated by a longitudinal movement of the lock key to hold the bolt in locking position.

---

1,558,171. BOOTBLACK STAND. FRANK INFELISE, Lynn, Mass. Filed Apr. 14, 1924. Serial No. 706,327. 1 Claim. (Cl. 15—265.)

In a device of the kind described the combination with a boot black stand having an opening in the front thereof of a curved extension arm on which is pivotally mounted a foot rest having adjustable and locking means comprising a series of teeth in which teeth engage a locking lever, an anchor arm pivoted at one end to the inside rear wall of the stand, a slot provided in the other end of the anchor arm, a pivot pin secured in one end of said extension arm and slidably in said slot, whereby said two arms are connected together within said stand a locking rod positioned within the interior of the stand, a series of notches in the extension arm adapted to engage said rod and lock said extension arm in position when the same is extended through the opening.

---

1,558,172. METHOD OF RENDERING ROADS DUST FREE. THEODOR JOSEPH AZON JACOMETTI, Amsterdam, Netherlands, assignor to Nederlandsch-Indische Spiritus Maatschappij, Amsterdam, Netherlands. Filed June 2, 1925. Serial No. 34,468. 2 Claims. (Cl. 94—25.)

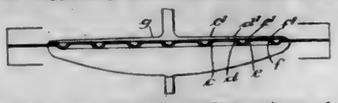
1. A method of rendering roads dust-free, consisting in treating the roads with the residual liquid from the distillation of alcohol, as set forth.

---

1,558,173. MEMBRANE FOR MANOMETERS. PAUL JATOW, Dodendorf, near Magdeburg, Germany, assignor to Schäffer & Budenberg, G. m. b. H., Buckau, near Magdeburg, Germany. Filed Mar. 20, 1925. Serial No. 17,140. 1 Claim. (Cl. 137—157.)

In a measuring instrument, a chamber having a pressure medium inlet, a resilient diaphragm arranged in said chamber and having substantially flat annular sur-

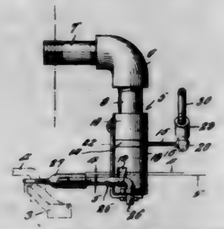
faces alternating with annular corrugations directed toward the inlet side of said chamber, and a substantially flat supporting surface on one wall of said cham-



ber, against which the flat annular surfaces of the diaphgram immediately abut when the normal maximum pressure is exceeded.

---

1,558,174. AUXILIARY AIR VALVE FOR CARBURETORS. DEMARB JEANNIES, Mamou, La. Filed June 26, 1924. Serial No. 722,606. 1 Claim. (Cl. 277—19.)



In combination with the carburetor and intake manifold of an internal combustion engine, an auxiliary air valve comprising an inner stationary cylinder, a median cylinder rotatably mounted on the inner cylinder and an outer cylinder, rotatably mounted on the median cylinder, an annular groove in the periphery of the inner cylinder, radial apertures connecting the interior of said cylinder with the groove, an angularly disposed radial aperture in the periphery of the median cylinder adapted to register with the annular groove, a radial rectangular aperture in the periphery of the outer cylinder adapted to register with said angularly disposed aperture upon rotation of the cylinders, and means whereby the median cylinder and the outer cylinder may be rotated.

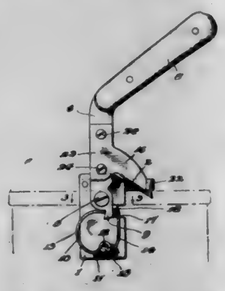
---

1,558,175. MANUFACTURE OF GRAMOPHONE DISK RECORDS. FREDERICK WILLIAM JONES, Jr., Croydon, England, assignor to Columbia Graphophone Company, Limited, London, England. Filed Oct. 15, 1923. Serial No. 668,739. 12 Claims. (Cl. 18—48.8.)

1. A gramophone disk record formed under the influence of pressure from one or more porous disks of a thermoplastic material.

---

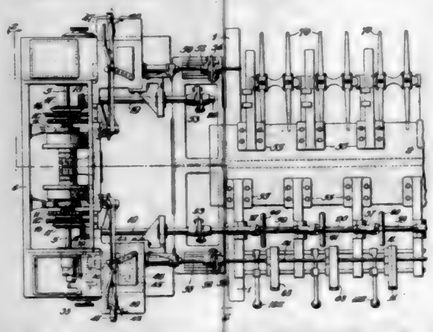
1,558,176. CAN OPENER. JASON JONES, Dover, Okla. Filed Apr. 20, 1925. Serial No. 24,549. 5 Claims. (Cl. 30—3.)



1. A can opener comprising a mounting member adapted to be positioned at the side of a can and extend above the can, means for retaining said mounting member against vertical movement when placed against a can, a handle connected with said mounting member for movement towards and away from the head of the can, a cutting blade carried by said handle for cutting through the head of the can, when the handle is moved downwardly, and means normally holding said handle against downward movement.

---

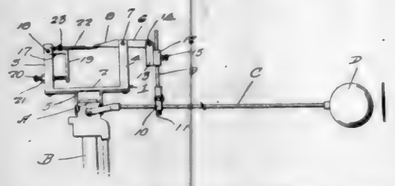
1,558,177. AUTOMATIC WINDING MACHINE. JEAN JOSEPH and DAVID THEODORE BERLIZHEIMER, Philadelphia, Pa., assignors of one-third to Gustavus Josephs, Philadelphia, Pa. Filed Aug. 21, 1924. Serial No. 733,412. 15 Claims. (Cl. 242—36.)



1. In a winding machine, a quill, means including a floating drive to rotate said quill, a carriage, means to reciprocate the carriage, a thread carrier box for said carriage, means to effect step by step advance of said carrier box during carriage reciprocation, a vertically disposed, pivotal thread carrier within said carrie box mounted to move inwadly under the influence of gravity upon thread breakage and multiple quick acting trip mechanism common to said quill operating and carrier box operating means, connected with respect to said thread carrier and operative to stop said quill and carrier box.

---

1,558,178. FLOAT-BALL REGULATOR. JOSEPH A. JUNG, Springfield, Ohio. Filed Feb. 4, 1925. Serial No. 6,744. 5 Claims. (Cl. 137—104.)



1. In an apparatus of the class described, a supporting structure, a spring on the supporting structure, a movable member adapted to be actuated by the float and to trip past the spring.

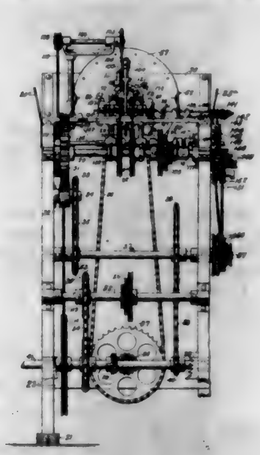
5. An apparatus of the class described including a supporting structure, a regulating lever pivoted on the supporting structure, a spring fixed on the lever, means for adjusting the lever, a trip lever pivotally mounted on the supporting structure so that one end moves to trip past one end of the spring, and means on the trip lever for attaching it to a float.

---

1,558,179. WINDING AND TWISTING MACHINE. CHARLES R. KEEFER, Baltimore, Md. Filed Oct. 6, 1924. Serial No. 742,018. 19 Claims. (Cl. 117—14.)

1. A machine of the character described including parallel bars, means to wind lines around these parallel bars, means to feed the wound lines along the parallel

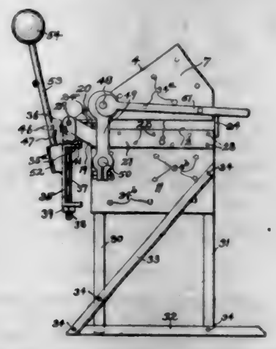
bars, means to cut the lines between the parallel bars, means to carry pairs of strands into positions for receiving sections of said lines between these strands of each pair, means to twist the strands of each pair with



said cut lines therebetween, means to carry the twisted strands forward, and means to adjust the said parallel bars towards and from one another for the purpose specified.

---

1,558,180. BENDING BRAKE. THOMAS J. KELLEHER, Chicago, Ill. Filed Apr. 16, 1924. Serial No. 706,896. 4 Claims. (Cl. 153—16.)

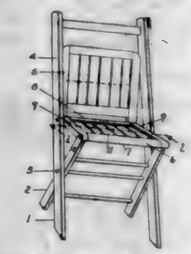


1. In a bending brake, a bed provided with ends integral therewith, bars rigidly secured to said ends and extending forward thereof, and pivots in said extended ends, in combination with a folding leaf comprising U-shaped members mounted on said pivots, bolts non-rotatably extended through the horizontal bar of said U-shaped members respectively, a channel iron mounted on said bolts, and nuts on the lower and screw-threaded ends of said bolts, adapted to determine the position of said channel iron relative to said pivots.

---

1,558,181. CHAIR. WILLIAM E. KIDDER, Kalamazoo, Mich. Filed Mar. 4, 1922. Serial No. 540,993. 2 Claims. (Cl. 155—178.)

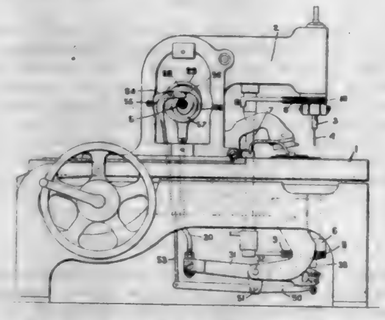
1. A chair seat or back comprising a rectangular frame provided with opposed side members having grooved inner edges and opposed side members having bores in their inner edges, a filling comprising a plurality of slats having their ends loosely engaged in said grooves, and



a resilient supporting rod disposed transversely below said slats with its ends loosely engaged in said bores and yieldingly supporting said slats.

---

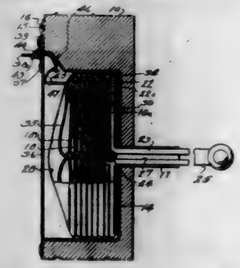
1,558,182. SEWING MACHINE. JOHN KIEWICZ, Boston, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Dec. 17, 1923. Serial No. 681,060. 11 Claims. (Cl. 112—157.)



1. In a sewing machine, the combination with a needle operating from above the work, of two loopers and loop-spreading means situated beneath the work, a movable looper-actuating member beneath the work, means for giving said member a harmonic movement, and cam elements for translating said harmonic movements of the looper-actuating member into an irregular motion of the loopers.

---

1,558,183. VEHICLE SIGNAL. PAUL C. KLINGBEIL, Remsen, Iowa. Filed June 16, 1925. Serial No. 37,434. 5 Claims. (Cl. 116—40.)

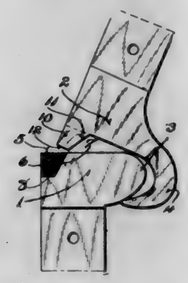


1. In a vehicle signal, a casing, a door hinged to the casing and having at its hinged end an inwardly extending hook, said door being spring-urged toward open position, a lazy tongs structure mounted in the casing, means

for extending the lazy tongs beyond the casing, and a finger on the free end of the lazy tongs adapted to engage said hook when the lazy tongs is retracted into the casing to thereby close the door, said finger when the door is closed being engaged between the hook and the door to maintain the latter against vibration.

---

1,558,184. INTERLOCKED JOINT. JOHN H. KLUENDER, Kenosha, Wis. Filed Oct. 31, 1924. Serial No. 747,012. 2 Claims. (Cl. 287—103.)



2. An interlocking joint comprising a male member having a head provided with a rounded protuberance at one side, a female member having a head provided with a grooved lip projecting from one side and adapted to enclose said rounded protuberance, one member having a pair of spaced lugs on the opposite side from its interlocking engaging element, and the other member having a correspondingly positioned central lug for intermeshed engagement with the spaced lugs of the other member when said joint has been locked in its rocked position, whereby the parts are held against lateral motion.

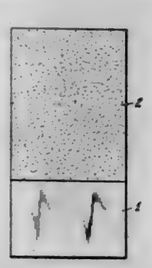
---

1,558,185. MANUFACTURE OF UREA FROM AMMONIUM CARBAMATE. NORMAN W. KRASE, Clarendon, Va., and VERNID LESESSNE GADDY, Dillon, S. C., assignors to Richard C. Tolman, trustee. Filed Mar. 25, 1921. Serial No. 455,496. 2 Claims. (Cl. 260—125.)

1. The process of making urea from a mixture of ammonium carbamate and ammonium carbonate, comprising compressing the mixture, charging the compressed mixture into a heated autoclave and maintaining the heat of the autoclave.

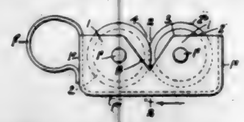
---

1,558,186. COMPOSITE SHINGLE. VINCENT F. LAKE, Demarest, N. J., assignor to Slate Veneer Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1922. Serial No. 608,413. 3 Claims. (Cl. 108—8.)



1. A composite shingle comprising a backing of adhesive binding material and a facing of slate veneer.

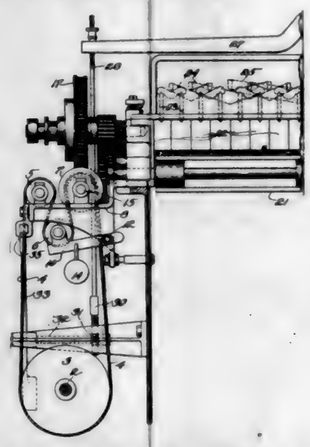
1,558,187. KNIFE SHARPENER. DAVID LAMBERT, Cleveland, Ohio. Filed Nov. 15, 1923. Serial No. 674,895. 12 Claims. (Cl. 76—87.)



12. A sharpener comprising a support, and axially arranged sharpening disks tiltably mounted on said support.

---

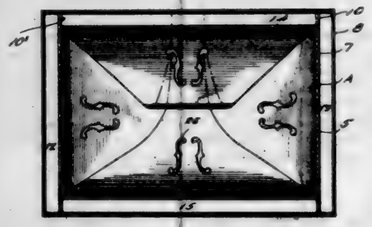
1,558,188. EVENER MECHANISM. FELIX D. LANGEVIN and ROBERT S. CURLEY, Lowell, Mass., assignors to Saco-Lowell Shops, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 25, 1924. Serial No. 694,837. 5 Claims. (Cl. 19—70.)



1. In an evener motion, the combination of a drum, a cone pulley, a belt connecting said drum and pulley and operative to drive one of said parts from the other, means for adjusting said belt longitudinally of said cone pulley, a weighted drum bearing on said belt, and means for supporting said weighted drum for movement to cause it to maintain a substantially constant tension on said belt notwithstanding changes in position of said belt on said pulley.

---

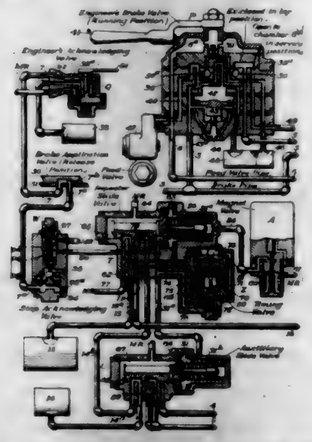
1,558,189. RADIO AND PHONOGRAPHIC AMPLIFYING RESONATOR. WILLIAM C. LARSON and CHARLES P. WEGNER, Two Harbors, Minn. Filed Apr. 26, 1923. Serial No. 634,816. 2 Claims. (Cl. 181—27.)



1. A sound amplifying horn comprising a tone chamber and throat having a continuous sound conduit therethrough and including inner and outer spaced walls, end pieces connecting the walls together at the outer terminals of the throat and tone chamber, certain of the inner walls being extended to engage the inner surface of the outer walls to form independent compartments, said extended portions of the inner walls being provided with openings to establish communication between all of the compartments.

---

1,558,190. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LLOYD V. LEWIS, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1923. Serial No. 666,923. 31 Claims. (Cl. 246—182.)



1. In combination with an automatic fluid pressure braking mechanism for a railway train, manually operable means for applying the brakes, trackway apparatus responsive to traffic conditions in advance, train carried means for cooperating with said trackway apparatus and effective under unsafe conditions in advance to apply the brakes automatically after a time interval the length of which is dependent upon the speed of the train, and means operating only when said manually operable means is shifted to brake applying position for delaying said automatic brake application for a fixed interval of time.

---

1,558,191. EARPIECE. BRUNO LINDEMANN, Hamburg, Germany. Filed Dec. 27, 1924. Serial No. 758,329. 4 Claims. (Cl. 179—182.)

3. In an ear piece, two semi-spherical soft resilient members cemented together around the edge thereof, each member having a centrally positioned opening therein.

---

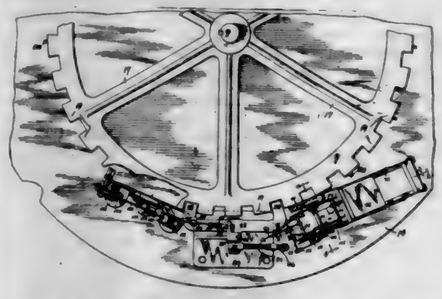
1,558,192. BOOT OR SHOE. ALEXANDER LINDGREN, Manchester, N. H., assignor of one-half to Hovey E. Slayton, Manchester, N. H. Filed Apr. 7, 1923. Serial No. 630,487. 4 Claims. (Cl. 36—71.)

1. A boot or shoe of the kind described, having a foot contacting insole portion free for vertical movement relatively with the rest of the shoe, a metallic member fitted under said freely moving portion, means securing said metallic member adjacent the forepart of the shoe, and

means operating from the outside of said shoe to effect the movement of said metallic member and vary the vertical position of the free insole portion.

---

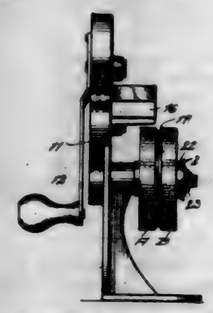
1,558,193. SAFETY DOOR. CHARLES H. LUCKING, Detroit, Mich. Filed Aug. 24, 1923. Serial No. 659,238. 15 Claims. (Cl. 70—50.)



1. In a locking mechanism for a revoluble door, the combination of a latch wheel connected to the door and provided with notches, a latch adapted to be moved to engage in said notches, means to move the latch into and out of engaging position, a plurality of controlling means to cause the latch to be moved into engaging position, and a plurality of devices to cause the latch to be moved out of engaging position.

---

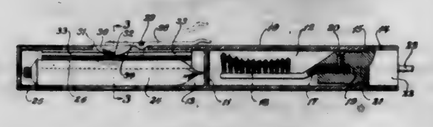
1,558,194. SHARPENING MACHINE. MELCHIOR L. LUEBBEN, St. Louis, Mo., assignor to Luebben Products Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 19, 1923. Serial No. 681,494. 4 Claims. (Cl. 51—116.)



1. An implement sharpening assembly comprising a pair of rotary abrading disks, a face of each disk being inclined in opposite directions from an annular apical point constituting a sharp line concentric with the axis of the disk, said lines of the respective disks registering

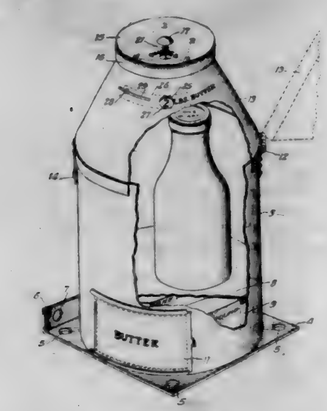
and in contact with each other whereby to form grinding contacts with an edged instrument, in combination with means for holding the disks yieldably in contact and driving them in unison.

1,558,195. DENTIFRICE RECEPTACLE. FRANK H. MCENANEY, Brooklyn, N. Y. Filed Mar. 26, 1924. Serial No. 702,114. 2 Claims. (Cl. 221—60.)



1. An article of the class mentioned including a receptacle open at one end, a dentifrice tube adapted to be inserted in said receptacle, a yieldable presser member overlying the entire length of the tube and coacting with the inside walls of said receptacle and operable means for moving said presser member into pressing engagement with said tube, said means comprising a lever fulcrumed to said receptacle and having a head engaging said presser member.

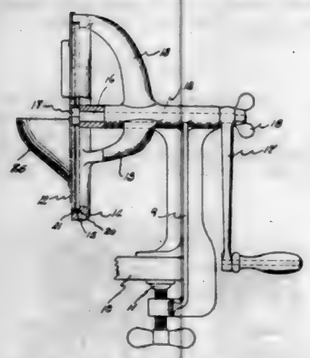
1,558,196. RECEPTACLE FOR MILK AND BUTTER. ERNEST MAGNUSON and MILTON G. SMITH, Freeport, Ill. Filed July 12, 1923. Serial No. 651,030. 1 Claim. (Cl. 220—1.)



A receptacle of the character described, comprising a cylindrical body portion provided with a transverse partition dividing the same into an upper milk bottle compartment and a lower butter compartment, a door through which access may be had to said lower compartment, a truncated cover for said upper compartment hinged at one side thereof, and a cap rotatably mounted on the top of said truncated cover and adapted to be rotatably adjusted to indicate contents of said compartments.

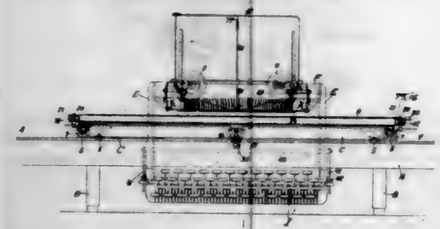
1,558,197. FOOD CUTTER. WILLIAM G. MANSUY, Detroit, Mich. Filed Apr. 16, 1925. Serial No. 23,508. 4 Claims. (Cl. 146—114.)

3. A food cutter of the class described comprising a supporting member; a rim member carried by said supporting member; a rotatable shaft carried by said supporting member extending axially of said rim member, said shaft having the end adjacent said rim member provided with flat faces; a cutting element comprising a disc adapted for mounting loosely on said flat faces, said disc having an opening formed therein of the con-



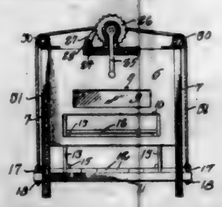
tour of said shaft at said flat faces; and means cooperating with said rim member for retaining said disc in operative relation on said shaft.

1,558,198. APPARATUS FOR BOOKKEEPING. CARL MICHELSEN, Rostock, Germany. Filed Jan. 15, 1924. Serial No. 686,434. 18 Claims. (Cl. 197—126.)



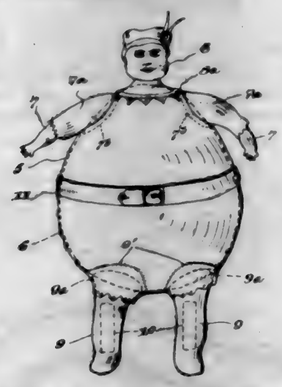
1. A typewriting machine, comprising printed mechanism, a platen adapted to have sheets placed thereon, and means adapted to have a part of said sheets fixed thereto and to be shifted therewith over the surface of the platen.

1,558,199. INCUBATOR. MORGAN T. MORGAN, Anaconda, Mont. Filed Apr. 17, 1922. Serial No. 553,369. 1 Claim. (Cl. 119—35.)



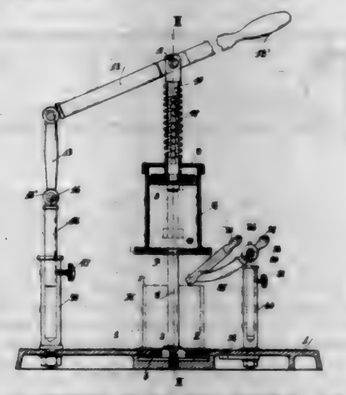
An incubator comprising a main housing including a top, wall, side walls, and a vertical movable bottom wall, supporting legs for the main housing extending below the lower surface thereof and forming a guide for the lower wall, an upstanding frame carried by the lower wall adapted to extend into the main housing, a sliding egg supporting tray associated with the frame, the lower wall being extended beyond the side walls of the housing and the legs and provided with supporting eyes, a transversely extending rotatable drum carried by the top wall and disposed at a point equi-distant from the ends thereof, means for rotating the drum, the guide pulleys carried by the top wall and arranged on each side of the drum, and lifting cables secured to the extended portions of the lower wall and trained about said pulleys and secured to the drum, as and for the purpose specified.

1,558,200. AQUATIC DOLL. ALBERT E. MURPHY, Chicago, Ill. Filed Aug. 17, 1922. Serial No. 582,455. 4 Claims. (Cl. 46—40.)



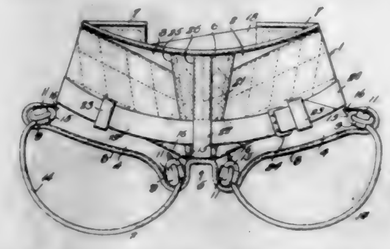
4. An aquatic doll comprising a substantially hollow body portion having leg openings therein and a relatively enlarged opening for the reception of a buoyant member, weighted legs insertible through said enlarged opening and positioned in said leg openings said legs having enlargements at their upper ends, the dimensions of which are greater than the dimensions of said leg openings whereby when said doll is afloat the said enlarged portions will engage the inner walls of said openings.

1,558,201. PRESS OF THE COMPRESSED-AIR TYPE FOR THE CASTING OF PRECIOUS METALS. RENÉ VICTOR NINCK, Nice, France. Filed Feb. 29, 1924. Serial No. 695,947. 10 Claims. (Cl. 22—69.)



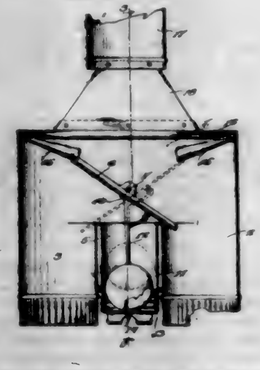
4. In an apparatus of the class described, a flask, a pump for supplying air to said flask, said pump comprising a cylinder and piston, means formed on the stem of said piston for cooperating with means formed on said cylinder for adjusting the relationship of the cylinder and piston whereby the amount of air supplied to said flask may be varied.

1,558,202. SUPPORTER. ROBERT REED NORWOOD, Mineral Wells, Tex. Filed Jan. 17, 1923. Serial No. 612,068. 1 Claim. (Cl. 128—96.)



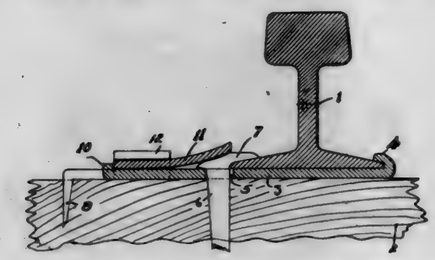
An abdominal support in the form of a belt comprising side members and an extension located between the side members and secured to the forward ends of the side members; the extension having downwardly converging side edges and the upper edge of the belt being downwardly concaved continuously from one end of the belt to the other and the lower edges of the side members being straight and converging downwardly from the ends of the belt to the extension whereby the belt will assume a definite and fixed frusto-conical form about the body of the wearer, the upper edge of the extension being continuous and unbroken and there being a continuous binder along the entire upper edge of the belt to aid in preserving said definite and fixed frusto-conical form in the belt; keepers secured to the belt at the lower edge thereof and upon the front thereof, tongues extending through the keepers, means for connecting the tongues detachably together at the front of the belt, the tongues being crossed on each other at the rear of the belt and being connected to the rear ends of the side members near to the upper edges thereof, the construction being such as to aid in preserving the said frusto-conical form of the belt, the side members of the belt having depending wings, and perineal straps carried by the wings.

1,558,203. CISTERN CUT-OFF. JAMES P. OLSON, Sanford, Fla. Filed May 6, 1925. Serial No. 28,451. 2 Claims. (Cl. 137—9.)



1. A device for the purpose set forth comprising a casing having a plurality of outlets in its bottom, a float chamber between the outlets, a tiltable cut-off plate mounted within the casing above and extending entirely across the float chamber and having a central opening, there being a vent in the bottom of the float chamber, and an imperforate float in the float chamber connected with one side of the tiltable valve whereby to normally direct water into one outlet.

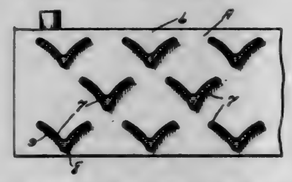
1,558,204. LOCKING TIE PLATE FOR RAILS. HENRY PODOLSKY, San Francisco, Calif. Filed Sept. 4, 1924. Serial No. 735,741. 2 Claims. (Cl. 238—294.)



1. An article of manufacture comprising the combination of a flat plate, having an upturned flange at one end to embrace a rail flange, two downwardly turned prongs, a spike opening, a pair of inturned flanges and an upturned locking lug between said flanges and a spring plate, adapted to be driven under the inturned flanges and over the top of a spike head.

---

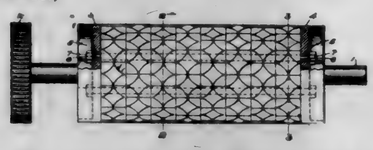
1,558,205. AUTOMOBILE RADIATOR. OTTO SIEFKEN, Rockford, Iowa. Filed Apr. 3, 1924. Serial No. 704,062. 1 Claim. (Cl. 257—129.)



A radiator comprising an upper inlet tank, a lower outlet tank, a plurality of tubes connecting the tanks together, each tube including a tapered leading end, and arcuate oppositely inclined wings, the tubes being arranged in staggered relation relative to one another, and gradually tapering toward their upper ends, as and for the purpose specified.

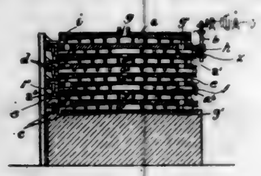
---

1,558,206. DIE ROLLER. DAVID G. SIMPSON, Brooklyn, N. Y., assignor to Loose Wiles Biscuit Company, Long Island City, N. Y., a Corporation of New York. Filed May 26, 1922. Serial No. 563,813. 7 Claims. (Cl. 107—23.)



7. A die roller particularly adapted for use in cutting dough or like material comprising in combination, a shaft, a series of adjoining die block rings 8 upon said shaft, each ring having a hub 14 keyed to the shaft, a radial web portion 13 projecting from said hub and having a plurality of transverse openings, a circumferential series of die blocks removably supported at the outer extremity of each of said flanges, a pair of heads 3, 4 keyed on said shaft, one at each end of said series of die block rings, bolts 6 extending longitudinally of the shaft through said heads and through said transverse openings in the web portions of the die block rings, and securing means at the opposite ends of said bolts whereby the rings may be drawn into and held in adjoining relation between said heads.

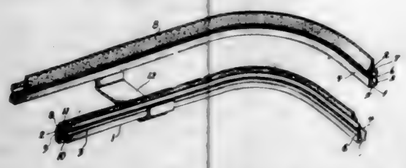
1,558,207. MECHANICAL ROASTING FURNACE. GEORG STOHN, Stolberg, Germany. Filed Jan. 26, 1921. Serial No. 440,231. 2 Claims. (Cl. 263—26.)



1. Mechanical roasting furnace having a series of superposed roasting chambers, each consisting of a stationary hearth-plate and a rotating hearth-plate, rotated from the periphery, the individual rotary hearth-plates being operated by separate and independent driving means.

---

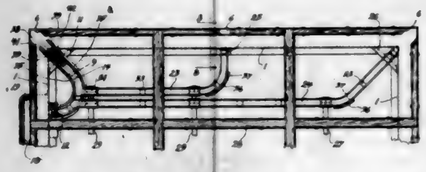
1,558,208. BALL-TRACK RAIL FOR GAME TABLES AND THE LIKE. THEODORE R. TREIBER, Chicago, Ill., assignor, by mesne assignments, to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 8, 1923. Serial No. 656,317. 15 Claims. (Cl. 273—3.)



1. A support rail of the character described having an open sided longitudinally extending interlock channel adapted to interlock with a bearer, strip shaped to enter the channel endwise and interlock therewith.

---

1,558,209. GAME TABLE. THEODORE B. TREIBER, Chicago, Ill., assignor, by mesne assignments, to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 8, 1923. Serial No. 661,647. 9 Claims. (Cl. 273—11.)

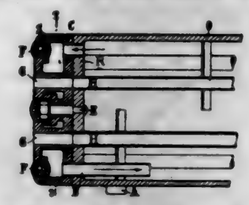


1. A pocket game table including a pair of independent gullies leading from respective adjacent pockets of the table and inclined downwardly therefrom and curved in directions toward the part of the table between said pockets and discharging in a direction outwardly therefrom at horizontally spaced points, and independent gullies leading and inclining downwardly from the other pockets of the table and discharging into respective of said first mentioned gullies at intermediate points thereof.

---

1,558,210. STEAM BOILER. MIECZYSLAW VON POKRZYWNICKI, Warsaw, Russia. Filed Feb. 9, 1914, Serial No. 817,506. Renewed Jan. 20, 1922. Serial No. 530,639½. 2 Claims. (Cl. 122—461.)

1. In a boiler, the combination with a fire pipe, of a superheater disposed therein and comprising a casing terminating within the fire pipe, smoke pipes extending longitudinally throughout the casing and fixed to the ends thereof, and an independent casing fixed to the front end of the first mentioned casing and constructed to offer greater resistance to disintegration under the action of heat than do the walls of the first mentioned casing, the two casings having means of intercommunication and the second mentioned casing having openings leading from the fire tube to the front ends of the smoke tubes.



2. In a boiler, the combination with a fire pipe, of a superheater arranged therein and comprising a casing, a protective casing in advance of the first mentioned casing and connected thereto, a relatively short pipe affording communication between the upper portions of the casings, and a relatively long pipe affording communication between the lower portions of the casings.

---

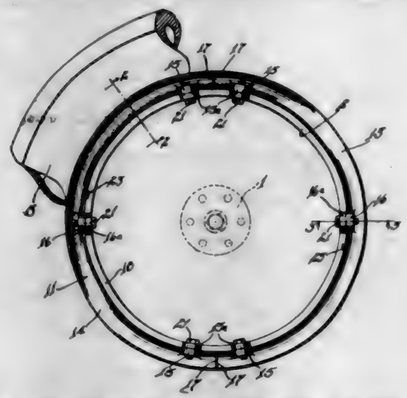
1,558,211. LINE-TESTING APPARATUS. CHARLES DAVID WILLIAMS, Silver Lake, Kans. Filed May 4, 1922. Serial No. 558,423. 4 Claims. (Cl. 173—273.)

1. In a wire line testing apparatus, a hollow staff of conducting material, a head of insulating material supported upon the upper end of said staff and having an opening alined with the opening of said staff, wire line connectors mounted on the staff and operating in the opening of the staff in the head, said wire line connectors comprising strips of resilient metal, a block of insulating material interposed between the inner portions of the strips and fastening devices for securing the strips to the block whereby the strips are mechanically connected and electrically insulated, one of said strips having electric contact with the hollow staff, the other strip being spaced and insulated from the hollow staff, and a binding post carried by the head and having electric contact with the strip insulated from the hollow staff.

---

1,558,212. RIM FOR VEHICLE TIRES. CARL FRED WOLF, Chicago, Ill. Filed Nov. 27, 1922. Serial No. 603,664. 1 Claim. (Cl. 152—21.)

A device of the type described comprising a rim section having an integral tire retaining flange on one side and an annular groove disposed adjacent to the other side, a tire retaining ring consisting of two semi-circular pieces having flanges adapted to enter said groove, lugs having threaded bores and being carried by said pieces, each of said pieces having one of the lugs disposed adjacent to each end thereof, and having one lug disposed intermediate the ends, said lugs projecting laterally from said pieces and having their inner surfaces disposed nearer the radial center of the pieces than the inner surfaces of said pieces, lugs carried by said rim section and being positioned on said rim section so as to be aligned with said first named lugs when



said pieces are disposed on the rim section, the lugs on said rim section that align with the lugs disposed adjacent to the ends of said pieces having slots therein, and bolts securing adjacent lugs together.

---

1,558,213. HOLDER FOR LICENSES, ETC. THOMAS RALPH ATKINS, Lynn, Mass., assignor of one-half to Ralph M. Davis, Lynn, Mass. Filed June 17, 1924. Serial No. 720,553. 3 Claims. (Cl. 224—26.)

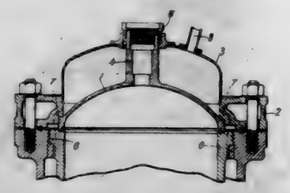
3. In a holder of the character stated, a pouch composed of two duplicate parts or sections of flexible sheet material, each including a body portion and a flap portion, stitches connecting opposite ends of the body portions, so that said portions form the sides of a storage space, the flap portions projecting in opposite directions from said space, and complemental fastener members fixed to said flaps and adapted to be interengaged to couple the flaps together at the inner side of the pouch, so that the flaps collectively constitute a support-engaging member adapted to bear on one side of a supporting strap interposed between the flaps and the inner side of the pouch, one of the flaps forming the bottom of the storage space, the outer side of the pouch being provided with a fastener member adapted to engage a complemental fastener member on the flap of a folder inserted in said space.

---

1,558,214. CYLINDER HEAD OF INTERNAL-COMBUSTION ENGINES. VADIME ARCHAOULOFF, Paris, France. Filed July 20, 1923. Serial No. 652,867. 1 Claim. (Cl. 123—123.)

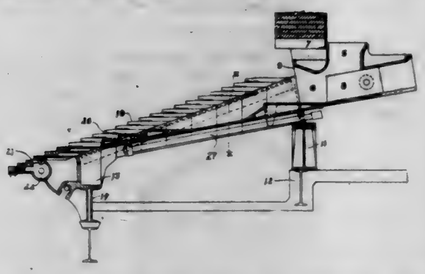
A cylinder construction including in combination a jacketed body, a liner therein, a head including a semi-cylindrical main portion provided with a depending annular collar the lower edge of which is seated on the upper edge of the liner, a jacketed ring embracing the upper edge of the collar on the main portion and seated on the upper edge of the cylinder body, means for detachably fastening the ring to the cylinder body so as to releasably clamp the main portion of the head in

position, a central tubular valve seating member integral with and rising from the top of the main portion, a cover carried by the ring and arranged in spaced relation to the main portion so as to form a cooling chamber therebetween, the ring and the cylinder body being provided with aligning passes for allowing the cooling liquid to circulate between the chamber and the jacketed cylinder body, and a stuffing box provided centrally on the cover and embracing the outer surface of the central valve seating member, substantially as and for the purposes set forth.



---

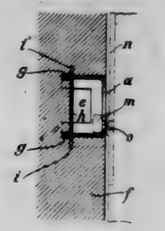
1,558,215. STOKER CONSTRUCTION. OTTO ARAM, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 17, 1920. Serial No. 410,865. 11 Claims. (Cl. 110—44.)



2. An underfeed stoker having a combustion grate formed of alternately disposed tuyères and retorts, front and rear supports for the said grate, and a frame comprising structural beam members connecting the said supports and supporting the tuyères and walls of the retorts.

---

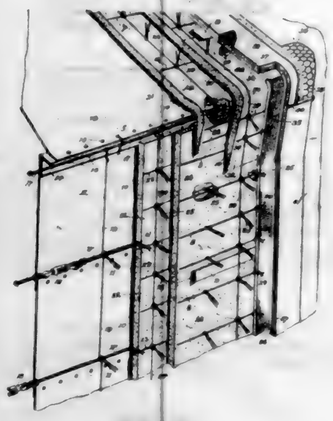
1,558,216. BEDSTEAD AND LIKE JOINT. WILHELM BACHMANN, Zurich, Switzerland. Filed Dec. 30, 1922. Serial No. 610,009. 2 Claims. (Cl. 5—299.)



1. In a bedstead or like joint, the combination with a wooden bedstead element having a circular recess and an annular groove of the same outside diameter as the recess made at the bottom of the latter, of a cylindrical metal casing adapted to fit said recess and to engage said annular groove, a bar held in diametrically opposite slots in the casing wall, said bar being normally bent outwards so that it can be driven into the surrounding wood by straightening it against the bottom of the recess, and shoulders formed on said bar at some distance from the ends thereof, so that they will engage and be stopped by the casing wall when the bar is thus straightened.

---

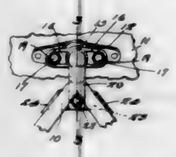
1,558,217. INSULATION FOR OIL TANKS. LESLIE A. BALDWIN, St. Louis, Mo., assignor to Johns-Manville, Inc., a Corporation of New York. Filed June 1, 1923. Serial No. 642,843. 9 Claims. (Cl. 220—1.)



1. The combination with an oil tank of a plurality of tie wires supported by the walls of said tank and extending outward therefrom; sheet insulation arranged in one or more layers pierced by said tie wires and surrounding said tank; metal lath overlying said sheet insulation and held in place by said tie wires; and hardened plastic heat insulating material overlying and supported by said lath.

---

1,558,218. RADIUS-ROD BRACE. WILLIAM G. BALDWIN, Castle Hayne, N. C. Filed Aug. 15, 1923. Serial No. 657,619. 2 Claims. (Cl. 267—66.)



1. In combination with a motor vehicle radius rod, a ball at one end of said rod, a socket member for receiving the ball, a socket cap, resilient means for securing the socket cap to the socket member, an arm carried by and extending from the cap and means for resiliently securing said arm to the radius rod.

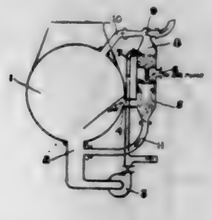
---

1,558,219. MULTICOLORED PRINTING. ROBERT B. BARTON, Chicago, Ill. Filed Dec. 5, 1921. Serial No. 520,143. 2 Claims. (Cl. 101—211.)

1. The improved method of multi-color printing which consists in photographically producing a glass negative of the subject through a screen and also of the screen, making a positive print of the subject negative on copper and also of the screen negative, etching the two positive plates, transferring an ink imprint of the etched subject plate to the etched screen plate, producing therefrom electroplates corresponding in number to the color units present in the subject, eliminating from each of said plates those portions of the subject having other than the single color selected for printing by that plate, then printing from the plates in succession and in appropriate register relation by inks corresponding in color to that of the subject-fraction represented in the particular plate.

---

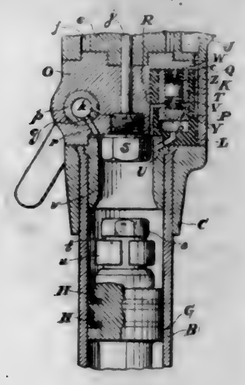
1,558,220. VAPOR CONDENSER. KARL BAUMANN, Urmston, England, assignor, by mesne assignments, to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 13, 1920. Serial No. 403,256. 12 Claims. (Cl. 257—24.)



1. The combination with a condenser, of an air withdrawal conduit leading from the condenser to an evacuation pump, a heat-interchanger interposed in said conduit, and means for passing water through said heat-interchanger to cool the air prior to its delivery to the pump, and means for cooling said water prior to its delivery to said heat-interchanger, comprising a chamber into which said water is delivered and an auxiliary evacuation pump for maintaining a low absolute pressure in said chamber for effecting a vaporizing of a portion of the water passing through the chamber.

---

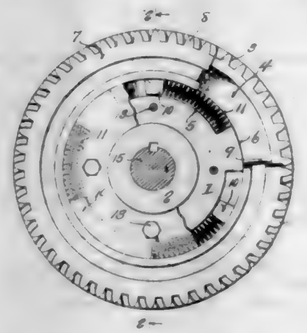
1,558,221. LUBRICATOR FOR ROCK DRILLS. LEWIS C. BAYLES and FRED M. SLATER, Easton, Pa., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 12, 1924. Serial No. 731,540. 6 Claims. (Cl. 184—18.)



1. A rock drill comprising a hammer cylinder, an air feed cylinder, a reservoir adapted to supply oil to both of said cylinders, a lubricating device including a casing having an oil inlet from said reservoir and an outlet to the feed cylinder, a hollow plunger within said casing adapted to be actuated by air from the feed cylinder to receive oil from said inlet, and a piston within said plunger to discharge the oil from said plunger through said casing into the feed cylinder.

---

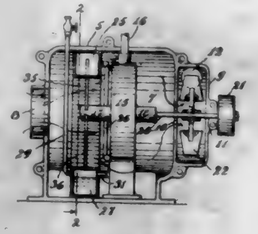
1,558,222. BACKLASH TAKE-UP FOR GEARS. ALBERT BEETOW, Milwaukee, Wis. Filed Jan. 14, 1924. Serial No. 686,090. 1 Claim. (Cl. 74—28.)



A gear comprising a main body member provided with teeth, an auxiliary ring-like member provided with teeth, said members having interengaging annular members, said main member having a plurality of separate annular recesses, said auxiliary member having a plurality of inwardly directed radial lugs located within said separate recesses, a plurality of springs seated within said recesses and bearing against said lugs, said main member having a hub, and a retaining ring surrounding said hub closing said separate recesses and retaining said lugs within said recesses, said retaining ring being carried between shoulders formed on said main and auxiliary members.

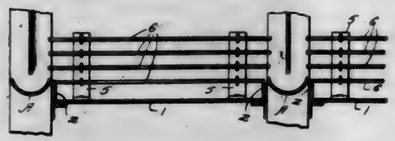
---

1,558,223. ENGINE. EMIL BEHRINGER and LEWIS HATCH, Brooklyn, N. Y., assignors to Wisner Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Oct. 23, 1921. Serial No. 510,403. 5 Claims. (Cl. 60—96.)



2. The combination with a housing comprising an engine containing chamber, there being an air inlet opening at one end, of a fan casing at the other end communicating with the chamber, an engine in said housing, a condenser for the exhaust of said engine disposed between said air inlet and said engine, and a fan mounted in the fan casing and acting to draw a draft of air into said inlet opening and then over said condenser and said engine.

1,558,224. REMOVABLE DECK FLOOR FOR LIVE-POULTRY CARS. ROY BENTLEY, Sabetha, Kans., assignor to Frank X. Mudd, Chicago, Ill. Filed Apr. 12, 1923, Serial No. 631,615. Renewed Aug. 26, 1925. 1 Claim. (Cl. 119—12.)

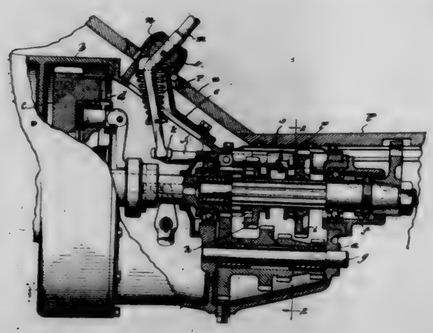


In combination with a car for transporting live poultry, the car having spaced troughs and supports therefor, a movable floor, said floor having relatively low open portions integral with it at its sides rising therefrom and constituting guards serving as the sole means to prevent escape of poultry below the troughs, brackets rising from the floor at the rear thereof, and rods mounted by said brackets above the guards, said rods being of a length greater than the distance between the supports.

1,558,225. TOOTH-CLEANING INSTRUMENT. JULIUS C. BOEKER, Mount Olive, Ill. Filed Aug. 9, 1923. Serial No. 656,491. 2 Claims. (Cl. 15—210.)

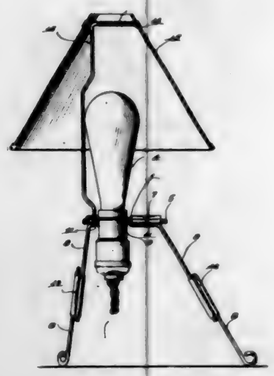
1. A tooth cleaning instrument comprising a handle, gripping members extending therefrom and normally separated at their outer portions, the opposing sides of the said members being formed with grooves closed at their inner ends and opening at their outer ends through the ends of the said gripping members, the grooves extending longitudinally of the said gripping members, means for drawing the members together, and a pad slidably insertable endwise between the grooved outer end portions of the gripping members, the said pad being provided at its opposite sides with ribs engaging in the grooves.

1,558,226. TRANSMISSION. JAMES SCRIPPS BOOTH, Detroit, Mich. Filed Nov. 6, 1924. Serial No. 748,120. 1 Claim. (Cl. 74—39.)



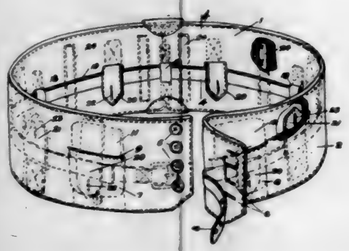
In a motor car construction, a transmission calculated to permit the lowering of the floor boards, having in combination with the power unit and a clutch housing, a transmission housing containing speed reducing gears, a pair of slidable gear shifting rods slidably supported in the walls of the transmission housing, one located at each side of the upper train of gears and projecting below the top of such gears, a cover for said transmission housing wholly independent of the sliding rods, the said rods passing out of the forward end of the transmission case into the clutch housing, and a gear shifting lever having a ball and socket support directly over the clutch housing, and arranged to selectively engage and control the forward ends of said gear shifting rods.

1,558,227. SUPPORT FOR INCANDESCENT LAMPS. WILLIAM LOUIS BORATE, Rochester, N. Y. Filed Apr. 16, 1925. Serial No. 23,516. 7 Claims. (Cl. 240—52.)



1. A support for incandescent lamps comprising a resilient lamp supporting ring having arms extending outwardly therefrom and provided with sleeves, and supports removably fitted in said sleeves.

1,558,228. VEST BELT. ABRAHAM BOTKIN, Hyattsville, Md. Filed Apr. 3, 1923. Serial No. 629,650. 1 Claim. (Cl. 241—8.)

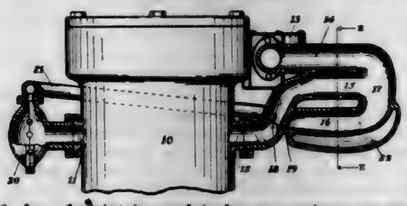


A vest belt comprising a plurality of band members secured together in superposed relation, and free from each other at a longitudinal edge, pockets between said members, each pocket secured to a free edge of one only of said members.

1,558,229. PLAYING CARDS. WILLIAM S. BOWMAN, Orangeville, Pa. Filed July 13, 1925. Serial No. 43,171. 5 Claims. (Cl. 273—152.)

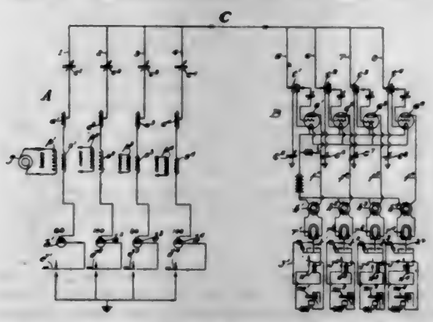
1. A deck of playing cards each of which is provided on its back with a designation classifying it as a head or tail card, each said card carrying on its face a pictorial representation of a half portion of an animal, and being also provided with a symbol denoting the particular value of the card.

1,558,230. HEAVY-FUEL VAPORIZER. CARL P. BROCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed June 21, 1919, Serial No. 305,925. Renewed Feb. 19, 1924. 21 Claims. (Cl. 183—32.)



1. In a fuel intake conduit for gas engines, means for separating the heavier particles of the fuel from the lighter particles, an air passage for said heavier fuel particles, and means for heating said separated heavier particles only.

1,558,231. MULTIPLEX TELEGRAPHY. WILLIAM M. BRUCE, Jr., Springfield, Ohio. Filed May 2, 1921. Serial No. 466,015. 7 Claims. (Cl. 178—51.)

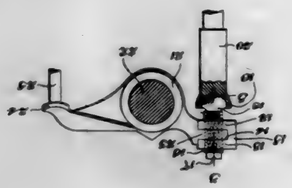


1. In a system of multiplex telegraphy, means at a sending station for supplying current of different high frequencies on different circuits connected to a single conductor and means for producing comparatively low frequency groups of high frequency currents in each of said circuits and impressing upon these groups signals corresponding to dots and dashes in connection with apparatus at a receiving station comprising an electrically tuned device for each high frequency current in resonance therewith, and a separate receiving device for each group comprising a vibrating coil mechanically tuned to the low frequency groups which receiving devices are connected in multiple to said conductor.

1,558,232. RAG DOLL. ALBERT BRÜCKNER, Jersey City, N. J. Filed July 21, 1921. Serial No. 486,386. 3 Claims. (Cl. 46—40.)

3. A doll having a body including a rigid bust member having a spherical portion projecting upwardly, a head for the doll body having a cooperating spherical depression in a lower portion adapted to slide forwardly and backwardly and turn on the spherical upper portion of the bust, and means for mounting said head upon said bust member for said bodily adjustment forwardly or rearwardly of the median plane of the doll body and for independent axial rotation in any one of its adjusted positions.

1,558,233. SELF-GRIPPING ADJUSTABLE COUPLING. JULIAN K. BRYANT, Lowell, Mass., assignor to Security Engineers, Incorporated, Lowell, Mass., a Corporation of Massachusetts. Filed Oct. 22, 1924. Serial No. 745,262. 4 Claims. (Cl. 287—100.)

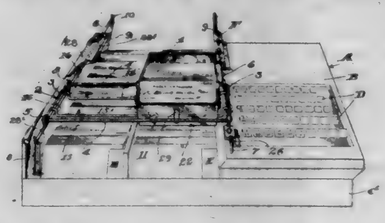


1. An automatically-gripping adjustable coupling comprising a recessed member provided with threaded apertures out of alinement, an intermediate member in said recess and forming a part of the coupling, and a male threaded member engaged with said threaded apertures.

1,558,234. FEEDING DEVICE FOR SORTING MACHINES. ALEXANDER M. BUNN, Washington, D. C., assignor to National Assorting Company, Washington, D. C., a Corporation of Delaware. Filed Dec. 19, 1923. Serial No. 681,646. 21 Claims. (Cl. 129—16.1.)

1. The combination, with a sorting apparatus equipped with means for simultaneously providing a plurality of

spaces classified for the reception of articles carrying a designation in consonance with the classification of certain of the spaces, of an article carrier mounted for



travel into juxtaposition to any selected space, and means facilitating the delivery of a separate article into said space.

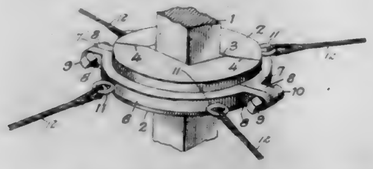
---

1,558,235. PRESSED-STEEL CONTAINER. CARROLL BURTON, Johnstown, Pa. Filed Dec. 26, 1922. Serial No. 608,997. 2 Claims. (Cl. 220—40.)

1. A metallic container comprising in combination a body portion composed of a single piece of metal and having a flat bottom and curved side walls, a series of vertical reinforcing ribs disposed at intervals around said side walls composed of multiple thicknesses of the side wall metal, an outwardly turned rim around the upper edge of said container having a plurality of slots therein, a flat disk like closure for said container, a plurality of L-shaped downwarly projecting lugs on said closure adapted to project into the slots in said rim and engage said rim when said closure is given a slight turn, and means inserted in some of said slots adapted to engage said rim and said L-shaped lugs to prevent the removal of said closure.

---

1,558,236. SUPPORTING DEVICE FOR OIL-WELL DRIVE SHAFTS. NELSON S. BURTON, Ardmore, Okla., assignor to Nina Burton, Clarksburg, W. Va. Filed Feb. 19, 1925. Serial No. 10,223. 4 Claims. (Cl. 255—1.)

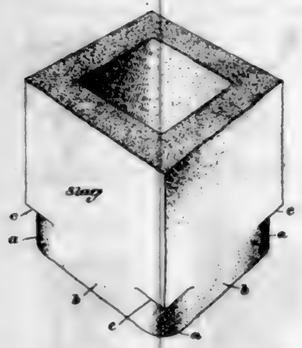


1. In oil-well drilling apparatus, means for supporting the vertical rotary drive-shaft of the oil-well rig, said means comprising a stationary ring, in two sections, and a disk, in two sections, revolubly supported by said ring and having a central opening for the reception of the drive-shaft.

---

1,558,237. METHOD OF MANUFACTURING SHRINK-HEAD CASINGS. FRED H. CHAPIN, Cleveland, Ohio. Filed Apr. 20, 1925. Serial No. 24,684. 9 Claims. (Cl. 22—192.)

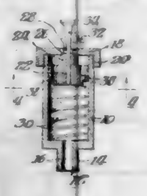
1. In the manufacture of shrink head casings for ingot molds, the method herein described which consists in mixing furnace slag and a binder in proportions of about 7 parts by weight of slag to one part by weight of the binder, molding the mixture to give it the desired



shape and then baking the molded article at a temperature of between 200° and 250° F. to remove moisture therefrom and render the casing porous.

---

1,558,238. VENT VALVE FOR ENGINES. JAMES A. CHARTER, Chicago, Ill. Filed Apr. 14, 1924. Serial No. 706,619. 3 Claims. (Cl. 251—144.)



1. In mechanism of the class described, a chamber having an end wall having a port therethrough, a long, slender, conical valve stem of less cross-section than the port, reciprocal through the port, separate means on the stem on opposite sides of the wall capable of independently closing the port, a perforated member movable in the chamber carrying the valve stem, spring mechanism normally urging the perforated member to such position that one of the port closing means closes the port, means applying suction apparatus to the chamber whereby vacuum created by it in the chamber moves the piston against the action of the spring until the second closing means closes the port, the two closing means being sufficiently separated so that intermediate between the two positions described, air is sucked through said port and the chamber.

---

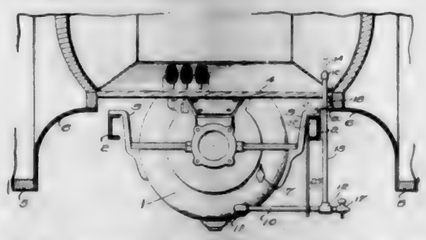
1,558,239. CARLINE. JOSEPH A. COSTELLO, Cleveland, Ohio, assignor, by mesne assignments, to Chicago-Cleveland Car Roofing Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 12, 1923. Serial No. 662,329. 10 Claims. (Cl. 108—5.6.)

1. A metal carline comprising two substantially parallel and substantially horizontal inverted-channel-shaped transverse members forming opposite ends respectively of the carline, and a body extending between and rigid with the inner flanges of said transverse members, each

end portion of said body being spaced at its outer end downwardly from the upper extremity of the inner flange of the adjacent transverse member, and the inner flange of each inverted-channel-shaped transverse member having an upper portion extending uninterruptedly substantially from end to end of said transverse member.

---

1,558,240. OIL GAUGE. WALTER EDWARD CRAWFORD, Orlando, Fla. Filed Aug. 19, 1921. Serial No. 493,686. 1 Claim. (Cl. 73—120.)



In an automobile having an engine crank case provided with an opening and a body having a floor, an oil gauge comprising a horizontal pipe having one end arranged in said opening, a vertical pipe connected to the other end of said horizontal pipe and extending through the floor of the body, an indicating member arranged in the vertical pipe and a depending supporting member secured to the body of the car, said member being provided with a horizontal portion having an opening for the reception of said vertical pipe, said member being extended downwardly beyond said horizontal portion and being provided with a second horizontal portion adapted to rest upon a portion of the frame of the car, said member being further provided with a depending end having an opening for the reception of said horizontal pipe.

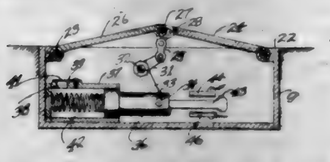
---

1,558,241. MEDICAL COMPOUND AND PROCESS FOR MANUFACTURING THE SAME. ORVILLE ADALBERT DAFERT-SENSEL-TIMMER, Vienna, Austria. Filed Dec. 15, 1924. Serial No. 756,061. 7 Claims. (Cl. 260—14.)

1. A process which comprises reacting with a halide of arsenic, upon quinine compound, to form a double compound thereof.

---

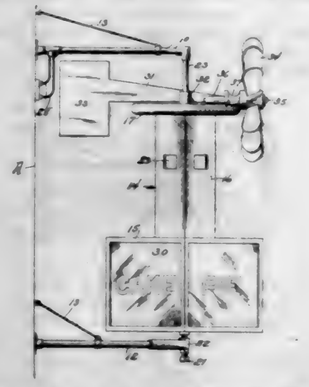
1,558,242. SWITCH MECHANISM FOR ROAD SIGNALS. GERRIT H. DALMAN, Ripon, Calif. Filed June 15, 1922. Serial No. 568,608. 1 Claim. (Cl. 200—86.)



In a switch for a road signal, a box adapted to be mounted in a road-way, said box having a cover, said cover comprising two sections having a sliding dovetail connection, a link pivoted to one of said sections, a bell-crank fulcrumed within said box, and having one of its arms connected to said link, a cylinder mounted within said box, a spring mounted within said cylinder, a piston movable in said cylinder against the action of said spring, said cylinder being connected to the free arm of said bell-crank, a rod secured to said cylinder, contacts mounted on said box and adapted to be electrically connected by said rod, and a valve positioned on said cylinder, said valve being capable of permitting rapid exhaust of air from said cylinder, and a slow ingress of air to said cylinder, substantially as and for the purpose specified.

---

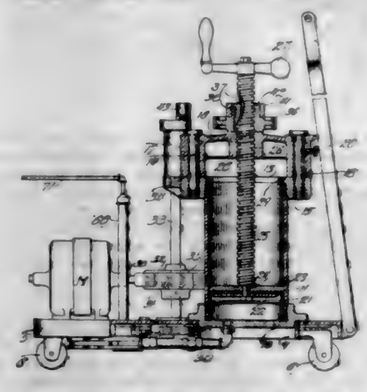
1,558,243. ROTATING ELECTRIC SIGN. JOHN CLARENCE DANIEL, Winston-Salem, N. C. Filed Sept. 10, 1924. Serial No. 736,978. 4 Claims. (Cl. 40—89.)



1. In a device of the character described, upper and lower stationary supports, a hollow member depending from the upper support, a casing journaled upon the lower support and rotatably mounted about said depending member, a friction wheel carried by said casing, an arm rotatably mounted on said depending member and carrying a rudder, a wind wheel journally supported by said arm, and a friction roller carried by the wind wheel engaging said friction wheel.

---

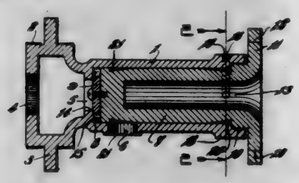
1,558,244. LUBRICANT COMPRESSOR. ERNEST W. DAVIS, Oak Park, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed May 6, 1921. Serial No. 467,264. 4 Claims. (Cl. 221—79.)



1. A lubricant compressor comprising a low pressure cylinder, a plunger slidable in said low pressure cylinder, a cap for said low pressure cylinder, the end of said cap having a screw-threaded opening therethrough, a screw-threaded plunger rod extending through said threaded opening and carrying said plunger at its inner end, a ratchet gear for rotating said plunger rod, a crank arm, a pawl secured to said crank arm for engaging said ratchet, means for oscillating said crank arm comprising a shaft mounted parallel with said plunger rod, a spring having one end connected with the free

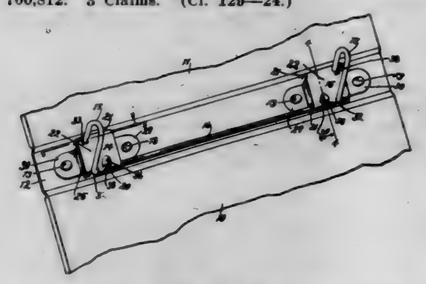
end of said crank arm, and the other end connected to said shaft eccentrically thereof, a high pressure cylinder having a plunger reciprocable therein, a lever for operating said plunger, and a second spring having one end connected to said lever and the other end connected to said shaft eccentrically thereof, the points of connection of said springs to said shaft being such that when one spring is being tensioned the other is being relaxed.

1,558,245. FAUCET. JOHN F. DAVIS, Decatur, Ill. Filed Oct. 19, 1923. Serial No. 669,628. 8 Claims. (Cl. 251—25.)



2. A faucet, comprising, a casing having a port and having a bore terminating in a seat adjacent said port, a valve plug slidable in said bore and having an end face adapted to engage said seat, a manipulative element on said plug, and a stop for limiting the withdrawal of said plug, said stop being yieldably tensioned but retractable to permit withdrawal of said plug from said casing.

1,558,246. LOOSE-LEAF BINDER. JAMES C. DAWSON, Webster Groves, Mo., assignor to Elma N. Dawson, Webster Groves, Mo. Filed Mar. 21, 1924. Serial No. 700,812. 3 Claims. (Cl. 129—24.)



1. In a temporary binder, a sheet metal base, including a generally flat top, and flanges extending downwardly from the sides thereof, one of the flanges and the adjacent portion of the top being notched, a tab at one end of the base including a downwardly extending portion spaced at one edge from the notched flange, a rock-shaft journaled between the edge and flange and a hook on the shaft projecting through said notch and having a catch to engage the base.

1,558,247. BUILDING FORM. FRANK L. DECKER, Kimble, Pa. Original application filed June 21, 1924. Serial No. 721,542. Divided and this application filed Jan. 21, 1925. Serial No. 3,858. 1 Claim. (Cl. 72—19.)

A means for re-facing a wooden structure in which the siding is removed therefrom, in which an outer wall construction comprising grooved slabs arranged in superimposed courses having their vertical joints broken are employed, of horizontally disposed plates having inner flanged ends secured to the structure and outer ends which are flanged in both directions, one of the last mentioned flanges comprising spaced elements and both of the last mentioned flanges designed to be received in the grooves of the superimposed slabs, other flanges on the plates holding the slabs in spaced relation, a channeled member secured to the lower plate and passing through the upper plate of each series, a spacer plate for the channeled members engaging therewith and engaging

with the mentioned plates, and said channeled members being disposed along the vertical joints of the wall and serving as a passage for concrete to be delivered between the joints of the slabs, and also as a mold for such concrete when set.

1,558,248. HEAT-GENERATING COMPOSITION. JOHN M. DENNISON, New York, N. Y. Filed Aug. 5, 1925. Serial No. 48,406. 5 Claims. (Cl. 44—3.)

1. A composition consisting of oxidized iron filings, ammonium chloride, calcium oxide, and sulphuric acid, said composition made heat generating by the addition of water.

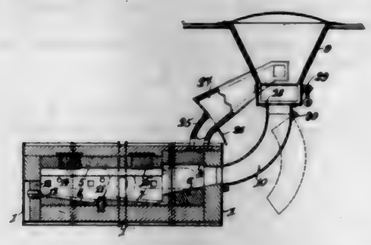
1,558,249. ARTIFICIAL LURE. HENRY L. DE ZENG, Moorestown, N. J. Filed Oct. 27, 1923. Serial No. 671,074. 3 Claims. (Cl. 43—45.)

1. In an artificial lure, a body portion, and a pair of revolving members, said members being located in predetermined fixed relationship with respect to each other, the upper surface of one member being adapted to reflect light to the under surface of the other member alternately as said members are caused to revolve on moving the lure through the water horizontally.

1,558,250. MELTING FURNACE OF THE TILTING TYPE. PAUL DHÉ, Paris, France. Filed Mar. 1, 1924. Serial No. 696,296. 8 Claims. (Cl. 263—33.)

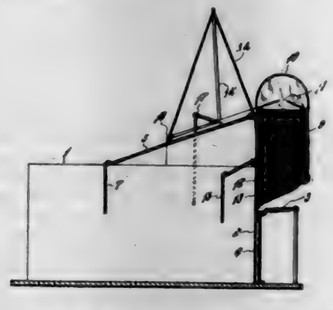
8. In a tilting furnace for the fusion of basalt providing for the direct casting of the melted substance in molds, the combination of a furnace properly so called which is built of fire brick and is provided with a tap hole at the front and a loading aperture at the rear, a metal frame supporting the said furnace, a horizontal axle having the said frame pivoted thereon, and a hearth situated within the said furnace, said hearth being divided into three parts whereof one is forwardly inclined and serves to contain the substances to be melted and the other two constitute the melting basin and are rearwardly inclined, outlet conduits for the gases of combustion disposed above the said forwardly-inclined hearth, the outer ends of said conduits having the shape of an arc of a circle which has for its centre the pivoting axis of the furnace, a basalt feeding hopper disposed above the rear part of the furnace, conduits whereof

one end opens into said hopper and the other is open to the atmosphere, the latter end being adjacent the



outer end of the said outlet conduits, a movable flap disposed within the said hopper for closing the lower end of the same.

1,558,251. FLYTRAP. JAMES V. DE WITT, Vidor, Tex. Filed May 5, 1924. Serial No. 711,235. 4 Claims. (Cl. 119—156.)

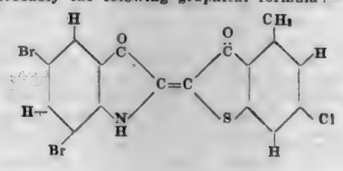


1. A trap of the class described comprising a body open at its top and front, doors closing the rear end of the body and having flexible portions for brushing the flies from the body of an animal passing through the same, a top door adapted to close the top and front of the body in rear of the animal when the door is moved downwardly, a trap chamber opening into the body, means associated therewith for catching and holding the flies entering the same, and a door for closing the trap chamber and means for moving this door by the movement of the top door.

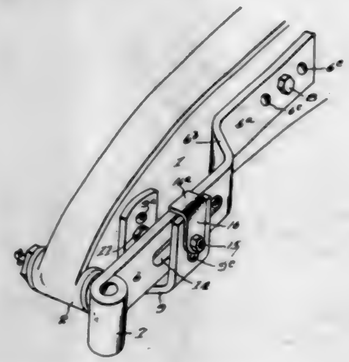
1,558,252. VAT DYESTUFF AND PROCESS OF MAKING SAME. JOSEPH G. DINWIDDIE, Penns Grove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 8, 1925. Serial No. 1,153. 8 Claims. (Cl. 260—49.)

1. The process of producing a vat dyestuff which comprises condensing a halogenerated isatin-chloride with one molecularly-equivalent amount of an hydroxymethyl-halo-thionaphthene.

6. As a new composition of matter, a product obtainable by condensing a dibrom-isatin-chloride with 2-hydroxy-3-methyl-5-chloro-thionaphthene, and having most probably the folowing graphical formula:—

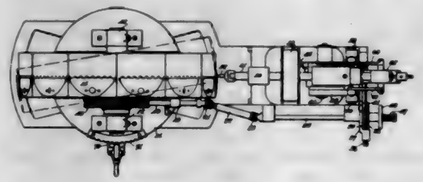


1,558,253. BUMPER-SUPPORTING MEANS. WAYNE E. DUNSTON, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Nov. 19, 1923. Serial No. 675,555. 19 Claims. (Cl. 293—55.)



3. The combination, with a vehicle frame member, of a bumper-supporting arm, the said arm having inner and outer offset portions, means connecting one of such portions to said frame member, and means including a spacing member for adjustably connecting the other portion of said arm to said member.

1,558,254. MACHINE FOR CUTTING BUTTON BLANKS. PAUL F. DUSHA, New York, ANTON FEYK, Bohemia, and EMIL FEYK, New York, N. Y., assignors to Holub-Dusha Co., New York, N. Y., a Corporation of New York. Filed Nov. 12, 1924. Serial No. 749,466. 2 Claims. (Cl. 70—16.)



1. A machine for cutting button blanks, comprising a rotary bull wheel adapted to receive on its periphery a circular series of shells, a cutter having a fixed mounting and movable toward and away from the bull wheel to cut blanks from the shells, means for imparting a step by step feed to the bull wheel whereby the cutter is adapted to remove a line of blanks from the successive shells on the bull wheel, and means for shifting the axis of the bull wheel about an axis intersecting at a right angle the said axis of the bull wheel and also the axial line of the cutter.

1,558,255. AUTOMATIC SPARK RETARDER. FRANK C. FAURE, Petaluma, Calif. Filed Sept. 18, 1923. Serial No. 662,536. 2 Claims. (Cl. 123—186.)

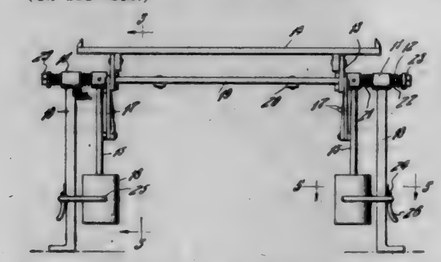
2. The combination with the starting motor switch and the spark control element of an automobile engine; of means connected to the control element and operable primarily to move the control element to spark retarding position and then to engage and close said switch and including a rock shaft journalled adjacent said switch, a rock arm extending from said rock shaft and having a pedal overlying said switch in normal spaced relation thereto, a second rock arm extending from said

shaft, a push bar having one end resting against the second rock arm to be moved thereby upon the pedal being depressed, an operative connection between the remaining end of said bar and the spark control element,

a rod projecting from said pusher bar through said second rock arm, a stop on the end of the rod, and a compression spring between said stop and the rock arm to hold the end of the pusher bar yieldably against the second rock arm.

---

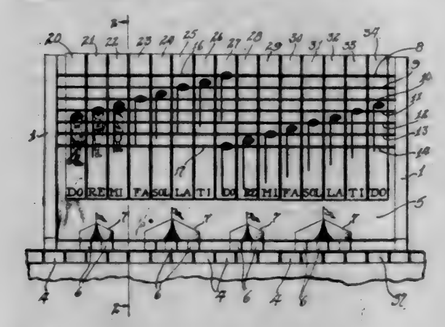
1,558,256. TABLE. VINCENT FIORITO, Chicago, Ill. Filed Nov. 19, 1924. Serial No. 750,905. 4 Claims. (Cl. 114—195.)



1. A table comprising spaced standards, a top, pivot rods rotatably mounted in the standards and secured to the top whereby the latter may be moved pivotally, a counter-balance weight rigid with the top whereby the latter will be held substantially horizontal and means pivotally mounted upon the standards and engageable with the weights to hold the top against pivotal movement.

---

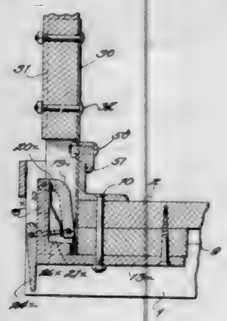
1,558,257. MUSIC INSTRUCTOR FOR CHILDREN. HAROLD FISHER, Chicago, and DIECY HOOBLER, Streator, Ill. Filed Aug. 9, 1924. Serial No. 731,164. 5 Claims. (Cl. 84—478.)



1. A musical instructor for children comprising a supporting member arranged to be placed in vertical position upon the keyboard of a piano, cords attached in parallel relation to said keyboard, representing the lines of a musical staff, and removable members adapted for disposition upon said supporting member and arranged to lie in back of said cords, said members having legends imprinted thereon representing notes of a diatonic scale and adapted to lie in registration with one of the cords or spaces between the cords, whereby the members may be moved on said supporting member to a point substantially in registration with the corresponding key of the keyboard.

---

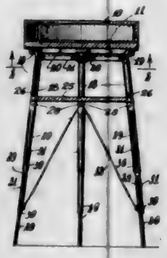
1,558,258. STAKEHOLDER. CLARENCE E. FLINCHBAUGH, Lima, Ohio. Filed July 2, 1924. Serial No. 723,813. 7 Claims. (Cl. 296—43.)



7. The combination of the floor of a vehicle body and stake, an angle member fixed with respect to the floor and having an upright portion, a latch bar pivotally connected to said upright portion for preventing upward movement of the stake relative to the floor and the angle member, a spring strip secured in interposed relation between the upright portion of the angle member and the latch bar, a cam lever disposed back of the upright portion of the angle member, and a connection between said cam lever and the latch bar; the said upright portion of the angle member being provided with intermediate abutments or shoulders, and the connection between the latch bar and the cam lever being in the form of a bail disposed below said shoulders or abutments and pivotally connected to the cam lever on its bight.

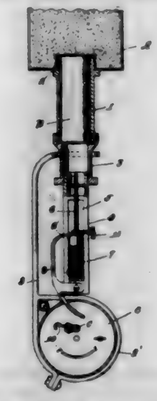
---

1,558,259. PORTABLE STAND FOR SHAVERS. CESARIO S. FRANCO, Philadelphia, Pa. Filed Apr. 16, 1923, Serial No. 632,194. Renewed Sept. 10, 1925. 6 Claims. (Cl. 45—11.)



1. A device of the class described comprising a top member, upper leg-elements on which said top member is supported, a shelf carried by said upper leg-elements, lower leg elements pivotally attached at their upper ends to the said shelf, and means for collapsing said upper leg-elements on said top member and said shelf on said upper leg-elements, the said lower leg-elements being formed of a number of sections telescoping into one another.

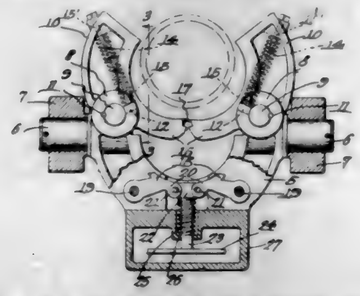
1,558,260. DETONATOR. BURTON K. GLASS, Altoona, Pa. Filed Jan. 19, 1925. Serial No. 3,464. 3 Claims. (Cl. 102—4.)



3. A device of the class described comprising a cartridge holding member, means for attaching the same to a member carrying the explosive charge, a coupling detachably connected with the cartridge carrying member, a breech member connected with the coupling, a firing pin in the breech member, a spring in the breech member for projecting the firing pin against the cartridge, a trigger member pivoted to the breech member and engaging the firing pin for holding the same retracted, a clock carrying frame connected with the device, a clip adapted to be attached to the alarm mechanism of a clock for engaging the trigger member to move the same to releasing position, a casing for enclosing the parts including the explosive charge and a spring pressed shock absorbing member at one end of the casing.

---

1,558,261. PIPE ELEVATOR. FRANK W. GRADY, Lomita, Calif. Filed Jan. 20, 1925. Serial No. 3,612. 2 Claims. (Cl. 294—91.)



1. A pipe lifter including a body portion, jaws pivotally supported on the body portion and having inwardly extended end portions formed with shoulders, a pair of pivoted latch members adapted to engage the shoulders to lock the jaws in their active positions, means for moving the latch members simultaneously to release the jaws, and spring members for normally urging the jaws outwardly.

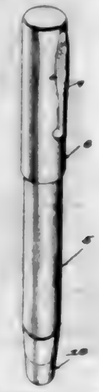
---

1,558,262. REDUCTION OF ORES. GUYON F. GREENWOOD, Georgeville, Quebec, Canada, assignor of one-half to Robert B. Hutcheson, Montreal, Quebec, Canada. Filed Jan. 31, 1923. Serial No. 616,177. 2 Claims. (Cl. 75—17.)

1. The method of reducing ores which comprises separately preheating the ore and a reducing agent which is able to unite with the metal to a temperature above their combining temperature range, and subsequently bringing them together in such preheated state and maintaining them at a selected reducing temperature above their combining temperature range during the process of reduction of the ore.

---

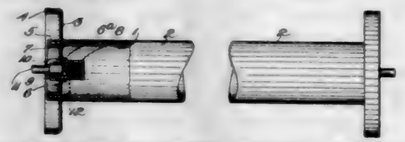
1,558,263. FOUNTAIN PEN. FRANK J. GROMMES, Aurora, Ill. Filed June 19, 1924. Serial No. 721,058. 1 Claim. (Cl. 120—47.)



A fountain pen comprising a cylinder, having a chamber, the rear portion of the cylinder being provided with a reduced threaded portion, a piston arranged in said cylinder and having a bore opening out through opposite ends of the piston and threaded for its entire length, a rod having an enlarged forward portion threaded in the bore of said piston and adapted to extend entirely through the piston and moved into the forward portion of the cylinder, a cap securely connected to said rod and adapted to be threaded on the rear terminal portion of said cylinder, said piston being provided with a sealing medium frictionally contacting with the wall of the cylinder and holding the piston against turning and a packing carried by said cap and surrounding the rear portion of said rod whereby leakage from said chamber is positively prevented.

---

1,558,264. YARN SPOOL. EDGAR F. HATHAWAY, Wellesley, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 1, 1923. Serial No. 660,529. 6 Claims. (Cl. 242—123.)



1. A yarn spool for weaving embracing a tubular barrel, a head comprising inner and outer laterally flanged disks engaging said barrel in lapped relation and firmly secured thereto, and a journal mounted centrally in said inner disk to rotatably support said spool substantially as described.

---

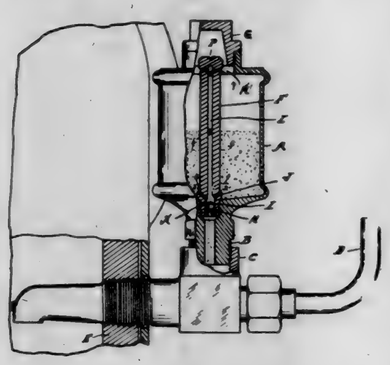
1,558,265. PROCESS OF MANUFACTURING ARTIFICIAL-SILK THREADS FROM VISCOSE. ISIDORE OCTAVE EMILE LAMS, Tubize, Belgium, assignor to Fabrique de Soie Artificielle de Tubize, Société Anonyme, Brussels, Belgium. Filed Jan. 18, 1923. Serial No. 613,541. 2 Claims. (Cl. 18—54.)

1. In the process of manufacturing artificial silk threads from viscose, the steps which comprise subjecting

viscose threads to the action of an aqueous solution containing 13 to 15% of ammonium formate and 13 to 18% of sodium formate, drawing the threads while so congulated, and then converting them into cellulose hydrate.

---

1,558,266. LUBRICATOR. ELIJAH MCCOY, Detroit, Mich., assignor to Edwin C. Nagel, Detroit, Mich. Filed Dec. 18, 1922. Serial No. 607,655. 8 Claims. (Cl. 184—58.)



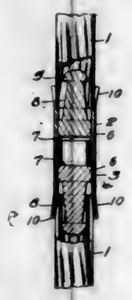
1. In a lubricator for the feeding of flaked or powdered lubricant, the combination with a casing, of a hollow stem extending longitudinally thereof and provided with ports at its upper end communicating with the casing, said stem also having a series of three or more inclined ports between the hollow interior thereof and the lower portion of the casing, said ports being arranged to lead upwardly in all directions to deflect the steam in all directions and agitate the flaked or powdered lubricant in said chamber, and a normally closed automatic valve in said hollow stem adapted to be actuated by the pulsating pressure.

---

1,558,267. SOCKET WRENCH. JOHN J. MCGUCKIN, Brooklyn, N. Y., assignor to Louis Schwab, doing business as Stevens & Company, New York, N. Y. Filed Mar. 25, 1924. Serial No. 701,643. 3 Claims. (Cl. 81—121.)

1. The combination, with a socket wrench, of a lateral detent element provided with a nut engaging portion and with resilient, readily detachable, shank gripping means rockable on the shank to optionally move the nut engaging portion into or out of the socket.

1,558,268. COUPLING FOR SECTIONAL RODS. LOUIS L. MAST, West Milton, Ohio. Filed Mar. 20, 1924. Serial No. 702,910. 1 Claim. (Cl. 287—125.)



In a lightning-rod, the combination with two hollow lightning-rod sections, of a coupling-device therefor, comprising two sheet-metal tubular members removably secured together at adjacent ends, each provided, at its free end, with an annular series of fingers bearing against the exterior surface of the adjacent lightning-rod section, at one end thereof, a pin removably disposed in the bore of each tubular member and comprising a truncated cone-shaped shank, an enlarged circular base at one end of said shank snugly fitting the interior surface of the wall of the tubular member, and an enlargement on the reduced end of said shank, said fingers bent inward and the end of the lightning-rod section crimped against said shank and under said enlargement, whereby the tubular member and lightning-rod section are interlocked with said pin.

---

1,558,269. HINGED LAST. FREDERICK W. MILLAY, Haverhill, Mass., assignor to Fred W. Millay Co., Inc., Haverhill, Mass., a Corporation of Massachusetts. Filed June 28, 1923. Serial No. 648,369. 5 Claims. (Cl. 12—136.)

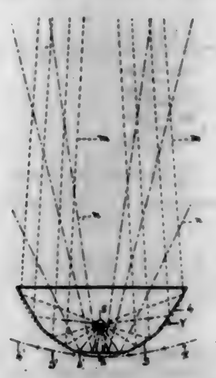
1. A last comprising a heel part and a fore part; a straight rigid member one end of which is immovably anchored in the heel part while the opposite end thereof extends into a pocket in the fore part and has a transverse cylindrical hole therethrough; a pin in the fore part extending through and fitting said hole; and a hidden spring in a socket communicating with the upper wall of said pocket with its lower end coacting with said rigid member and adapted to force the under wall of said pocket against said rigid member.

---

1,558,270. REFLECTOR FOR LIGHT PROJECTORS. WALTER F. MORRISON, Los Angeles, Calif. Filed Aug. 27, 1924. Serial No. 734,440. 1 Claim. (Cl. 240—41.)

A segmental parabolic reflector for light projectors comprising a plurality of vertically arranged contiguous zones, the common bounding edges of which are relatively parallel in a vertical plane and of the same relative

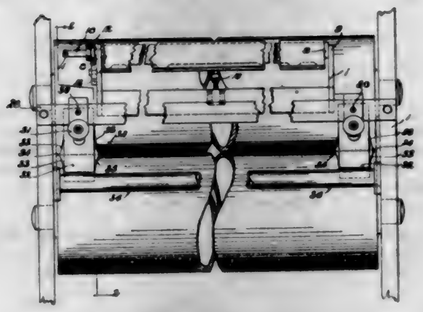
parabolic curvature, said zones having a lateral parabolic curvature taken at right angles to the bounding edges and at any point in their lengths of greater focal length



than the focal length of the parabola contemplated by the curvature of said edges, and the focal length of the parabola contemplated by the curvature of said edges being the same as the focal length of the reflector.

---

1,558,271. PROCESS AND MECHANISM FOR IMPREGNATING FIBROUS MATERIAL. LUTHER S. NEWELL, Cranston, R. I., assignor to Respro Inc., Cranston, R. I., a Corporation of Rhode Island. Filed May 2, 1924. Serial No. 710,698. 11 Claims. (Cl. 91—48.)



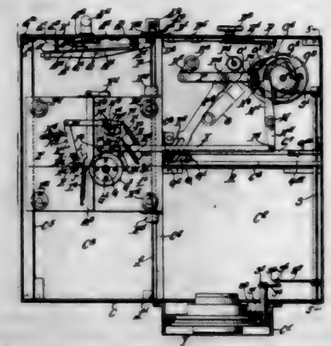
1. The process of impregnating material characterized by applying a viscous fluid to the entire width of the material in quantity gradually diminishing from center to edge, and applying pressure to the coated strip in a manner to force a transversely uniform amount of the said fluid thereinto.

5. A machine for impregnation comprising pressure rolls and means for applying impregnating material to one of the rolls in quantity gradually diminishing from center toward ends of the roll.

---

1,558,272. AEROPLANE CAMERA. NIELS PEDERSEN, Philadelphia, Pa., assignor, by mesne assignments, to Brock & Weymouth, Incorporated, a Corporation of Delaware. Filed Nov. 9, 1923. Serial No. 673,679. 11 Claims. (Cl. 95—24.)

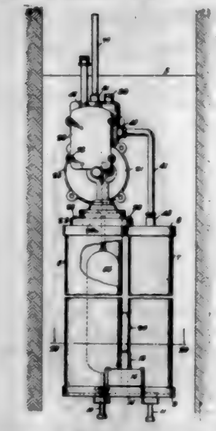
1. In a camera for aerial photography a compartment for a plate magazine, a plate magazine vertically movable in said compartment and formed with lateral ledges to support a series of plates, means for moving the magazine vertically in its compartment to bring the series of plates successively to approximately the focal plane of the camera, means for supporting the plates in the



focal plane of the camera and means for shifting the plates from the magazine to the plate supporting means and returning them to the magazine after exposure.

---

1,558,273. COMPRESSED-AIR WATER ELEVATOR. THEODORE PETERS, Ferdinand, Ind. Filed Jan. 14, 1925. Serial No. 2,419. 8 Claims. (Cl. 103—248.)

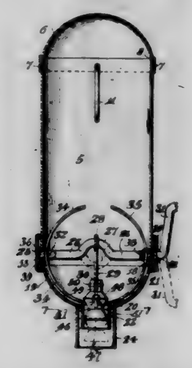


1. A compressed air water elevator including a pair of water cylinders communicating with a source of supply of water, each cylinder having a port for the intake and exhaust of air, a casing associated with the water cylinders and having a plurality of chambers, one of said chambers having an air exhaust port and communicating with the air port of one cylinder, another of said chambers having an air exhaust port and communicating with the air port of the other cylinder, the third chamber being provided with a pair of separate ports respectively communicating with the first and second chambers and having a third port for connection with a source of compressed air supply, a pair of valves for controlling the pair of ports of the third chamber, separate valves for respectively controlling the air exhaust ports of the first and second named chambers, all of said valves being rigidly related and movably mounted for simultaneously closing the air exhaust port of one chamber and opening the air exhaust port of another chamber while opening the port of the third chamber which leads to the chamber having its air exhaust port closed and closing the port of said third chamber which leads to the chamber having its air exhaust port opened, and vice versa, and a float in one cylinder operatively connected to the valves.

1,558,274. DRAWER ATTACHMENT FOR SINKS. CHARLES A. PETERSON, Chicago, Ill. Filed June 22, 1923. Serial No. 647,074. 1 Claim. (Cl. 45—77.)

The combination with a sink having downwardly projecting flanges, said flanges having laterally extending portions serving as drawer supports, said portions having threaded openings therein, rods having threaded portions adapted to be screwed into said openings, a drawer-supporting plate supported by said rods, said plate having struck up flanges to act as drawer guides, portions of said flanges forming lugs, said lugs having openings therein to receive said rods so as to support said plate, and drawers carried by said first named flanges and by said plate.

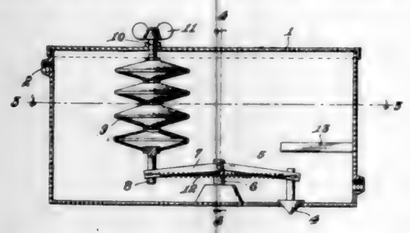
1,558,275. DISPENSING RECEPTACLE. JOHN PETERSON and GUSTAV G. SMITH, Portland, Oreg. Filed July 21, 1924. Serial No. 727,246. 8 Claims. (Cl. 221—104.)



1. A dispensing receptacle comprising a vertically disposed container having an outlet in its bottom, a reciprocatory combined dispensing and closure valve for said outlet, a shaft mounted in the lower portion of and extending diametrically of said container and further operated exteriorly thereof, an actuating rod pivotally connected respectively to said shaft and valve for shifting the latter when the shaft is revolved, and a pair of oppositely disposed arc shaped agitators fixedly secured to opposed end portions of said shaft within said container, the ends of one of said agitators spaced from the ends of the other to provide a clearance for said rod.

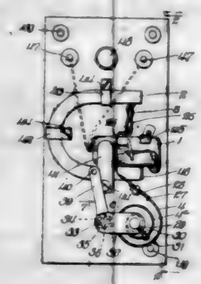
1,558,276. AUTOMATIC DRAIN. LELAND H. PETERSON, Wauneta, Nebr. Filed Dec. 31, 1924. Serial No. 759,143. 1 Claim. (Cl. 34.3.)

A drain device comprising a receptacle having a drain opening in its bottom, a valve for controlling the opening a support in the receptacle, a lever pivoted to said support and supporting the valve, a second lever pivoted to the support, a spring having its ends connected with the outer ends of the levers, a thermostat connected with



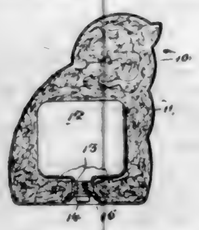
the outer end of the second lever, means for adjusting the thermostat and a stop for limiting the upward movement of the valve.

1,558,277. ELECTRICAL SWITCH. LOUIS A. M. PHELAN and CLIFFORD HOTCHKISS, Beloit, Wis.; said Hotchkiss assignor to said Phelan. Filed Dec. 8, 1922. Serial No. 605,635. 5 Claims. (Cl. 200—136.)



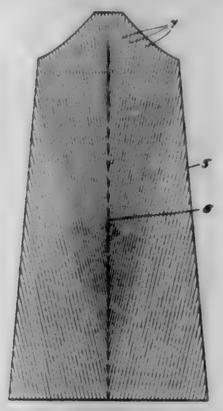
1. An electrical contactor comprising a hermetically sealed container, an integral inwardly directed extension to said container, a magnetic armature pivotally mounted on said extension, and a contact mounted on said armature.

1,558,278. COMBINED TOY AND HEATING DEVICE. ELMA PHILLIPS, Dover Plains, N. Y. Filed Dec. 1, 1923. Serial No. 677,997. 1 Claim. (Cl. 150—8.)



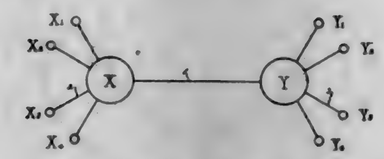
In a device of the character described, a body formed of flexible material and provided with a resilient stuffing, a water receptacle embedded within the stuffing and having a thickened neck portion located at the bottom portion of the body and provided with a removable closure element, the outer end of said neck portion being grooved and the edge of the flexible material being engaged within the groove, said neck portion being set inwardly with respect to the outer surface of the body and the body being recessed at said neck portion to permit access to the closure element.

1,558,279. METHOD OF PREPARING FURS. HARRY POST, New York, N. Y. Filed Feb. 8, 1923. Serial No. 617,707. 5 Claims. (Cl. 149—28.)



1. In the art of fur manufacturing, the method which consists in cutting a fur bearing animal pelt longitudinally, then separating the pelt by a second longitudinal cut into half sections, then dividing each of said sections into a plurality of narrow strips by parallel diagonal cuts, assembling the strips of each section into two series in separated relation to each other, inserting strips of flexible material between the separated pelt strips in each series, sewing the pelt strips and the inserted strips to each other to thereby produce two similar half sections of a whole animal skin each substantially corresponding in area with the original half section, and finally assembling right and left half sections each containing the inserted strips and sewing the same to each other along the longitudinal edges thereof in the form of the original natural animal pelt.

1,558,280. SECRET SYSTEM OF TELEGRAPHY. LOUIS M. POTTS, Baltimore, Md., assignor, by mesne assignments, to American Telephone and Telegraph Company, New York, N. Y., a Corporation of New York. Filed Mar. 22, 1920. Serial No. 367,787. 3 Claims. (Cl. 178—22.)

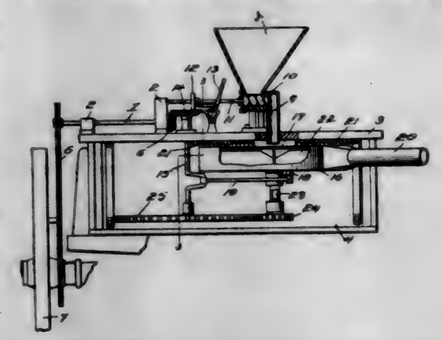


1. The combination in a telegraph system of a number of stations, a line interconnecting two of said stations, a rotating distributor at one of said stations, means including a plurality of relays arranged to cooperate with said distributor during a given revolution thereof for storing a plurality of separate groups of signal impulses, corresponding impulses in all groups being stored in the same definite order, a second plurality of relays, means rendered effective by the distributor at the end of said given revolution for transferring said groups of impulses from the first to the second relays, and means cooperating with said second relays and with the distributor during a subsequent revolution thereof for transmitting said groups of stored impulses over the line in such manner that the impulses of each group are sent in an order different from that of other groups.

1,558,281. PRESS FOR TENNIS AND OTHER RACKETS. WILLIAM REYNOLDS POTTS, London, England. Filed Feb. 11, 1925. Serial No. 8,489. 2 Claims. (Cl. 273—74.)

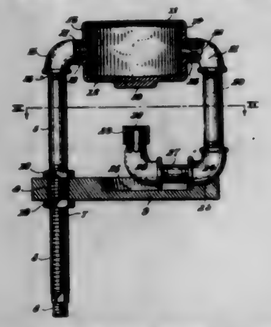
1. A press for tennis and other rackets, comprising a frame, spaced uprights secured to said frame, members movable angularly and longitudinally relative to the uprights and having lateral extensions, and means to adjustably secure said members on the uprights.

1,558,282. SEED SOWING AND DISTRIBUTING MACHINE. GUSTAV PRANG, Rickreall, Oreg. Filed Sept. 15, 1924. Serial No. 737,875. 1 Claim. (Cl. 275—2.)



In a device of the class described, a hopper provided with a seed discharge, a casing into which the seeds are adapted to be discharged, means for mounting said casing to permit oscillation thereof, a distributing spout carried by said casing, a fan for ejecting the seeds, said fan being disposed within said casing, means for controlling the discharge of seed from said hopper, and a single driven shaft for simultaneously operating said seed control means, rotating said fan, and oscillating said casing.

1,558,283. FUEL BURNER. MURRAY E. PAGE and THOMAS S. PAGE, Syracuse, N. Y. Filed Dec. 21, 1923. Serial No. 682,071. 2 Claims. (Cl. 158—63.)

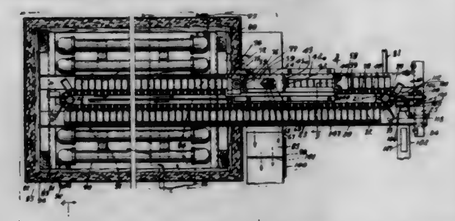


2. In a burner of the class described, a vertically disposed fuel supply pipe having its lower portion screw threaded, an elbow carried by the upper end of said

pipe, a retort connected to the elbow, a drip pan mounted on the threaded portion of the fuel supply pipe to move vertically thereon, adjusting nuts on said threaded portion of the fuel supply pipe above and below the drip pan to adjust the position of the latter on the fuel supply pipe, a burner head supported by the drip pan, and a pipe connection between the burner head and retort, said drip pan having a drip recess wherein the lower part of said pipe connection rests and being laterally extended on each side thereof to provide heat conserving means.

---

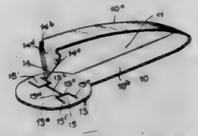
1,558,284. MOLDING APPARATUS. LEWIS A. PALEY, Buffalo, N. Y. Filed June 29, 1922. Serial No. 571,646. 27 Claims. (Cl. 18—26.)



1. In a molding machine, an endless chain of molds adapted to move entirely in a substantially horizontal plane, means for introducing a hot, liquid substance into said molds, means for cooling said substance to form cakes, and means for ejecting the cakes from the molds.

---

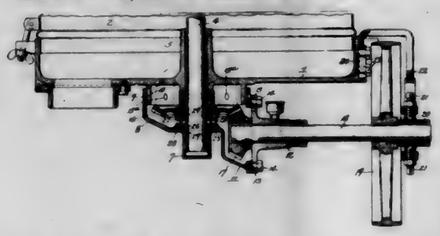
1,558,285. LOCKING DEVICE. SYLVESTER RAPHAEL, Brooklyn, N. Y., assignor to Sylvia Raphael, New York, N. Y. Filed Aug. 14, 1923. Serial No. 657,321. 6 Claims. (Cl. 24—153.)



1. A fastening device of the character described including a female member having an opening, a resilient member disposed to either side of the opening, a male member having a head relatively larger than said opening adapted to enter therein and means on the male member for engaging said resilient member to permanently interlock the male and female members.

---

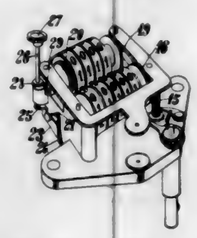
1,558,286. VEGETABLE-PARING MACHINE. HENRY ROBINSON, Lindenhurst, N. Y. Filed Dec. 11, 1924. Serial No. 755,186. 4 Claims. (Cl. 74—7.)



1. In a machine of the character described, the combination comprising a supporting frame having a main bearing for a vertical driven shaft and a depending flange, a driving shaft and a driven shaft, a gear and a pinion connecting the same, a housing for the gears attached to the depending flange from the supporting frame, a step bearing interposed between the gear and the housing, a journal bearing for the driven shaft in said housing on the opposite side of said gear from the main bearing, and a flanged bearing for the driving shaft attached to the housing.

---

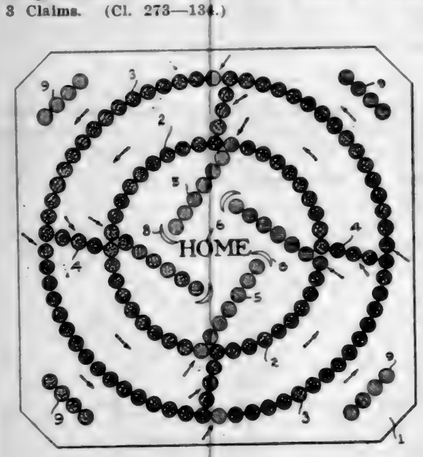
1,558,287. REGISTERING COUNTER. CHARLES HILAIRE HENRI RODANET, Paris, France, assignor to Société Anonyme: Etablissements Ed. Jaeger, Paris, France. Filed Jan. 4, 1924. Serial No. 684,425. 4 Claims. (Cl. 235—134.)



1. In a registering counter, juxtaposed digit drums adapted to be frictionally operated, a ratchet on one of the drums, the other drums being provided with a circular race, a tooth projecting from said circular race, and means for cooperating with said circular race and said projecting tooth to engage or release the teeth of the ratchet of said digit drum.

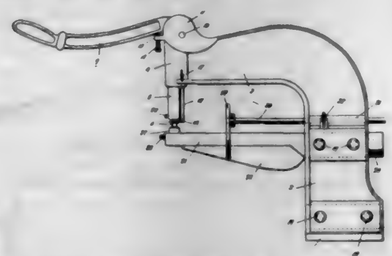
---

1,558,288. GAME APPARATUS. HARRY ROMAN, Wilmington, Del. Filed Mar. 6, 1925. Serial No. 13,597. 3 Claims. (Cl. 273—134.)



1. A game apparatus consisting of a playing field having a playing area defined by concentric series of circles, radial series connecting the concentric series, and tangential series projecting inwardly from the inner of the concentric series and being arranged at right angles to define a "home" space, each radial series being adjacent a tangential series and identified with the inner concentric series, the tangential series being distinguishably colored among themselves and the concentric series being distinguishable in color from the tangential series.

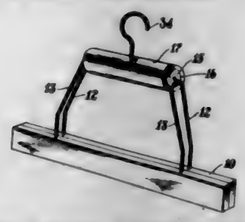
1,558,289. PUNCH. HEYMAN ROSENBERG, New York, N. Y. Filed Apr. 6, 1925. Serial No. 21,014. 3 Claims. (Cl. 164—96.)



1. In punches, the combination of a standard and arm, the standard having a plurality of shank-receiving sleeves spaced apart vertically, a punch bar reciprocally carried by the arm, means for actuating the punch bar, an arbor having a shank proportioned to fit and be sustained by either of the sleeves, the arbor having a die-receiving opening, and an extension standard having a die-receiving opening at one end and a shank at the other proportioned to and mounted in the die-receiving opening of the arbor.

---

1,558,290. TROUSERS HANGER. PHILIP K. RUSSELL, New York, N. Y. Filed Dec. 27, 1924. Serial No. 758,345. 3 Claims. (Cl. 211—18.)



1. A trousers hanger comprising a tubular handle, a spindle extending freely through said handle, a pair of disks mounted freely on said spindle one near each end thereof and having said handle fixed thereto, a spring attached at one end to the said spindle and having its other end engaged in a notch in one of the said disks to urge the said spindle and handle in a rotary direction upon one another, gripper elements carried respectively by the spindle and handle, and means for releasing the last named end of the spring from the said disk and engaging it with the said spindle.

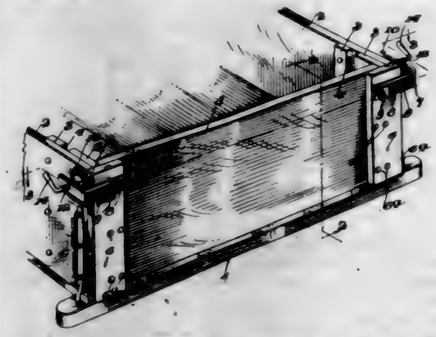
---

1,558,291. CAR ROOF. THOMAS NATHAN RUSSELL, Chicago, Ill., assignor, by mesne assignments, to Chicago-Cleveland Car Roofing Company, Wilmington, Del., a Corporation of Delaware. Filed June 4, 1918. Serial No. 238,085. 1 Claim. (Cl. 108—5.)

In a mullion roof for railway cars wherein such mullions define roof spaces in which separate roof sheets are confined and in which all sides of each sheet are held in such manner that the sheet is free for movement longitudinally of the roof, the combination of the mullion strips, roof sheets arranged between said mullion strips, mullion caps freely interlocked with the sides of the roof sheets the latter being freely movable with relation thereto, the eaves ends of said mullion caps being bent downwardly and thence inwardly under the eaves ends of the mullion strips, the sheets and caps having reversely rebent flanges for such purpose which restrain vertical displacement of the sheets and caps, securing means for the ridge ends of the sheets which restrains them from movement towards the eaves but leaves them free for the said longitudinal movement paralleling the ridge axis of the roof, and securing means within the eaves lines of the roof confining the eaves ends of the sheets from upward movement and leaving them free for said longitudinal movement.

---

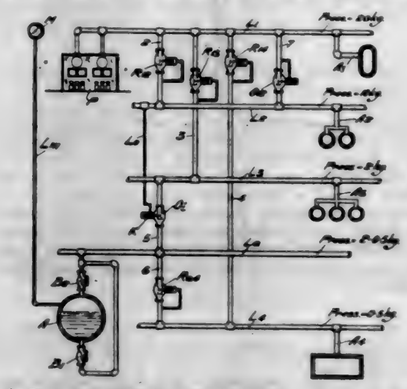
1,558,292. END GATE FOR WAGONS. WILLIAM H. RUSSELL, Clarksville, Va., assignor to C. H. Russell & Son, Inc., Clarksville, Va., a Corporation of Virginia. Filed Apr. 1, 1925. Serial No. 19,929. 2 Claims. (Cl. 296—53.)



1. An end gate for use with wagons having sides provided with washers on their outer faces and comprising a gate body adapted to fit between and engage the sides, brackets having portions fastened to the gate body and having arms rigidly connected with said portions and overlying the washers on the sides of the wagon, and screws threadedly connected with said arms and engageable in and with said washers to exert an inward pressure on the sides of the wagon to force the sides against the ends of the end gate and to secure the end gate to the sides of the wagon.

---

1,558,293. STEAM-ACCUMULATOR APPARATUS FOR STEAM PLANTS. JOHANNES RUTHS, Djursholm, Sweden, assignor to Aktiebolaget Vaporackumulator, Stockholm, Sweden, a Corporation. Filed Oct. 18, 1922. Serial No. 595,401. 7 Claims. (Cl. 60—94.)

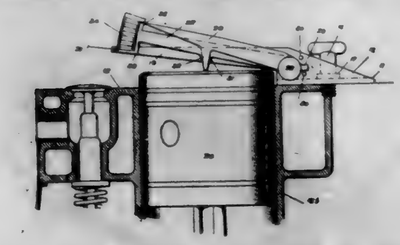


1. In a steam plant, in combination, a steam generator, a steam conduit system connected therewith, an accumulator and a plurality of steam consumers in said con-

duit system, a main conduit in said conduit system, a secondary conduit in said conduit system having a lower pressure than in said main conduit, a connection adapted to receive steam from said secondary conduit, means to pass steam from said connection to said accumulator, a third conduit in said conduit system, having a pressure different than that in the afore-mentioned conduits, means in said connection to control the flow of steam therethrough responsive to the pressure in said third conduit.

---

1,558,294. PISTON-POSITION INDICATOR. ANTON I. SANDBO, Rock Island, Ill., assignor of one-third to J. Hays Britton, Rock Island, Ill. Filed July 16, 1924. Serial No. 726,369. 4 Claims. (Cl. 33—180.)



1. A piston position indicator comprising three members assembled with one another, one member having means for mounting it on a cylinder block, a second member being movable relatively to the first named member in one direction only with the piston, and the third member being movable relatively to the second member in both directions with the piston, the first named and second members having cooperable pointer and graduations for indicating the position of the second member relatively to the first-named member, and the second and third members having cooperable pointer and graduations for indicating the position of the third member relatively to the second member.

---

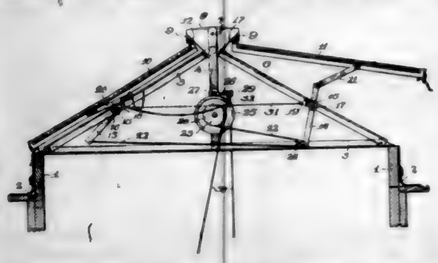
1,558,295. FISHHOOK. JIM SAWYERS, Caddo, Tex. Filed May 16, 1925. Serial No. 30,745. 1 Claim. (Cl. 59—95.)

A fish hook comprising an eye head of substantial diameter provided with a circular base, a fish hook shank with a tapered extremity passing through the center of the base of the eye head, a detachable collar on the tapered portion of the shank below the base, the extremity of the tapered portion being swaged or peened over which, together with the collar, prevents movement of the hook shank in either direction, allowing the fish hook to twirl as well as the fish that may be suspended thereby.

---

1,558,296. VENTILATOR. LISLE C. SCHAUB, Chicago, Ill. Filed Jan. 14, 1925. Serial No. 2,350. 5 Claims. (Cl. 108—31.)

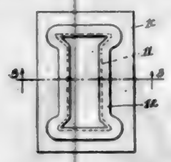
1. A ventilator comprising supporting trusses consisting of a cross-beam, a king post thereon, and rafters inclined from opposite ends of the cross-beam to the upper portion of said post, closures hingedly mounted upon said trusses, levers fulcrumed intermediate their ends on said rafters and operatively connected at their outer end with said closures, a windlass, a cable secured at one end to and adapted to be wound upon said windlass and at its opposite end secured to the free end of



one of said levers, said cable intermediate its ends having coaction with the free end of the other lever, pawl and ratchet devices for each lever, means for operating said windlass, and means connecting said pawl and ratchet device and engaged with said windlass operating means whereby to actuate the respective pawls.

---

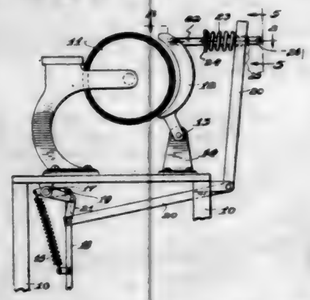
1,558,297. SIGN. JOHN M. SCHILLING, Lima, Ohio. Filed Nov. 3, 1924. Serial No. 747,500. 9 Claims. (Cl. 40—125.)



7. In a sign, a character element formed from a bar of semi-plastic material shaped to constitute an inner and an outer outline of said character, said bar being of substantial width and thickness and having a groove along one side for engaging a mounting plate.

---

1,558,298. IRONER. CHESTER L. SCHWARTZ, Detroit, Mich. Filed Mar. 16, 1922. Serial No. 544,178. 1 Claim. (Cl. 68—9.)



In an ironer, a frame provided with a pair of angular supporting arms, a roll supported between said arms to provide free clearance underneath the roll from the arms, a pair of standards carried by the frame positioned on the opposite side of the roll, an arcuate shoe pivotally mounted between said standards to be swung toward and away from said roll, pedal operated mechanism, a pair of bell crank levers connected with said pedal operated mechanism to be actuated thereby, a pair of connecting links secured to said shoe, one extending slidably

through each of said bell crank levers, each connecting link being provided with spaced apart stops one on each side of the bell crank lever, a coil spring encircling the connecting link between the bell crank lever and the stop nearest the shoe, to hold the shoe toward the roll and adapted to hold the bell crank lever against the stop farthest from the shoe, and a spring engaging said pedal operated mechanism and exerting pressure thereon to normally hold the shoe away from the roll.

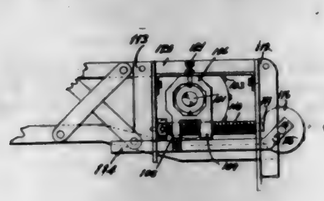
---

1,558,299. MIXED ESTERS OF LOWER AND HIGHER FATTY ACIDS AND PROCESS OF MAKING SAME. GEORGE L. SCHWARTZ, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 11, 1922. Serial No. 551,734. 17 Claims. (Cl. 260—106.)

1. The process of producing a composition containing mixed glycerides of lower and higher fatty acids which comprises heating the glyceride of a higher fatty acid together with concentrated acetic acid in the presence of an esterification catalyst until the desired proportion of higher fatty acid radicals have been replaced by acetic acid radicals in said glycerides, adding glycerine, heating the resulting mass at a temperature substantially below 150° C. until a crude acetin mixture is formed, distilling off any excess acetic acid, and then heating the resulting mixture at a temperature above 150° C. but below that at which thermal decomposition of the glycerides occurs, while passing an inert gas through the mixture to remove water as it is formed, until esterification of the higher fatty acid by the acetin is practically complete.

---

1,558,300. ENDLESS ELEVATOR. MAILLER SEARLES, Oakland, Calif.: Clara Cliff Searles, executrix of said Mailler Searles, deceased, assignor to Mailler Searles, Inc., San Francisco, Calif., a Corporation of California. Filed Dec. 11, 1922. Serial No. 606,287. 2 Claims. (Cl. 198—103.)

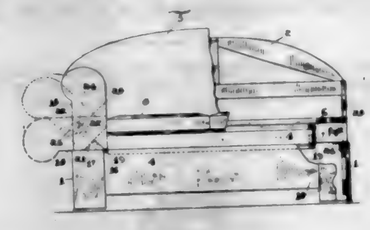


1. An elevating machine comprising an inclined support, endless chains passing over said support, flights connecting said chains to carry packages up the incline, adjustable sprocket wheels at the top of the incline over which the chains pass, a discharge roller for the packages and a pair of slidable bars to support said discharge roller at a fixed distance from the sprocket wheels at the top of the incline in all adjustments thereof, said support being movable with the adjustment of the sprocket wheels and each bar having a double support in the inclined frame.

---

1,558,301. FOLDING COUCH AND THE LIKE. FREDERICK L. H. SIMS, Southhampton, Canada. Filed July 24, 192. Serial No. 577,261. 1 Claim. (Cl. (155—113.)

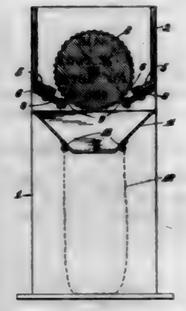
The combination of a sofa having a fixed end member and a seat; a movable sofa arm adapted to lie with one side either abutting the end of the seat or resting on the fixed end member; a hinge pivotally connected with the sofa adjacent the seat and pivotally connected with the said side of the movable arm



midway between its inner and outer edges, whereby said edges travel in planes substantially at right angles to one another as the said end is swung on the hinge.

---

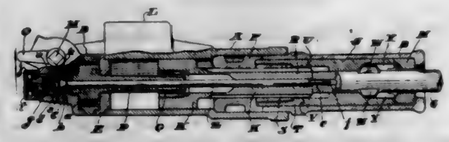
1,558,302. CRUSHER. BEN HILL SMARTT, Five Points, Ala. Filed Nov. 22, 1923. Serial No. 676,266. 4 Claims. (Cl. 83—14.)



1. In a crusher, the combination of a drum roller, superimposed plates arranged at the sides thereof beneath the horizontal plane of the axis of the roller and inclined to serve as a hopper for directing material toward the roller, each of the superimposed plates having a cutting or crushing edge presented toward the roller and adapted to cooperate therewith for enabling the roller to effectively crush material fed thereto when the roller is revolved in either direction.

---

1,558,303. DOUBLE-TUBE CONNECTION. RAYMOND H. SMICKLE, Belvidere, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 24, 1924. Serial No. 739,538. 8 Claims. (Cl. 121—10.)

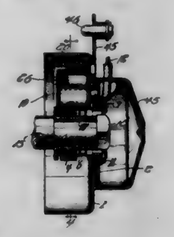


1. In a fluid actuated rock drill, the combination of a cylinder with a back head, a coniform seat in said back head, a reciprocatory hammer piston in said cylinder, a pair of concentrically arranged conical ended fluid conveying tubes extending through the cylinder, and

resilient means for holding the conical end of one of said tubes against said coniform seat and for holding the conical end of the other said tube in fluid tight contact with the corresponding end of the first said tube.

---

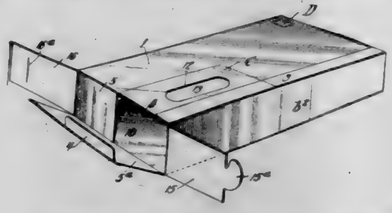
1,558,304. TIMING DEVICE. THEODORE J. SMULSKI, Chicago, Ill. Filed Aug. 18, 1919. Serial No. 318,097. 8 Claims. (Cl. 200—25.)



2. In a timing device; a commutator, a sleeve passing through the commutator out of electrical contact therewith and adapted to be secured to a timing shaft, a radial arm on said sleeve, a contact carrying lever pivoted between its ends on said radial arm and revolvable about the commutator, a contact on one arm of said carrier, spring means for normally holding said contact in operative relation to the commutator and a counterweight on the other arm of the said contact carrying lever.

---

1,558,305. ENVELOPE AND CARTON. MARY IRENE SNAPE, Springfield, Ill. Filed Jan. 7, 1922. Serial No. 527,575. 5 Claims. (Cl. 229—27.)

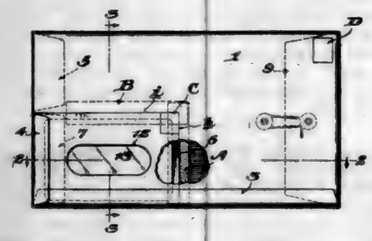


5. A package for mailing purposes, comprising a rectangular body having six sides and formed from a single sheet of material and including a box-like compartment for mail matter less than first class, and a relatively small letter compartment on the top of said box-like compartment, so that one address applied to the small compartment is sufficient for both kinds of mail matter, flaps for accessibly closing the opposite ends of said box-like compartment, and a flap for non-accessibly sealing the small compartment.

---

1,558,306. ENVELOPE. MARY IRENE SNAPE, Springfield, Ill. Original application filed Jan. 7, 1922, Serial No. 527,575. Divided and this application filed July 29, 1925. Serial No. 46,800. 7 Claims. (Cl. 229—72.)

7. A blank for forming an envelope having a large and a smaller compartment including a sheet foldable to provide a front and a back, an extension on the front at one end thereof having an outer end substantially registering with the adjacent end of the front, said front having a window and said extension being foldable to underlie the window and to form a smaller compartment in conjunction with the front, a flap on the adjacent end of the front between the window and the rear side of the front formed to be



secured to the back, and a flap on the back adjacent the rear side thereof formed to extend over the said outer end of the extension.

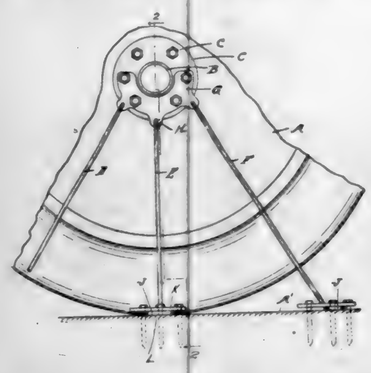
---

1,558,307. RAILROAD-TRACK TRUSS ROD. WILLIS W. STEPHENS, Glencoe, Okla. Filed Jan. 15, 1924. Serial No. 686,293. 3 Claims. (Cl. 238—52.)

3. The combination with a truss rod connecting the bases of adjacent rails, of clamps carried by the ends of said truss rod, said clamps comprising flat bars engaging the under sides of the bases of the rails, integral clamping jaws carried by said flat bars, a clamping jaw slidably mounted on each flat bar, said last named clamping jaws being each formed from a flat member engaging the flat bar, integral flanges carried by said flat member and engaging over the edges of the flat bars, said flat member having its inner end provided with a split sleeve and means cooperating with said sleeve for forcing the clamping member as a whole outwardly.

---

1,558,308. VEHICLE ANCHORAGE DEVICE. HARRY STERNBERGH, Detroit, Mich., assignor to William W. Blakely, Detroit, Mich. Filed Nov. 10, 1924. Serial No. 749,041. 6 Claims. (Cl. 188—32.)



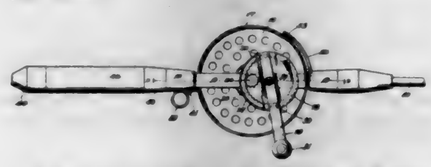
1. In an anchorage device for vehicles, the combination with a vehicle wheel having a body portion, a hub portion and fasteners securing said hub portion to the body portion, of a tie member for holding said wheel from movement, and a member connected to said tie member secured by said fasteners to said wheel.

1,558,309. DISTRIBUTING STICK FOR TYPE. WILLIAM HENRY STOREY, Leicester, England. Filed Sept. 4, 1924. Serial No. 735,747. 6 Claims. (Cl. 276—37.)

1. A distributing stick for type provided with a closed end and a pronged end, characterized in that an adaptor is so pivoted at a point near the pronged end that it can be moved into and out of operative position forming a connected part of the distributing stick with no loose parts to be lost or damaged.

---

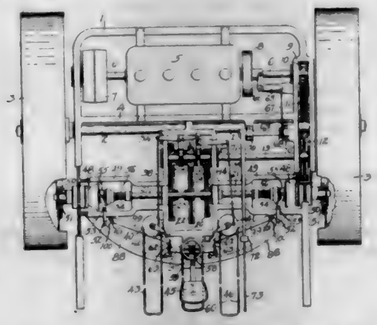
1,558,310. FISHING REEL. GEORGE A. SWASEY, Milo, Me. Filed Oct. 3, 1923. Serial No. 666,816. 4 Claims. (Cl. 43—20.)



1. A fishing reel including a frame, a spindle journaled thereon, means for rotating the spindle, a sleeve upon the spindle limiting the spindle against displacement, a sectional spool assembled upon the sleeve, means rotatably adjustable on the sleeve and clamping the spool sections in position, and means locking the sleeve and spindle to turn in unison and disposed to limit said clamping means against retrograde movement.

---

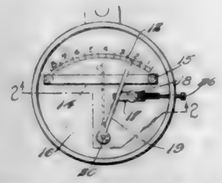
1,558,311. LINE-DRIVE TRACTOR. HOWARD M. SWEET, Detroit, Mich., assignor, by direct and mesne assignments, to Rex Tractor Co., Detroit, Mich., a Corporation of Michigan. Filed Apr. 6, 1921. Serial No. 459,138. 3 Claims. (Cl. 180—17.)



1. In a tractor, means for controlling the operating parts thereof comprising the combination with driving wheels, frame, power plant and transmission mechanism, of a jack shaft operatively connected with the power plant, a clutch member at each end of the jack shaft for connecting or disconnecting the same with the respective driving wheels, levers for operating the clutch devices, transmission mechanism including shiftable members for causing a forward or reverse movement of the tractor, a hand lever for the forward and a hand lever for the reverse shift devices, a wheel connected with each lever, a pair of lines for turning each wheel from a distance and thereby move the respective lever to actuate the shift devices, mechanism for operating each of the clutches including a rotatable shaft, a lever thereon for each clutch device adapted to actuate the same upon turning in one direction only, a wheel on the said shaft, and a pair of lines for the wheel adapted to turn the same in one direction or the other.

---

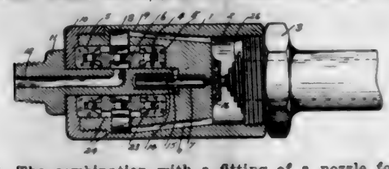
1,558,312. ELECTRIC FLATIRON. PETER SZENT, Chicago, Ill. Filed Mar. 8, 1922. Serial No. 542,191. 5 Claims. (Cl. 219—25.)



1. In an electric flat iron having a heating unit, a circuit control means comprising a pair of spaced contacts, a circuit closer adapted to make contact with both of the aforesaid contacts, and a thermostatic means adapted to actuate the circuit closer to open and close the circuit upon temperature changes in the iron.

---

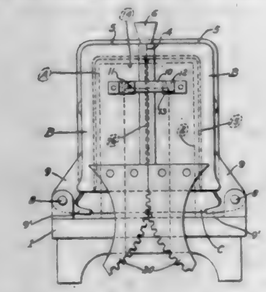
1,558,313. LUBRICATING SYSTEM. PERLE E. TARLTON, Los Angeles, Calif., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 10, 1922. Serial No. 593,527. 5 Claims. (Cl. 285—163.)



1. The combination with a fitting of a nozzle for receiving said fitting, having a bore and a passageway communicating with said bore intermediate its ends, means adjacent each end of said bore for making sealing contact with said fitting, said nozzle including a passageway for venting the inner end of said bore, and an inwardly opening check valve closing one end of said last named passageway.

---

1,558,314. CASTING APPARATUS. GEORGE K. THOMPSON, Summit, N. J. Filed Aug. 31, 1923. Serial No. 660,267. 11 Claims. (Cl. 22—136.)



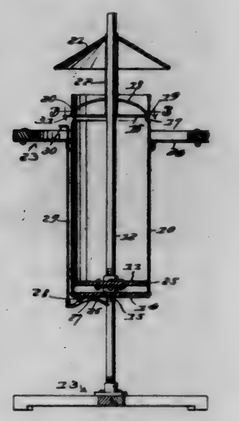
2. A mold comprising a support provided with a core, mold sections hinged to said support and movable toward and away from said core, and operating means whereby motion is transmitted from one of said mold sections to the other, so as to prevent independent movement of said sections, said operating means comprising toothed gears concentric with the hinges.

1,558,315. SAW FRAME. ERIK TIMANDER, Orsa, Sweden. Filed Oct. 18, 1924. Serial No. 744,370. 5 Claims. (Cl. 145—34.)

5. A saw frame comprising two tube-pieces, the one sliding within the other, a locking ring sliding on the one tube-piece, a projection on the ring facing the adjacent end of the other tube-piece and a depression in a part of the edge of the latter tube-piece which depression is received within the ring and cooperates with the projection for tilting the locking ring and causing it to catch into its tube-piece when the two tube-piece are pushed together.

---

1,558,316. POULTRY FEEDER. JOHN E. TIPPLE, Union City, Ohio. Filed Dec. 4, 1924. Serial No. 753,941. 12 Claims. (Cl. 119—51.)

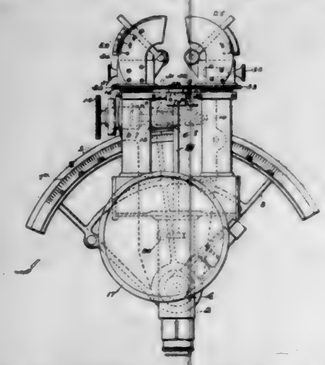


12. A poultry feeder having a reservoir or receptacle carrying a poultry perch, a stationary follower fitted in the reservoir or receptacle and forming the bottom of the feed chamber thereof, the reservoir or receptacle being movable vertically with relation to the follower, and means for controlling the movement of the reservoir or receptacle with relation to the follower, the follower being carried by a stationary rod or stem carried by said perch, and means mounted upon the reservoir or receptacle for engaging the rod or stem to lock the former against downward movement and consisting of a spring actuated pawl, an operating rod connected therewith, and a retaining pin for engagement by a finger of the operating rod to secure the pawl in its disengaged position.

---

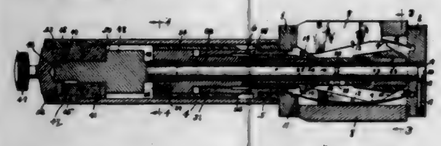
1,558,317. MEANS AND METHOD OF POSITION FINDING BY ASTRONOMICAL OBSERVATION. JOHN PARKER VAN ZANDT, Washington, D. C. Filed June 3, 1921. Serial No. 474,794. 16 Claims. (Cl. 88—2.7.)

1. In a position finding device, means for observing two celestial objects simultaneously and bringing their images into coincidence, said means comprising a telescope system with two objectives and two collimators, and means mounted on each of said collimators capable of rotation in a plane perpendicular to the axis of the collimator, and also capable for rotation in a second plane perpendicular to said first named plane, and suitable scales for indicating the degree of both rotations, and means for setting said first named means against either or both rotations.



---

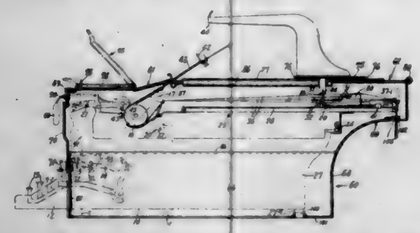
1,558,318. INSIDE MICROMETER GAUGE. HARRY VOLLS, Detroit, Mich., assignor to Volls Precision Tool Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 21, 1924. Serial No. 733,314. 10 Claims. (Cl. 33—178.)



1. In a gauge, the combination of a hollow cylindrical body having a radial slot, a central shaft in the body, expanders slidably mounted on the shaft and having surfaces inclined to the axis of said shaft, a blade mounted in the slot in engagement with said inclined surfaces on the expanders, means to slide the expanders along the shaft in one direction as a unit to force the blade outwardly, and means to vary the distance between said expanders.

---

1,558,319. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 17, 1921, Serial No. 501,229. Renewed Oct. 8, 1923. 46 Claims. (Cl. 197—186.)

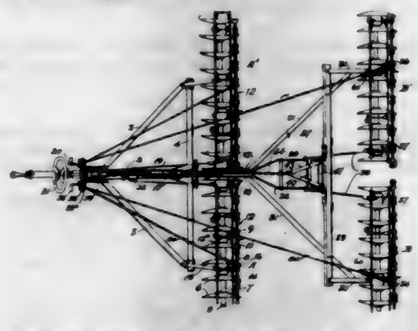


1. A sound-deadening casing for a continuous billing typewriting machine comprising a frame with a keyboard extension and a carriage with a swingable platen-displacing frame, said casing comprising a body-part through the front of which said extension projects, and a cover

comprising a rearward portion and a forward portion swingable, forward edge first, to a position to rest on said extension and permit forward swinging of the platen-displacing frame, and having a door to permit access to the typewriting machine without shifting said forward portion to its normal position.

---

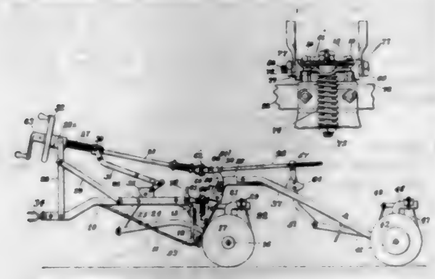
1,558,320. DISK-HARROW MECHANISM. CHARLES H. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Aug. 4, 1919, Serial No. 315,088. Renewed Mar. 21, 1925. 12 Claims. (Cl. 55—83.)



1. The combination of a front frame, the disk gangs connected thereto, the rear laterally swinging frame flexibly connected to the front frame, the rear gangs connected to the rear frame and adjustably movable relatively thereto, the adjusting device for the rear gangs having a rear element supported on and movable longitudinally of the rear frame, and a front element supported on the front frame and held on lines approximately fixed relatively to said frame, and adapted to exert draft on the rear element and on the rear gangs, and a vertically swinging lever supported on a pivot approximately in the vertical lines around which the rear frame swings and adapted to actuate the rear gang adjusting device.

---

1,558,321. DISK HARROW. CHARLES H. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Jan. 26, 1920. Serial No. 354,011. 46 Claims. (Cl. 55—88.)



1. In a disk harrow, the combination of front and rear frames pivotally connected together for angular swinging relatively to each other about a vertical axis, and yielding means normally holding said frames against such angular swinging in either direction from their normal position, said means being operable by steering force tending to change the line of travel of the harrow to permit such swinging.

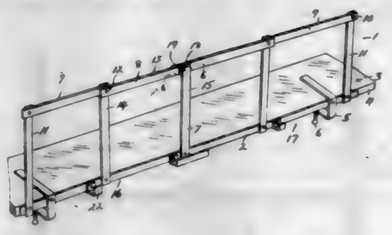
29. A disk harrow comprising in combination a front frame, disk gangs connected with said frame, a rear frame, disk gangs connected with said rear frame, means pivotally connecting said frames together to swing angularly relatively to each other about a vertical axis, a gang adjusting lever mounted on the rear frame, connections operable by said lever to adjust the cutting angle of the rear gangs positively in either direction, and means having a support on the front frame and operatively connected with said lever for actuating the same.

35. In a disk harrow, the combination of a front frame, gangs of disks adjustably connected thereto, a rear frame pivotally connected to the front frame to swing laterally relatively thereto, gangs of disks adjustably connected to the rear frame, power transmitting parts mounted on the front and rear frames respectively and connected with the respective gangs, and power mechanism supported on the front frame and connected with said transmitting parts to positively move the latter fore and aft to adjust the front or rear gangs.

46. In a disk harrow a front frame, gangs of disks connected with said frame and adjustably movable fore and aft, gang adjusting devices carried by said frame and adapted to be operated to adjust said gangs, a rear frame pivotally coupled with the front frame, gangs of disks connected with said rear frame and adjustably movable fore and aft, self-locking gang adjusting devices carried by said rear frame for adjusting said rear gangs and holding them in their different positions of adjustment, and independently operable coaxially mounted means for operating said gang adjusting devices.

---

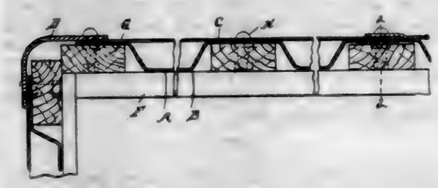
1,558,322. LUGGAGE CARRIER. JAMES FRAZER WHITEHEAD, Detroit, Mich., assignor to Kales Stamping Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 29, 1923. Serial No. 671,538. 9 Claims. (Cl. 224—29.)



8. In a collapsible luggage carrier, the combination with a supporting bar, of a link pivotally connected thereto, a rail pivoted to the link, and a second link pivoted to the supporting bar detachably connected to said rail.

---

1,558,323. CAR BODY. FREDERICK M. WHYTE, Tarrytown, N. Y., assignor to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 6, 1917, Serial No. 205,776. Renewed Nov. 17, 1922. 14 Claims. (Cl. 105—409.)



4. In a car body, an end wall comprising pairs of metallic sheets extending from the center to the sides and from the sill to the plate, the inner sheets having inwardly-embossed panel portions and portions intermediate said panel portions and above and below the

same, lying substantially in the original plane, the outer sheets lying adjacent to the portions of said inner sheets which are in the original plane and being rigidly secured thereto, and the marginal portions of said sheets at the center of the car being overlapped, interspaced and secured to each other.

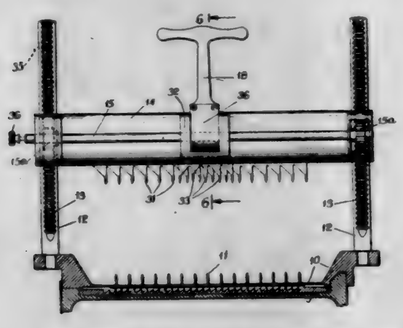
---

1,558,324. SWITCH. CHARLES D. WIEMER, Los Angeles, Calif. Filed Apr. 13, 1922. Serial No. 552,376. 2 Claims. (Cl. 200—5.)

1. A switch for a signalling system comprising a contact having spaced contact points, a movable contact cooperating therewith to intermittently engage the contact points when the switch is actuated, and a circuit maker and breaker comprising a fixed contact and a movable contact actuated by said first movable contact, said circuit maker and breaker being arranged whereby an electric circuit including said first movable contact is opened, and a circuit including said fixed contact is closed, when the switch is actuated.

---

1,558,325. CLAMP FOR MEAT-SLICING MACHINES. GEORGE RUE WOOD, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Aug. 24, 1923. Serial No. 659,029. 25 Claims. (Cl. 145—217.)

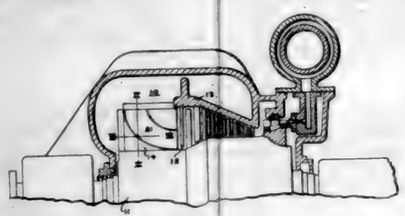


1. A meat clamp comprising in combination with the guide posts of a meat slicing machine, rack teeth thereon, a clamping bar, a shaft carried thereby, pinions upon said shaft engaging the said teeth, a ratchet upon said shaft, a handle supported by said shaft and adjacent said ratchet, a feed pawl supported by said handle and adapted to engage said ratchet, a retaining pawl also adapted to engage said ratchet, and means operable by the displacement of said handle for engaging and disengaging said pawls and ratchet and for rotating the ratchet and thereby through the pinions and rack lowering said clamping bar.

---

1,558,326. TURBINE BLADING. ERIC ZETTERQUIST, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 21, 1923. Serial No. 682,102. 16 Claims. (Cl. 253—77.)

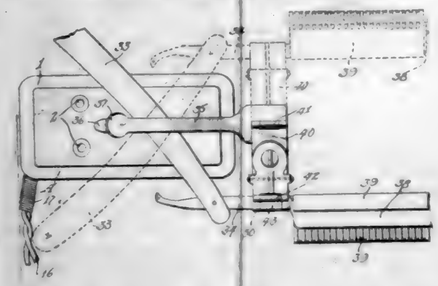
1. In a turbine, an exhaust blade structure comprising a row of wide blade elements and a plurality of rows of energy-abstracting elements associated therewith, whereby the total cross sectional areas of the passages be-



tween the inlet and the energy-abstracting portions may be made not greater than the inlet areas between the blade elements.

---

1,558,327. HOLDING DEVICE FOR VIBRATORS. GIORGI ADELMO, Spring Valley, Ill. Filed Oct. 17, 1924. Serial No. 744,298. 4 Claims. (Cl. 30—12.)



1. A device of the type described comprising a casing, an electric vibrating mechanism mounted within said casing, and a clamping mechanism operatively connected with said vibrating mechanism for supporting the ordinary type of razor thereupon in an operative position, whereby the razor may vibrate with said clamping mechanism, said clamping mechanism comprising a guide strap having a spring clamp for pressing the blade of said razor into engagement with said guide strap, and a second clamping member arranged to hold the handle of said razor against movement, said second named clamping member comprising spring portions arranged to yieldably engage with the exterior walls of said handle and a separator arranged to extend through the solid portion of said handle, said spring members and said separator being in substantial registration with one another.

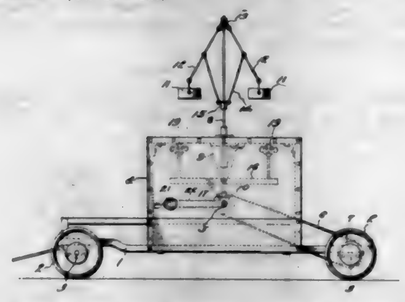
---

1,558,328. SAW-SETTING APPARATUS. DOMINIK ALESKUS, Cloquet, Minn. Filed May 5, 1925. Serial No. 28,284. 1 Claim. (Cl. 76—71.)

A saw setting device including a stem having one end threaded, and the other end merging into a flattened portion, a handle threadedly engaged on the threaded end of the stem, a second handle extending rigidly from the flattened portion coaxially with the first handle and the stem, said flattened portion provided with a slot forming a pair of spaced jaws, a regulating plate slidably mounted over the slot in the flattened portion and having an extension at its end disposed in the slot, a plate on the flattened portion, said regulating plate slidable through said last mentioned plate, and a set screw threaded through the last mentioned plate for holding regulating plate in different adjusted positions.

---

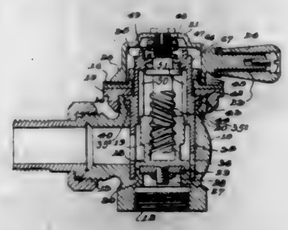
1,558,329. TOY. BERNARD J. ASSENDRUP, Twin Falls, Idaho. Filed Mar. 10, 1923. Serial No. 624,289. 1 Claim. (Cl. 46—45.)



A toy of the class described comprising a wheeled frame, a housing thereon having openings in its top, a horizontal shaft journaled in the housing, means for driving said shaft from one of the wheels of the frame, a vertically arranged shaft passing through the top of the housing, gears connecting the same with the horizontal shaft, arms pivotally connected with the top of the vertical shaft, baskets connected with the lower ends of the arms, a collar slidably mounted on the vertical shaft, links pivoted to the collar and to the arms, a hanger in the housing, a see-saw pivoted to the hanger, an eccentric on the horizontal shaft, a link connected with the eccentric strap and with the see-saw, figures carried by the see-saw and adapted to appear and disappear through the openings in the top of the housing when the see-saw is actuated, a musical device and means for actuating the same from the horizontal shaft.

---

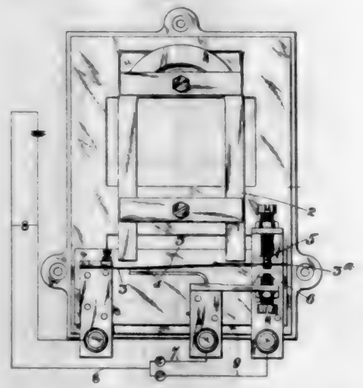
1,558,330. VALVE FOR RADIATORS. JAMES GARFIELD BAIN, Helena, Mont. Filed Apr. 18, 1922. Serial No. 554,596. 3 Claims. (Cl. 251—157.)



1. In a device of the class described, a valve casing including an inlet member and an outlet member, a sleeve mounted in the casing, in vertical alinement with the inlet member, a valve member within the sleeve and including a tubular element, a stem threaded into said tubular element for reciprocating the valve member, said sleeve having circumferentially arranged ports of different sizes, the casing being grooved vertically at points having predetermined relation to the ports, means adapted to enter any of the grooves for retaining the sleeve in position for centering any port thereof in alinement with the outlet member, and guiding means between the valve member and the sleeve.

---

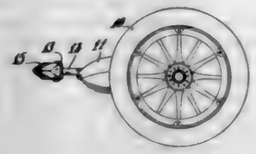
1,558,331. THERMALLY-ACTUATED ELECTRIC SWITCH. PERCY WILLIAM BAKER, Putney, London, England. Filed Sept. 1, 1921. Serial No. 497,644. 1 Claim. (Cl. 200—122.)



A thermally-actuated electric switch, comprising a base, a horse shoe magnet arranged thereon, a block secured on the base, a spring member held at one end in the block, a plate of magnetic material secured to the opposite end of the member and in line with one of the poles of the magnet, said plate being extended and provided with a contact, opposing contacts carried by the base to be engaged by the contact on the plate in the respectively opposite positions of the member, and a circuiting wire coiled about the member, and means for energizing said wire when the member is in position incident to the attraction of the magnet.

---

1,558,332. CUSHIONING FENDER FOR VEHICLES. HENRY H. BASCH, New York, N. Y. Filed Aug. 15, 1924. Serial No. 732,146. 4 Claims. (Cl. 293—55.)



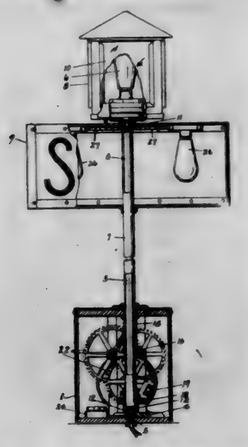
1. A cushioning member for a fender bar comprising a rubber strip arranged for mounting on the said bar, an inner pneumatic tube in said strip, said strip being of triangular cross section, and having a plurality of apertures formed therein, wires passed through said apertures and bent around the top and bottom edges of said bar, and having their outer ends twisted together for holding said member in position on said fender bar.

---

1,558,333. SIGNAL. JOSEPH M. BENNINGHOFF, Bryan, Ohio. Filed June 5, 1922. Serial No. 565,918. 3 Claims. (Cl. 116—68.)

1. In a device of the class described, the combination of a housing, constituting a base, a standard projecting upwardly form said housing, a tubular shaft rotatably mounted on said standard, an actuated member mounted on said shaft, a ratchet-like positioning cam mounted within said housing at the base of said standard, a ratchet-like positioning member on the lower end of said shaft riding upon said positioning cam, a star wheel on

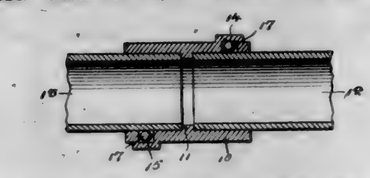
said shaft having teeth corresponding with the cams of said positioning member, a driving wheel provided with a tappet adapted to engage with a tooth of said



star wheel on each revolution whereby the shaft is rotated with a step by step movement, a motor within said housing, and a train of gears connecting said motor to said driving wheel.

---

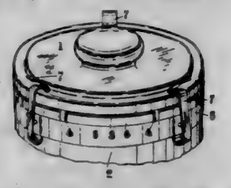
1,558,334. PIPE COUPLING. JOHN C. BOSS and RUDOLPH F. BOSS, Westerville, Ohio. Filed June 27, 1924. Serial No. 722,776. 1 Claim. (Cl. 285—198.)



A coupling for connecting the adjacent ends of two pipes, said coupling comprising a sleeve adapted to receive said pipes, an internal annular flange arranged centrally of said sleeve and adapted to be engaged by the adjacent ends of said pipes, cam shaped pockets arranged adjacent the opposed ends of said sleeve, the walls of each pocket projecting outwardly from said sleeve at one end and merging into the wall of the sleeve at the other end, and one side wall of each pocket having an opening therein, whereby a ball may be inserted in the pocket through said opening after the pipes have been associated with said sleeve for the purpose specified.

---

1,558,335. CLOSURE MEANS FOR JARS. WALDO EDWARD BRADEN, Gilden Park, England. Filed Mar. 5, 1924. Serial No. 697,100. 7 Claims. (Cl. 215—89.)



1. Closing means for jars and the lids thereof having complemental seating surfaces, comprising a washer for application to one of said seating surfaces, positive retaining elements in continuous contact with said washer for permanently securing said washer in position, means for releasably locking the lid to the jar, and positioning means for said retaining elements and said lid locking means.

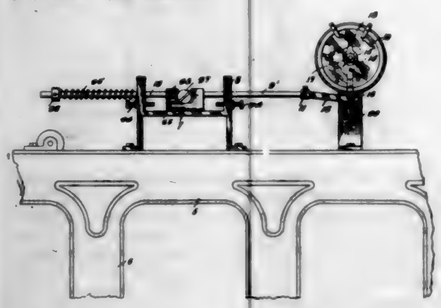
---

1,558,336. PROCESS OF ABSORBING VAPORS. JEAN HENRY BRÉGEAT, Paris, France. Filed Apr. 12, 1924. Serial No. 706,187. 1 Claim. (Cl. 252—4.)

In the absorption and removal of vapors from gas-vapor mixtures, the herein described improvement which comprises subjecting such gas-vapor mixtures to the absorbing action of an absorbent liquid comprising a hydrogenated phenolic body.

---

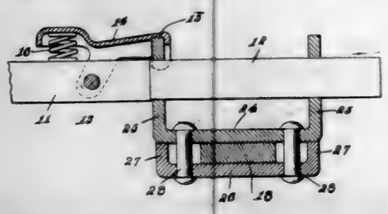
1,558,337. TESTER. WALTER J. BRITTON, Spartanburg, S. C. Filed Sept. 12, 1924. Serial No. 737,429. 6 Claims. (Cl. 265—1.)



1. In combination with a lease rod of a slasher, a frame, bearing brackets mounted on the frame, said brackets including horizontal surfaces having grooves formed therein, bearing members having grooves, balls mounted in the grooves, said bearing members having cut out portions to accommodate the ends of a lease rod, an indicating member mounted on the frame, and means connected with one of the bearing members and indicating member for moving the indicating member when the bearing member moves, and said lease rod adapted to be moved by variations in the thickness of the sizing material on the yarn passing over the lease rod.

---

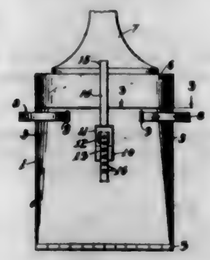
1,558,338. CARRIAGE RUNNER. FERN O. BROOKS, Boyne City, Mich. Filed July 13, 1923. Serial No. 651,365. 1 Claim. (Cl. 280—14.)



Carriage runners of the character described embodying flat transversely rectangular metal strips including a runner and an intermeditately offset bar spaced above the runner, braces connecting the ends of the bar to the runner, front and rear spindle receiving brackets upon the end portion of the intermediately offset bar, the rear bracket comprising a plate having arcuate shaped apertured registering lugs extending therefrom, the front axle bracket including long and short U-shaped companion members respectively, said short companion member secured to the underside of the long companion member and clamping the front portion of the bar therebetween, the upper ends of the long companion members having registering openings therein to receive the pintles of the axles therein, and spring tensioned holding means receiving the inner arcuate shaped ears of the front and rear axle brackets respectively.

---

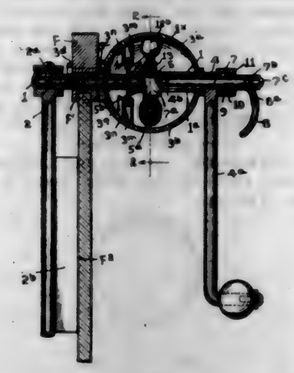
1,558,339. PAINTBRUSH PROTECTOR. LEONARD H. BROWN, North Palo Alto, and RUDOLPH MALMGREN, Mayfield, Calif. Filed Mar. 7, 1924. Serial No. 697,624. 4 Claims. (Cl. 91—63.)



1. A paint brush protector comprising a pair of jaws hinged together at one end and having triangular shaped interlocking sides, and an element mounted thereon and extending beyond one end thereof and adapted to engage the body portion of a brush placed therein.

---

1,558,340. WINDSHIELD WIPER. RUSSELL JAMES BROWNBACK, Norristown, Pa. Filed June 10, 1924. Serial No. 719,168. 14 Claims. (Cl. 15—255.)

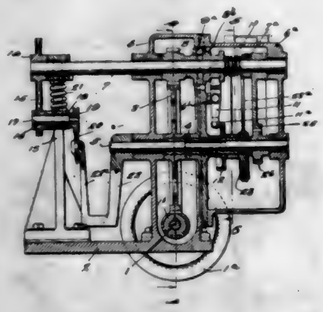


1. A wind-shield wiper, comprising a rock shaft movably mounted on the windshield; means for rocking said shaft; a wiper carrying arm on said shaft engaging the wind shield glass; and means for shifting said shaft to move said arm out of engagement with the glass at the end of each wiping stroke.

---

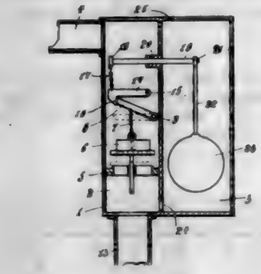
1,558,341. SEAM-REENFORCING MACHINE. JAMES W. BRUNDAGE, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 22, 1923. Serial No. 682,294. 11 Claims. (Cl. 154—1.)

1. In a machine of the class described, a supporting roller journaled to rotate about a fixed axis, a pressing roller cooperating therewith, a supporting arm on one end of which said supporting roller is journaled extending substantially perpendicular to said axis, and means for supporting the other end of said arm and swinging it in a path concentric to said axis.



---

1,558,342. FLUSHING DEVICE. CHARLES EDWARD CHITTENDEN, Auckland, New Zealand. Filed May 21, 1924. Serial No. 714,968. 2 Claims. (Cl. 4—53.)



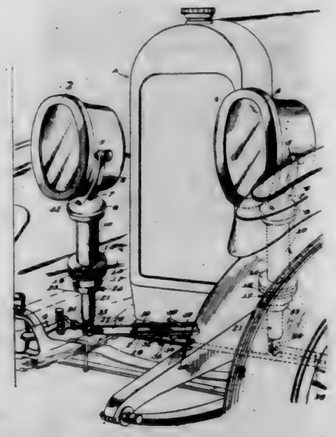
1. A flushing apparatus, comprising, a valve compartment, a valve in the valve compartment, a float compartment, a float in the float compartment, an outflow pipe connected to the valve compartment below the valve, a by-pass interconnecting the compartments, an operating handle, a lever in the valve compartment controlled by the operating handle, a flexible connection between the valve and the lever, a pivoted catch positioned above the lever, a sloping faced hooked end on the catch, an end face on the lever cooperating with the sloping portion of the catch to engage the lever with the catch by gravity when the lever is sufficiently raised, and connecting means between the catch and the float whereby rising of the float causes disengagement of the catch from the lever.

---

1,558,343. HEADLIGHT. GUSTAVE COOK, Gillett, Wis. Filed Feb. 14, 1925. Serial No. 9,254. 3 Claims. (Cl. 240—62.)

1. In a dirigble headlight supporting and operating device, a vertical shaft rotatably supported on a stationary part of a vehicle, said vehicle having the usual axially movable cross connecting rod between the steering arms for the steering wheels of the vehicle, a plate clamped on said connecting rod, said plate having an upstanding stud formed with a reduced upper end portion and with a pair of oppositely extending lateral pin projections, a roller disposed on said reduced upper end portion of the stud, other rollers mounted on the lateral

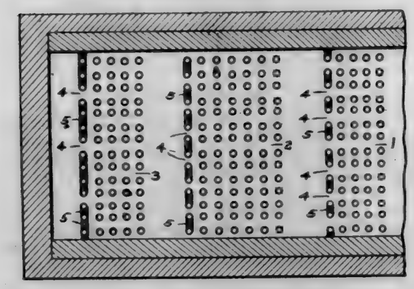
pin projections, and a link attached at one end to the lower end of said shaft and having a longitudinally extending slot in which the roller on the reduced upper



end portion of said stud works, the slotted portion of said link resting upon the rollers on said lateral pin projections.

---

1,558,344. BAFFLING FOR BOILERS. JOSEPH B. CRANE, Pittsburgh, Pa., assignor to George T. Ladd, Pittsburgh, Pa. Filed Oct. 24, 1923. Serial No. 670,489. 2 Claims. (Cl. 110—98.)

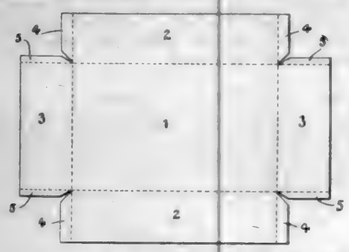


1. A vertical water tube boiler having in combination vertical banks of tubes, a combustion chamber and an outlet for gases so arranged on opposite sides of the banks of tubes that the line of flow of hot gases will be at an angle to the tubes and baffles extending parallel with and the entire widths of the banks of tubes and having openings therethrough the openings in adjacent baffles being out of alinement and the area of said openings increasing from points adjacent to the combustion chamber.

---

1,558,345. DIE. MARTIN DE LIN, Holland, Mich. Filed June 30, 1924. Serial No. 723,085. 6 Claims. (Cl. 113—46.)

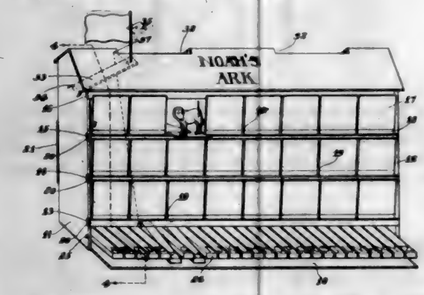
1. A device of the class described comprising a die having a rectangular opening therethrough, rollers mounted at the corners of the die adapted to successively operate upon the flaps of the sides and ends of a box blank to interlock them as the blank from which



the box is formed is forced through the die, and means for forcing a blank through the die substantially as described.

---

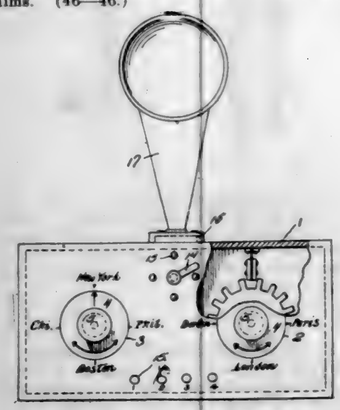
1,558,346. EDUCATIONAL TOY. VICTOR EHRMAN, Los Angeles, Calif. Filed Dec. 23, 1924. Serial No. 757,635. 7 Claims. (Cl. 35—9.)



1. An educational toy comprising end walls, a spindle secured between said end walls, keys pivoted upon said spindle, a support secured between said end walls, panels hinged to said support, statuettes mounted upon said panels and means connecting said keys to said panels whereby when said keys are depressed said panels will be caused to assume horizontal positions so as to display the statuettes thereon.

---

1,558,347. RADIOTOY. ALBERT PHIL FARROW, Knoxville, Tenn. Filed Feb. 26, 1925. Serial No. 11,836. 2 Claims. (46—46.)

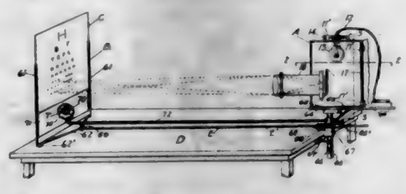


1. A toy of the class described including a cabinet having a front panel provided with an opening, a dial rotatable in the opening and having a hub portion, a

plate on the inside of the panel over the opening and provided with an opening for rotatably receiving the hub of the dial, a wheel on the inner end of the hub provided with radially extending peripheral teeth, and a spring supported on the top of the cabinet extending downwardly to engage the teeth of the wheel whereby when the dial is rotated, a clicking noise will be made.

---

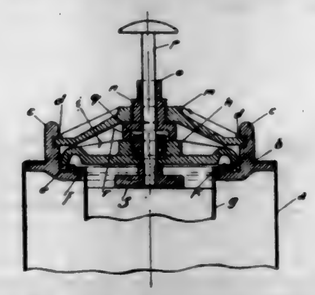
1,558,348. METHOD OF AND APPARATUS FOR VISION TESTING, ETC. CLARENCE ERROL FERREE and GERTRUDE RAND FERREE, Bryn Mawr, Pa. Filed Jan. 24, 1921. Serial No. 439,572. 36 Claims. (Cl. 88—20.)



1. The method of illuminating uniformly a test chart for the purpose of testing visual acuity which comprises the formation of an evenly illuminated aperture, projecting an image of said aperture upon said test chart and varying the intensity of illumination of said image while maintaining uniformity of distribution of illumination in the image without varying the size, shape or color thereof.

---

1,558,349. LID FOR FIRE EXTINGUISHERS. CLEMENS GRAAFF, Berlin, Germany. Filed May 26, 1915. Serial No. 30,671. 3 Claims. (Cl. 220—55.)

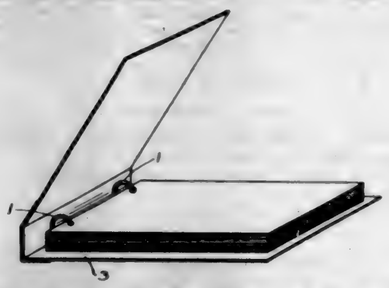


1. A bridged lid for fire extinguishers, consisting of a lid plate, a seat on the fire extinguisher for said lid plate, a bridge detachably fitted to the extinguisher, a screw spindle screwing in said bridge and adapted to press said lid against said seat, the said screw spindle and said lid plate being bored and adapted to act as a guide for a tappet, for operating the extinguisher, a stuffing box in said lid plate for said tappet, and on the lower end of said screw a bell, completely covering said stuffing box, when the bridge is in operative position.

---

1,558,350. BINDER. LESTER C. GREEN, Seattle, Wash. Filed Sept. 2, 1924. Serial No. 735,802. 2 Claims. (Cl. 281—25.)

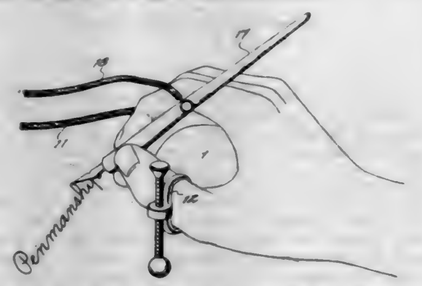
1. A binder, comprising a back, a plurality of leaves thereon, a tubular substantially U-shaped metallic clip carried by the back and having one leg only extending through registered perforations in the leaves, said leaves capable of being moved along said leg and turned over on to the other leg, and means for permanently securing each leg of the clip to said back including a roughened tack piercing the back with its head at the outer side of the back and its shank entering one of the tubular legs, and the leg being crimped into snug engagement



with the roughened portion of the shank, the back being gripped snugly between the head of the tack and the bottom end of the leg.

---

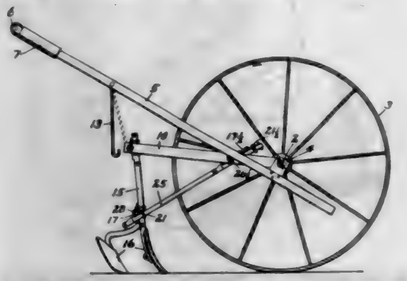
1,558,351. ELECTRIC WRITER. RICARDO GUASCO, Aguascalientes, Mexico. Filed Sept. 23, 1924. Serial No. 739,409. 3 Claims. (Cl. 174—177.)



1. In a rest for the hand of a writer, electrodes, one on which the hand of the writer rests, and the other designed to be gripped between the fingers of the writer, and said electrodes designed to be hitched to a mild source of electricity.

---

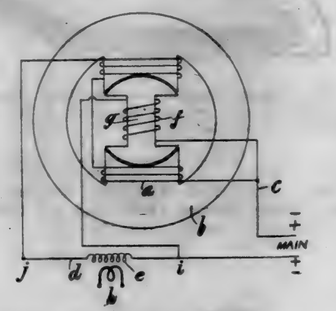
1,558,352. CULTIVATOR. ROBERT L. GUTHRIE, Los Angeles, Calif., assignor to Abbie C. Guthrie, Los Angeles, Calif. Filed Sept. 1, 1922. Serial No. 585,636. 4 Claims. (Cl. 97—59.)



1. A cultivator comprising an axle, a supporting wheel mounted upon the center of the axle, bearing plates swingingly mounted on the ends of the axle, a U-shaped handle frame having side members secured to the bearing plates so that the handle may be swung forwardly and backwardly over the wheel, a second U-shaped frame mounted on the axle inside of the bearing plates, set collars on the axle to hold the arms of the second frame

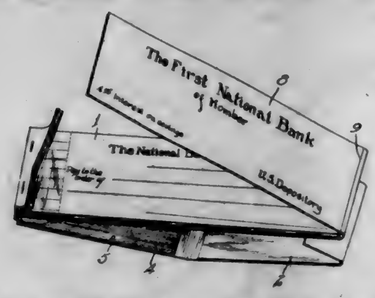
from lateral movement, the cross portion of the second frame being a rod having its ends extending through the ends of the side bars and removable clamp collars upon the rod against the side bars, a cultivator element mounted upon the cross rod, and a hook connected to the handle frame and adapted to optionally engage under the cross rod so as to carry the cultivator element up and down with the handle.

1,558,353. ELECTRIC RESISTANCE WELDING. CECIL ALLARTON HADLEY, Inverness, Scotland. Filed July 8, 1924. Serial No. 724,900. 8 Claims. (Cl. 219—4.)



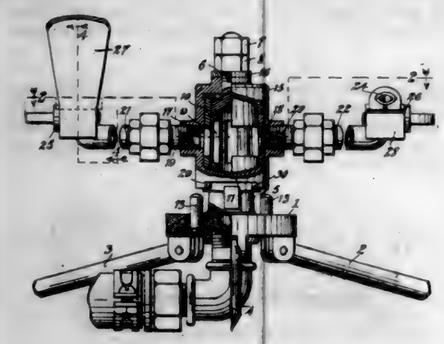
7. In electric resistance welding the combination with a plurality of welding transformers and a source of supply of alternating current therefor, of an induction regulator disposed between the source of supply of alternating current and the welding transformers, a primary winding on said induction regulator in series with the welding transformers, and a secondary winding on said induction regulator in shunt with said primary winding and said welding transformers, said primary and secondary windings being relatively rotatable in such a manner that in one position the secondary winding induces an increased voltage in the primary winding and in another position the voltage in the primary winding is reduced, whilst in intermediate positions the current supplied to the welding transformers will be due to the normal supply voltage.

1,558,354. CHECK-BOOK BLOTTER. ORRIS H. HALVERSON, Manitowoc, Wis. Filed Feb. 23, 1923. Serial No. 620,783. 1 Claim. (Cl. 281—4.)



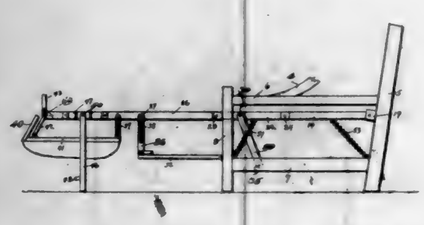
In a check book blotter construction for check books, of the type having a cover with a flap receiving recess therein, a check book having a flap adapted to be received in said recess, said blotter construction comprising a flap adapted to be received in said recess, a check book supporting member hingedly secured to said letter flap, and a blotter hingedly secured to the free end of said member and adapted to overlie the uppermost check in the check book.

1,558,355. LAWN SPRINKLER. CHARLES W. HART, Rexford, Mont. Filed Mar. 13, 1924. Serial No. 699,100. 5 Claims. (Cl. 299—71.)



1. A lawn sprinkler, which comprises a base portion, a valve spindle thereon and having ports therein, a valve sleeve mounted on the spindle and having a port, a valve casing mounted on the sleeve and having oppositely arranged ports, said sleeve and casing both being rotatable on the spindle and the casing rotatable with respect to the sleeve, and means on the base to engage the sleeve to interrupt its motion at predetermined points in its travel.

1,558,356. FOLDING BED. JOHN P. HARTMAN, San Francisco, Calif. Filed Nov. 3, 1923. Serial No. 672,654. 1 Claim. (Cl. 5—16.)

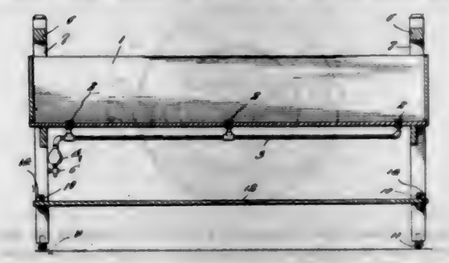


In a device of the character described, a back frame, braces extending from said back frame, uprights secured to said braces, longitudinal spacers extending between said braces, a longitudinal member secured to said back-frame, parallel members extending between said longitudinal spacers, a U-shaped angle iron head section, pivoted to said longitudinal member, intermediate angle iron members pivoted to said head sections, a radius link extending between said intermediate members and said parallel members, an offset bruce extending between said intermediate members, a foot section pivoted to said intermediate members, a seat frame pivoted to the foremost of said longitudinal spacers, and supported from said foot section by sliding links, legs offset from said foot section, and pivoted thereto, and a back cushion frame secured to said foot section.

1,558,357. FLOWER BOX. DR WITT HENLEY, Houston, Tex. Filed Dec. 26, 1922. Serial No. 608,843. 1 Claim. (Cl. 47—34.)

In a flower box structure, a stand, a box supported thereon in a horizontal position and elevated above the bottom of the stand, pipes passing vertically through the

bottom of the box, a horizontally disposed pipe located below the box and connected with the first mentioned pipes, a drip chamber connected with the horizontal pipe



and located below the same, and a valve cock connected with the drip chamber and supported above the bottom of the stand.

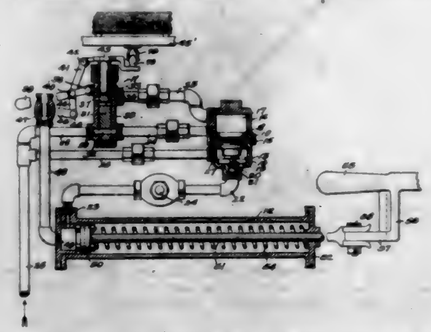
1,558,358. SIPHON APPARATUS. KENNETH CLAUDE DEVEREUX HICKMAN, London, England. Filed Mar. 19, 1921. Serial No. 453,848. 3 Claims. (Cl. 137—106.)

1. Siphon apparatus for rendering constant the level of liquid in a receptacle irrespective of the rate of inflow thereto, including a long lib, a short limb, an interconnecting portion, said limbs being adapted to straddle a wall of the receptacle and constituting with said interconnecting portion a vacuum space, a source of reduced air pressure in permanent communication with said vacuum space, a permanent liquid seal for the lower end of said long limb and a vacuum space closure orifice in said short limb which determines and is substantially the same as the height of the said constant level.

1,558,359. WATCH-PROTECTING DEVICE. JOSEPH HONIG, New York, N. Y. Filed Aug. 15, 1924. Serial No. 732,258. 2 Claims. (Cl. 24—3.)

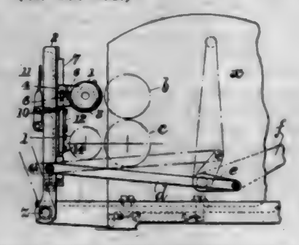
1. In combination with a watch and chain, a longitudinally expansible link forming the connecting medium between the watch and the chain, said link comprising a cylindrical casing closed at both ends, a plunger pin extending longitudinally in said casing and projecting at one end through one end of the casing and a series of prongs pivotally connected at one end to the inner end of said plunger pin and engaging at their opposite ends in apertures in the said end of the casing, and a displaceable locking bolt projected through the side of said casing to engage and lock said plunger pin.

1,558,360. TRAIN CONTROL. GEORGE P. HORAN, Rutland, Vt. Filed May 19, 1923. Serial No. 640,204. 7 Claims. (Cl. 246—189.)



4. In an air brake system and in combination with the engineer's valve thereof, a motor for operating the engineer's valve, said motor comprising a cylinder having each of its ends open to the atmosphere, a piston connected at one end to the engineer's valve and having a head movable through said cylinder, a second valve, said second valve being of the balanced type, a piston in the second valve, means for admitting train-line pressure to opposite sides of the piston to balance the same, means for establishing communication between said balanced valve and the cylinder of the engineer's valve motor, a valve associated with the balanced valve for closing said communication means, means for disturbing the balance of the balanced valve to open the valve associated therewith and admit train-line pressure to the cylinder of the engineer's valve motor to give an operation of the engineer's valve, and means for automatically and simultaneously closing the atmospheric communication of one end of said motor cylinder.

1,558,361. MACHINE FOR PRINTING WORDS AND FIGURES ON CHECKS, DIVIDEND WARRANTS, AND THE LIKE. JAMES H. HORNER, London, England. Filed Feb. 3, 1925. Serial No. 6,566. 10 Claims. (Cl. 101—93.)

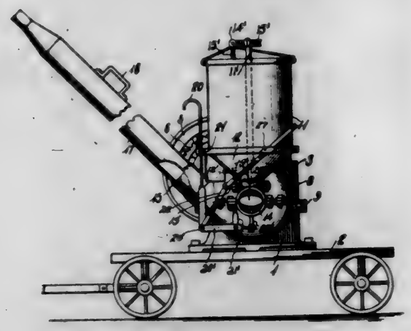


1. A hand operated printing machine having a pivoted frame and a platen which is vertically movable on the frame.

1,558,362. DUST-INSECTICIDE-APPLYING MACHINE. JOHN C. HULL, Gasport, N. Y. Filed June 24, 1922. Serial No. 570,752. 4 Claims. (Cl. 43—148.)

3. In an insecticide applying machine, the combination with a blower having a fan therein, a motor for driv-

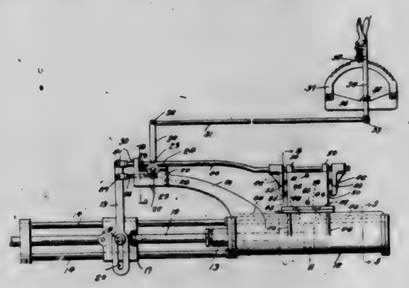
ing said fan, an air inlet to said blower, adjustable means for regulating the quantity of air admitted to the blower, a valve for admitting the insecticide to said



blower in a determined ratio to the quantity of air, means connecting said valves whereby they operate in unison, and a discharge for said blower.

---

1,558,363. REVERSING GEAR FOR LOCOMOTIVE ENGINES. SMITH H. HUNTER, Buntyn, Tenn. Filed Dec. 1, 1921. Serial No. 519,242. 2 Claims. (Cl. 121—41.)

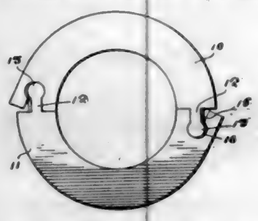


1. A reverse mechanism including a cylinder, a piston operable therein associated with reversing gear, an upstanding link cooperating with said piston and gear, valve means to control the admission and exhaust of motive fluid into and from the cylinder having a casing, an arm extending beyond and above one end of the cylinder, said arm having a bearing block, plates secured to said bearing block, a shaft journaled intermediate said bearing block and plates, a crank on said shaft, a link extending from the crank to the first mentioned link, a rod extending from the first mentioned link above the shaft and second mentioned link and slidably mounted on said casing, means on the rod to operate the valve means, a crank arm extending from said shaft, and means to operate the crank arm.

---

1,558,364. WASHER. ELMER J. IVERSON, Petersburg, Territory of Alaska. Filed July 16, 1923. Serial No. 651,998. 1 Claim. (Cl. 85—51.)

A device of the character described comprising two complementary semi-circular plate sections, each of which is provided with a bifurcation at one end and a recess at the inner end of the bifurcation, the opposed faces of the bifurcated parts and the walls of the recesses being formed with continuous V-shaped in cross section grooves, a head carried by the opposite end of each of the sections having beveled edges adapted to be received in the



grooves, and the bifurcated part being adapted to be bent into engagement with the head whereby to lock the two sections together.

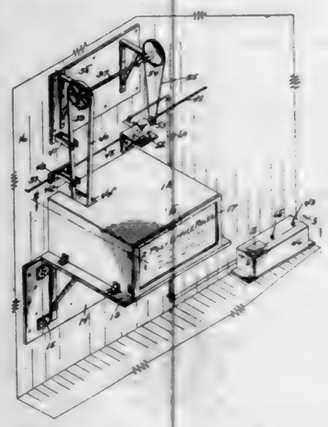
---

1,558,365. MOLD. CARL C. JENSEN, Chicago, Ill. Filed July 7, 1923. Serial No. 650,146. 2 Claims. (Cl. 25—118.)

1. A mold comprising a box having an open front and an open top, a core consisting of two sections, one moving through the open front of the box and the other through the open top of the box, rods adapted to be clamped between the sections with the ends arranged to be embedded in the casting.

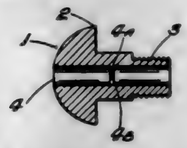
---

1,558,366. PROTECTING DEVICE. LEE ROY JOHNSON, Brenham, Tex. Filed Jan. 31, 1925. Serial No 6,098. 5 Claims. (Cl. 89—1.)



1. A device of the character described comprising a gun, normally disengaged means for operating the hammer of the gun to discharge the latter, electrically operated means for actuating the hammer operating means and means remote from the gun for engaging the hammer operating means with the hammer.

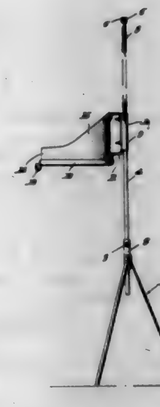
1,558,367. APERTURE SIGHT. ROBERT KERR JOHNSTON, Dunedin, New Zealand. Filed Nov. 10, 1922. Serial No. 601,325. 3 Claims. (Cl. 33—47.)



1. As a new article of manufacture a sight, comprising an apertured member having an enlarged and convex dome-shaped end, the aperture extending through the dome-shaped end.

---

1,558,368. SACK HOLDER. GEAN JONES, Sylvester Township, Green County, Wis. Filed May 21, 1924. Serial No. 714,930. 1 Claim. (Cl. 33—26.)



In a sack holder, a supporting base, a rod rising from said base, a cap on the upper end of said rod equipped with laterally extending diametrically opposite hooks, a sleeve freely slidable on said rod, a bracket fixed to and extending laterally from said sleeve, an annular band secured to said bracket and equipped with a bag supporting hook, a cylindrical filling member rising from said band with its rear side made higher than its front, and coiled springs connecting said slidable sleeve with the hooks of the cap, whereby the holder is yieldably held supported by said rod.

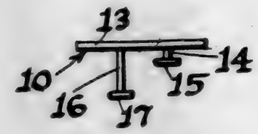
---

1,558,369. CUTTER. SAMUEL L. JONES, Longton, Kans. Filed Sept. 19, 1924. Serial No. 738,607. 4 Claims. (Cl. 146—147.)

1. A cutter of the character described comprising a base block, upstanding parallel guides carried by the ends of the base block for receiving the material to be cut therebetween, a pivoted frame, an operating handle for the frame, and a plurality of equi-distantly spaced knives carried by the frame, the guides being provided with spaces for receiving the knives to guide the same during the cutting operation.

---

1,558,370. COLLAR BUTTON. CLARENCE J. KELLEY, Kalispell, Mont. Filed July 25, 1924. Serial No. 728,124. 5 Claims. (Cl. 24—101.)



1. A collar button comprising a flat plate, and a pair of studs projecting from one face of said plate and being positioned inwardly from the edges thereof, one of said studs being shorter than the other.

---

1,558,371. DEVICE FOR THE CLEANING OF SPINNING APPARATUS FOR THE MANUFACTURE OF ARTIFICIAL FILAMENTS. HUBERT KEMPF, Barmen, Germany, assignor to the Firm J. P. Bemberg A. G., Barmen-Rittershausen, Germany. Filed Apr. 20, 1925. Serial No. 24,620. 2 Claims. (Cl. 18—8.)

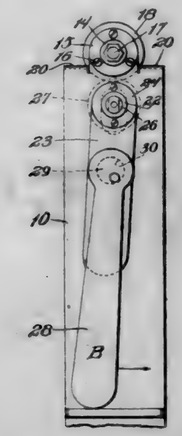
1. Apparatus for the manufacture of artificial filaments, comprising a spinning funnel, an outer casing enclosing said funnel, said outer casing having a hole in its side in the neighbourhood of the level of the top of the funnel, and a pipe for the supply of cleaning liquid passing from the exterior of the apparatus through said hole to the interior of said funnel.

---

1,558,372. CAN OPENER. THOMAS A. KILLMAN, Nashville, Tenn. Filed Jan. 8, 1925. Serial No. 1,223. 17 Claims. (Cl. 30—3.)

14. In a can opener, a vertical support, a cutting roller rotatable upon the support, a feeding roller for engagement with the under surface of a can rim carried by the support and adjustably shiftable in a straight line toward and away from the axis of the cutter roller,

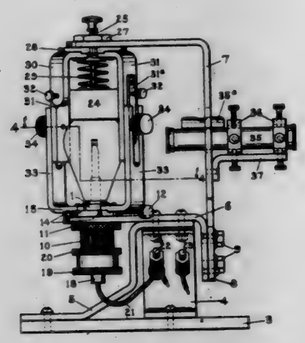
means for rotating the feeding roller, and means for shifting the feeding roller, a pair of arms carried by said vertical support and extending outwardly at opposite



sides of the cutting roller and adapted to overly a can top to prevent oscillation of the can during the cutting operation.

---

1,558,373. FIXTURE FOR REBASING LAMPS. RICHARD C. LEAKE, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Sept. 24, 1921. Serial No. 502,955. 22 Claims. (Cl. 176—3.)

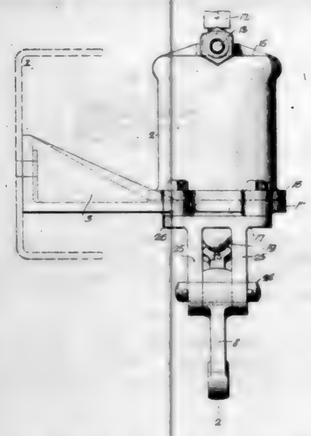


1. In a rebasing fixture of the character described, an axially adjustable plunger for engaging the center contact of the base of the lamp to be rebased, a block with a cavity therein to fit over the end of the lamp bulb, means for yieldingly pressing said block toward said plunger and thereby holding the lamp firmly, and means for adjusting said block in any direction laterally with respect to the axis of said plunger.

---

1,558,374. AIR-BRAKE MECHANISM. IRVIN D. LENGEL, Reading, Pa., assignor to Lengel Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 8, 1924. Serial No. 736,617. 6 Claims. (Cl. 303—6.)

1. The combination in brake mechanism, of a cylinder; an abutment extending into the cylinder; a hollow piston located between the abutment and the walls of the cylinder, said piston having a plurality of pressure



surfaces; and means for successively applying fluid to said surfaces of the piston to project the piston and to apply the brakes.

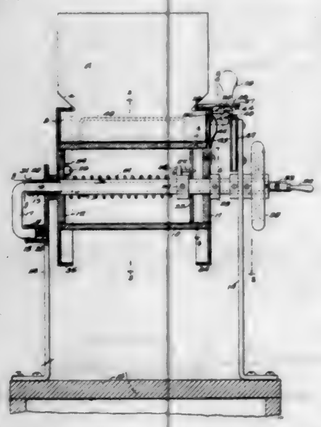
---

1,558,375. SPINNING OF ARTIFICIAL SILK. OTTO LEUCHS and EMIL HÜBERT, Elberfeld, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed May 4, 1925. Serial No. 28,010. 3 Claims. (Cl. 18—54.)

1. In the process of manufacturing artificial silk, the treatment of the spinning apparatus prior to spinning consisting in freeing the surfaces of such parts of the apparatus, which come into contact with the precipitating liquid from accumulated air.

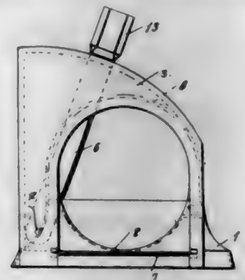
---

1,558,376. CARD-INDEX FILE. LEON RAY LEWIS and JULIUS JOAB COLVIN, Hudson Falls, N. Y. Filed Jan. 30, 1924. Serial No. 689,494. 7 Claims. (Cl. 129—16.)



1. A card index file including a drum having heads, one of said heads turnable relatively to the drum body, a card engaging means on the drum body, and a movable card-retaining portion on said turnable head and movable by the turning of said turnable head.

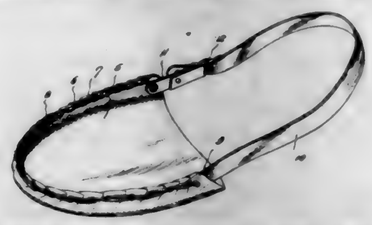
1,558,377. LONG-HORN-CHEESE CUTTER. WILLIAM C. LIVINGSTON, Newton, Kans. Filed May 1, 1924. Serial No. 710,371. 1 Claim. (Cl. 31—20.)



A slicing machine end structure U-shaped in cross section having walls integral with each other and spaced apart longitudinally of the machine, said end having a discharge opening for the material through said walls, said opening being nearer distal sides of said walls than the proximal side thereof, a knife guided by and operable intermediate said walls, said knife being pivoted to the walls adjacent the lower corner of the proximal side thereof, said knife being movable to a position completely exposing said opening to accommodate a closure in the latter, and a cover-supporting flange integral with the innermost wall extending around said opening and laterally from said innermost wall to reinforce the structure.

---

1,558,378. SHOE ATTACHMENT. GEORGE C. MCAULEY, Detroit, Mich. Filed July 10, 1923, Serial No. 650,625. Renewed Sept. 10, 1925. 1 Claim. (Cl. 36—72.)

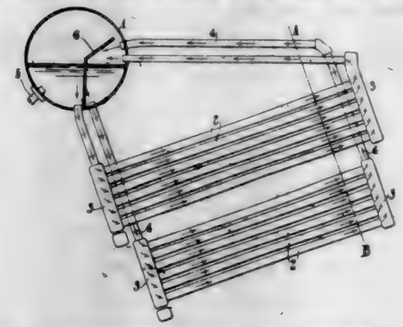


A shoe attachment comprising a strip of material adapted to be applied to the sole of a shoe, and when applied having its rear edge spaced from the heel of the shoe, the said strip being provided with a marginal portion adapted to be folded up around the edge of the sole of the shoe, said marginal portion being provided with slits forming tongues, which may overlap each other, each tongue having an opening, a securing strap attached to the marginal portion of the strip and at the rear edge of the strip and at the openings in the terminal tongues and adapted to extend around the back of the shoe upper and lacing passing through the openings of all of the tongues of the marginal portion of the strip and serving as means for drawing the tongues in overlapped close proximity with the upper of the shoe and the strap in close proximity with the rear portion of the upper of the shoe.

---

1,558,379. WATER-TUBE BOILER OR THE LIKE. ROBERT MCGREGOR, Ilford, England, assignor, by direct and mesne assignments, of one-third to The Stirling Boiler Company, Limited, London, England, and two thirds to Babcock & Wilcox Limited, London, England. Filed Mar. 14, 1922. Serial No. 543,751. 4 Claims. (Cl. 122—290.)

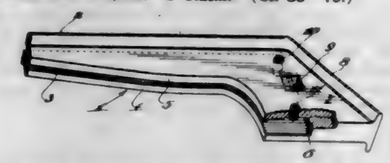
1. In a steam boiler, an upper steam and water drum, an upper and a lower bank of horisontally inclined water tubes, upper uptake and downtake water chambers connected to the ends of the tubes of the upper bank and to said drum, lower uptake and downtake water chambers connected to the ends of the tubes of the lower bank and located between the planes of the inner faces of the



upper water chambers and connections between the lower water chambers and the drum, comprising tubes having imperforate walls and extending upwardly from the tops of said lower water chambers and between tubes of said upper bank and between the inner faces of said upper water chambers.

---

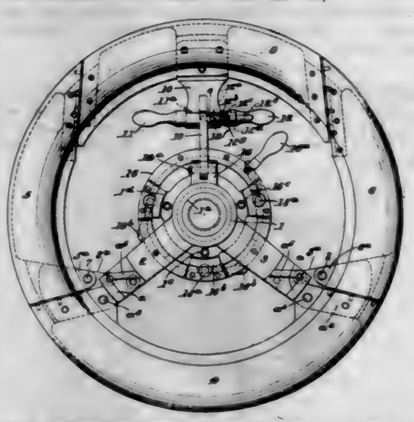
1,558,380. SQUARE ATTACHMENT FOR SAWS. HARRY E. MACKINGA, Los Angeles, Calif. Filed Apr. 24, 1924. Serial No. 708,660. 1 Claim. (Cl. 33—75.)



A square attachment for saws consisting of an integral body having a straight edge and a slot with a shoulder adapted to engage the back of a saw, the body having a second straight edge forming an angle with the shoulder.

---

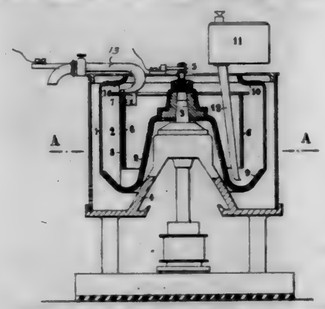
1,558,381. CORE. HARVEY F. MARANVILLE, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 9, 1923. Serial No. 624,033. 12 Claims. (Cl. 154—9.)



1. A collapsible mandrel for use in manufacturing pneumatic tires, comprising a hub member, a core segment rigidly carried thereby, a core segment hinged to

each end of said first named segment, a key segment cooperating with the free ends of said hinged segments, a lug projecting inwardly from said key segment and having a bifurcation, and a strut pivotally connected to said hub member and having its other end detachably engaging said bifurcation.

1,558,382. ELECTROCENTRIFUGAL SEPARATOR. ALFRED MARX, Paris, France. Filed July 13, 1923. Serial No. 651,376. 2 Claims. (Cl. 233—1.)

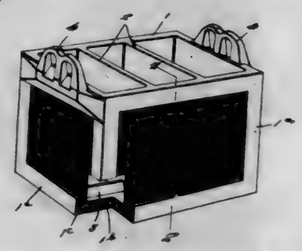


1. A process for the separation of suspensions or emulsions, characterized essentially by the fact that the product to be treated is subjected simultaneously to the action of an electric field and of centrifugal force, whereby to obtain rapid and complete separation of the particles which are in suspension in the fluid to be treated.

1,558,383. MACHINE FOR FOLDING AND ATTACHING RIBBONS TO THE EDGES OF FLOOR COVERINGS. WALTER M. MATHES, Chester, Pa., assignor to Congoleum Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 28, 1923. Serial No. 659,851. 8 Claims. (Cl. 154—1.)

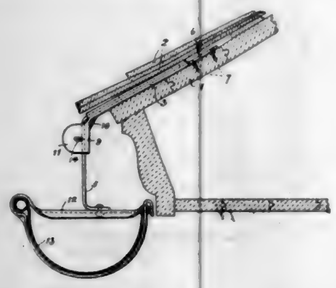
1. The combination with strip feeding mechanism, of a laterally expansible structure having guides for the side edges of a strip actuated by said feeding mechanism, and mechanism mounted on and movable with said structure for applying a reinforcing ribbon to the edge of said strip.

1,558,384. BATTERY BOX. JOHN B. MATTSON, Boston, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Feb. 29, 1924. Serial No. 695,940. 5 Claims. (Cl. 206—2.)



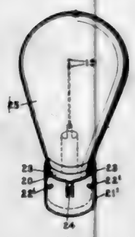
1. A rubber battery box having a body of hard rubber and having its bottom and lower portion only of its vertical walls provided with an exterior layer of relatively soft rubber homogeneously united therewith.

1,558,385. GUTTER MOUNT. CHARLES MEUNIER, Great Neck, N. Y. Filed Feb. 20, 1925. Serial No. 10,648. 2 Claims. (Cl. 108—29.)



1. A gutter mount, comprising a flattened guide member constituting a support and comprising upper and lower plates coupled at their edges, and a flat hanger strap, said member adapted to be secured under a roof covering, and said strap having its upper portion bent at an angle to the main vertical portion thereof and telescoping within said member, and means removably securing the strap in said member.

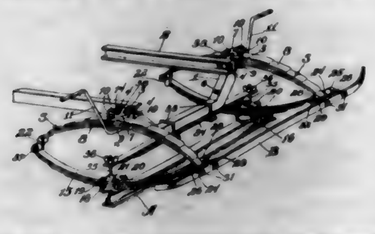
1,558,386. MOUNTING FOR INCANDESCENT LAMPS OF RAILWAY LIGHT SIGNALS. EDMUND W. MOORE, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Sept. 30, 1921. Serial No. 504,456. 16 Claims. (Cl. 176—32.)



1. In a light signal, the combination with an optical unit, a lamp socket of the bayonnet type having the usual spring pressed contact plunger and three hook-shaped slots, said socket being fixed in the position where its axis and the plane of its slots have a predetermined space relation to the focal point of said optical unit, an incandescent lamp having a base with three radial pins to fit in said socket, said lamp having a concentrated filament which is located in the same said predetermined relation to the axis of its base and the plane of its pins, whereby the filament of said lamp will come at the focal point of the optical unit without adjustment whenever the lamp is inserted in the socket, the spring pressed plunger of the socket co-acting with said pins and slots to constitute a three-point support which positions the lamp with the axis of its base in a definite angular relation to the axis of the socket irrespective of mechanical clearance between the base and the socket.

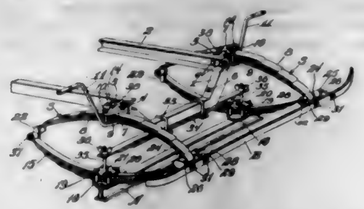
1,558,387. VEHICLE SPRING GEAR. LOUIS A. MORINES and JAMES T. HANCHARIK, Wilkes-Barre, Pa. Filed Nov. 13, 1924. Serial No. 749,700. 2 Claims. (Cl. 267—36.)

1. In combination with a vehicle frame and an axle, said frame including a cross member, elliptical springs interposed between the frame and axle, means for securing the upper members of the springs to the frame, means for securing the lower members of the springs to the axle, the last named means for each of the lower members comprising a plate, an upstanding member carried



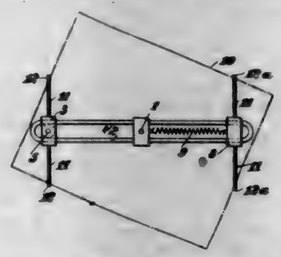
by said plate, a spring underlying the cross member, means for securing the central portion of said last named spring to the cross member, and means for connecting the plate with an extremity of the last named spring.

1,558,388. VEHICLE SPRING GEAR. LOUIS A. MORINES and JAMES T. HANCHARIK, Wilkes-Barre, Pa. Original application filed Nov. 13, 1924, Serial No. 749,700. Divided and this application filed Apr. 4, 1925. Serial No. 20,722. 4 Claims. (Cl. 293—55.)



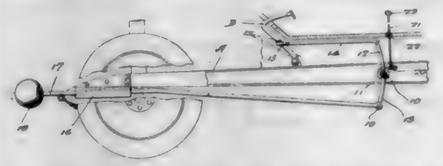
1. In combination with a vehicle body and an axle, elliptical springs interposed therebetween, means for securing the springs to the frame and axle, said springs being disposed in a direction lengthwise of the frame, and a brace member connecting the forward ends of the springs.

1,558,389. WHIRLING DEVICE FOR PLATES WITH LIGHT-SENSITIVE LAYERS. LOUIS MUELLER, Berlin-Baumschulenweg, Germany, assignor to Adolf Hamm & Co., Dusseldorf, Germany. Filed Mar. 8, 1924. Serial No. 697,973. 7 Claims. (Cl. 34—26.)



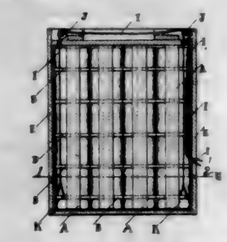
7. A whirling device for plates with light-sensitive layers for equally distributing and drying said layers having a vertical shaft, two guide arms fixed on opposite sides of said shaft and slidable blocks arranged on said guide arms, one of said slidable blocks being adjustable, a pair of holding arms for the plates fixed on each of said slidable blocks in such a manner that each pair of holding arms may grip the plate across one corner thereof.

1,558,390. VEHICLE BRAKE. ELVES W. NORMAN, Gary, Ind. Filed May 5, 1923. Serial No. 636,968. 2 Claims. (Cl. 180—83.)



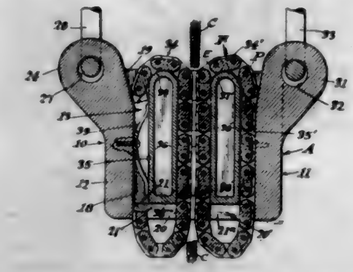
1. Means for automatically releasing the clutch and applying the brake of a motor vehicle upon the occurrence of a collision, comprising a pair of elongated guide members secured upon the side bars of the chassis of a motor vehicle, rearwardly extending plunger rods slidable through said guides, a bumper carried by the forward ends of said plunger rods, a shaft journaled transversely of the vehicle chassis rearwardly of the brake and clutch pedals, downwardly extending arms on said rock shaft pivotally connected with the rear ends of said plunger rods, upwardly extending arms on said rock shaft, and forwardly extending rods pivotally connected with said last named arms and having their forward ends abuttingly engaging the clutch and brake pedals.

1,558,391. SUN SCREEN. TOMOSUKE OHARA, Tokyo, Japan. Filed Apr. 28, 1925. Serial No. 26,477. 4 Claims. (Cl. 156—17.)



1. A sun screen comprising a series of horizontal bars having angular strips or bends attached to their outer surfaces and arranged in zig-zag order, and provided with strips of cloth connecting said angular strips in vertical series and other strips of fabric connecting the bars or slats in vertical series, the strips of each series being spaced apart and the spaces between the strips of one series alternating with the spaces of the other series.

1,558,392. WIRE-ROPE DRILLING CLAMP. ROBERT L. PORTER, Los Angeles, Calif. Filed Nov. 20, 1924. Serial No. 751,134. 8 Claims. (Cl. 24—135.)

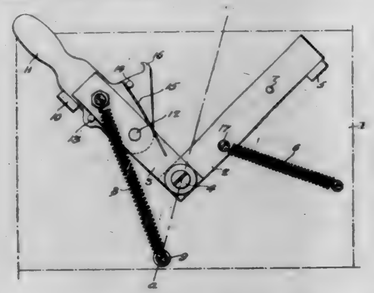


1. A cable clamp comprising a pair of pivotally connected clamping members, said clamping members having jaw portions, each of said jaw portions having an open-

ing, an endless link chain mounted on a member movable within each opening, expansion springs within each opening engaging each member, and means for opening and closing said jaws.

---

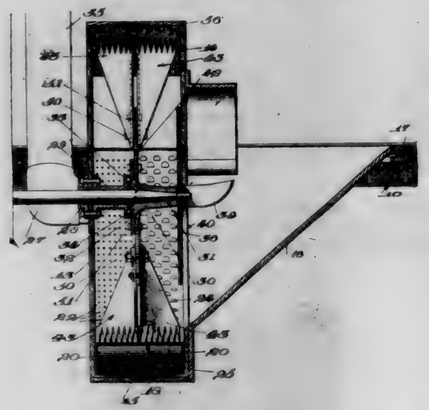
1,558,393. MECHANICAL MOVEMENT. WILLIAM T. PRINGLE, Philadelphia, Pa., assignor to V. V. Fittings Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 3, 1919. Serial No. 308,432. 7 Claims. (Cl. 74—14.)



1. A mechanical movement consisting of two concentrically pivoted members of which one is provided with a projection; a spring operative on said latter member; means for actuating said latter member, said means being pivotally mounted on the second member and having a portion formed to detachably engage the projection of the first member; with a spring tending to maintain said means in a position wherein said portion is disengaged from said projection.

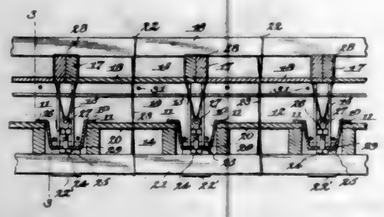
---

1,558,394. APPARATUS FOR GRINDING FODDER, STRAW, OR SIMILAR ROUGH FOOD FOR STOCK. JASPER N. RICE, St. Joseph, Mo. Filed Jan. 5, 1925. Serial No. 612. 7 Claims. (Cl. 146—115.)



1. A grinding apparatus comprising a drum, a rotary element within the drum, radially extending blower blades carried by said rotary member, a perforated false bottom within the drum, and projections struck upwardly from the false bottom adapted to cooperate with the teeth of said blades for grinding and pulverizing material deposited within said drum, and said blades also developing air pressure to force the ground material through the perforated false bottom of the drum.

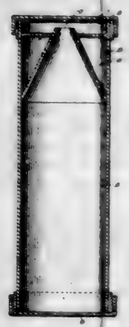
1,558,395. CONCRETE BUILDING FORM. HENRY C. RIESBOL, New York, N. Y. Filed Nov. 17, 1924. Serial No. 750,410. 5 Claims. (Cl. 25—131.5.)



1. A building form including a plurality of spaced channel members, inner wall forming sections between said channel members, and means on said channel members for removably supporting a horizontal beam for holding said channel members in alignment.

---

1,558,396. GRASS-SEED CONTAINER. RUDOLPH LIENAU ROEHRS, Rutherford, N. J. Filed Nov. 8, 1923. Serial No. 673,622. 1 Claim. (Cl. 221—61.)



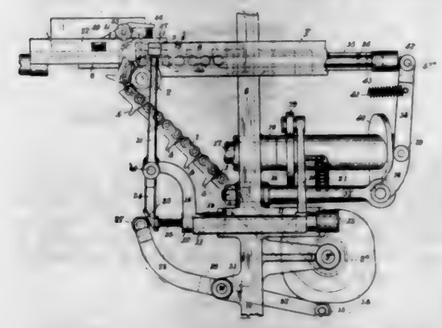
A container for grass seed and the like comprising a tubular member, a perforated end wall constituting a discharge for said tubular member, a tapered hollow member mounted within said tubular member and constituting means for delivering the contents of the tubular member to the perforated discharge member, the open end of said tapered hollow member being spaced from the perforated discharge member, and a guard plate spaced from the perforated discharge member and surrounding the tapered hollow member, and through which the small end of the tapered hollow member projects.

---

1,558,397. MACHINE FOR WRAPPING SWEETMEATS AND OTHER ARTICLES. WILLIAM ROSE, Gainsborough, England. Filed June 13, 1923. Serial No. 645,220. 3 Claims. (Cl. 198—24.)

1. In a feeding apparatus, a conveyor adapted to advance articles along a channel, in combination with

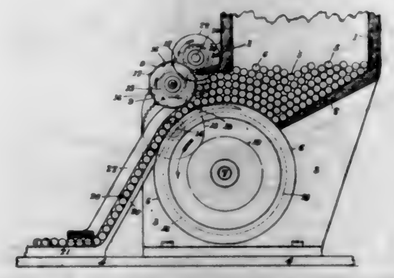
a pusher adapted to oscillate about axes substantially at right angles to each other, and to follow the motion



of the conveyor during the active movement of the pusher, substantially as described.

---

1,558,398. APPARATUS FOR FEEDING CIGARETTES. WILLIAM ROSE, Gainsborough, England. Filed June 5, 1924. Serial No. 718,184. 3 Claims. (Cl. 226—5.)

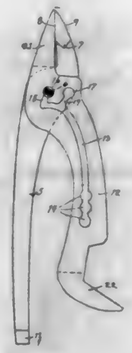


1. In apparatus for feeding cigarettes or like articles a hopper and feed means associated with said hopper, in combination with a platform supported in proximity to the feeding means in such manner that a portion of the upper face of the platform is slightly raised relatively to and above the portion of the said feed means which is near the platform so as to render it impossible for those cigarettes which are supported by said platform to come into actual contact with, and to be impelled in a forward direction by, the feed means, and a rotatable clearance roller having its axis parallel to the axis of said feed means leaving a gap, slightly larger than the diameter of one of the cigarettes, between its surface and said portion of the upper face of the platform; all substantially as, and for the purpose, hereinbefore described.

---

1,558,399. COMBINED PLIERS AND WRENCH. JOSEPH N. RYLEN, Turlock, Calif. Filed Aug. 9, 1924. Serial No. 731,088. 2 Claims. (Cl. 81—83.)

1. In a tool of the character described, a pair of handles, one of said handles having a pivot secured therein, the other of said handles having an elongated slot extending through the substantially entire length thereof, there being enlarged areas communicating with said slot, a nose formed upon one end of said first-mentioned handle and having serrated surfaces on both faces thereof, a nose formed upon one end of said slotted handle and having a serrated face adapted to contact one of the serrated faces first mentioned, a head formed on the opposite end of said slotted handle and having



a serrated surface adapted to be brought into engagement with the other serrated face on said first-mentioned nose, for the purpose specified.

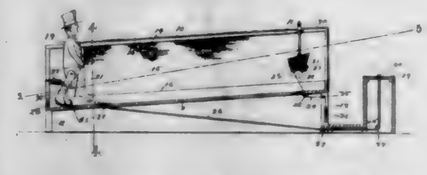
---

1,558,400. FURNACE CASING. LEONARD F. SARGENT, Wausau, Wis. Filed June 9, 1925. Serial No. 35,977. 6 Claims. (Cl. 126—114.)

1. A furnace casing comprising, in combination, a plurality of vertically disposed panels and a joint member associated with adjacent panels, said joint member being substantially H-shaped in cross section and having its intermediate portion interposed between the panels and its flanges overlying the adjacent marginal portions of the panels.

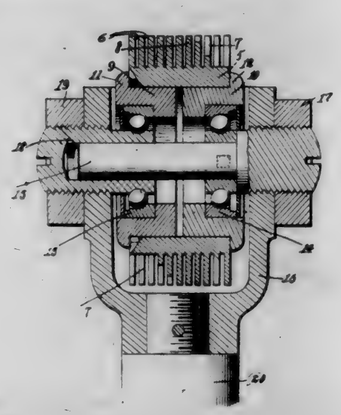
---

1,558,401. AMUSEMENT APPARATUS. RYUJI SATO, Nyack, N. Y. Filed July 28, 1923. Serial No. 654,455. 4 Claims. (Cl. 273—108.)



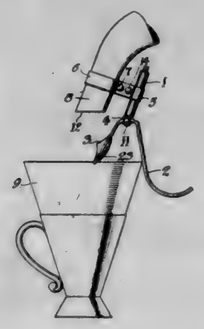
1. An amusement apparatus including an inclined table, a plurality of cages mounted above said table, baskets supported at one end of said cages, a manikin mounted at the other end of said cages, a ball normally positioned adjacent each of the manikins, and individual operating mechanisms for actuating said manikins to cause the same to kick the balls in the direction of said baskets.

1,558,402. WHEEL-TRUING DEVICE. WILLIAM A. SEAMAN, Midland, Mich. Filed July 6, 1922. Serial No. 573,129. 1 Claim. (Cl. 125—37.)



A dressing and truing device comprising a shell housing, a truing wheel provided with an axial bore arranged in the housing, a sectional barrel fitted in the bore provided with end flanges engaging the outer sides of the truing wheel, a fixed axle in the shell housing, means securing one end of the axle to the shell, a removable support for the other end of the axle, and bearing races supporting the sectional barrel with antifriction means engaging the axle and the removable support respectively.

1,558,403. CLOSURE FOR SIRUP PUMPS. ANTHONY SHACIKOSKI, Homer City, Pa. Filed Mar. 31, 1925. Serial No. 19,696. 2 Claims. (Cl. 137—111.)



2. A closure for dispensing faucets or pumps, comprising in combination with the outlet thereof, a clamp thereon, a rod carried by said clamp having a lateral pivot member, a member pivoted to said lateral pivot member, said pivoted member having a plug on one end thereof adapted to close said outlet, and having at its other end a depending arm whereby said closure may be moved to open position by contact of a glass or similar receptacle against said arm.

1,558,404. ROLLER SKATE. FRANK SLOGR, Omaha, Nebr. Filed Apr. 10, 1924, Serial No. 705,543. Renewed May 20, 1925. 6 Claims. (Cl. 208—178.)

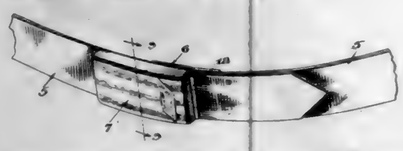
1. In a roller skate, extensibly connected sole and heel plates, bracket arms, depending from the plates, each arm being struck from sheet metal and bent to provide a circular bearing at its lower end with an annular groove in the bearing and a shaft carrying a roller and having an annular flange at each end received in the bearing groove.

1,558,405. DEODORANT COMPOSITION. ARTHUR G. SMITH, Oak Park, Ill. Filed Mar. 6, 1924. Serial No. 697,389. 5 Claims. (Cl. 167—9.)

1. A deodorant composition in powdered form comprising sodium bicarbonate, zinc stearate and an inorganic emollient filler.

3. A deodorant composition in powdered form comprising a major quantity of sodium bicarbonate, and minor quanties of anhydrous calcium sulfate and zinc stearate.

1,558,406. IDENTIFICATION DEVICE. FRED W. SNYDER, Chicago, Ill. Filed Dec. 29, 1924. Serial No. 758,692. 2 Claims. (Cl. 40—10.)

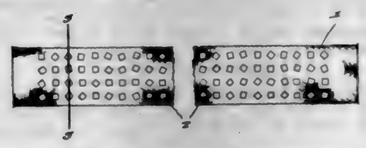


1. In a belt buckle of the type described, the combination of an outer compartment comprising a face and side and end members, a rear member adapted to fit within said outer compartment and pivotally connected therewith, prongs secured to the inner face of said rear member and adapted to receive a card therein, ears integral with said rear member and extending rearwardly at substantially right angles to said rear member, means provided in said ears to receive a belt retaining member and a lip integral with the end of said outer compartment opposite to the pivotal means and adapted to engage the rear portion to retain it in locked position.

1,558,407. VANITY CASE. RAE SOMMER, Chicago, Ill. Filed Nov. 24, 1924. Serial No. 752,028. 16 Claims. (Cl. 132—83.)

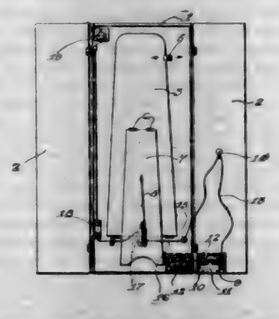
1. A vanity case, comprising a closed body portion having a filling opening; a pair of relatively fixed parallel perforated plates adapted to close said opening; a member rotatably mounted between said fixed plates, and having perforations therein normally registering with the perforations in one of said plates, and adapted to register with the perforations in the other plate only when the member is rotated; and means for returning said member to normal position.

1,558,408. LINING. ARTHUR G. SOELIS, Grand Forks, N. Dak. Filed May 11, 1923. Serial No. 638,320. 1 Claim. (Cl. 188—259.)



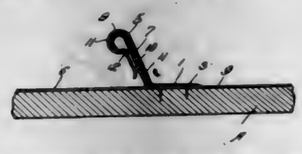
A lining of the class described having woolen inserts therein which pass entirely through the lining and having their ends flush with the surfaces of the lining, said inserts having enlarged heads which are arranged at one face of the lining.

1,558,409. CABINET. HULDREICH M. STIENECKER, Climax, Mich. Filed Apr. 18, 1922. Serial No. 554,449. 2 Claims. (Cl. 68—10.)



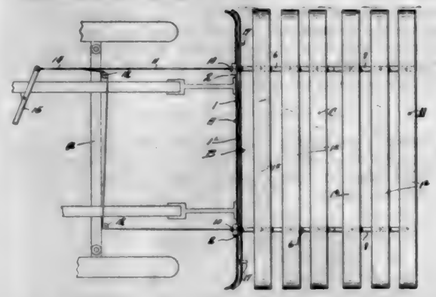
1. A cabinet comprising a casing, an ironing board swingingly mounted within the casing, an electric iron, and a circuit for the electric iron automatically closed when the ironing board is arranged in operative position.

1,558,410. SHEET-METAL ROOFING. WILLIAM STRONG, near Springfield, Ohio. Filed Apr. 10, 1924. Serial No. 705,577. 1 Claim. Cl. 108—20.)



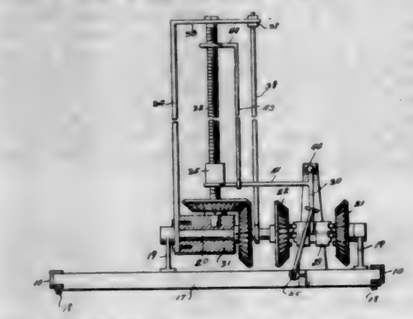
In an interlocking joint, contiguous sheet metal sections of roofing, a securing plate having one end thereof bent upwardly at an oblique angle to provide a flange, the upper end thereof being curved and terminating in a lip, an obliquely disposed flange formed on the edge of one of said sheet metal sections and adapted to be disposed against one side of the aforementioned flange, the upper edge of the last mentioned flange being curved and adapted to be received in the curved portion on the flange of the securing plate, the other section being adapted to overlie the securing plate, a flange formed thereon and adapted to extend along the opposite side of the flange of the securing plate, the upper portion of the flange on the second section being curved and disposed over the curved portion of the aforementioned flanges, the curved portion of the last mentioned flange terminating in a depending strip which is adapted to be crimped into engagement with the lip formed on the free edge of the curved portion of the flange formed on the securing plate, said depending portion adapted to be disposed substantially parallel to and spaced from the aforementioned flanges and having an offset extension at its terminal.

1,558,411. BUMPER. HOMER G. STUMP, Cadillac, Mich. Filed June 30, 1925. Serial No. 40,579. 3 Claims. (Cl. 293—45.)



2. A combination bumper and fender for a vehicle comprising a unit adapted to be supported by the vehicle and disposed in a vertical direction, a second unit slidably connected with the first named unit for movement in a vertical direction, a plurality of hingedly connected units adapted to fold one upon the other, one of said last named units being hingedly connected to the second unit, and means for holding said hingedly connected units in folded relation and to maintain the second unit in its uppermost position, said means also operating to impart the requisite folding movement to the hingedly connected units and upward movement to the second unit.

1,558,412. POWER-OPERATED DUMPING TRUCK. EMAN SYSEL, Dorchester, Nebr. Filed May 5, 1923. Serial No. 636,850. 1 Claim. (Cl. 298—21.)



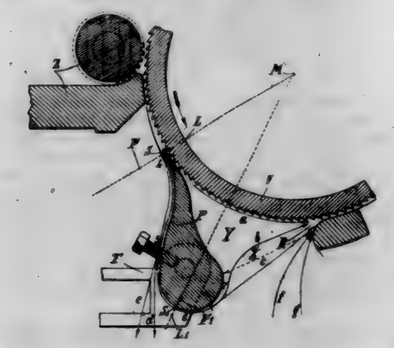
In a dumping truck, a chassis, a body pivoted thereon, a horizontal shaft journaled upon the chassis in transverse relation thereto, a frame pivoted on said shaft and extending in a normally upright position, a support journally mounted on the shaft within the frame, a feed screw journaled in the frame and in said support and carrying a bevel gear, a bevel gear on said shaft meshing with said first named bevel gear, clutch operated transmission gearing on said shaft for rotating the same in a selected direction, the clutch mechanism including a slidable member splined upon the shaft, and a pivoted fork engaging the same, a nut member carried by the truck body and operatively engaged upon said feed screw, an arm on said forked lever adapted to be engaged by said nut at one limit of the movement thereof, and a stop disposed about the upper end of the feed screw and connected with said lever and adapted to be engaged by the nut at the upper limit of its movement.

**1,558,413. PROCESS OF MAKING DRY BATTERIES.** BORIS H. TRITSELBAUM, Brooklyn, N. Y., assignor to Bright Star Battery Co., New York, N. Y., a Corporation of New York. Filed May 26, 1921. Serial No. 472,867. 4 Claims. (Cl. 136—158.)

1. The process of producing a dry battery paste involving the use of sal ammoniac, which comprises dissolving sal ammoniac in zinc chloride solution of a definite density and at a definite temperature, then permitting the endothermic properties of the sal ammoniac to reduce the temperature of the mixture to a definite temperature, and then adding a cereal mixture, whereby the resultant mixture will gelatinize in a definite time without the necessity of cooking it.

---

**1,558,414. TEXTILE MACHINERY FOR FIBER PREPARATION.** MEINRAD THOMA, Zurich, Switzerland. Filed May 21, 1924. Serial No. 714,895. 5 Claims. (Cl. 19—105.)



2. In textile machinery, a device for removing impurities, comprising a licker-in, and a plate to deviate the air and to act as a knife cooperating with the licker-in, the profile of the plate increasing in thickness from a knife edge at one end to a well rounded portion at the other end, and the length of the profile from the knife edge to the rounded end corresponding approximately to the radius of the licker-in, so that it projects into a calm zone, the front part of the plate being approximately tangential to the circumference of the licker-in to gently deviate the air along natural stream lines and avoid any whirls of air.

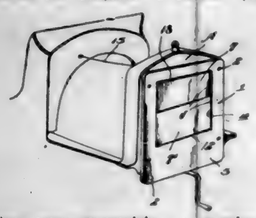
---

**1,558,415. ELECTRIC SWITCH.** GEORGE B. THOMAS, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 19, 1922. Serial No. 562,223. 11 Claims. (Cl. 200—66.)

1. An electric switch comprising a reversely and freely rotatable switch spindle, a switch member mounted thereon, a group of stationary stops, a pair of independent latch slides arranged side by side and adapted to embrace between them any one of said stops, said slides being rotatable with the switch member, one of said latch slides controlling the rotation of the switch member in one direction, and the other controlling the rotation of the switch member in the opposite direction, a spring for rotating the switch member in either direction, and means operated by the switch spindle for tensioning the switch spring and for shifting the detaining latch slide rectilinearly out of engagement with its associated stop on rotation of the spindle in either direction.

---

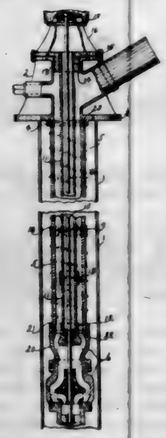
**1,558,416. ATTACHMENT FOR RADIATORS.** WILLIAM C. TOELLNER, Bunceton, Mo. Filed June 18, 1921. Serial No. 478,698. 1 Claim. (Cl. 257—132.)



A radiator cover comprising a member adapted to be secured to the front face of the radiator, said member having an opening therein, a projection at the lower edge of the opening and guideways at the sides thereof, the guideways being arranged in upper and lower pairs, the lower pair being of greater width than the upper pair, a pair of shutters engaging the guideways, both shutters engaging the lower guideways when in open or in partly open position with the upper shutter engaging the upper guideways when the shutters are in closed position, a projection at the lower edge of the lower shutter for engaging the projection at the lower edge of the opening for limiting the upward movement of the lower shutter, hooks formed on the upper edge of the lower shutter and on the lower edge of the upper shutter for causing movement of the upper shutter to be transmitted to the lower shutter when the hooks engage each other, an outwardly extending part at the upper edge of the upper shutter for engaging the upper wall of the opening when the shutter is in raised position and means connected with the upper shutter for moving the same.

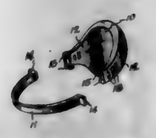
---

**1,558,417. PUMP.** PERCY E. VAUGHAN, San Jose, Calif. Filed May 2, 1922. Serial No. 557,874. 9 Claims. (Cl. 103—102.)



1. A pump including a discharge casing column, a bowl supporting said column, and supporting means for said bowl arranged within said column.

**1,558,418. ADJUSTABLE FINGER RING.** FRANS BERTIL WENDEL, Cranford, N. J., assignor to Hercules Novelty Mfg. Co. Inc., a Corporation of New Jersey. Filed Apr. 22, 1925. Serial No. 25,061. 2 Claims. (Cl. 63—16.)



2. An adjustable finger ring comprising two cooperative arcuately curved sections, the end portions of one of said sections having longitudinally spaced series of keeper openings extending in said end portions from their inner faces toward the outer faces thereof, the second section having the extremities thereof turned outward in opposite directions to produce locking terminals adapted to enter and engage with keeper openings of the first section to lock said sections together in adjusted position, said second section being made of material possessing inherent resiliency and the ends thereof being sprung toward each other when the locking terminals of the second section are engaged with keeper openings in the first section so that the spring action of the second section continuously urges the ends of the second section outward against the inner faces of the first section and tends to prevent retraction of the locking terminals of the second section from said keeper openings of the first section, the end portions of said first section having pairs of lugs at their extremities extending inwardly beyond the inner faces of said end portions of the first section for embracing the end portions of the second section to co-operate with the locking terminals of the second section and with walls of keeper openings of the first section to prevent relative swinging movement of the two sections of the ring.

---

**1,558,419. PROCESS AND APPARATUS FOR THE FORMATION OF METAL STAMPINGS.** FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 28, 1923. Serial No. 641,977. 7 Claims. (Cl. 78—81.)

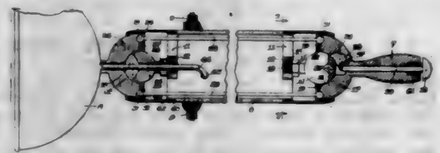
1. The method of producing articles by a multi-stage process consisting in introducing within the openings of a dial plate initial stage blanks, forcing the metal of the initial blank against the side walls of the opening to anchor the blank within said openings to thus support the same for further operation, and indexing the dial plate forwardly in a step by step manner to bring the initial blank between suitable forming dies and punches for the formation of the article to the desired configuration and shape.

**1,558,420. ROPE STRUCTURE.** HERBERT VERNET WHITLOCK, Elizabeth, N. J. Filed Dec. 30, 1924. Serial No. 758,805. 13 Claims. (Cl. 117—52.)

1. In rope structure, a strand comprising a core of fibers and a continuous covering of yarns, the said fibers lying substantially in helices about the axis of the said strand.

---

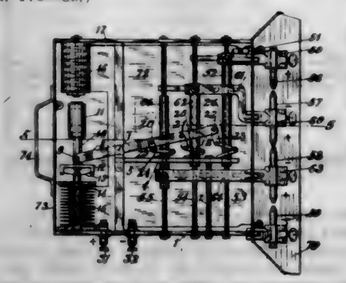
**1,558,421. SPOTLAMP.** CAMERON A. WHITBETT, Chicago, Ill., assignor to Fyrac Manufacturing Company, Rockford, Ill., a Corporation of Illinois. Original application filed Aug. 15, 1921, Serial No. 492,275. Divided and this application filed Sept. 13, 1924. Serial No. 737,483. 11 Claims. (Cl. 240—61.)



1. In a windshield spotlight in combination, a generally tubular housing extending substantially horizontally, a ball and socket joint at one end of said housing, a lamp supported by said ball and socket joint, an operating handle at the other end of said housing, and means having a translational motion for transmitting the adjusting motion of said handle to said lamp.

---

**1,558,422. ELECTRIC-ARC LAMP.** MAURICE J. WOHL, New York, N. Y., assignor to M. J. Wohl & Co., Inc., Long Island City, N. Y., a Corporation of New York. Filed Oct. 7, 1920. Serial No. 415,295. 9 Claims. (Cl. 176—59.)

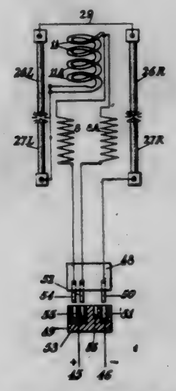


1. In an arc lamp a plurality of electrodes arranged in a single vertical line, a fixed electrode forming one end of said line, means mounting said plurality of electrodes to move toward and away from said fixed elec-

trode to form a plurality of arcs, a clutch for each movable electrode to operate the same and common means joining all clutches to move them and the electrodes simultaneously through distances forming multiples of the movement of the clutch for the electrode nearest the fixed electrode to form arcs of equal length between the electrodes.

---

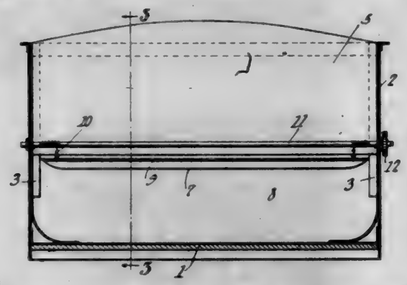
1,558,423. REGULATION FOR ARC LAMPS. MAURICE J. WOHL, Long Island City, and MAX MAYER, New York, N. Y., assignors to M. J. Wohl & Co., Inc., Long Island City, N. Y., a Corporation of New York. Filed July 25, 1921. Serial No. 487,270. 4 Claims. (Cl. 176—41.)



1. In an arc lamp a pair of arc forming electrodes, means for forming and regulating an arc of one of two different lengths and current values between said electrodes consisting of a solenoid having two magnetising windings, a resistance in series with each winding and switching means to pass current through one of said windings forming means to hold said arc at a relatively short length and low current value or alternatively to pass current through both windings in parallel to hold said arc at a substantially increased length and larger current value.

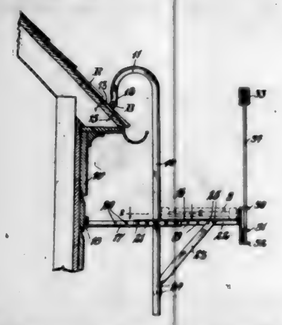
---

1,558,424. DUMP BODY. JOHN FOSTER WRIGHT, Jersey City, N. J. Filed Dec. 26, 1923. Serial No. 682,725. 5 Claims. (Cl. 298—17.)



1. The combination with a dump body having spaced angle bars arranged in pairs upon the inner faces of the sides thereof, of partition plates extending transversely of the body and secured to the angle bars, said bars extending between the plates, a closure slidably mounted at its sides between the angle bars and spaced from and adapted to be housed between the partition plates, and means for shifting the closure.

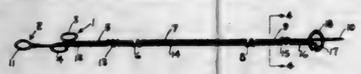
1,558,425. STAGING BRACKET. OTTO YETTER, Boston, Mass. Filed Apr. 3, 1924. Serial No. 704,056. 1 Claim. (Cl. 304—15.)



A staging bracket for supporting a staging adjacent the edge of a roof comprising a vertical member, a goose neck formed at its upper end, an angularly adjustable attaching foot carried by the free terminal of the goose neck having perforations therein through which attaching means are adapted to be passed for anchoring the same to the roof for suspending the vertical member over the edge of the roof, a horizontal member secured to the vertical member and projecting outwardly away from the wall of the building, an angle brace extending downwardly from the outer end of the horizontal member to the lower end of the vertical member and connected respectively to the outer end of the horizontal member and the lower end of the vertical member and an arm adjustably carried by the horizontal member and projecting inwardly therefrom for engaging the wall of the building in such a manner as to dispose the vertical member in a downwardly diverging relation to the side wall of the building whereby the upper face of the portion of the horizontal member lying between the vertical member and the outer end of said horizontal member is adapted to receive thereon the staging.

---

1,558,426. BAITING DEVICE FOR RODENTS. CHARLES J. BARNES, Redlands, Calif. Filed Apr. 13, 1925. Serial No. 22,830. 3 Claims. (Cl. 43—124.)



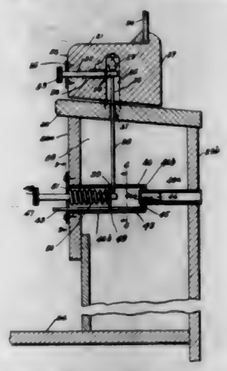
2. A baiting device for rodents comprising two members formed of wire, the wires being bent to connect the members in parallel positions so that the members will reciprocate and to form stops to limit the reciprocation, one member having a prong for carrying bait and the other member having means for holding the bait while the prong is withdrawn.

---

1,558,427. BURGLAR ALARM. ALBERT K. BODENHORN, Southgate, Calif. Filed Mar. 18, 1924. Serial No. 700,044. 7 Claims. (Cl. 116—88.)

3. A burglar alarm adapted to be associated with a wall and with a closure for an opening, said alarm comprising a tube extending through the wall, a cartridge retainable within said tube, a hammer within said tube, said hammer being adapted to strike said cartridge to fire the same, a coiled spring encircling said hammer, means associated with the closure for keeping said hammer in retracted position and said spring compressed when the closure is closed, said means being adapted to be actuated by the opening of the closure to release said hammer for impact against said cartridge, said hammer being urged against said cartridge by the expansion of

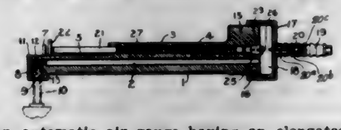
said spring, means for extracting said cartridge, and means positioned on the inner face of the wall for normally closing one end of said tube, said closing means being adapted to be readily detached to allow the



removal of said cartridge, and comprising a plate and means for fastening the plate, said fastening means engaging slots in the plate, the slots being arranged to be disengaged from said fastening means by a turning of said plate.

---

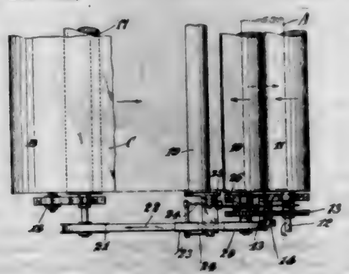
1,558,428. AUTOMATIC AIR GAUGE. CHARLES E. BRIDGES, Los Angeles, Calif. Filed Mar. 10, 1925. Serial No. 14,461. 7 Claims. (Cl. 50—8.)



1. An automatic air gauge having an elongated body with a piston passage therethrough part way, an upper face at the rear end of the piston passage, an air passage leading to a source of air supply, an air passage leading to a tire valve, a piston in the rear portion of the piston passage, a scale on the upper face of the body, means on the piston to register with the scale, a valve in the other end of said piston passage, a spring between the valve and the piston and a check valve in the air passage from the source of supply positioned to be acted upon by the valve in the piston passage.

---

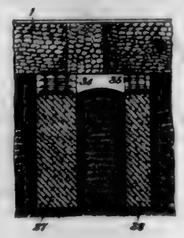
1,558,429. WINDING MACHINE. OTIS H. FOLSOM, Peoria, Ill., assignor to Samuel M. Langston Company, Camden, N. J., a Corporation of New Jersey. Filed Feb. 27, 1925. Serial No. 11,940. 5 Claims. (Cl. 242—66.)



1. A winding machine for sheet material including a winding drum for engaging the surface of the winding roll, means for positively driving said drum and rotating said winding roll, a tension drum for engaging the surface of the supply or unwinding roll, and power transmitting connections from one drum to the other, normally tending to drive the tension drum at lower surface speed than the rewinding drum, and including slip connections for permitting them to run at the same surface speed.

---

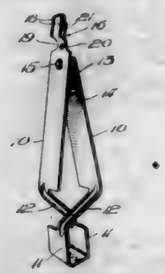
1,558,430. UNDERPINNING. JOHN B. GOLDSBOROUGH, Croton-on-Hudson, N. Y. Filed Oct. 31, 1918. Serial No. 260,514. 6 Claims. (Cl. 61—51.)



1. The method of underpinning a building which consists in excavating sections of the earth beneath and in alignment with the foundation of the building while leaving it supported temporarily by its natural arching action and constructing in some of the excavations supporting piers and in other excavations members associated with and supported by the piers for supporting the portions of the foundations spanning the space between the piers.

---

1,558,431. STORAGE-BATTERY CLIP. HERBERT EDWARD WALKER, Chicago, Ill. Filed July 31, 1922. Serial No. 578,552. 5 Claims. (Cl. 173—273.)



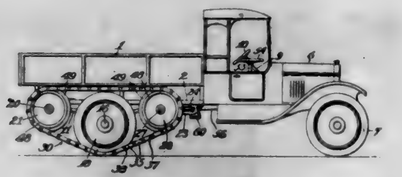
1. A clip comprising two opposed separate resilient jaw members disposed at an acute angle to each other, one of the jaw members being formed to provide an integral seat for the other jaw member to predetermine said angle and means for attaching the jaw members together.

---

1,558,432. AUTOMATIC VEHICLE WHEEL TRACK. JOHN H. WILSON, Indianapolis, Ind. Filed Sept. 6, 1923. Serial No. 661,187. 12 Claims. (Cl. 305—3.)

10. In a vehicle-wheel track, the combination, with a vehicle comprising a frame and a carrying wheel supporting the frame, of a guide pulley rotatable on the frame rearward of the wheel, a guide fixed to the frame forward of the wheel and having a rack bar fixed there-

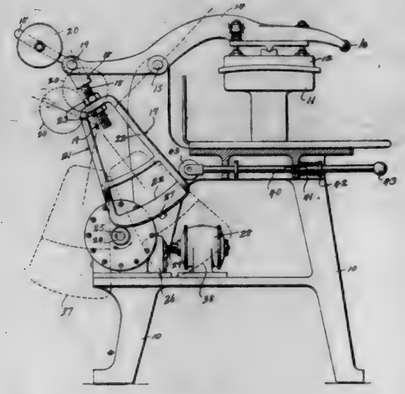
to, a guide shaft adjustably supported by the guide, a guide pulley rotatable on the guide shaft and being movable thereby away from the other guide pulley, a sectional track for the carrying wheel extending about the pulleys and having two end parts separably connected together, two coil springs each extending loosely through



said end parts and secured to sections of the track distant from the end parts, means to forcibly move the guide shaft away from the carrying wheel to the end of said guide, and a gear wheel fixed to the pulley on the guide shaft to be carried into engagement with the rack bar as the guide shaft nears the end of its guide.

---

1,558,433. POWER PRESS. BASIL J. YANCHENKO, New York, N. Y., assignor, by mesne assignments, to Liberty National Bank, trustee, Syracuse, N. Y. Filed Feb. 6, 1925. Serial No. 7,239. 11 Claims. (Cl. 68—9.)



1. A power press comprising in combination, cooperating wide opening press jaws, a cam associated with the press jaws to produce compression thereinbetween, means associated with the cam urging it to an inoperative position, a motor driven roller continuously revolving and adapted to cooperate with the cam, means to permit the cam to pass by the roller without being acted on by said roller, and a manually actuated control handle operable by the operator to throw the cam into engagement with the roller.

---

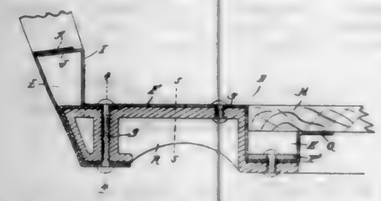
1,558,434. ATTACHABLE UPHOLSTERY FOR VEHICLE BODIES. PAUL E. BRENEMAN, Detroit, Mich., assignor to C. R. Wilson Body Company, Detroit, Mich., a Corporation of Michigan. Filed July 17, 1920, Serial No. 396,885. Renewed Jan. 6, 1923. 5 Claims. (Cl. 155—184.)

1. In a metallic vehicle body, the combination with a panel portion having a flange projecting from the border thereof, of an upholstery unit engageable with said panel beneath said flange, and a detachable retain-

ing strip secured to said flange and projecting therefrom to overlap said unit.

---

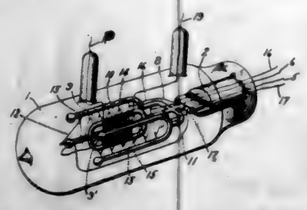
1,558,435. METAL BODY FOR VEHICLES. PAUL E. BRENEMAN, Detroit, Mich., assignor to C. R. Wilson Body Company, Detroit, Mich., a Corporation of Michigan. Filed July 17, 1920. Serial No. 396,886. 12 Claims. (Cl. 296—28.)



3. In a metallic vehicle body, the combination with the outer panel having an inturned flange at the threshold of the door opening, and a member forming a sill for resting upon the sill of the chassis frame having an outwardly-extending floor portion and upturned portion, and an out-turned flange for uniting with the inturned flange of said threshold.

---

1,558,436. ELECTRICAL DISCHARGE APPARATUS AND PROCESS OF PREPARING AND USING THE SAME. IRVING LANGMUIR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 16, 1913, Serial No. 795,610. Renewed Mar. 14, 1916. Serial No. 84,242. 32 Claims. (Cl. 250—27.)

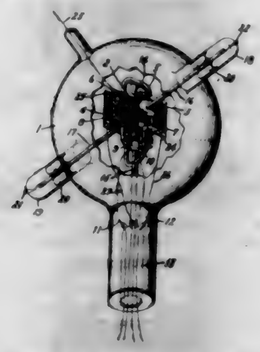


1. A discharge tube having electrodes at least one of which is adapted to emit electrons, the gas content or residue of said tube and the relation of the parts of the tube being such that the tube is capable of being so operated in a range below saturation and materially above ionization voltages that the governing or limiting action

on the space current due to the electric field of said electrons is substantially unaffected by positive ionization and by secondary electron emission from the walls of the tube.

---

1,558,437. ELECTRICAL DISCHARGE APPARATUS. IRVING LANGMUIR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 29, 1913, Serial No. 797,986. Renewed Feb. 29, 1924. 38 Claims. (Cl. 250—27.)



1. A discharge apparatus operating with an electron discharge comprising a highly evacuated envelope, an electron-emitting cathode, an anode, a conductor therein located near the cathode, means for maintaining said conductor at a substantially uniform positive potential with respect to said cathode, and separate means within said envelope for varying the electron discharge between said cathode and anode.

2. An electrical discharge apparatus, comprising an electron-emitting cathode, an anode, an envelope therefor, said electrodes and the space in said envelope being freed from gas to a degree permitting a substantially pure electron-discharge to take place therein without gas ionization, a conducting body in said envelope located near the cathode, and a source of potential having its positive terminal connected to said body and its negative terminal directly to the cathode.

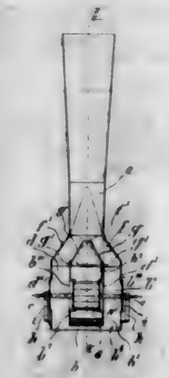
15. Parallel supporting members, and a filamentary thermionic cathode insulatingly supported at a plurality of points thereby, a grid frame at each side of said cathode, and an arbor for supporting said members and said frames.

22. An evacuated vessel containing a filament electrode and a cold electrode, a second cold electrode located between the filament and the first cold electrode, and a third cold electrode located between the filament and second cold electrode.

---

1,558,438. MEANS FOR PRODUCING MECHANICAL DRAFTS IN CHIMNEYS AND THE LIKE. GEORGE JULES ARMAND LOUIS PRAT, Paris, France. Filed Aug. 30, 1923. Serial No. 660,119½. 1 Claim. (Cl. 110—162.)

In a plant for the production of mechanical draft, the combination, of a chimney, having a lower portion of rectangular cross-section, a rectangular enclosure forming a chamber adjacent the rectangular portion of said chimney and communicating therewith, being connected thereto by flat inclined walls, a casing within said chamber the side walls of which are substantially parallel to corresponding walls of said chamber leaving a space therebetween, said casing having a rectangular nozzle opening into said chimney adjacent the juncture of said enclosure and chimney, a fan rotor mounted in said casing, said casing having openings for the passage of gases to said fan rotor, rectangular shutters hingedly carried at the mouth of the nozzle on opposite sides thereof, said shutters being of such size as to engage the walls of the enclosure in one position of said shutters



and means for moving said shutters to selectively close the said nozzle against passage of forced draft, or to close the space between the casing and enclosure against passage of natural draft or to partially close the nozzle to cause an induced draft.

---

1,558,439. POISON DISTRIBUTOR. WILLIAM SCHILPLIN, Seattle, Wash. Filed May 3, 1923, Serial No. 636,362. Renewed Mar. 19, 1925. 2 Claims. (Cl. 43—147.)

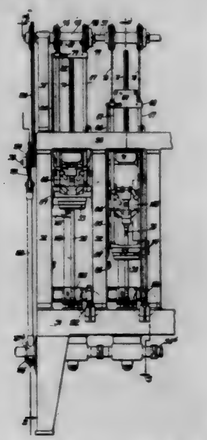
1. In a poison distributor, the combination with a stand having a bail, a container for poison powder pivotally connected to said stand, said container having an outlet at the bottom thereof, an air pressure device connected to said stand, a discharge spout for said device, a partition element within said spout to provide two passages for air through the latter, a flexible delivery tube connecting the container with one of said passages, and adjustable means provided within the spout for regulating the effective sizes of said passages.

1,558,440. PREVENTING THE STICKING OF PLASTIC MATERIALS TO MOLDS. HARRY M. WEBBER, Montclair, N. J., assignor to Ellis-Foster Company, Montclair, N. J., a Corporation of New Jersey. Filed Mar. 22, 1924. Serial No. 701,231. 3 Claims. (Cl. 18—47.)

1. In molding plastic resinous substances having a tendency to stick to the mold the step which consists in dusting the mold prior to molding with a dusting powder comprising a metallic soap.

---

1,558,441. BOLT MACHINE. JAMES A. EDEN, Jr., Springfield, Mass., assignor to Walter H. Foster, New York, N. Y. Filed Oct. 30, 1923. Serial No. 671,652. 25 Claims. (Cl. 10—87.)



4. In a machine of the class described, in combination, cutter-head, upright guides therefor, a cross-head above the travel of the cutter-head, a threaded shaft extending above the cross-head and driven from its lower portion and a nut engaging said shaft and attached to the cutter-head and means for withdrawing said nut from engagement at the end of a feeding movement and for bringing it into engagement at the end of a retracting movement.

20. In a machine of the class described, in combination, a cutter-head adapted to traverse the body of a blank, a pointing cutter adapted to engage the end of the blank and a facing cutter adapted to face the head of the blank and means for simultaneously moving the pointing cutter and the facing cutter into and out of engagement with the work.

---

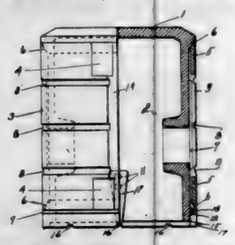
1,558,442. FURFURAL PRODUCT AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Sept. 2, 1924. Serial No. 735,518. 6 Claims. (Cl. 18—55.)

3. The process of making cast articles which comprises dissolving nitrocellulose in furfural and allowing the mixture in an acidulated condition to harden in suitable molds whereby castings are obtained.

---

1,558,443. PISTON FOR INTERNAL-COMBUSTION ENGINES. HARRY F. JOSEPH, Davenport, Iowa, assignor of one-half to A. G. Bush, Davenport, Iowa. Filed Dec. 15, 1921. Serial No. 522,648. 12 Claims. (Cl. 74—108.)

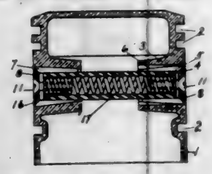
1. In a piston, the combination with a body having a head bevelled upon its lower edge, of a plurality of segmental plates bevelled at their upper ends to correspond to the bevel of the head, and with bevels formed at



the lower ends of the plates, and means for exerting pressure outwardly and upwardly against the plates.

---

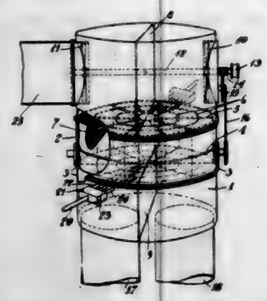
1,558,444. AUTOMATIC ADJUSTER FOR WRIST-PIN BEARINGS FOR AUTOMOBILE AND GAS ENGINES. HARRY F. JOSEPH, Davenport, Iowa, assignor of one-half to A. G. Bush, Davenport, Iowa. Filed Dec. 8 1922. Serial No. 605,595. 7 Claims. (Cl. 74—108.)



1. In a bearing, a hollow shaft or pin, a tapered bushing adjustably mounted thereon and having its outer end internally beveled, a bearing member surrounding the tapered bushing, a cap mounted upon the beveled end of the bushing and means secured within the hollow shaft and connected with the cap for applying pressure upon the outer end of the bushing.

---

1,558,445. SOOT-BLOWING APPARATUS FOR REGENERATIVE HEATING DEVICES. FREDRIK LJUNGSTRÖM, Brevik, Lidingon, Sweden, assignor to Aktiebolaget Ljungstroms Ångturbin, Stockholm, Sweden, a Corporation. Original application filed Apr. 11, 1921, Serial No. 460,600. Divided and this application filed Nov. 2, 1922. Serial No. 598,657. 2 Claims. (Cl. 110—56.)



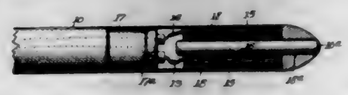
1. In a regenerative heating device in which the fluid to be heated and the fluid giving off heat pass alternately through the same passages of the regenerative material, the combination with a continuously rotating body containing the regenerative material, of a stationary pipe supplying the cleaning fluid and arranged close by the movable body, said pipe being provided with outlets directed against said body.

1,558,446. METHOD OF TREATING WOOD-TAR OIL. AUGUSTUS E. MAZE, East Orange, N. J., assignor to Ellis-Foster Company, Montclair, N. J., a Corporation of New Jersey. Filed Mar. 27, 1924. Serial No. 702,560. 3 Claims. (Cl. 203—4.)

1. The process of making a nitrocellulose solvent from wood tar oil which comprises agitating a distillate thereof, boiling up to 130° C., with bleaching powder whereby a product of improved odor and good solvent properties for nitrocellulose is obtained.

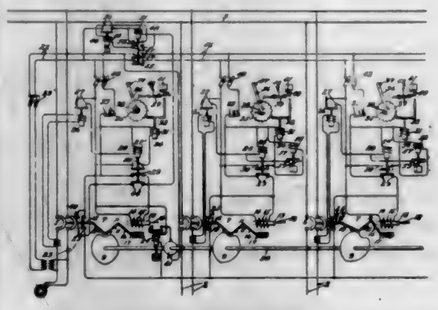
---

1,558,447. ELECTROMAGNETIC FISHING TOOL. CHESTER H. BEACH, Racine, Wis., assignor to Wisconsin Electric Company, a Corporation of Wisconsin. Filed Nov. 7, 1921. Serial No. 513,324. 1 Claim. (Cl. 175—367.)



In a tool of the class described, an electric cable, a ferrule tightly fitted over said cable adjacent one end thereof, one edge of said ferrule being pressed into said cable to anchor the same thereon, an elongated shell tightly fitting said ferrule at its inner end and provided with an aperture at its outer end, an electromagnetic coil housed within said shell and connected to the conductors of said cable, and a core of magnetic material mounted in said coil with its tip projecting into said aperture and lying flush with the outer end of said shell.

1,558,448. AUTOMATIC RECLOSING CIRCUIT-BREAKER SYSTEM. ARVID E. ANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 2, 1922. Serial No. 579,252. 8 Claims. (Cl. 175—294.)



1. In an automatic reclosing circuit breaker system, a plurality of circuit breakers, means arranged to be operated to effect the opening of one of said circuit breakers, means operative in response to the opening of said one of said circuit breakers to effect the opening of the other of said circuit breakers, means operative in response to the opening of said one of said circuit breakers to effect the closing thereof, means arranged to effect the closing of the other of said circuit breakers successively, and means operative in response to the closing of said one of said circuit breakers to effect the operation of said last mentioned means.

Patents Nos. 1,558,449 to 1,559,585.

# THE OFFICIAL GAZETTE

OF THE

# United States Patent Office.

Vol. 339—No. 4. TUESDAY, OCTOBER 27, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## ADJUDICATED PATENTS.

(C. C. A. Ill.) The Bruegmann patent, No. 983,675, for improved printer's register hook, *Held* not infringed. *Printing Utilities Co.* v. *International Harvester Co.*, 6 F. (2d) 461.

(C. C. A. Pa.) The Honigmann patent, No. 1,074,720, for automatic feeding device for printing presses, claims 1, 2, 10, 21, and 22 *Held* subsequent in date of invention to claims 13–17 of the Wells and Hunter patent, No. 1,363,200. *Miehle Printing Press & Mfg. Co.* v. *Miller Saw Trimmer Co.*, 6 F. (2d) 417.

(C. C. A. N. Y.) The Alberti patents, Nos. 1,234,109 and 1,234,711, for bottle closure and process of making, *Held* valid and infringed. *International Cork Co.* v. *New Process Cork Co.*, 6 F. (2d) 420.

(C. C. A. Wis.) The Schneider patent, No. 1,263,351, for electric heater, *Held* not infringed. *Cutler-Hammer Mfg. Co.* v. *General Electric Co. et al.*, 6 F. (2d) 376.

(C. C. A. Pa.) The Wells and Hunter patent, No. 1,363,200, for automatic printing-press feeder, claims 13–17 *Held* prior in invention to claims 1, 2, 10, 21, and 22 of the Honigmann patent, No. 1,074,720. *Miehle Printing Press & Mfg. Co.* v. *Miller Saw Trimmer Co.*, 6 F. (2d) 417.

(C. C. A. Wis.) The Abbott patent, No. 1,367,341, for electric heating element, *Held* valid and infringed. *Cutler-Hammer Mfg. Co.* v. *General Electric Co.*, 6 F. (2d) 376.

## NOTICE TO ATTORNEYS.

**A circular letter reading as follows has been placed in the mail addressed to each attorney on the roster:**

**"Your name appears on the roster of those registered to practice before the United States Patent Office. We are preparing to revise the roster to eliminate the names of those who are dead or who have retired from practice before this Office.**

**"You are reminded that the rules provide that attorneys registered in this Office should keep the Office advised of any change of address. To this end will you please fill out the form below and return this letter immediately.**

**"Your failure to fill out and return this letter will be considered your authorization to remove your name from the roster."**

**Attorneys who have not received this circular and who wish their names to be retained on the roster should immediately write the Commissioner of Patents to that effect and give him their full names and business addresses, together with their registration numbers and the names of any firms of which they are members or with which they are associated.**

## Condition of Applications Under Examination at Close of Business October 16, 1925.

| Room No. | (Total number of applications awaiting action, excluding Trade-Mark Division, 40,573; Trade-Mark Division, 2,119. Oldest new case, Apr. 6, 1925; oldest amended, Apr. 8, 1925. The dates given are 1925.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS. | Oldest new application and oldest action by applicant awaiting office action. # DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decisions.

EX PARTE DODGE.

*Decided February 14, 1924.*

1. INVENTION—REVERSAL OF PARTS.

Where in a prior patent a bracket is attached to each side of a container and cooperating trunnions are attached to the inner walls of a casing for the container, *Held* that it is an obvious reversal to attach the trunnions to the container and the brackets to the casing.

2. SAME—REMOVABILITY OF PARTS.

Where it is old to make the top member and the upper portions of the front and rear of a shipping casing for an oil can removable from the rest of the casing, but permanently attached to the can, *Held* that there is no merit in making these portions removable from the can as well as from the casing.

3. SAME—ADDITIONAL FUNCTION.

Although it was not patentable over the prior art to secure trunnions on the sides of a container and cooperating brackets on the inner sides of a case, yet where these parts were made to serve the additional function of maintaining the container against movement in the case during shipment, *Held* that a claim covering all these features should be allowed.

[Note.—This application has resulted in Patent No. 1,490,663, April 15, 1924.]

Application for patent.

APPEAL from the Examiners in Chief.

COMBINED CONTAINER AND CASE.

Application filed November 8, 1919, Serial No. 336,570.

*Messrs. Morsell & Keeney* for the applicant.

*Mr. T. A. Hostetler* for the Commissioner of Patents.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiners in Chief affirming that of the primary Examiner denying patentability to all the claims, two in number, of which claim 1 will serve for illustrative purposes:

1. In combination a case of substantially rectangular shape having oppositely disposed side walls, front and rear walls each of which are formed of a lower portion fixed to said side walls and a removable upper portion adapted to be secured as desired to said side walls, and a removable top cover, a container having medial opposite trunnions, the distance between the outer portions of said trunnions being slightly less than the distance between the inner surfaces of the side walls of the case to permit the container being easily lowered into and lifted upwardly in said container when the top cover and the upper portions of the front and rear walls are removed, and bearing brackets mounted on the upper and inner portions of the opposite side walls and having upper rounded edge recesses for pivotally receiving the opposite trunnions and supporting the container when the container is lifted upwardly from the case and the trunnions are inserted in said brackets, the inner portions of said brackets being of greater distance apart than the width of the container but of less distance apart than the distance apart of the outer portions of the trunnions.

The references are: Bean, No. 298,338, May 13, 1884; Clough, No. 211,088, January 7, 1879; Heisey, No. 294,231, February 26, 1884.

The appealed claims are directed to a container for liquid, such as lubricating oil, and a holding case in which the container is shipped and from which the container is partially removed when being tipped to pour out the fluid or oil. Upon each side of the container is soldered a trunnion with a flaring head, and upon the top and within each of the sides of the case is secured a supporting bracket for the trunnion. In order to facilitate the tipping of the container when the trunnions are set into the brackets, the top and upper portions of the front and rear of the case are removed. These portions are arranged so that such removal may be readily made. In shipping, the trunnions, which are out of engagement with the brackets, serve to stay the container in the case by contacting with the walls of the latter. Also at such time the brackets stay the top of the container by engaging its sides.

[1] The patent to Clough discloses a round oil can set in a case of the general shape employed by appellant, and, notwithstanding appellant's contention to the contrary, the can may be readily shipped in the case. The front and top portions of the case may be readily removed and the brackets carried by the can set over the trunnions carried in the case and the can tipped in the manner in which appellant may tip his can. The brackets are secured to the can in the Clough arrangement by a band, but the patentee states the brackets may be soldered to the can, lines 15 to 18, and this would simulate appellant's way of fastening his trunnions to the container. Although Clough secures the brackets to the can and the trunnions to the case, this is an obvious reversal, and there is no point in the change appellant has made. The trunnions J of this patent are clearly shown enlarged at their outer ends. It is considered the brackets and the trunnions of this reference are substantially those employed by appellant.

[2] Bean discloses the rectangular can and the handle bracketed by the two top bars of the case. The top members and the upper portions of the front and rear of the case are removable, as in appellant's construction, but while removable from the case they are permanently attached to the can. It is not believed there is any merit in making these portions removable from the can as well as from the case. It is thought to be obvious the lugs and brackets of Clough could be employed in the Bean construction. When this is done, the appealed claims are fully anticipated. Such a change is believed to be wholly wanting in inventive concept. The conclusion of the Examiners in Chief is believed to be sound.

[3] Appellant submits an additional claim which sets forth substantially the same combination of parts as set forth in the appealed claims, but adds the further limitation that the brackets and the trunnions have a function in maintaining the container against movement in the case. Since the container is of thin material and the contents are heavy, it is thought there is some advantage in these features, and since they are not shown in the art to which my attention has been called it is thought this claim may be allowed.

The decision of the Examiners in Chief is affirmed.

---

EX PARTE HALLECK.

*Decided May 29, 1924.*

INVENTION—AGGREGATION OF INDEPENDENT ELEMENTS.

Where swaging dies and gauging grooves are formed in the same block for successive but independent operations on the same blank, *Held* that a claim for the block provided with the two forming surfaces covers an aggregation of independent elements.

[Note.—This application has resulted in Patent No. 1,523,356, January 13, 1925.]

Application for patent.

APPEAL from Examiners in Chief.

FORGING MACHINES.

Application filed July 10, 1917, No. 179,771.

*Mr. Horace L. Rockwell* for the applicant.

KINNAN, *First Assistant Commissioner:*

This is an appeal from the decision of the Examiners in Chief affirming the action of the Primary Examiner finally rejecting claim 19, which reads as follows:

19. In a forging machine, swaging dies provided with flat transversely disposed diagonal forming surfaces and cooperating shank receiving surfaces, said dies each having inclined gaging grooves disposed longitudinally thereof at one side of said transversely disposed surfaces.

The claim was rejected not on the ground that it was directly anticipated, but on the ground that it covered a mere aggregation of dies for performing separate and distinct operations.

There were a number of other claims rejected, which were canceled after the decision of the Examiners in Chief. They included the combination of the so-called forming dies and the means "for forming a cutting edge on the steel." Claim 19 is for the combination of the swaging dies and the gauging grooves. These are both formed in the same block; but they are entirely independent in their operations. In other words, the swaging dies are first employed to bring the blank into the shape shown in Figure 10 and the die is then opened, the blank is turned at right angles and placed in the gauging grooves, whereupon the die is again closed in order that the blank may be acted upon by the surfaces 14 and 15 of the die, so as to "be brought down to gauge," and at the same time the desired square corners be formed.

While the swaging dies and the gauging grooves are formed in the same block, they are utterly independent in their actions, and the claim covers an aggregation of independent elements just as much as if the swaging dies and the gauging grooves were formed in independent blocks. The two elements covered by the claim are just as independent as the elements covered by the claims which were canceled. That a machine comprising two independently-operated dies is not a patentable combination was held in the case of *The Beecher Mfg. Co.* v. *The Atwater Mfg. Co.*, 1885 C. D. 324; 31 O. G. 1306; 114 U. S. 523, and the same reasoning applies to the present claim.

The decision of the Examiners in Chief is affirmed.

---

EX PARTE V. PERRIN & CIE.

*Decided August 28, 1923.*

1. TRADE-MARKS—SECONDARY MEANING—ACT OF 1905.

A descriptive mark will not be registered under the act of 1905, and the Office will not consider evidence that it has acquired secondary meaning.

2. SAME—SAME—ACT OF 1920.

Since descriptive marks may be registered under the act of 1920, it is not necessary for the Office to put a strained interpretation upon the act of 1905 in order to register marks which have acquired secondary meanings.

Application for registration of trade-mark.

ON APPEAL.

TRADE-MARK FOR GLOVES.

Application filed November 10, 1920, Serial No. 139,472.

*Messrs. Knight Brothers* for applicant.

FENNING, *Assistant Commissioner:*

This is an appeal from the action of the Examiner of Trade-Marks refusing to register as a trade-mark for leather gloves "Ripproof" on the ground that it is merely descriptive.

In *Hercules Powder Company* v. *Newton*, 274 O. G. 204; 1920 C. D. 340; 266 Fed. Rep. 169, the court said:

If the proposed trade-mark consists of a single word, then that word standing alone is merely descriptive, or it is not descriptive at all.

It seems too clear for argument that the present mark is descriptive and that, therefore, it is merely descriptive. Applicant in fact admits this, but urges that the mark has acquired a secondary meaning by use, and consequently it is no longer merely descriptive. In support of this affidavits are filed and a number of cases are cited. The Patent Office is not provided with facilities for taking testimony in ex parte cases and I am loathe to believe, in view of this well-known condition, that the trade-mark statute was intended to put upon the Office the burden of determining whether or not a mark has attained a secondary meaning. That this is the substantial understanding of the profession is evidenced by a proposed revision of the trade-mark laws which has been prepared by a committee of the patent section of the American Bar Association and revised by a committee of the New York Bar Association. Both committees endeavor to make special provisions for registering trade-marks which have attained secondary meaning, which may be taken as an indication that the present statute does not provide for such precedure.

Applicant cites the well-known "Holeproof" hosiery cases, 172 F. 859 and 190 F. 606, and the "Wearever" case, 226 F. 815. It is true in those cases that the court discusses secondary meaning as applied to a registered trade-mark, but the discussion there seems to be obiter, since the cases were wholly decided on a question of unfair competition.

[1] The following cases indicate the proper attitude of the Office to be a refusal to register under the act of 1905 a trade-mark which is descriptive: *Standard Paint Co.* v. *Trinidad Asphalt Mfg. Co.*, 165 O. G. 971; 1911 C. D. 530; 220 U. S., 446; *In re Toledo Scale Co.*, 303 O. G. 399; 1922 C. D. 136; *In re Packard Motor Car Co.*, 243 O. G. 1311; 1917 C. D. 206; 46 App. D. C. 555; *In re Alvah Bushnell Co.*, 270 O. G. 189; 1920 C. D. 112; 49 App. D. C. 133; 261 Fed. Rep. 1013; *In re B. F. Goodrich Co.*, 313 O. G. 663; 1923 C. D. 260; 285 Fed. Rep. 995; *In re Reid Bros.*, 287 O. G. 408; 1921 C. D. 198; 51 App. D. C. 6; 273 Fed. Rep. 368, as well as the Hercules Powder case above cited.

[2] The recent attitude of the court of appeals is indicated in the Goodrich and Reid Brothers cases cited, and this is a reasonable attitude at least since the passage of the act of 1920, which act makes it possible for an applicant to register its trade-mark even though it is descriptive. *Dunlap & Co.* v. *Jackson & Gutman Co.*, 326 O. G. 439; 1924 C. D. 38; 13 T. M. Rep. 66. The presence on the statute books of the act of 1920 makes it unnecessary for this Office to put a strained interpretation upon the act of 1905 and also makes it unnecessary for this Office to do the very dangerous thing of allowing registration on the ground of secondary meaning shown entirely by ex parte affidavits.

The Examiner of Trade-Marks is affirmed.

---

EX PARTE CALUMET STEEL COMPANY.

*Decided September 15, 1925.*

1. TRADE-MARKS—TWO-COLORED FENCE POST.

Arbitrarily coloring the lower or base portion of a fence post black and arbitrarily coloring the upper portion of the post green does not constitute a trade-mark.

2. SAME—ACT OF 1920—DEVICES OTHER THAN TRADE-MARKS NOT REGISTRABLE.

Under the act of 1920, as under the act of 1905, a device in order to be registrable must be a trade-mark.

3. SAME—CHARACTERISTIC OF A TRADE-MARK.

A thing in common use which includes no name, symbol, or assertion of origin or ownership is not a trade-mark.

ON PETITION.

Application for registration of trade-mark under act of March 19, 1920, filed April 24, 1924, Serial No. 196,049.

METALLIC FENCE POSTS.

*Mr. Eugene C. Wann* for the applicant.

FENNING, *Assistant Commissioner:*

Applicant petitions from the action of the Examiner of Trade-Marks refusing registration of his trade-mark under the act of March 19, 1920, substantially on the ground that what applicant is endeavoring to register is not a trade-mark.

I have carefully considered the act of 1920, but am unable to find in it any authority for registering anything which is not a trade-mark. This legislation appears to have originated with Senate bill 4783, introduced June 27, 1918. This bill amended sections 2, 4, and 13 and added a new section 16 (*a*) to the Trade-Mark Act of February 20, 1905. A hearing was had July 3 and 5, 1918, before the Committee on Commerce of the Senate and the proceedings printed.

Another bill (S. 4889) was introduced on August 20, 1918, apparently to take the place of Senate 4783. It appears that this bill 4889 was passed by the Senate without amendments and reported favorably by the Committee on Patents of the House (Report No. 1090) February 18, 1919, but failed of passage by the House.

On July 5, 1918, there was introduced in the House H. R. 7157 to amend section 5 of the Trade-Mark Act of February 20, 1905. This bill extended the ten-year clause of the act of February 20, 1905, to include other articles not manufactured by the applicant for ten years next preceding February 20, 1905. This bill was favorably reported with slight amendments by the Committee on Patents of the House February 6, 1920, after hearings had on January 21 and 22, 1920. The hearings and the report were printed.

A new bill (H. R. 9023) was introduced into the House some time in 1919. A hearing on this bill was held before the House Committee on Patents October 15, 1919, and the bill was reported to the House favorably October 24, 1919. It appears that this bill (H. R. 9023) was identical with Senate bill 4889, previously passed by the Senate. H. R. 9023 was then sent to the Senate and a report was made February 21, 1920, by the Committee on Patents, and this report recommended that the bill pass with certain amendments. Apparently this bill passed the Senate in the amended form as reported by the committee of the Senate.

After passage by the Senate it appears that the Senate amendments were not agreed to by the House and a conference was authorized (see Congressional Record of March 20, 1920, p. 4463). The conference report was submitted to the Senate March 11, 1920 (see Congressional Record for that date, p. 4488). The conference report recommended that the House recede from its disagreement of the Senate amendments, one of said amendments by the Senate being further amended by the conferees and agreed to by them. The conference report with all amendments was agreed to by the Senate March 11, 1920 (see p. 4488, Congressional Record), and reported to the House and discussed March 13, 1920 (see Congressional Record for that date, pp. 4603–4604), and the conference report was agreed to.

It should be noted that one of the amendments to the bill made by the Senate—namely, section 9—authorized the incorporation into the bill of H. R. 7157.

I have carefully examined the proceedings which led up to the passage of the act, but am unable to find anything which leads to the conclusion that we should register something which is not a trade-mark. *Ex parte Standard Oil Company (New Jersey)*, 1924 C. D. 110; 328 O. G. 785; *Ex parte H. K. H. Silk Co.*, 1924 C. D. 150; 329 O. G. 266; *Ex parte Keyless Auto Clock Co.*, 1923 C. D. 25; 309 O. G. 223; *Ex parte Mme. V. V. Maginley*, 1924 C. D. 145; 329 O. G. 264.

[1] I am clearly of the opinion that the Examiner of Trade-Marks was right and that what applicant at present proposes to register is not a trade-mark. Applicant has presented affidavits of dealers indicating that the dress of his goods is recognizable; but those affidavits cannot establish that the dress is in law a mark.

The application as amended sets out that:

> The trade mark consists in arbitrarily coloring the lower or base portion of a fence post black and arbitrarily coloring the upper portion of the post green as indicated by the shading in the accompanying drawing.

The drawing shows a metal fence post colored black to a little above the ground line and colored green from there to the top of the post.

This application was involved in opposition No. 5694, in which on February 6, 1925, I refused registration. 146 MS. Dec. 371. The applicant at that time said:

> The trade mark consists in coloring the entire post one color, as for instance green as indicated by the shading in the accompanying drawing, and then coloring the base of the post, from a point at or just above the ground line down, with a contrasting color, as with a heavy extra coat of tough, rust-resisting black asphaltum, thus making the post have a double coated base.
> The trade mark is applied or affixed directly to the goods by painting or coloring the same in the manner above described.

We must take judicial notice of the fact that it has been common for many years to paint lower portions of fence posts which go into the ground with a black asphaltum paint for the purpose of protecting the fence post. We must also take official notice of the fact that it is not at all uncommon to have the portion of the fence post which appears above the ground painted green. In fact, green is one of the most usual colors used in paint for fences.

As pointed out in *Ames Shovel and Tool Company* v. *Baldwin Tool Works*, 335 O. G.. 831:

> No one may adopt a trade mark which will exclude the rest of the trade from using the usual ordinary manufacturing practice established in the trade.

See also *Checker Cab Mfg. Co.* v. *Yellow Cab Co.*, 339 O. G. 762.

[2] Applicant has objected to the citation of decided cases on the ground that he is applying for registration under the act of 1920, and the decided cases were decided under the act of 1905. It is clear, however, that under the act of 1920, as under the act of 1905, a device in order to be registrable must be a trade-mark. In *Goodyear Tire & Rubber Co.* v. *The Firestone Tire & Rubber Co.*, 1917 C. D. 49; 240 O. G. 641, registration was refused of an automobile tire consisting of a black tread and red side walls. After very careful consideration and argument, most of which is clearly applicable here, it was held that that mark was not a trade-mark.

In *In re American Circular Loom Company*, 1907 C. D. 452; 126 O. G. 2191; 28 App. D. C. 450, the Court of Appeals of the District of Columbia refused registration of "flakes of mica impressed or otherwise applied to the external surface of an insulating tube" on the ground that it was merely "an ingenious attempt to obtain a trade mark of which color, unconnected with some symbol or design, is the essential feature." The court there cited with approval the holding of the Commissioner that:

> The surface effect which the applicant calls his trade mark is not so clearly distinct from the article upon which it appears as to be readily recognized as an arbitrary symbol for this purpose.

[3] That this is not a new doctrine is clearly established by the case of *Harrington* v. *Libby*, Fed. Cases 6107, decided in 1877, where the court held that a peculiarly-marked pail was not a trade-mark for collars packed in the pail. The court held that a thing which was in common use and which included no name, no symbol, no assertion of origin or ownership, was not a trade-mark.

The Examiner was right in refusing registration. The petition is denied.

---

CHECKER CAB MANUFACTURING CORPORATION *v.* YELLOW CAB MANUFACTURING CO.

*Decided September 24, 1924.*

1. TRADE-MARKS—NOT PRIMARILY FOR ORNAMENT.
   A trade-mark may be ornamental. It may add to the beauty of a device and still be a trade-mark; but the purpose of a trade-mark is not primarily for ornament.
2. SAME—PORTIONS OF STRUCTURES.
   The courts generally hold portions of structures not trade-marks.
3. SAME—OPPOSITION—REPRESENTATION OF A SHUTTER EMBOSSED IN THE SIDE OF AN AUTOMOBILE BODY.
   Where it was common to apply an ornament to the side of a carriage or automobile body behind the window, and one of the best-known ornaments was the representation of the slats of a blind or shutter, opposition to the registration of an alleged mark comprising an embossed representation of a shutter in the same location was sustained.

Opposition No. 4,735.

APPEAL from Examiner of Interferences.

TRADE-MARK FOR AUTOMOBILE TAXICABS.

Application of Yellow Cab Manufacturing Co. filed February 15, 1923, No. 176,105, published June 5, 1923.

*Messrs. Brown, Boettcher & Dienner* for Checker Cab Manufacturing Corporation.

*Messrs. Rummler & Rummler* for Yellow Cab Manufacturing Co.

FENNING, *Assistant Commissioner:*

The Yellow Cab Manufacturing Co. appeals from the action of the Examiner of Interferences sustaining an opposition brought by the Checker Cab Manufacturing Corporation against its application to register as a trade-mark for "Motor Driven Passenger Vehicles — Namely, Automobile Taxicabs" what applicant aptly defines in its brief thus:

> The trade mark involved in this proceeding is an emblem, consisting of a panel having the appearance of a plurality of parallel slats arranged within a border which resembles a frame so that the entire emblem has the appearance of a shutter panel, but in fact is an embossed representation, not made of slats, and is solid with no ventilating slits as in the conventional shutter that it appears to represent.

The application papers allege that the trade-mark is applied or affixed to the goods by embossing the same on a sheet of metal and inserting the latter as a panel in the exterior wall in the upper rear part of each side of the vehicle. It has been common practice in automobile bodies of the closed type to provide a window in the upper portion of the body on each side to the rear of the doors. This practice was common with the bodies of carriages of various types before the advent of the automobile. In both types of vehicles it has been common for upward of a century, at least, at times to provide a window smaller in dimensions than the space of the vehicle body provided. Such procedure might leave a blank space in the vehicle body to the rear of the window. It was common to apply an ornament or embellishment to this part of the vehicle body. One of the commonest and best-known ornaments employed by the carriage builder for many years has been the representation of the slats of a blind or shutter for a window. Sometimes actual slats were set into the body, sometimes a representation of them was painted upon the vehicle body. The effect produced by such arrangement was to make it appear that there were two windows in the rear portion of the vehicle body, one of them being closed by the shutter.

Finding this condition of the art applicant alleges that it elected to choose as its trade-mark to indicate origin this ornamentation of its vehicle. Opposer, manufacturing a vehicle somewhat similar to that of applicant's, sometimes employs this old obvious scheme of ornamenting its vehicle bodies. Such fact seems to indicate that opposer may be damaged by registration to applicant of the mark under consideration.

[1] Beyond doubt a trade-mark may be ornamental. It may add to the beauty of a device and still be a trade-mark. On the other hand the purpose of a trade-mark is not primarily ornamental. The Supreme Court in *Columbia Mill Company* v. *Alcorn*, 65 O. G. 1916; 1893 O. G. 672; 150 U. S. 460, said:

> That to acquire the right to the exclusive use of a name, device, or symbol, as a trade mark, it must appear that it was adopted for the purpose of identifying the origin or ownership of the article to which it is attached, or that such trade mark must point distinctively, either by itself or by association, to the origin, manufacture, or ownership of the article on which it is stamped. It must be designed, as its primary object and purpose, to indicate the owner or producer of the commodity, and to distinguish it from like articles manufactured by others.

[2] It is difficult for me to believe that applicant has shown trade-mark use of the design here in issue. It is embedded in the wall of the cab, taking the place of what might otherwise be a blank piece of material. It is a portion of the structure (and the courts generally hold portions of structures not trade-marks).

[3] To the casual observer or to one conversant with automobile bodies it seems to be a conventional ornament conventionally placed. As such any body builder is entitled to use it. To give exclusive use of it to applicant would be a perversion of the trade-mark laws.

The opposition must be sustained.

The Examiner of Interferences is affirmed.

---

EX PARTE OWN YOUR HOME EXPOSITION, INC.

*Decided May 26, 1925.*

PRINTS—ADVERTISEMENT SOLICITING EXHIBITS AT "OWN YOUR HOME" EXPOSITION.
An advertisement in which manufacturers of building material and home equipment are invited to exhibit their products at the "Own Your Home" exposition refused registration on the ground that it is not descriptive of an article of manufacture.

Appeal from Examiner of Trade-Marks.

PRINT FOR "BUILDING MATERIAL AND HOME EQUIPMENT MANUFACTURERS."

*Messrs. Wilkinson, Huxley, Byron & Knight* for the applicant.

FENNING, *Assistant Commissioner:*

Applicant appeals from the decision of the Examiner of Trade-Marks refusing registration as a print of an advertisement in which building material and home equipment manufacturers are invited to exhibit their products at the "Own Your Home" exposition.

The act under which prints are registered in this Office provides that the words engraving, cut, and print of the Copyright Act shall be applied only to works connected with the fine arts and that "no prints or labels designed to be used for any other article of manufacture shall be entered under the copyright law, but may be registered in the Patent Office."

Rule 28 of the rules of this Office defines a print as—

> an artistic and intellectual production designed to be used for an article of manufacture and in some fashion pertaining thereto, but not borne by it—

and rule 30 provides that no print can be registered unless—

> it properly belongs to an article of manufacture and is descriptive thereof.

Inspection of the print shows that it is not descriptive of anything, unless it is of the exposition itself. It certainly in no way describes building material. That it is not descriptive of an article of manufacture is shown by the last paragraph of the statement, which, after giving the date of the first publication and the title of the print, states:

> It is used for advertising purposes, for building material and home equipment manufacturers.

Obviously the manufacturers are not articles of manufacture, nor does the label in any way describe the building material. The only possible suggestion as to the character of the material is the statement that only manufacturers of reliable products are invited to exhibit.

Registration was therefore properly refused, and the decision of the Examiner of Trade-Marks is affirmed.

## Court of Appeals of the District of Columbia.

IN RE THE GOODYEAR TIRE & RUBBER COMPANY.

*No. 1,705. Decided April 6, 1925.*

TRADE-MARKS—DESCRIPTIVE—DIAMOND-SHAPED PROJECTIONS ON FACE OF RUBBER TIRE.

Diamond-shaped projections molded on the face of a rubber tire are for the purpose of enhancing the wear or preventing skidding, or both, and are not registrable, being descriptive of the goods.

APPEAL from Patent Office. Affirmed.

*Mr. E. H. Parry* for The Goodyear Tire & Rubber Co.

*Mr. T. A. Hostetler* for the Commissioner of Patents.

Before MARTIN, C. J., ROBB, J., and VAN ORSDEL, J.

VAN ORSDEL, *J.*:

This appeal is from the decision of the Commissioner of Patents denying registration of a trade-mark consisting of—

a series of circumferentially disposed, outstanding blocks or elements, approximately diamond-shaped, and spaced by a series of grooves or lines which intersect each other at right angles, the blocks or elements being alined on parallel cross-planes.

The goods on which the mark is used are specified as belting, hose, machinery packing, and nonmetallic tires. The diamond-shaped projections, which appellant claims as a trade-mark, are clearly descriptive of the goods on which they are used, since they form a very essential part of the goods itself. In other words, these projections are molded on the face of a rubber tire either to enhance the wear or to prevent skidding, or both.

Section 5 of the Trade-Mark Act of 1905, among other things, provides:

That no mark which consists merely in * * * devices which are descriptive of the goods with which they are used shall be registered.

As suggested in brief of counsel for the Patent Office,—

the most accurate way of describing an article is possibly by the article itself.

This case, we think, is clearly ruled by the decisions in *Re United States Tire Company*, 225 O. G. 1107; 1916 C. D. 161; 44 App. D. C. 469; *In re Barrett Company*, 262 O. G. 167; 1919 C. D. 200; 48 App. D. C. 586; *Bristol Co.* v. *Graham*, 199 Fed. 412, and *Daniel & Electric Hose & Rubber Co.*, 231 Fed. 827.

The decision of the Commissioner of Patents is affirmed.

---

## Court of Appeals of the District of Columbia.

IN RE SCHRAM.

*No. 1,726. Decided April 6, 1925.*

ANTICIPATION—SCREW CAP FOR FRUIT JARS.

S.'s improvement in screw caps for fruit jars, anticipated.

APPEAL from Patent Office. Affirmed.

*Mr. John S. Barker* for the applicant.

*Mr. T. A. Hostetler* for the Commissioner of Patents.

Before MARTIN, C. J., ROBB, J., and VAN ORSDEL, J.

ROBB, *J.*:

Appeal from a decision of the Patent Office refusing four claims covering an alleged invention on a screw cap for a fruit jar.

The claimed novelty consists of

a closely rolled bead formed around the lower edge of said cap, whereby the spreading of the lower edge of the cap, cutting of the gasket or hands is prevented and a more uniform sealing action is obtained.

In other words, appellant has rolled up the lower edge of the old cap, and nothing more. While this change undoubtedly is an improvement over the prior art, it was suggested, as found by the Patent Office, by the patent to Redington, No. 1,110,646, which, though differing somewhat from appellant's device, clearly disclosed the idea.

For the reasons more fully stated by the tribunals of the Patent Office, the decision is affirmed.

Affirmed.

---

## Court of Appeals of the District of Columbia.

LANGMUIR *v.* ARNOLD.

*No. 1,680. Decided June 1, 1925.*

INTERFERENCE—PRIORITY.

Decision of the Patent Office awarding priority to the junior party A. reversed.

APPEAL from Patent Office. Reversed.

*Mr. A. G. Davis* and *Mr. A. D. Lunt* for Langmuir.

*Mr. Carl L. Richmond* and *Mr. Melville Church* for Arnold.

Before MARTIN, C. J., ROBB, J., and VAN ORSDEL, J.

ROBB, *J.*:

Appeal from a decision of an Assistant Commissioner of Patents in an interference proceeding awarding priority to the junior party, Arnold, and reversing concurrent decisions of the Examiner of Interferences and the Board of Examiners in Chief.

The invention is a thermionic tube adapted to be used as a relay in long-distance telephone systems, as a detector or amplifier in wireless systems, or as a rectifier of alternating currents. The issue is expressed in 13 counts, of which the 1st, 7th, and 13th, here reproduced, will serve as examples:

1. A high vacuum electron discharge device comprising an envelope, an incandescent cathode, and an anode, the space in said envelope being evacuated to such degree that the passage of current produces no appreciable positive ionization when the impressed voltage is as high as 200 volts.

7. A discharge device comprising a tube and electrodes therein one of which is adapted to emit electrons, the degree of evacuation and the relation of the parts of the device being such that the device is capable of being so operated, when voltages materially higher than ionization voltages are impressed on electrodes of the device and when the electron emission has any value such that the space current is below the saturation region at such voltage, that the line obtained by plotting the logarithms of any values of said current below the saturation region as ordinates against the logarithms of the corresponding values of said impressed voltages as abscissæ is straight and continuous.

13. The method of controlling an electric current in one circuit by an electromotive force in another circuit which consists in causing said current at voltages materially above ionization voltages to pass as a discharge across a vacuous space between an electron emitting cathode and an anode, maintaining a high vacuum in said space, governing or limiting the current by a space charge effect in said space substantially unaffected by positive ionization, and superimposing the effect of said electromotive force on said space charge effect to control said current in a stable and reproducible manner.

The attitude of the junior party, appellee here, when this interference was declared, is significant. He filed a motion challenging the patentability of the issue and sought and obtained permission to take evidence in support of that motion. The result was the taking of voluminous testimony by the parties on this issue, which by stipulation is in the record here. The Law Examiner, to whom this question was initially referred, sustained the patentability of the issue and his decision is controlling here. We therefore start our inquiry in this appeal with the established fact that, so far as this proceeding is concerned, the issue is patentable; in other words, that something more than mere mechanical skill was involved in the result achieved.

The Examiner of Interferences, in an exhaustive opinion, awarded priority to the senior party, Langmuir. The Board, on appeal, directed attention to the fact that, structurally considered, the tubes of both parties outwardly are substantially identical with the Fleming valve and the De Forest audion of the prior art; that the invention has been referred to as a "thing compact of glass and metal". The Board then pointed out that this definition, although correct as far as it goes, is inadequate because it applies equally well to the prior-art devices, and that to this definition should be added the qualification that the device "operates with a *pure* electronic discharge above the voltage of positive ionization and below saturation", and proceeded:

But how is one to know whether the discharge is purely electronic? In other words, how is one to know whether a tube embodies merely the prior art devices or the invention of the issue? * * * For example, count 1 specifies that the envelope of the tube is evacuated to such a degree that the passage of current produces no appreciable positive ionization when the impressed voltage is as high as 200 volts. Thus the count distinguishes from the prior art, not by features of structure, but by a characteristic which is manifest while the device is operating at or above a certain voltage.

Later in its decision the Board suggested that the question to be determined was, who of the parties "first knowingly and understandingly conceived and produced such a tube"; that Arnold, the junior party, did not claim to have conceived the invention prior to November 1, 1912, or to have reduced it to practice prior to the 29th of that month; that Langmuir, on the other hand, alleged conception, disclosure, sketches, written description and successful operation prior to September 1, 1912, followed in November of that year by the successful operation of other devices embodying the invention. The Board then carefully reviewed the testimony in support of Langmuir's contentions and found that he had conceived the invention of counts 1 to 11, inclusive, as early as September 1, 1912, and had reduced the same to practice by November 19th of the same year; that, as to counts 12 and 13, Langmuir had conceived prior to April 8, 1913, and had reduced to practice by April 15th of that year; that Arnold conceived and reduced to practive the invention of fail the counts except counts 1 and 11 on April 25, 1913, and that counts 1 and 11 were not reduced to practice until after Langmuir's filing date.

The attitude of the Assistant Commissioner toward the case was that of the junior party upon the declaration of the interference, namely, that the patentability of the issue was doubtful. He says:

The line between the prior art and the issue is attenuated and if there is patentability, it must be as set out in the decision of the Law Examiner on the motion, and I do not understand either party to attack that decision here. Arnold alleges that when he made the invention, he thought he was following the prior art and not producing something patentable, and an undercurrent of that attitude seems to tinge his whole case. This is why he filed so late.

Proceeding from that postulate, the Assistant Commissioner has accepted as controlling on the question of conception and reduction to practice, on behalf of Arnold, testimony of a vague and general character and which failed to satisfy the lower tribunals, as it also has failed to satisfy us. The decisions of those tribunals are so clear and satisfying that we are content to rest our opinion upon the reasoning there given.

It results that the decision is reversed and priority awarded Langmuir.

Reversed.

## Court of Appeals of the District of Columbia.

CONTINENTAL VARNISH COMPANY *v.* THE ALABASTINE COMPANY.

*No. 1,737. Decided June 1, 1925.*

TRADE-MARKS—DESCRIPTIVE—"OPALINE."

The word "Opaline" as applied to "varnishes and finishes in the nature of a paint" would signify the character or quality of such goods, and hence the word is not registrable.

APPEAL from Patent Office. Affirmed.

*Mr. Wm. L. Morris* for Continental Varnish Company.

*Mr. E. T. Fenwick* and *Mr. C. R. Allen* for The Alabastine Company.

Before MARTIN, C. J., ROBB, J., and VAN ORSDEL, J.

ROBB, *J.*:

Appeal from a decision of the Patent Office in a trade-mark opposition proceeding denying appellant's application for the registration of the word "Opaline" as a trade-mark "for varnishes and finishes in the nature of a paint", on the ground that the word is descriptive.

The opposer applies the same mark on mixed paints which the tribunals of the Patent Office have found, and in that finding we concur, may be and have been used for substantially the same purpose as appellant's product. Opposer therefore is in a position to object to the registration of this word. The Standard Dictionary defines "opaline" as "pertaining to or possessing the qualities of the opal; * * * possessing the milky irridescence of the opal; opalescent." The following illustrative quotation is then given: "Sea and sky and meadow were taking a hundred *opaline* tints from the reflection of the sunset." Prudence Palfrey Aldrich, p. 212. (1874).

Under section 5 of the Trade-Mark Act of 1905, (33 Stat. 724) no mark is registrable consisting "merely in words or devices which are descriptive of the goods with which they are used, *or of the character or quality of such goods.*" As we many times have ruled, the obvious purpose of this provision is to prevent a monopoly of words either aptly descriptive or aptly suggestive of the char-

acter or quality of the goods to which they are to be applied. Here there can be no doubt that, to the general public, the use of the word "Opaline", as applied to "varnishes and finishes in the nature of a paint", would signify the character or quality of such goods, and hence that the word is not registrable.

The decision is affirmed.

Affirmed.

## Court of Appeals of the District of Columbia.

CARLEY *v.* MATTHES.

*No. 1,751. Decided June 1, 1925.*

REISSUES—ENLARGEMENT OF ORIGINAL CONCEPTION.

The original conception and disclosure, as determined by an original application, may not be enlarged through a reissue application, so as to include the independent work of a later inventor.

APPEAL from Patent Office. Affirmed.

*Mr. Frank B. Fox* for Carley.

*Mr. C. M. Nissen* and *Mr. A. J. Crane* for Matthes.

Before MARTIN, C. J., ROBB, J., and VAN ORSDEL, J.

ROBB, *J.*:

Appeal from a decision of the Patent Office in an interference proceeding sustaining the contention of the party Matthes that the party Carley has no right to make the claims of the issue, and awarding priority to Matthes.

The invention is simple and relates to wire clamps for supporting trolley wires. The single count of the issue reads as follows:

A wire clamp comprising a supporting member, means to secure the member to a support or hanger, clamping means to engage and support a conductor and having a pivotal engagement with the supporting member, a collar movable relatively to the supporting member and clamping means when rotated relatively thereto to move the collar into and out of engagement with the clamping means to operate the clamping means, means on the clamping means to engage the collar to prevent the disengagement of the clamping means, means interposed between the collar and supporting member after assembly of the above parts to maintain the parts against separation.

After the patent to Matthes had issued, Carley filed an application for the reissue of his Patent No. 1,382,620, inserting in the reissue application the claim of the issue. The Examiners in Chief and the Assistant Commissioner, in separate decisions, have successively held that there was no basis in the original patent to Carley for this claim. Both the specification and drawing of the reissue application materially differ from the original specification and drawing. In other words, this clearly is an attempt through a reissue application to enlarge the original conception and disclosure, so as to include the independent work of a later inventor. This may not be done. *Railway Co. v. Sayles*, 16 O. G. 243; 1879 C. D. 349; 98 U. S. 554; *Cooper v. Downing*, 230 O. G. 909; 1916 C. D. 227; 45 App. D. C. 345; *Moneyweight Scale Co. v. Toledo Computing Scale Co.*, 170 O. G. 928; 1911 C. D. 504; 187 Fed. 826. It is not what a reissue applicant may not claim to have invented, after seeing the work of a later inventor, but what he has described and disclosed in his original application. *Schmidt v. Clark*, 138 O. G. 768; 1909 C. D. 280; 32 App. D. C. 290.

For the reasons fully stated by the Board and the Assistant Commissioner, we affirm the decision.

Affirmed.

## Court of Appeals of the District of Columbia.

IN RE WILLIAMS.

*No. 1,747. Decided June 1, 1925.*

ANTICIPATION.

Decision of Patent Office rejecting claims affirmed.

APPEAL from Patent Office. Affirmed.

*Mr. J. H. Milans, Mr. C. T. Milans,* and *Mr. A. M. Belfield* for Williams.

*Mr. T. A. Hostetler* for the Commissioner of Patents.

Before MARTIN, C. J., ROBB, J., and VAN ORSDEL, J.

PER CURIAM:

Appeal from a decision of the Patent Office rejecting claims 1 to 8 and 10 to 14, inclusive, of an application for patent covering an improvement upon appellant's prior patent No. 831,815, the improvement consisting of a dummy or peg upon which the separable member of the pot-head connecter may be placed when disconnected, and a cap which fits either the body portion of the pot-head connecter or the dummy, so that the cap and the separable member are interchangeable.

The Examiner disallowed all the claims then in the application. The Examiners in Chief, after considering the references, said:

The only thing which is not disclosed in the references is the idea of making the cap and the detachable element of the pothead interchangeable between the fixed element of the pothead and the dummy. If there is any invention in this it is small but we are disposed to give appellant the benefit of the doubt, in the absence of any reference.

They therefore allowed one claim and disallowed the others. On appeal the Assistant Commissioner affirmed the Board "for the reasons set out in the decisions below." For the same reasons, we affirm the decision of the Assistant Commissioner.

Affirmed.

## Court of Appeals of the District of Columbia.

MANN AND BOHN *v.* LEGLER, JR., AND KOHL.

*No. 1,746. Decided June 1, 1925.*

INTERFERENCE—REDUCTION TO PRACTICE—DELAY—ABANDONMENT.

Where the senior parties conceived the invention, a saxophone, and embodied it in an instrument which would produce music more than two years prior to the entry of the junior parties into the field, *Held* that the instrument constituted a reduction to practice, and while delay on the part of the senior parties in filing their application was a circumstance to be considered the facts that they did not secrete their invention, were not spurred into activity by the entry of the junior parties into the field, and finally filed their application on the construction shown in this embodiment negatived abondonment.

APPEAL from Patent Office. Affirmed.

*Mr. J. H. Milans, Mr. C. T. Milans,* and *Mr. A. M. Belfield* for Mann et al.

*Mr. L. L. Townsend* for Legler et al.

Before MARTIN, C. J., ROBB, J., and VAN ORSDEL, J.

ROBB, *J.*:

Appeal from a decision of the Patent Office in an interference proceeding awarding priority to the senior parties.

The invention relates to an alleged musical instrument or modified form of saxophone. The Examiner of Interferences found that the senior parties conceived the invention and embodied it in an instrument (Exhibit A), as early as April of 1918, more than two years prior to the entry of the junior parties into the field. This finding was adopted by the Examiners in Chief and the Commissioner and is not seriously challenged.

The Examiner, after reviewing the evidence relating to this exhibit and finding it was possible to produce music from that instrument, ruled that the delay in filing an application justified him in holding that it was no more than an abandoned experiment and not a reduction to practice. The Board declined to accept this finding and held that, while the delay was a circumstance to be considered, the fact that the inventors did not secrete their invention, were not spurred into activity by the entry of the junior parties into the field, and finally filed their application on the construction shown in this Exhibit A, negatived abandonment. They further found that this exhibit constituted a reduction to practice. The Commissioner, putting aside all other questions raised, ruled that the proofs of the junior parties established no date of conception prior to 1920 and that, for the reasons stated by the Board, reduction to practice in April of 1918 was shown by the senior parties, to whom he therefore awarded priority.

For the reasons fully stated by the Board, we affirm the decision. See *Lederer v. Walker*, 182 O. G. 511, 1912 C. D. 500, 39 App. D. C. 122; and *Hubbard v. Berg*, 195 O. G. 460, 1913 C. D. 460, 40 App. D. C. 577.

Affirmed.

## PATENT SUITS.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

809,582, H. Robinson, Machine for peeling vegetables; 942,932, same, Vegetable paring machine, July 29, 1925, final consent decree for plaintiff; writ of injunction issued July 31, 1925, D. C. Mass., Doc. E 1406, *Imperial Machine & Foundry Corp. v. Wrought Iron Range Co.*

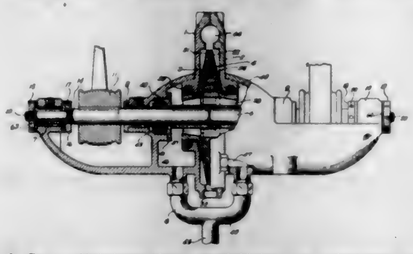
# REISSUES

## OCTOBER 27, 1925.

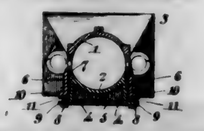
16,191. MACHINE FOR DISINTEGRATING AND EMULSIFYING MATERIALS. HARRY POVEY, Stanmore, and HALDANE OSWALD HALLAS, London, England, assignors to Colloidal Equipment Corporation, New York, N. Y., a Corporation of New Jersey. Filed Aug. 11, 1925. Serial No. 49,627. Original No. 1,489,786, dated Apr. 8, 1924, Serial No. 655,542, filed Aug. 3, 1923. 7 Claims. (Cl. 83—8.)



1. In a disintegrating, emulsifying, or admixing machine, a casing, relatively rotatable members mounted in the casing and having their proximate faces formed with relatively spaced blades and their edges beyond the blades defining a narrow discharge channel, the discharge channel being of less width than the space between the blades, feeding means for delivering material into the casing beyond each of the respective members, and means formed in said members for delivering the material from the casing axially of the members and adjacent their centres of rotation.

---

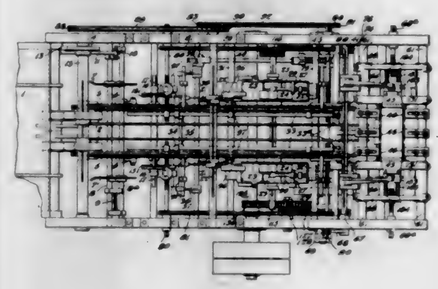
16,192. STOKER CYLINDER. ARTHUR WATHEY, Cleveland, Ohio. Filed Feb. 4, 1925. Serial No. 6,905. Original No. 1,500,972, dated July 8, 1924, Serial No. 565,638, filed June 3, 1922. 5 Claims. (Cl. 110—109.)



1. The combination in a stoker cylinder, of a detachable bottom member approximately semi-circular in cross-section adapted to rigidly support the weight of a ram in said cylinder and means for adjusting said bottom member transversely of the cylinder for the purpose specified.

---

16,193. MACHINE FOR MAKING BOXES. HAROLD J. GOSS, Nashua, N. H., assignor, by mesne assignments, to The Lake Erie Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 25, 1925. Serial No. 25,925. Original No. 1,513,236, dated Oct. 28, 1924, Serial No. 610,143, filed Jan. 2, 1923. 33 Claims. (Cl. 93—51.)

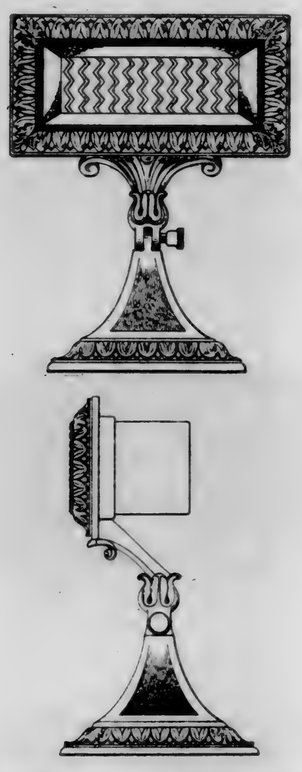


1. A machine of the character described having, in combination, folding mechanism; a hopper; traveling conveyors positively engaging the blanks to transport the same from the hopper toward the folding mechanism; means for transferring the blanks, one at a time, from the hopper to said conveyors, glue applying mechanism between the hopper and the folding mechanism including a pair of glue transferring rolls, and means for controlling the end flaps of the blank to permit of the engagement of some of said end flaps with said rolls to the exclusion of others.

# DESIGNS

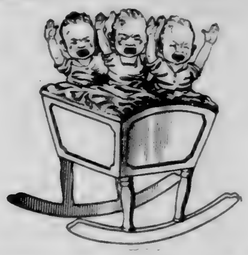
## OCTOBER 27, 1925.

68,558. ELECTRIC HEATER. JULIUS F. ADAMS, Pittsburgh, Pa. Filed Sept. 2, 1924. Serial No. 10,640. Term of patent 7 years.



The ornamental design for an electric heater, as shown.

68,559. TOY. WILLIAM HENRY ALGER, Worcester, Mass. Filed May 26, 1925. Serial No. 13,569. Term of patent 14 years.

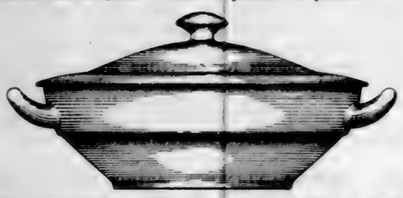


The ornamental design for a toy as shown.

68,560. TEAPOT OR SIMILAR ARTICLE. LUCIEN ANDUZE, Limoges, France, assignor to Herman C. Kupper, New York, N. Y. Filed Oct. 28, 1921. Serial No. 511,152. Term of patent 14 years.

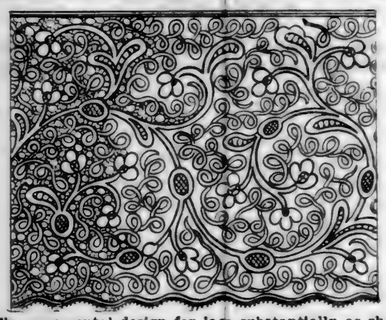
The ornamental design for a teapot or similar article as shown.

68,561. COVERED DISH OR SIMILAR ARTICLE. LUCIEN ANDUZE, Limoges, France, assignor to Herman C. Kupper, New York, N. Y. Filed Oct. 28, 1921. Serial No. 511,153. Term of patent 14 years.



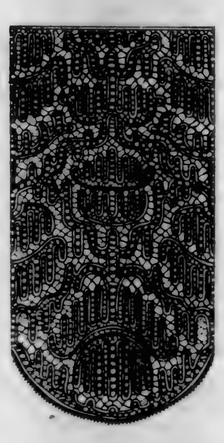
The ornamental design for a covered dish or similar article as shown.

68,562. LACE. CHARLES WILFRED BIRKIN and EDWIN THOMAS SANDS, Broadway, England, assignors to Birkin and Company, Broadway, England. Filed July 13, 1925. Serial No. 14,078. Term of patent 3½ years.



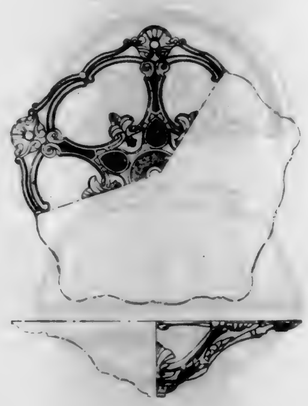
The ornamental design for lace substantially as shown.

68,563. LACE. CHARLES WILFRED BIRKIN and EDWIN THOMAS SANDS, Broadway, England, assignors to Birkin and Company, Broadway, England. Filed July 13, 1925. Serial No. 14,079. Term of patent 3½ years.



The ornamental design for lace substantially as shown.

68,564. ELECTRIC-LIGHTING FIXTURE. EDWARD BRANDT and HILIA J. BARTON, Detroit, Mich. Filed Aug. 13, 1925. Serial No. 14,422. Term of patent 7 years.



The ornamental design for an electric lighting fixture as shown.

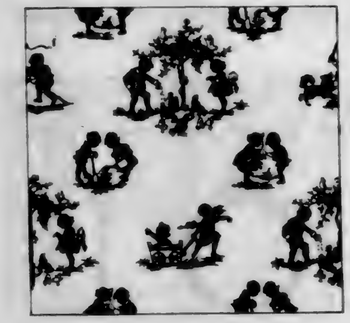
68,565. WALL PAPER. ALFRED C. DODMAN, Jr., Summit, N. J. Filed Aug. 19, 1925. Serial No. 14,508. Term of patent 14 years.

The ornamental design for wall paper, as shown.

68,566. WALL PAPER. ALFRED C. DODMAN, Jr., Summit, N. J. Filed Aug. 19, 1925. Serial No. 14,509. Term of patent 14 years.

The ornamental design for wall paper, as shown.

68,567. WALL PAPER. ALFRED C. DODMAN, Jr., Summit, N. J. Filed Aug. 26, 1925. Serial No. 14,599. Term of patent 14 years.

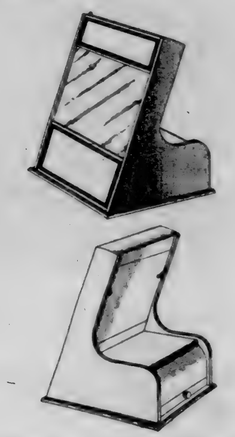


The ornamental design for wall paper, as shown.

68,568. FINGER RING OR ARTICLE OF SIMILAR NATURE. LOUIS FIEDLER, New York, N. Y., assignor to Benjamin Groas Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 14, 1925. Serial No. 12,715. Term of patent 3½ years.

The ornamental design for a finger ring or article of similar nature, as shown.

68,569. CABINET. JOHN L. FLANNERY, Chicago, Ill., assignor to The Boze Needle Co., Chicago, Ill., a Corporation of Illinois. Filed July 30, 1924. Serial No. 10,321. Term of patent 7 years.

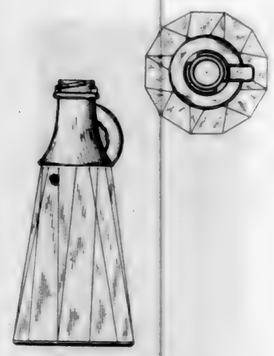


The ornamental design for a cabinet, as shown.

68,570. FINGER RING. MORTIMER C. FOSTER, New York, N. Y., assignor to Milton L. Ernst, Inc., New York, N. Y., a Corporation of New York. Filed July 16, 1925. Serial No. 13,797. Term of patent 7 years.

The ornamental design for finger ring, as shown.

68,571. BOTTLE. PAUL C. GALLAGHER, Omaha, Nebr., assignor to Paxton and Gallagher Company, Omaha, Nebr. Filed June 18, 1925. Serial No. 13,776. Term of patent 14 years.

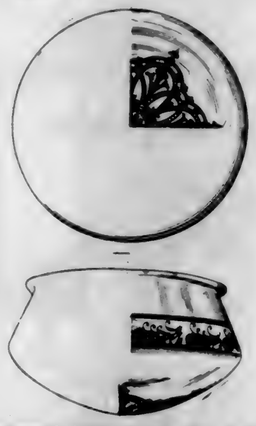


The ornamental design for a bottle, as shown.

68,572. GLASS LIGHTING GLOBE. MARSHALL W. GLEASON, Brooklyn, N. Y., assignor to Gleason-Tiebout Glass Company, Brooklyn, N. Y., a Corporation of New York. Filed July 7, 1925. Serial No. 14,013. Term of patent 3½ years.

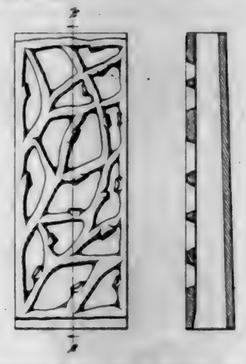
The ornamental design for a glass lighting globe as shown.

68,573. GLASS LIGHTING GLOBE. MARSHALL W. GLEASON, Brooklyn, N. Y., assignor to Gleason-Tiebout Glass Company, Brooklyn, N. Y., a Corporation of New York. Filed July 7, 1925. Serial No. 14,014. Term of patent 3½ years.



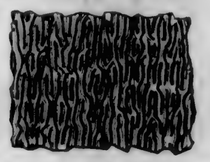
The ornamental design for a glass lighting globe as shown.

68,574. RADIANT FOR GAS HEATERS. JOHN H. GRAYSON, Athens, Ohio, assignor to The J. H. Grayson Manufacturing Company, Athens, Ohio, a Corporation of Ohio. Filed Dec. 29, 1924. Serial No. 11,814. Term of patent 14 years.



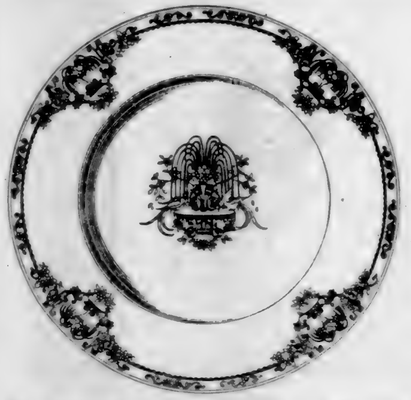
The ornamental design for a radiant for gas heaters, as shown.

68,575. LIGHT-TRANSMITTING GLASS. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 24, 1921. Serial No. 510,142. Term of patent 14 years.



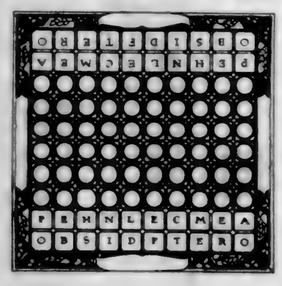
The ornamental design for light-transmitting glass as shown and described.

68,576. PLATE OR SIMILAR ARTICLE. FRANK G. HOLMES, Trenton, N. J., assignor to Lenox Incorporated, Trenton, N. J. Filed Sept. 12, 1925. Serial No. 14,770. Term of patent 14 years.



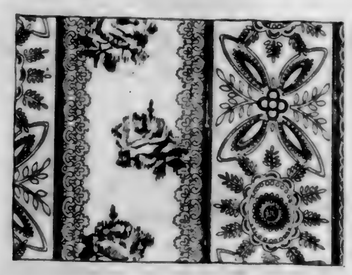
The ornamental design for a plate or similar article, as shown.

68,577. GAME BOARD OR SIMILAR ARTICLE. GEORGE W. HORTON, Queens, N. Y., assignor to John W. Bunker, New York, N. Y. Filed July 11, 1925. Serial No. 14,059. Term of patent 7 years.



The ornamental design for a game board or similar article, as shown.

68,578. TEXTILE FABRIC. WILLIAM C. KORSINEK, Cliffside Park, N. J., assignor to Golding Bros. Company, New York, N. Y., a Corporation of New York. Filed Aug. 21, 1925. Serial No. 14,552. Term of patent 3½ years.



The ornamental design for a textile fabric, as shown.

68,579. SHOE SOLE. MOSS HYMAN LEVY, London, England. Filed May 5, 1925. Serial No. 13,328. Term of patent 14 years.

The ornamental design for a shoe sole, as shown.

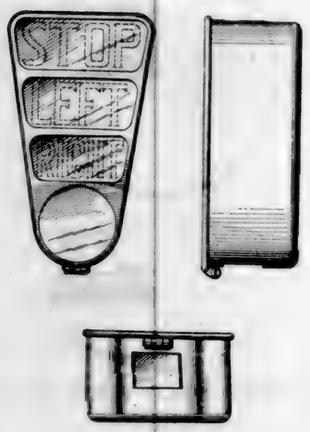
68,580. DOLL. FRANK L. LINDSTROM, Bridgeport, Conn. Filed Aug. 20, 1925. Serial No. 14,537. Term of patent 14 years.

The ornamental design for doll substantially as shown.

68,581. AUTOMOBILE SIGNAL-LIGHT CASING. THOMAS LONEY, Oakland, Calif. Filed Mar. 19, 1923. Serial No. 5,527. Term of patent 14 years.

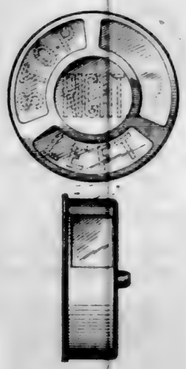
The ornamental design for an automobile signal light casing as shown.

68,582. AUTOMOBILE SIGNAL-LIGHT CASING. THOMAS LONEY, Oakland, Calif. Filed Mar. 19, 1923. Serial No. 5,533. Term of patent 14 years.



The ornamental design for an automobile signal light casing, as shown.

68,583. AUTOMOBILE SIGNAL-LIGHT CASING. THOMAS LONEY, Oakland, Calif. Filed Mar. 19, 1923. Serial No. 5,534. Term of patent 7 years.



The ornamental design for an automobile signal light casing, as shown.

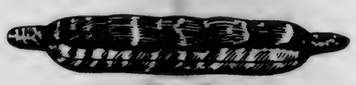
68,584. BROAD-TREAD TIRE. HARRY MCCREARY, Indiana, Pa. Filed May 29, 1925. Serial No. 12,603. Term of patent 8½ years.

The ornamental design for a broad-tread tire, as shown.

68,585. DIAL FOR RADIO RECEIVING APPARATUS. BENJAMIN P. MCKINLEY, Murray Hill-Flushing, N. Y., assignor to Hemco Electric Manufacturing Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Sept. 6, 1924. Serial No. 10,693. Term of patent 14 years.

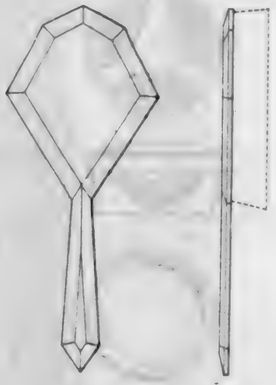
The ornamental design for a dial for radio receiving apparatus, as shown.

68,586. BOX FOR SOUVENIR PICTURES AND THE LIKE. GEORGE A. MORONEY, Philadelphia, Pa. Filed Aug. 12, 1925. Serial No. 14,401. Term of patent 3½ years.



The ornamental design for a box for souvenir pictures and the like, as shown.

68,587. BRUSH OR SIMILAR ARTICLE. GEORGE R. NEVIUS, Shrewsbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 26, 1923. Serial No. 5,943. Term of patent 7 years.



The ornamental design for a brush or similar article, as shown.

68,588. FACEPLATE FOR AUTO SIGNAL. JOHN O'DONNELL, Jr., Philadelphia, Pa., assignor of one-half to Louis H. Brown, Philadelphia, Pa. Filed Sept. 13, 1922. Serial No. 3,712. Term of patent 3½ years.

The ornamental design for a faceplate for auto signal, as shown.

68,589. JAR. CHARLES J. OPPENHEIM, Jr., New York, N. Y. Filed Aug. 14, 1925. Serial No. 14,423. Term of patent 14 years.

The ornamental design for a jar as shown.

---

68,590. BELT BUCKLE. WILLARD A. ORMSBEE, Taunton, Mass., assignor to Taunton Pearl Works, Inc., Taunton, Mass., a Corporation of Massachusetts. Filed Aug. 22, 1925. Serial No. 14,564. Term of patent 3½ years.

The ornamental design for a belt buckle, substantially as shown.

68,591. BELT BUCKLE. WILLARD A. ORMSBEE, Taunton, Mass., assignor to Taunton Pearl Works, Inc., Taunton, Mass., a Corporation of Massachusetts. Filed Aug. 25, 1925. Serial No. 14,586. Term of patent 3½ years.

The ornamental design for a belt buckle, substantially as shown.

---

68,592. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 13, 1925. Serial No. 14,438. Term of patent 14 years.

The ornamental design for lace substantially as shown.

---

68,593. VENDING-MACHINE CASING. CHARLES P. PRICE, Boston, Mass. Filed July 25, 1925. Serial No. 14,224. Term of patent 14 years.

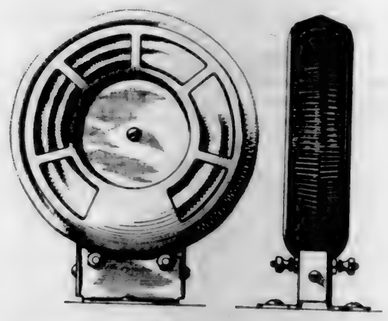
The ornamental design for a vending machine casing, substantially as shown.

68,594. BOTTLE. ARTHUR F. REED, Rochester, N. Y., assignor to F. E. Reed Glass Company, Rochester, N. Y., a Corporation of New York. Filed June 1, 1925. Serial No. 13,620. Term of patent 14 years.

The ornamental design for a bottle, as shown.

---

68,595. CASING FOR INDUCTION COIL. FRANK J. REICHMANN, Chicago, Ill. Filed Apr. 16, 1925. Serial No. 13,145. Term of patent 14 years.



The ornamental design for a casing for induction coil, as shown.

---

68,596. GEM. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed May 18, 1925. Serial No. 13,474. Term of patent 7 years.

The ornamental design for a gem, as shown.

68,597. GEM. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed May 19, 1925. Serial No. 13,485. Term of patent 7 years.

The ornamental design for a gem, as shown.

---

68,598. STATUETTE. IRENE HUNDT RUNDQUIST, Los Angeles, Calif. Filed Apr. 1, 1925. Serial No. 12,974. Term of patent 3½ years.

The ornamental design for a statuette, as shown.

---

68,599. GAS HEATER OR SIMILAR ARTICLE. HENRY H. SANFORD, Mansfield, Ohio, assignor to The New Method Stove Company, Mansfield, Ohio, a Corporation of Ohio. Filed Aug. 8, 1925. Serial No. 14,300. Term of patent 3½ years.

The ornamental design for a gas heater or similar article, as shown.

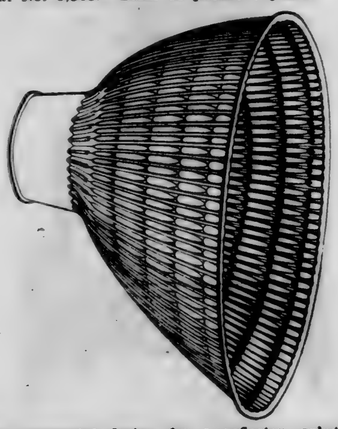
68,600. STRIP OR BANDING FOR DECORATIVE PURPOSES. BERTRAM A. SEGAR, New York, N. Y., assignor to The Segar Studios Inc., a Corporation of New York. Filed July 14, 1924. Serial No. 10,146. Term of patent 7 years.

The ornamental design for a strip or banding for decorative purposes substantially as shown.

68,601. HANDKERCHIEF CASE. HARRY O. SPANKUS, Milwaukee, Wis. Filed May 7, 1923. Serial No. 6,091. Term of patent 14 years.

The ornamental design for a handkerchief case, as shown.

68,602. REFLECTOR. WILLIAM H. SPENCER, Bogota, N. J., assignor to I. P. Frink Inc., New York, N. Y., a Corporation of New York. Filed May 12, 1924. Serial No. 9,563. Term of patent 7 years.

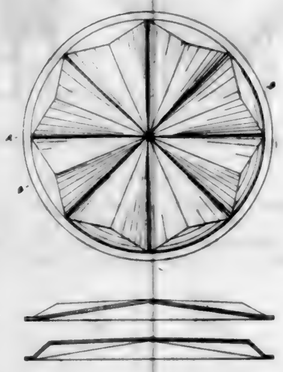


The ornamental design for a reflector, substantially as shown.

68,603. TOWEL CABINET. FRANK M. STEINER and WALTER S. GRAVES, Minneapolis, Minn., assignors to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Jan. 11, 1923. Serial No. 4,859. Term of patent 3½ years.

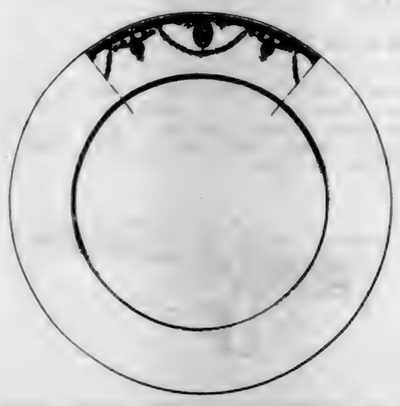
The ornamental design for a towel cabinet, as shown.

68,604. ORNAMENTAL LENS. SAMUEL STEPHENS, Drumheller, Alberta, Canada. Filed June 10, 1924. Serial No. 9,840. Term of patent 14 years.



The ornamental design for an ornamental lens, as shown.

68,605. PLATE OR LIKE ARTICLE. WILLIAM H. TAMS, Trenton, N. J. Filed Aug. 19, 1925. Serial No. 14,515. Term of patent 7 years.

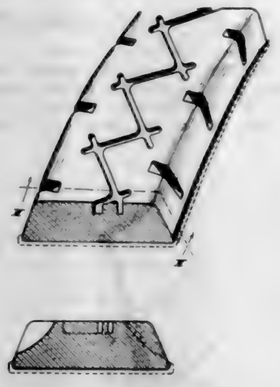


The ornamental design for a plate or like article, as shown.

68,606. BASE FOR LIGHTING FIXTURES. HARRY TEPPER, Brooklyn, N. Y., assignor to Apex Chandelier Co. Inc., New York, N. Y., a Corporation of New York. Filed July 25, 1925. Serial No. 14,214. Term of patent 3½ years.

The ornamental design for a base for lighting fixtures, as shown.

68,607. VEHICLE TIRE. THEODORE E. THOMAS, Baltimore, Md., assignor to Kelly-Springfield Tire Company, Cumberland, Md., a Corporation of New Jersey. Filed Oct. 29, 1924. Serial No. 11,218. Term of patent 14 years.



The ornamental design for a vehicle tire as shown.

68,608. LOUD SPEAKER OR SIMILAR ARTICLE. JOHN S. TIMMONS, Germantown, Pa., assignor to Timmons Radio Products Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 11, 1925. Serial No. 13,891. Term of patent 14 years.

The ornamental design for a loud speaker or similar article as shown.

# PATENTS

## GRANTED OCTOBER 27, 1925.

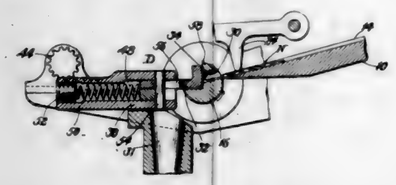
1,558,449. SHADE. WALTER E. ANDREWS, Whitman, Mass., assignor to The Andrews Shade Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1924. Serial No. 758,382. 2 Claims. (Cl. 240—108.)

1. In a shade of the character described, the combination of an inner backing sheet of flexible, transparent material; a sheet of flexible, absorbent material having a normally opaque body or ground capable of being rendered translucent upon application of an impregnating liquid, cemented to said backing sheet, said absorbent sheet having a prepared and permanently opaque design thereon; and a transparent outer coating of an impregnating and hard-drying material laid over said absorbent and ornamental sheet to give a smooth surface and render the normally opaque body or ground only thereof translucent.

1,558,450. SPARKLER. LOUIS V. ARONSON, Newark, N. J. Filed July 17, 1924. Serial No. 726,523. 5 Claims. (Cl. 46—14.)

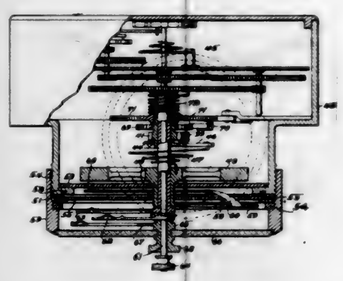
1. A toy comprising, in combination a revoluble momentum member, revoluble translucent disks mounted thereon having portions of different colors, means to cause illumination behind said disks upon revolution of said momentum member and means to revolve said momentum member.

1,558,451. NAIL DISTRIBUTOR. FREDERICK J. BALCOM, Binghamton, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 2, 1921. Serial No. 498,074. 21 Claims. (Cl. 1—89.)



4. In a nail-distributor, a rotatable discharge device, a yieldable stop member extending into the path of rotation of said device, and means arranged to adjust the stop member with relation to the discharge device.

1,558,452. GASOLINE GAUGE. EDGAR H. BARBE, New York, N. Y. Filed Jan. 6, 1922. Serial No. 527,467. 21 Claims. (Cl. 73—82.)



4. In a device of the class described, the combination of a fluid containing conduit including a cylinder at one end having a relatively large internal diameter and a cylinder at the opposite end having a relatively small internal diameter, pistons fitted in said cylinders, a float controlled mechanism operatively connected to the larger diametered piston to cause the same to move with a fall in the liquid level of liquid controlling the float mechanism, and an indicator operatively connected to the smaller diametered piston whereby the movement of the level fall is multiplied at the indicator by the more rapid movement of the smaller diametered piston.

15. In a means for indicating a change in liquid level per unit of time, the combination of a combined indicator and clock dial, a clock including an hour hand shaft and a minute hand shaft telescoping one into the other and extending through the dial, hands on said shafts coacting with the clock element of the dial, an indicator pointer loosely mounted on the outer of the clock shafts and coacting with the liquid indicating element of the dial, and float controlled means for actuating said indicator.

1,558,453. TREATMENT OF CELLULOSIC FIBERS AND FABRICS. FRANK LESLIE BARRETT, Whalley Range, near Manchester, and ROBINSON PERCY FOULDS, Colne, near Manchester, England, assignors to Tootal Broadhurst Lee Company Limited, Manchester, Lancaster, England. Filed Apr. 9, 1923. Serial No. 630,991. 8 Claims. (Cl. 8—20.)

2. The process which comprises treating cellulosic textile materials with sulfuric acid of between 1.45 and 1.55 spec. grav. in presence of formaldehyde.

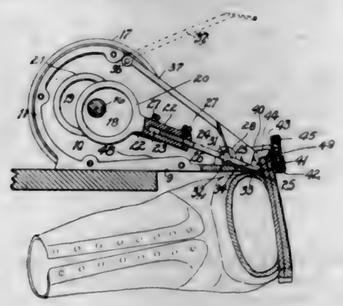
1,558,454. FOOT CONTROL FOR AUTOMOBILES. OLIVER E. BARTHEL and JOHN W. MCCREA, Detroit, Mich. Filed Oct. 4, 1924. Serial No. 741,542. 5 Claims. (Cl. 74—81.)

1. A device of the class described, comprising a footplate, a support hingedly secured to the rear part of said plate, stabilizing means yieldingly bearing on the underside of said plate forward of said support, and adjustable means varying the resilient elevation of said stabilizing means on said foot plate.

1,558,455. TIRE CORE. ARTHUR E. BAUMAN, Akron, Ohio. Filed Sept. 27, 1922. Serial No. 590,907. 2 Claims. (Cl. 152—8.)

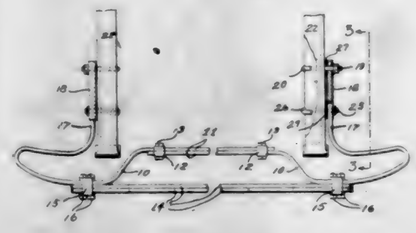
1. A tire having a yieldable core, said core being provided with a plurality of rows of laterally disposed rings extending circumferentially about the same, and the core having spaces intermediate said rows.

1,558,456. STITCH PULLER. GEORGE BECHERER, St. Louis, Mo. Filed Apr. 2, 1924. Serial No. 703,815. 11 Claims. (Cl. 12—17.)



5. A stitch puller comprising a casing, a shaft mounted in said casing, eccentrics secured to said shaft and located within the casing, eccentric straps carried by said eccentrics, hooked needles carried by said eccentric straps, pivoted needle supports carried by said casing, and an adjustable guide carried by said casing and located adjacent the hooked ends of said needles, and means for placing said shaft in rotation.

1,558,457. AUTOMOBILE BUMPER AND SUPPORT THEREFOR. JACOB BEGELMAN, Brooklyn, N. Y. Filed Nov. 14, 1923. Serial No. 674,778. 8 Claims. (Cl. 293—55.)

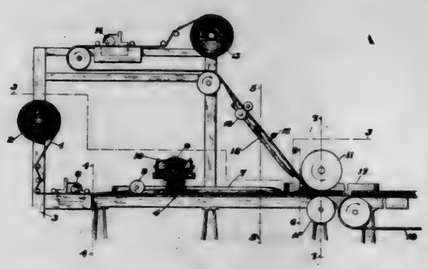


1. The combination of a bumper having supporting terminals; a plurality of engaging enveloping sockets therefor; and means for operatively mounting said sockets on the side bars of automobile chassis, said means embodying a plurality of anchoring hooks adapted to engage the said side bars.

1,558,458. PRESSED-STEEL WHEEL. DAVID H. BELLAMORE, New York, N. Y., assignor to The Steel Wheel Corporation, a Corporation of New York. Filed Aug. 22, 1919. Serial No. 319,091. 11 Claims. (Cl. 301—63.)

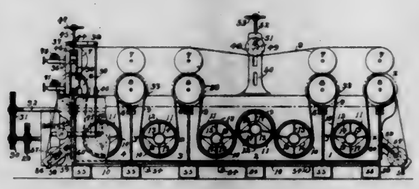
1. A disk wheel embodying a hub portion, a rim portion, a main disk associated with the hub and rim portions for spacing and supporting the hub from the rim, and a reenforcing disk, of smaller size than the main disk, associated with the hub, and secured adjacent its outer periphery to the main disk, the adjacent portions of both the main and reenforcing disks being dished in opposite directions to insure transverse stability of the wheel adjacent the hub, the space between said disks forming a chamber filled with a packing.

1,558,459. MACHINE AND METHOD OF MAKING PLASTER WALL BOARD. CHARLES B. BIRDSEY, Hinsdale, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 4, 1922. Serial No. 592,294. 3 Claims. (Cl. 154—1.)



1. A machine for making plaster wall-board comprising means for advancing a plastic mass between fibrous cover sheets, means for folding in the margins of said sheets to enter into the plastic mass, board forming means, means for passing the cover sheets and plastic mass with the folded in margins of the cover sheets embedded in the mass through the board forming means, said means including the application of pressure upon the cover sheets for causing the plastic mass to enter between the cover sheets and their respective folded margins and bond the cover sheets and margins to each other through the medium of the plastic body of the formed board.

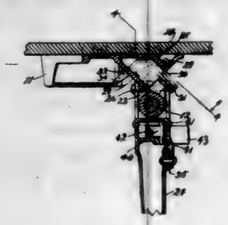
1,558,460. PROCESS OF AND APPARATUS FOR THE BLEACHING, DYEING, AND ANALOGOUS TREATMENT OF TEXTILE FIBERS. JOHN BRANDWOOD, THOMAS BRANDWOOD, and JOSEPH BRANDWOOD, Elton, Bury, England. Filed Jan. 24, 1922. Serial No. 531,391. 6 Claims. (Cl. 8—19.)



1. In an apparatus for treating textile fabrics, the combination of a plurality of rotatable perforated cylinders each supported upon a fixed central bearing adapted to cover some of the perforations in the cylinder as the latter rotates around said bearing, and a conveyor passing over said cylinders and adapted to cover the remaining perforations thereof.

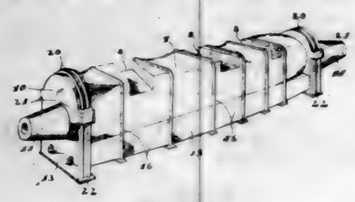
1,558,461. BRAKE MECHANISM FOR RAILWAY CARS. PERCY B. CAMP, Maywood, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed May 21, 1925. Serial No. 31,764. 3 Claims. (Cl. 74—116.)

1. In a hand brake mechanism for railway cars, the combination of a brake shaft, a ratchet wheel fixed to the shaft and having two sets of teeth thereon, a sleeve journaled on the shaft, a hand lever elvoted to the sleeve to swing between an operative position at an angle to the shaft and an inoperative position extending along the shaft, a pawl carried by the lever for



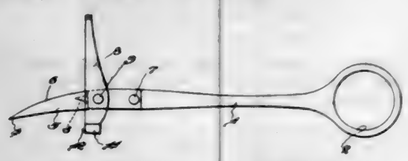
engaging one set of teeth to wind the shaft and a second pawl carried by the lever to engage the other set of teeth to unwind the shaft.

1,558,462. VHICLE AXLE. GEDEON CAYER, Willow Bunch, Saskatchewan, Canada. Filed Dec. 27, 1923. Serial No. 683,010. 3 Claims. (Cl. 301—129.)



1. A vehicle axle skein; having a depending recessed skirt portion; an anxle truss having a reduced end portion engaged in the recess of said skein; and supporting means extended beneath said truss and through the lower portion of said skein.

1,558,463. CAN OPENER. ARTHUR L. CHRISMAN, Springfield, Ill. Filed Sept. 1, 1923. Serial No. 660,579. 2 Claims. (Cl. 30—3.)

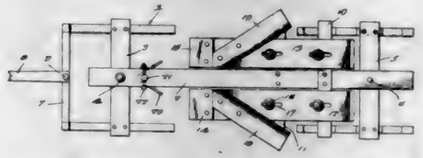


1. A can opener including a handle having one end offset, an inserting point formed on the offset end in parallel relation with the handle, a cutting blade attached to the handle adjacent the offset end and disposed parallel with the inserting point, a guard arm pivotally connected to the handle and normally extended transversely of the cutting blade, a hook at one end of the guard arm and a bearing head at the other end.

1,558,464. SNOWPLOW. EDWIN M. COX, Evart, Mich. Filed June 10, 1925. Serial No. 36,147. 3 Claims. (Cl. 37—149.)

1. A snow plow comprising an elongated beam, front and rear sleighs supported at the respective ends thereof, a cross bar extending transversely across the top of the beam adjacent the rear end thereof, an additional cross bar secured to the bottom of the beam and arranged

forwardly of the aforementioned cross bar, a pair of angularly disposed spaced scrapers, means for adjustably securing the same on said cross bars on the opposite

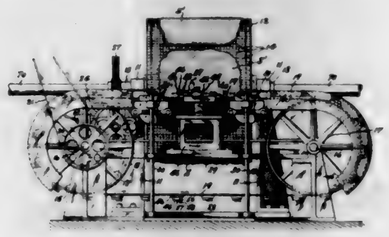


sides of the beam, and rearwardly diverging wings secured on the lower portions of the scrapers for directing the snow to the sides of the road.

1,558,465. LAWN MOWER. HERBERT H. DAHL, Kansas City, Mo. Filed Apr. 6, 1923. Serial No. 630,268. 1 Claim. (Cl. 56—25.)

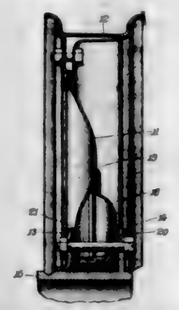
In a lawn mower, a motor housing, separate axle members fixed to and extending from opposite sides of the housing, wheels and a handle frame on the axle members, a handle on the frame, a motor in the housing having a vertical shaft extending below the housing, a knife on the shaft comprising oppositely disposed blades, and means for supplying current to the motor.

1,558,466. PELT OR SKIN DEHAIRING MACHINE. PHILIP C. DONNER, Summit, N. J. Filed Nov. 13, 1924. Serial No. 749,615. 21 Claims. (Cl. 149—19.)



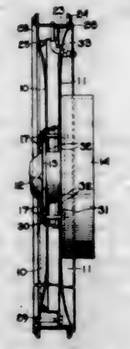
1. In a machine for dehairing pelts or skins, an endless knife-belt, means for driving said knife-belt, a plurality of successive cutting-blades on said knife-belt to project in horizontal plane from one edge of the latter, means for mounting said cutting-blades for yielding movement in a direction opposite to the direction of movement of said knife-belt, and means for supporting and feeding a pelt or skin for progressive movement into the path of said cutting-blades and subject to the cutting action thereof.

1,558,467. DISK WHEEL. GEORGE H. FORSYTH, Chicago, Ill., assignor to Motor Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed Oct. 10, 1921. Serial No. 506,625. 5 Claims. (Cl. 301—63.)



1. In a disk wheel, the combination with the hub and the disk body, of muting means acting upon the disk whereby to reduce the resonance of the same, said muting means comprising a non-vibratory member associated with the hub and having contact with the rear face of the disk.

1,558,468. DISK WHEEL. GEORGE H. FORSYTH, Chicago, Ill., assignor to Motor Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed Mar. 13, 1922, Serial No. 543,189. Renewed Aug. 24, 1925. 12 Claims. (Cl. 301—63.)

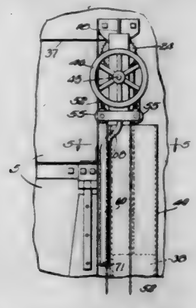


7. The method of forming a disk wheel of steel associated with a hub and a felly, which consists in disposing the disks in spaced relation with their outer edges held apart by the felly member having marginal inwardly opening channeled beads, forcing the center portion of the disks towards each other until their peripheries clear the channel walls of the felly, and then allowing the central portions of the disk to separate sufficiently to cause their peripheries to seat within the channels of the beads, and then fixing the assumed relation of the central portion of the disk at the hub in order to prevent their peripheries from leaving the channels under stress.

1,558,469. CONTROLLING DEVICE FOR CLOSURE-OPERATING MECHANISMS AND THE LIKE. WAINWRIGHT B. GERVAIS, Chicago, Ill., assignor to Variety Fire Door Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 12, 1923. Serial No. 668,062. 6 Claims. (Cl. 268—1.)

3. In combination, a closure, operating mechanism therefor, said mechanism including a clutch, a roller on

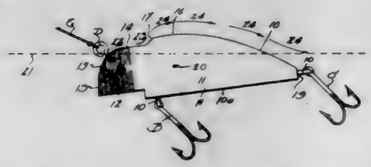
the closure, a clutch shifting arm extending into the path of movement of the roller to be actuated thereby,



in opening the closure and a coiled spring normally engaging the clutch and returning said arm to normal position upon closing the closure.

---

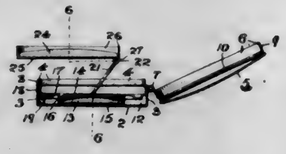
1,558,470. FISH LURE. PORTER D. GIBSON, Sioux City, Iowa. Filed May 29, 1925. Serial No. 33,645. 1 Claim. (Cl. 43—46.)



In a fish lure, a body of rectangular cross section throughout its length, said body having a flat under surface, a head formed integral with said body and of rectangular cross section, said head having a forward face inclined upwardly and a little rearwardly from the perpendicular to the under surface of the body, said head having an upper surface substantially parallel to the under surface of the body, and having an intermediate curved surface connecting said upper surface and the forward face, the body being provided with a back surface projecting above the head and joined to the upper surface thereof by means of a shoulder, said back surface being curved rearwardly and downwardly to substantially reduce the vertical thickness of the rear portion of the body, and a line tie secured in the head in the intermediate curved surface thereof.

---

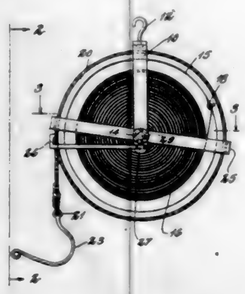
1,558,471. VANITY BOX. FREDERICK GOERTZ, Newark, N. J., assignor to August Goertz & Co., a Corporation of New Jersey. Filed Sept. 26, 1922. Serial No. 590,573. 15 Claims. (Cl. 132—83.)



1. A vanity box comprising a main shell, a lid or cover connected therewith, a second shell normally disposed within said main shell, and a movable connection between said main shell and said second shell for moving the latter shell from and above said main shell when the lid or cover is opened.

---

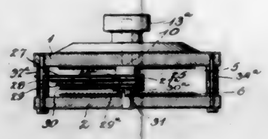
1,558,472. TOBACCO-LEAF CONVEYER. JULIUS GOLON, Suffield, Conn. Filed Jan. 19, 1925. Serial No. 3,414. 1 Claim. (Cl. 254—152.)



In a tobacco leaf conveyer of the class described, the combination of a shaft with a spring controlled drum revolving about said shaft, a cable wound about said drum in two groups spaced from each other, a unitary, hook-shaped article carrier held on the ends of the cables of said groups, a hanger for the conveyer, hook-shaped members attached at one end to said hanger and laterally engaging said cable groups, a means for keeping the cables in a single layer, and a means for preventing a displacement of hanger and drum.

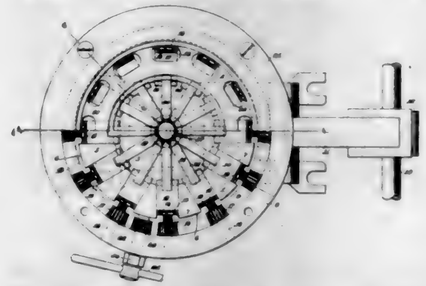
---

1,558,473. VARIOCOUPLER FOR RADIO TELEGRAPHY AND TELEPHONY. HAYNER H. GORDON, Washington, D. C. Filed Oct. 22, 1923. Serial No. 670,212. 6 Claims. (Cl. 171—119.)



6. In a vario-coupler, the combination of a fixed flat winding, a second fixed flat winding mounted parallel and adjacent to said first winding, a diamagnetic plate member fixedly located adjacent said windings with its plane parallel to the plane of the windings and adapted to alter the natural inductance of the windings by virtue of its relationship thereto and a second diamagnetic plate member mounted adjacent said coils with its plane parallel to the plane of the coils and means for moving said second plate member with respect to said first mentioned plate member.

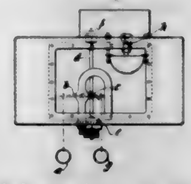
1,558,474. DIE-PRESSING APPARATUS. JOSEPH R. GORDON, Baldwin, N. Y., assignor to American Numbering Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 29, 1923. Serial No. 665,697. 11 Claims. (Cl. 101—401.5.)



1. Apparatus of the character described, comprising a body, means for giving to the body a reciprocating movement, and means having a biting engagement with the surface of the body whereby the said engaging means will be reciprocated by and with the body.

---

1,558,475. WATER-WASTE PREVENTER. WALTER HENRY GRAY, London, England. Filed Oct. 15, 1923. Serial No. 668,781. 2 Claims. (Cl. 4—26.)



1. A valve discharge cistern of the air-tight type comprising in combination a closed cistern having inlet and outlet openings in the base and an inlet in the top, a spindle operated inlet valve in connection with the inlet in the base, an air admission valve controlling the inlet in the top, a flushing valve controlling the outlet at the bottom, a common rod carrying the air admission and flushing valves so that they move to open and close together and cam means on the inlet valve spindle controlling the movements of the rod carrying the air admission and flushing valves, to open said valves when the inlet valve is closed and close said valves when the inlet valve is opened for the purposes set forth.

---

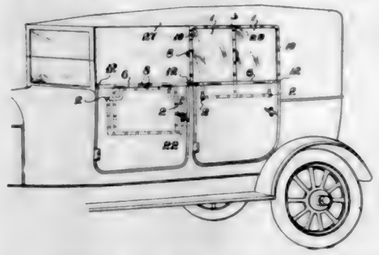
1,558,476. COMBINATION HOOK FOR LIVE BAIT. WILLIAM H. GRUENHAGEN, St. Paul, Minn. Filed Apr. 21, 1923. Serial No. 633,703. 7 Claims. (Cl. 43—40.)

1. A fish hook having a resilient loop intermediate its length disposed in a transverse plane, comprising two portions, one of which is bent and extended to a point adjacent the barb of the hook to form a weed guard.

---

1,558,477. WINDOW. FREDERICK HAROLD HALL, Holford, near Bridgwater, England. Filed Mar. 21, 1924. Serial No. 700,769. 7 Claims. (Cl. 296—45.)

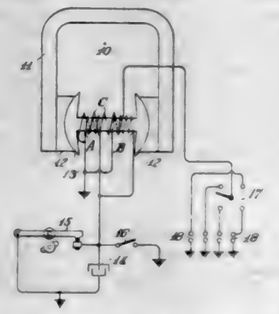
1. In combination, a window comprising two sections and a frame member having a housing for containing the window-sections when the latter are lowered, said window-sections being pivoted to the frame member so as to turn in opposite directions to each other in



their own planes, and having lower corner portions adapted to overlap and to be supported by the upper edge of the frame member when the window-sections are raised.

---

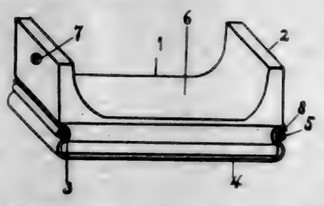
1,558,478. IGNITION SYSTEM. WILLIAM W. HAWKINS, Brooklyn, N. Y., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1922. Serial No. 537,982. 3 Claims. (Cl. 123—148.)



1. In a magneto, a rotor and a stator, one of said magneto elements comprising a core, a primary winding comprising two generating coils wound about said core in the same direction, corresponding ends of said coils being grounded, an interrupter having one contact grounded and the other contact connected to the non-grounded ends of said coils, and a secondary coil in inductive relation to said primary coils and core, but conductively separated therefrom.

---

1,558,479. ANTISLIPPING DEVICE FOR LADDERS. WALTER A. HEARN, Baltimore, Md. Substitute for application Serial No. 135,164, filed Dec. 5, 1916. This application filed Jan. 21, 1925. Serial No. 3,889. 2 Claims. (Cl. 228—62.)

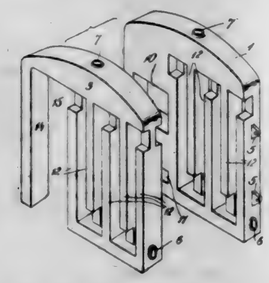


1. An independent rectangular supporting means for a ladder foot provided with an anti-slipping means engaging the bottom of said supporting means and pro-

vided with means for securing the said anti-slipping means to said supporting means, comprising a detachable flexible element.

---

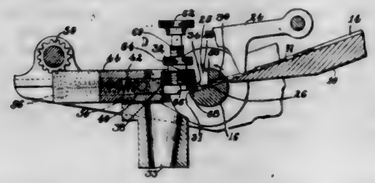
1,558,480. SECTIONAL BOILER. WILLIAM D. HINCHEY, New York, N. Y. Filed Feb. 7, 1923. Serial No. 617,438. 3 Claims. (Cl. 122—225.)



1. In a sectional boiler having associated transversely extending vertical sections forming a combustion chamber and interconnected water chambers, a hollow back section, a plurality of intermediate sections each comprising hollow top and bottom portions directly connected at intervals by hollow vertical portions, the upper and lower ends respectively of alternate vertical portions being reduced in cross section to provide passages through which the gases may flow from the combustion chamber into the spaces between adjacent vertical portions and out through a side of the boiler, and a hollow front section having spaced hollow vertical portions in alignment with the vertical portions of the intermediate sections.

---

1,558,481. NAIL DISTRIBUTOR. ALBERT E. HUDSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 12, 1923. Serial No. 618,591. 16 Claims. (Cl. 1—39.)



8. In a nail-distributor, a rotatable discharge-roll having nail-receiving openings and a nail-directing surface to which the nails pass from the openings, a stop member arranged to receive contact of the forward extremities of the nails while said extremities are upon the directing surface, and means arranged to impart to the stop member movements in a plurality of directions.

---

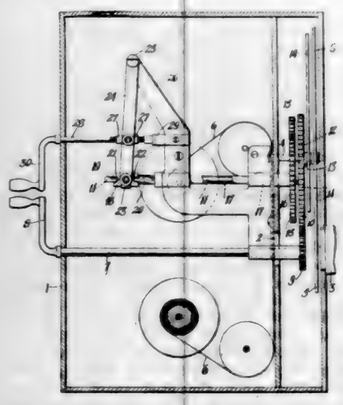
1,558,482. MOTOR-VEHICLE FUEL-SUPPLY DEVICE. JOHN D. KARLE, Roselle Park, N. J. Filed Apr. 30, 1925. Serial No. 26,961. 8 Claims. (Cl. 158—46.5.)

1. The combination with a carbureter of a motor-vehicle, and a main fuel-tank disposed rearwardly of said carbureter, of an auxiliary fuel-tank disposed forwardly of said carbureter having fuel inlet and outlet ports, a fuel-conduit connecting the main-tank with said inlet-port, a fuel-conduit connecting said outlet-port with the

carbureter, and an automatically acting valve-member incorporated in said auxiliary tank for closing said inlet-port in an upgrade position of the vehicle.

---

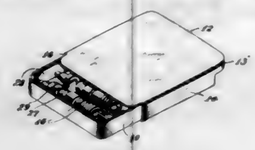
1,558,483. MOTION PICTURE. WILLIAM V. D. KELLEY, Newark, N. J., assignor, by mesne assignments, to Prizma, Incorporated, a Corporation of New Jersey. Filed Nov. 12, 1920. Serial No. 423,533. 17 Claims. (Cl. 88—16.4.)



1. The method which consists in progressively varying the values recorded in a series of negatives made on panchromatic emulsion between black and white and cycles of pure colors.

---

1,558,484. CONTAINER FOR VALVES AND THE LIKE. JEBE G. KINGSBURY, Bridgeport, Conn. Filed July 29, 1922. Serial No. 578,336. 2 Claims. (Cl. 206—16.)

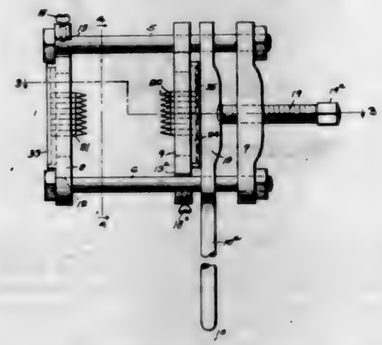


1. In combination, a container, a valve comprising a tubular valve body, a valve stem projecting from the body at one end, and provided with a head at its other end, and a spring upon said stem permitting lifting of

the head and normally retaining the head seated upon the body, and a support for the valve comprising a channel member removably disposed in the container adjacent one wall thereof and spaced from the other wall, and provided in one side with an opening, adapted to be engaged by the valve stem, whereby the body and head clasp upon said support in the removed position thereof, and whereby the stem engages the wall of the container in the inserted position of the support, to retain the valve in the container under spring pressure and to unseat the head.

---

1,558,485. SPRING SPREADER. GOTTLIEB L. E. KLINGBEIL, Omaha, Nebr. Filed Dec. 30, 1924. Serial No. 758,849. 8 Claims. (Cl. 81—3.7.)



1. A device of the character described comprising a pair of rods, a cross-bar connecting said rods, a screw threaded in the cross-bar, a follower plate slidable upon the rods with which said screw is engaged, a wedge plate, a bank of wedges floatingly mounted therein, interengaging means between the back of the wedge plate and the face of the follower plate, and a backing plate opposed to the wedges of the wedge plate.

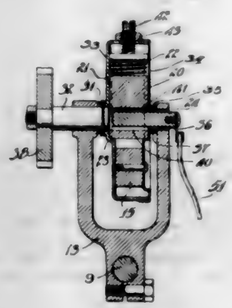
---

1,558,486. AUXILIARY SPRING FOR CONTROLLING LEVERS ON MOTOR VEHICLES AND THE LIKE. WILLIAM KLUMP, West Orange, N. J., assignor of one-third to John William Weed, Orange, N. J., and one-third to Gustavus R. Weed, East Orange, N. J. Filed June 25, 1924. Serial No. 722,216. 7 Claims. (Cl. 74—39.)

1. In a device of the character described, an operating lever, a lever pivotally mounted on said operating lever, a resilient member between said pivotally mounted lever and said operating lever having one end formed into a closed loop adapted to pass over and around said pivotally mounted lever and its other end so formed as to grip said operating lever, adapted to force said pivotally mounted lever into operative position.

---

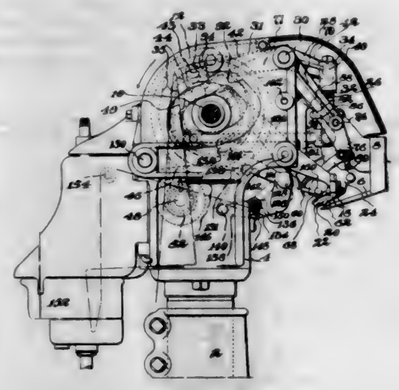
1,558,487. SPEED INDICATOR. HERMAN D. KRAUSS, Lakewood, Ohio. Filed May 7, 1923. Serial No. 637,174. 8 Claims. (Cl. 200—80.)



1. In a device of the character described the combination with a support, of a rotary driving member journalled therein, a driven hollow member rigidly mounted upon the driving member and having an opening in alignment with the axis of the driving member, a stationary contact member carried by said support and projecting into the driven member through said opening, a movable contact member mounted radially within the driving member and normally held out of engagement with the stationary contact member when the speed of the driving member is below a predetermined value, said movable contact member being adapted to engage the stationary contact member when the speed of the driven member reaches a predetermined value whereby an electric circuit is completed through said contact members.

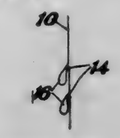
---

1,558,488. LASTING AND THREAD-FASTENING MACHINE. FRED N. LA CHAPELLE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 11, 1919. Serial No. 323,199. 53 Claims. (Cl. 12—6.)



1. In a machine of the class described the combination of means for lasting successive portions of a shoe upper and means for securing each portion while held in lasted position by an individual thread fastening which is self-sufficient to hold the upper in fixed position.

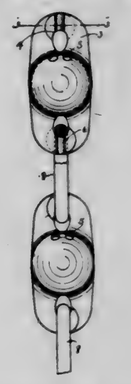
1,558,489. SHOEMAKING. FRED N. LA CHAPELLE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 16, 1921. Serial No. 461,807. 7 Claims. (Cl. 36—72.)



1. That method of making shoes which comprises lasting over the shoe bottom with the upper materials, a protective cover having surplus material therein, finishing the shoe, severing the protective cover approximately at the sole-attaching seam, placing the same cover about the upper of a second shoe of the same size, and utilizing the surplus material to extend the severed edge downwardly to last it over the bottom of the second shoe.

---

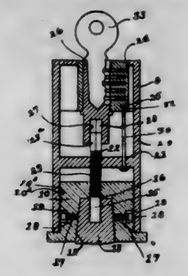
1,558,490. LINK CUP FOR CHAIN PUMPS. JAMES B. MAYBERRY, Shreveport, La. Filed Oct. 9, 1923. Serial No. 667,574. 19 Claims. (Cl. 198—152.)



18. Means for pumping deep drilled wells including an endless chain incorporating combined receptacle-and-link units, each of which consists of two recessed sheet metal members joined together to form the receptacle-link.

---

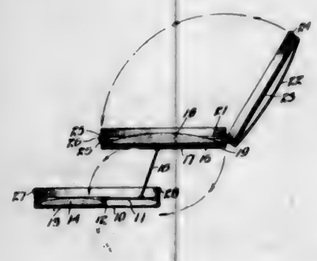
1,558,491. BATTERY CONNECTER. JAMES L. MORFOOT, Akron, Ohio. Filed Oct. 14, 1922. Serial No. 594,587. 8 Claims. (Cl. 136—29.)



1. In a device of the class described, in combination with a battery an insulating member having a socket adapted to receive the terminal post of a battery, means to secure said insulating member to said post, a casing adapted to fit over said insulating member and lock controlled means to secure said casing to said insulating member, said means being operable to establish an electrical contact between said post and said casing.

---

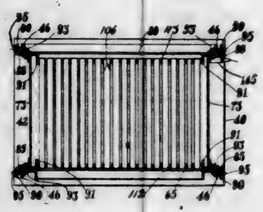
1,558,492. VANITY CASE. SIMON MORRISON, Brooklyn, N. Y., assignor to August Goertz & Company, Inc., Newark, N. J., a Corporation of New Jersey. Filed Jan. 25, 1923. Serial No. 615,445. 13 Claims. (Cl. 132—83.)



10. In combination with a box adapted to contain a rouge-compact, or the like, a carrier-frame pivotally connected with said box, a second box, and a means of pivotal connection for pivotally connecting said second box to said frame.

---

1,558,493. AIR-HEATING APPARATUS. CHARLES D. MOSHER, New York, N. Y. Filed Aug. 14, 1923. Serial No. 657,303. 4 Claims. (Cl. 257—166.)



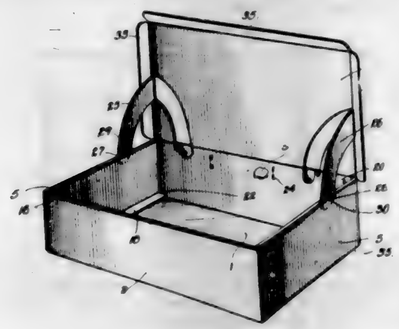
3. In an air heater the combination of a casing, a pair of adjustable bars at each of the sides of the casing, a plurality of air chambers arranged in a row in the casing, corrugated side walls spaced apart for each chamber, channel irons encasing the front and rear portion of each chamber, one of said channel irons having a pair of openings leading into its chamber, movable bars at the sides of the casing and means to clamp the bars to the casing and to bear against said channel irons at the ends of said row to clamp the chambers in place with passages between them.

---

1,558,494. DISPLAY BOX. EDWIN H. NEWTON, Kansas City, Mo., assignor to National Paper Box Company, Kansas City, Mo., a Corporation of Missouri. Filed Oct. 8, 1923. Serial No. 667,164. 3 Claims. (Cl. 206—44.)

1. A display box having a bottom, a front wall, a back wall, end walls and a cover connected to the rear wall by a fold, the end walls having double thicknesses

with slits in their upper edges, curved stay members cut from within the perimeter of the cover having tongues



engageable with the slits, and projections adjacent to the tongues overlapping the edges of the end walls to support the cover in a vertical position.

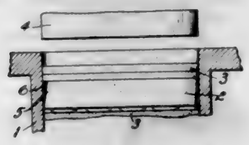
---

1,558,495. PROCESS OF MAKING ROOFING FELT OR LIKE MATERIAL. FREDERICK C. OVERBURY, Hillsdale, N. J., assignor, by mesne assignments, to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed July 29, 1915. Serial No. 42,628. Renewed Nov. 14, 1919. Serial No. 338,118. 1 Claim. (Cl. 154—40.)

The herein described method of producing a flexible composite sheet of fibrous material, consisting in bringing into face contact two layers of wet pulpy felted fiber and asbestos fiber, causing the said fibers of said layers to interlock, and then drying the sheet thus formed.

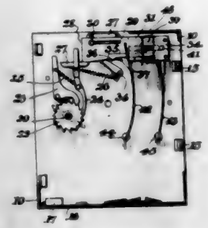
---

1,558,496. METHOD OF UNITING A RUBBER HEEL AND LEATHER BASE. DENNIS PARKS, St. Louis, Mo. Filed Jan. 31, 1924. Serial No. 689,789. 5 Claims. (Cl. 12—147.)



1. The method of uniting the members of a composite heel-blank of leather and rubber, in which the breast of the rubber heel inclines rearwardly, which comprises pasting a leather base and a rubber heel together within a container, the walls of which are engaged by the edges of said members while maintaining the members at such inclination as to bring the upper edge of the breast of the rubber heel substantially flush with the lower edge of the breast of the leather base.

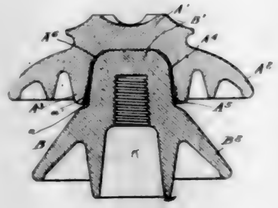
1,558,497. COIN-CONTROLLED MECHANISM. RAYMOND H. PEASE, Chicago, Ill., assignor to Charles Malouf, Chicago, Ill. Filed Oct. 27, 1921. Serial No. 510,718. 2 Claims. (Cl. 194—78.)



1. In combination with a clock and a clock casing, a lock-retained closure for the casing carrying a ratchet fixed to the winding arbor of the clock, spring-pressed pivoted detents engaging the ratchet, a spring-returned manually slidable member for engaging one of said detents, said member carrying at one end a plurality of coin-receiving slots, a spring-returned manually slidable member for releasing the other of said detents, said second member carrying at one end a plurality of coin-receiving slots and a handle projecting through the closure plate for manipulation from the outside of the clock-frame.

---

1,558,498. METHOD OF MAKING INSULATORS. JOHN M. PECK, CORNELIUS VAN DYKE BENNETT, and JAMES W. RYAN, Lima, N. Y., assignors to The Porcelain Insulator Corporation, Lima, N. Y., a Corporation of New York. Filed May 12, 1922. Serial No. 560,453. 2 Claims. (Cl. 18—47.5.)



1. The method of constructing an insulator formed of a plurality of hollow porcelain sections, consisting of first placing a resilient cement within the outer section, nesting the sections and applying pressure thereto to squeeze the resilient cement outwardly and bring the sections close together, and then inserting a non-resilient cement through the space between the bottom edge of the outer section and adjacent surface of the inner section, causing said non-resilient cement to fill the space between the sections not occupied by the resilient cement.

---

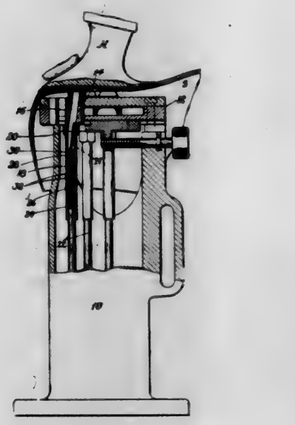
1,558,499. INSULATOR CONSTRUCTION. JOHN M. PECK, Lima, N. Y., assignor to The Porcelain Insulator Corporation, Lima, N. Y., a Corporation of New York. Filed Jan. 8, 1923. Serial No. 611,314. 4 Claims. (Cl. 173—318.)

4. An insulator comprising a plurality of nested sections of insulating material, the lower section having a rounded top fitting a correspondingly rounded recess in

the upper section, the opposed side walls of the sections constituting attaching surfaces, rigid cement located between said side walls for securing the sections together, said rounded surfaces terminating in opposed shoulders, and a sealing device located between said shoulders and acting to prevent access of the rigid cement between said rounded surfaces.

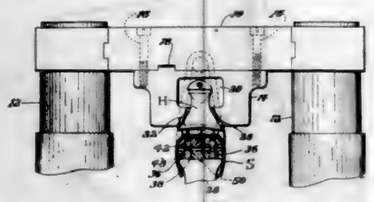
---

1,558,500. DRIVING DEVICE. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 2, 1919. Serial No. 327,966. 22 Claims. (Cl. 1—32.)



1. In a machine of the class described, a member having a guide passage with portions inclined with respect to one another, and a unitary flexible driving member movable in the passage and bending in its passage from one inclined portion to another.

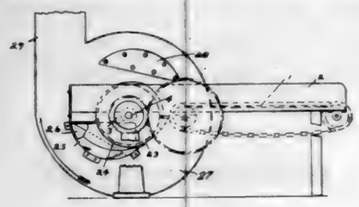
1,558,501. HEEL-ATTACHING MACHINE. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 20, 1922. Serial No. 576,286. 14 Claims. (Cl. 1—32.)



1. In a machine for attaching heels having projections, an engaging member arranged to contact with a heel at the sides only, and means arranged to apply pressure to the engaged heel and a shoe and to contact with the heel-projections to effect the attachment.

---

1,558,502. ENSILAGE MACHINE. JEFFREY J. POWER, Madison, Wis., assignor to Power-Stevens Fan Devices Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 17, 1923. Serial No. 657,867. 10 Claims. (Cl. 146—107.)



1. In a device of the character described, the combination with a centrifugal fan, a casing therefor having a segmental opening at one side of its center, and a trough projecting in an axial direction from said opening and adapted to feed material thereto; of a rotary cutter operable adjacent said casing and arranged to deliver material to said trough; and a cutter housing extending above said casing and partially covering said trough, said housing providing an opening above one margin of said trough, whereby to facilitate creation in said trough of whirling air currents induced by the fan and casing aforesaid.

---

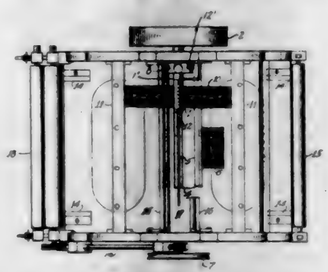
1,558,503. HOSE CONNECTION FOR AUTOMOBILE ENGINES AND RADIATORS. JOHN G. PRESSLER, Chicago, Ill. Filed Oct. 6, 1921. Serial No. 505,705. 13 Claims. (Cl. 285—90.)

1. In a flexible connection of the character described, the combination with separate conduit sections, of means for providing a fluid-tight connection for said sections comprising an all rubber tube the passage through which is of less diameter than the external diameter of said

sections and is dilated when the tube is in its applied position; said tube being provided in its inner and outer surfaces with a series of oppositely disposed recesses whereby said tube is, in effect, divided into a series of bands.

---

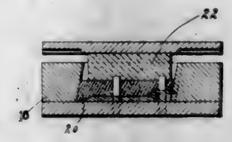
1,558,504. PAPER-PERFORATING MACHINE. SIDNEY A. RAGAN, New Orleans, La., assignor of one-half to Harold Frost, New Orleans, La. Filed May 16, 1924. Serial No. 713,751. 4 Claims. (Cl. 164—111.)



1. A paper perforating machine, comprising a frame, a guide plate mounted thereon, means for guiding a strip of paper across the guide plate, a bar movably mounted upon the frame above the guide plate, means for reciprocating said bar vertically, a punch bar movably mounted in the first mentioned bar, spring means for normally holding the punch bar in an elevated position, a spring pressed bar mounted for movement transversely of the first mentioned bar and adapted to engage the punch bar, and means operatively connecting the spring pressed bar, with the key of an instrument.

---

1,558,505. METHOD OF PRODUCING RUBBER ARTICLES. EUGENE J. RAY, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 31, 1924. Serial No. 759,174. 5 Claims. (Cl. 18—59.)

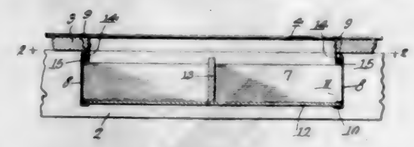


2. The method of molding a rubber article having different portions of unlike character which consists in cold molding and condensing a mass of unvulcanized rubber composition of one character, under pressure, to the exact size and shape of a portion of a vulcanizing mold adapted to produce the entire article, fitting the molded mass into said portion of the mold, placing in the mold a sufficient mass of unvulcanized rubber composition of another character to fill the remaining space in the mold, and applying heat and pressure sufficient to cause the second mass to take the shape of the mold and both masses to be vulcanized into a unitary article.

---

1,558,506. DRAWER CONSTRUCTION. FORREST OTTO RISK, Rhinelander, Wis. Filed June 4, 1925. Serial No. 35,016. 1 Claim. (Cl. 45—77.)

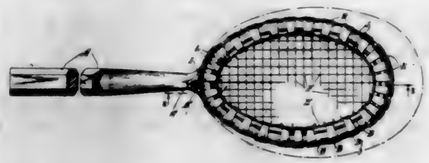
The combination with a table structure having a drawer opening, depending strips secured to said structure and extending backwardly from the opening, and upwardly and outwardly extending flanges on the strips, of a drawer including front and back portions, side plates connecting the same and extending above the back portion, said plates having inwardly extending flanges



mounted on and slidably engaging the flanges on the strips, an inwardly extending supporting flange at the lower portion of each side plate surmounted by an integral channel, and a drawer bottom seated at its sides within the channel.

---

1,558,507. TENNIS RACKET. AMBROSE RYDER, New York, N. Y. Filed May 26, 1921. Serial No. 472,679. 14 Claims. (Cl. 273—73.)



1. A tennis racket comprising a frame and a web formed independent thereof and pneumatic means supported by the frame and a plurality of independent bands holding said web to said frame under tension.

---

1,558,508. HOOK. HENRY SCHOEBEL, Hempstead Gardens, N. Y. Filed Aug. 2, 1924. Serial No. 729,762. 4 Claims. (Cl. 24—228.)

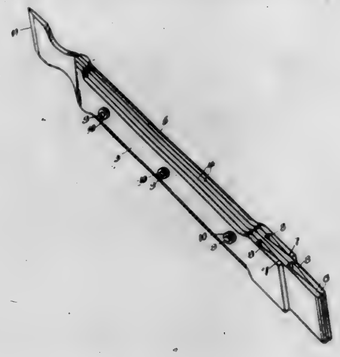
2. In a device of the class described composed of a single piece of wire, the combination with a intermediate shank portion, of a short longitudinal shank portion disposed adjacent said intermediate shank portion, an elongated longitudinal shank portion extending the entire length of the hook member in a straight line and disposed adjacent said intermediate shank portion, a hook portion extending up from said longitudinal shank portions, a loop portion connecting said elongated shank portion with said hook portion, a second loop portion connecting said short shank portion with said intermediate shank portion, and a third loop portion formed at one end of said elongated shank portion, the three shank portions and three loops being disposed in the same plane.

---

1,558,509. DISHWASHER. THEODORE SCHWEITZER, St. Paul, Minn. Filed Oct. 27, 1924. Serial No. 746,041. 4 Claims. (Cl. 15—147.)

1. In a device of the class described, a handle, a pair of jaws projecting from an end of said handle for

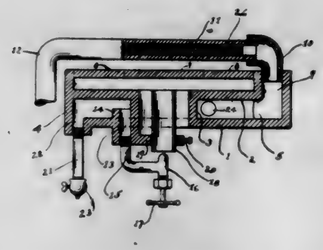
holding the central portion of a wash cloth, and jaws arranged on opposite sides of said handle to hold the



side portions of said cloth, whereby the same may be secured as to constitute a pad entirely covering the projecting pair of jaws.

---

1,558,510. BURNER. CLARENCE A. SHALER, Waupun, Wis. Filed Oct. 12, 1921. Serial No. 507,346. 5 Claims. (Cl. 158—64.)

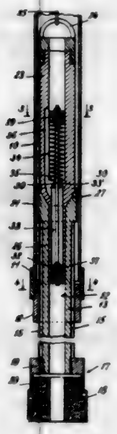


5. A hydrocarbon burner comprising the combination of a body portion subdivided into a burner cavity and a vapor cavity beneath said burner cavity and provided with a tubular air passage extending upwardly to the burner cavity, a disk like baffle plate disposed above said passage and spaced from the walls of said burner cavity, a pair of arms extending from the side walls of said cavity and supporting the baffle plate at opposite sides thereof, a tube adjustably supported in said air passage, a valve nozzle in communication with the vapor cavity and arranged to discharge upwardly into said tube, and a fuel supply pipe leading horizontally across the burner cavity and downwardly into the vapor cavity, said baffle plate having its supporting arms disposed substantially vertically beneath said fuel supply pipe.

---

1,558,511. FEEDING-PRESSURE REGULATOR FOR EARTH-BORING BITS. EGGLESTON SMITH, Mamaroneck, N. Y., assignor to Eggleston Drilling Corporation, Dover, Del., a Corporation of Delaware. Filed Jan. 21, 1925. Serial No. 3,711. 28 Claims. (Cl. 255—47.)

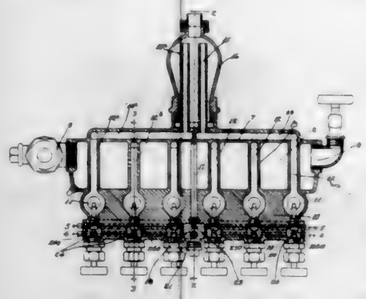
1. In an earth-boring apparatus the combination of an earth-boring bit, a driving element extending down the hole being drilled for rotating the bit, a device for connecting the bit to the lower end of the driving element for imparting positive rotation to the bit and for permitting longitudinal movement thereof with respect to



the driving element, and means operable by fluid pressure and associated with said device for exerting a feeding pressure upon the bit.

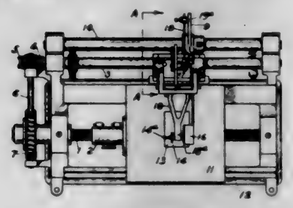
---

1,558,512. LUBRICATOR. W EARL SNYDER, Cincinnati, Ohio, assignor to The Edna Brass Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 23, 1924. Serial No. 727,824. 4 Claims. (Cl. 184—49.)



4. A lubricator comprising a web having a pair of channels, a supply well and feed chambers therein, the well communicating with each of the channels, a valve controlling communication between the supply well and one of the channels, the inner walls of the channels lying adjacent the feed chambers, and means accessible from the outside of the web and removable for providing access to the inner walls of the channels for perforating said inner walls to establish communication between one of the channels and a given feed chamber.

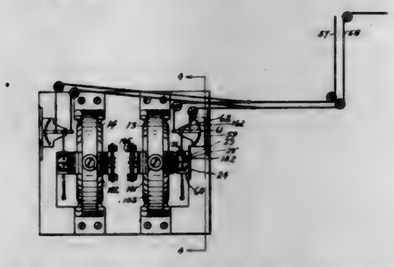
1,558,513. DEVICE FOR RULING GRADUATED SCALES. WILMER SOUDER, Salem, Ind. Filed Aug. 29, 1923. Serial No. 660,059. 8 Claims. (Cl. 33—32.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. In a ruling machine comprising a traveling carriage and ruling mechanism including a stylus, means to cause the carriage to travel continuously in one direction associated with means to cause the stylus to be reciprocated transversely to the movement of the carriage.

---

1,558,514. MULTIPLE GYRO SHIP STABILIZER. ELMER A. SPERRY, Brooklyn, N. Y. Filed Mar. 31, 1917, Serial No. 158,780. Renewed Jan. 5, 1923. 35 Claims. (Cl. 74—78.)

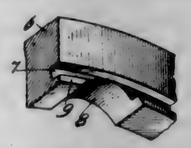


8. In stabilizing apparatus for ships, the combination with a plurality of stabilizing units, and means for synchronizing their operation when more than one are being operated.

31. In a ship stabilizing apparatus, the combination with a moving part to be accelerated and retarded during a rolling cycle, of a fly wheel, means for rotating the same, and means for utilizing the momentum of the fly wheel for accelerating said part.

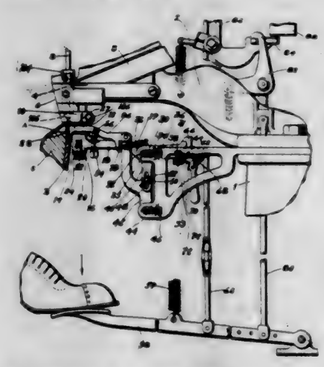
---

1,558,515. PISTON MECHANISM. DANIEL C. TEETOR, Indianapolis, Ind. Filed Aug. 23, 1924. Serial No. 733,702. 2 Claims. (Cl. 74—108.)



1. The combination with a hollow piston formed with a piston ring receiving groove and having passages establishing communication between the piston interior and said groove; and a piston ring occupying said groove and having an external circumferentially extending groove in its outer circular face and in a zone between and spaced apart from the flat faces of the ring, said ring also having passages formed in and extending across one flat face of the ring and of a depth to merge with the aforesaid groove in the ring.

1,558,516. LASTING MACHINE. FRANK H. THOMPSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 19, 1919. Serial No. 324,748. 72 Claims. (Cl. 12—2.)



27. In a machine for lasting shoes, the combination of a throat formed to present a plane surface disposed substantially horizontally, a member for gripping the margin of an upper against the plane surface of the throat, means operable on the outer surface of a sole adjacent to the upper where it is engaged by the gripper member to effect relative movement of the upper and the sole, means for lowering the gripper member away from the throat, and means for positioning the moving means above the upper engaging surface of the gripper member when in lowered position to enable the upper to be guided and supported by the moving means during its introduction between the upper engaging surface of the gripper member and the plane surface of the throat.

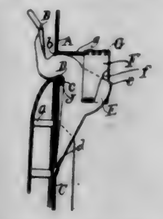
---

1,558,517. PROCESS OF PAINTING. THOMAS E. THOMPSON, Wilmette, Ill. Filed May 5, 1924. Serial No. 711,046. 1 Claim. (Cl. 91—71.)

The process of covering an article with a coating of permanent color which consists of applying to said article a mixture of powdered fused enamel of predetermined color and a fluid vehicle which leaves a binding residue, and baking said article at a temperature below the fusing point of said enamel.

---

1,558,518. REGISTER-DAMPER-OPERATING DEVICE. WILLIAM T. TRUAX, Battle Creek, Mich., assignor to United States Register Company, Battle Creek, Mich., a Corporation of Michigan. Filed Dec. 10, 1924. Serial No. 755,356. 4 Claims. (Cl. 98—54.)

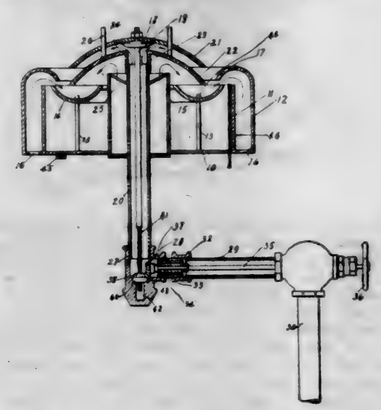


1. In a register damper operating device, the combination with a register front, of a projecting member attached to the front inside thereof, the said projecting member having a rigid portion extending downwardly, a spring attached to the projecting member and arranged

facing the said rigid portion, a damper having an upper edge pivotally supported by the said front, a lever having a recess engaging the said upper edge of the damper as a fulcrum, the said lever having a finger piece passing through the front and an extension inside of the front arranged between the said spring and the rigid portion of the projecting member and in frictional contact with them, and the said lever having an end secured to the said damper.

---

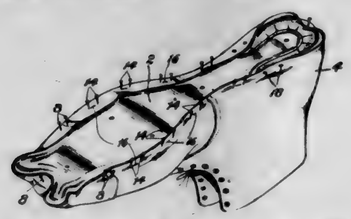
1,558,519. OIL BURNER. FRED F. UHL and HERER J. UHL, Bartlesville, Okla. Filed Apr. 23, 1924, Serial No. 708,543. Renewed Mar. 28, 1925. 3 Claims. (Cl. 158—91.)



2. An oil burner comprising a casing including spaced inner and outer walls, a tubular member arranged centrally of the burner, a trough interposed between the inner wall and said tubular member and lying substantially flush with the upper edge of said inner wall, the space between said inner and outer walls defining an air inlet chamber having openings in the bottom thereof, said chamber opening into said trough at one side thereof, said tubular member being open at the bottom whereby air is admitted to the trough from the opposite side thereof, oil supply pipe supporting the burner, spaced heating plates arranged above said pipe and adapted to convey the oil from the pipe to the trough, and a manualy operable valve movable toward and away from the adjacent end of said pipe and arranged to regulate the quantity of oil admitted to the trough.

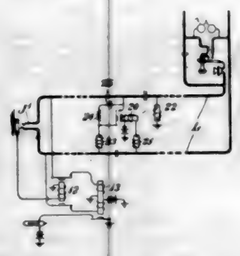
---

1,558,520. METHOD OF MAKING SHOES. EVERETT W. VARNEY, Newton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 19, 1921. Serial No. 523,469. 23 Claims. (Cl. 12—145.)



11. That improvement in methods of making shoes which consists in tensioning successive portions of a shoe upper, inserting through each tensioned portion a temporary tack and concurrently inserting through the upper and innersole rib a permanent fastening.

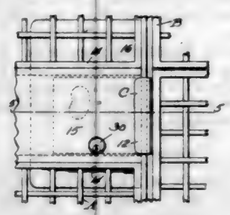
1,558,521. TELEPHONE-EXCHANGE SYSTEM. ERICH VON NOSTITZ, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 21, 1921. Serial No. 446,589. 3 Claims. (Cl. 179—44.)



1. A telephone exchange system comprising a telephone line terminating at a subscriber's station, a link circuit adapted to be associated therewith, a source of ringing current associated with said link circuit, means responsive to the connection of the link circuit and telephone line whereby ringing curernt is applied to said line and subscriber's station, a tripping relay associated with said link circuit so adjusted that it will not operate when the line is open at the subscriber's station, a slow operating relay connected only with the ring side of the line and entirely unresponsive to the application of ringing current thereto but responsive to the closure of said line at the subscriber's station, means subject only to the control exerted by said slow acting relay for so reducing the resistance presented by the line and link circuit to the ringing current that said tripping relay will be operated, and means controlled by said tripping relay for disconnecting the ringing current.

---

1,558,522. LOCK. SHERMAN L. WATSON, AUGUST W. BECKSTROM, and VICTOR GRONBERG, Jamestown, N. Y., assignors to Art Metal Construction Company, Jamestown, N. Y. Filed Sept. 23, 1922. Serial No. 590,058. 6 Claims. (Cl. 292—138.)



1. The combination of a lock casing having at opposite ends thereof openings for the entrance of a keeper stud, opposite stud-engaging parts movable in said casing adjacent said openings and each adapted to move into and out of holding engagement with a keeper stud etering through the adjacent opening, said latch-engaging parts being arranged to move in the same direction to engage the keeper studs, a pivoted lever which actuates both of said stud-engaging parts, and a keeper stud arranged to enter one of said openings.

---

1,558,523. HAIR CURLER. AUGUSTUS A. WEST, Philadelphia, Pa., assignor to Magic Hair Curler Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 6, 1924. Serial No. 711,317. 1 Claim. (Cl. 132—43.)

A hair curler formed of flexible wire and having a plurality of arms, a loop connecting the arms and means

arranged inwardly from though adjacent to said loop for securing the arms permanently engaged one upon

the other the ends of said arms being free and of uniform contour.

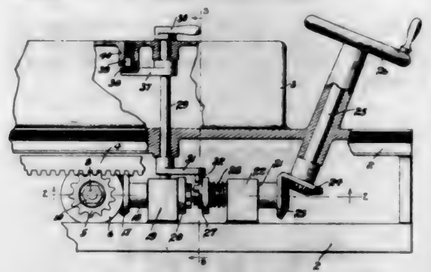
---

1,558,524. SEALING DEVICE. WILFORD J. WINNINGHOFF, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Jan. 6, 1920. Serial No. 349,815. 2 Claims. (Cl. 176—50.)

1. An hermetic junction between walls of vitreous material having thermal expansion co-efficients between those of quartz and tungsten comprising a boro-silicate vitreous material having a composition of approximately 20—80, another bore-silicate vitreous material having a composition in the neighborhood of 25—75, and fused in juncture to the first named vitreous material, and another boro-silicate vitreous material having a composition in the neighborhood of 30—70 and fused in juncture to the second named vitreous material.

---

1,558,525. GRINDING MACHINE. ARTHUR WILLIAMS, Grand Rapids, Mich., assignor to Wilmarth & Morman Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Feb. 26, 1923. Serial No. 621,259. 4 Claims. (Cl. 51—231.)

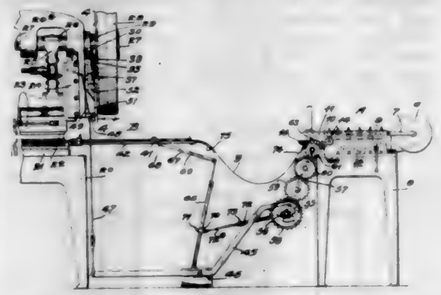


1. In a machine of the class described, a longitudinally movable table, supporting guides therefor, a rack connected to the table, a vertical sleeve rotatably mounted below the table, a pinion at the upper end of the sleeve connected with the rack, a gear on the sleeve below the pinion, a clutch member fixed at the lower end of the sleeve, a movably mounted clutch member adapted to connect with the first clutch member, a power operated mechanism connected with the movably mounted clutch member to drive the same, manually operable mechanism connected with the gear on the sleeve and including two additional clutch members adapted to be connected or disconnected, and means for selectively connecting either the first two clutch members and disconnected the last two clutch members, or vice versa, substantially as described.

---

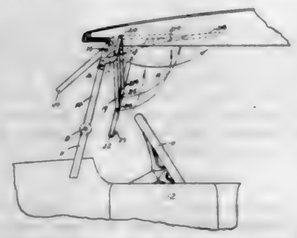
1,558,526. RADIATOR-FIN-FORMING MACHINE. MEINHARD WITTE, Minneapolis, Minn. Filed Aug. 20, 1923. Serial No. 658,234. 7 Claims. (Cl. 153—2.)

1. The combination with ribbon-corrugating mechanism and ribbon-punching mechanism, the latter receiving the corrugated ribbon from the former, of a ribbon-feeding device operative on the corrugated ribbon between the said two mechanisms and timed in respect to said corrugating mechanism, and means controlled by said feeding device for intermittently tripping the punching mechanism into action.



---

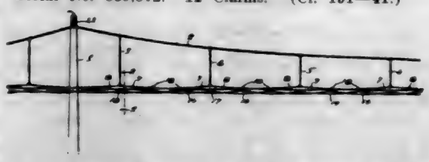
1,558,527. GLARESHIELD FOR AUTOMOBILES. CARL E. E. WOLFERMANN, New York, N. Y. Filed Oct. 4, 1924. Serial No. 741,757. 4 Claims. (Cl. 246—97.)



1. A movable glare shield for automobiles, comprising a colored glass plate covering the front and extending from below the steering wheel to above the eyesight of the driver, a frame surrounding said colored plate, a fixture extending into a bayonet shaped arm, secured to the automobile body in front of and above the steering wheel, a straight rail hingedly connected to the frame below the center of gravity of the framed glass plate and with its other end to the lowest point of aforesaid bayonet, another rail slightly bent at one end, hingedly connected with its bent end to the frame at the height of the center of gravity of the framed glass plate and with its other end to the uppermost point of the bayonet, both rails being of such length as to hold the colored glass plate in front of the steering wheel in a substantially vertical position extending from slightly below the steering wheel to above the eyesight of the driver.

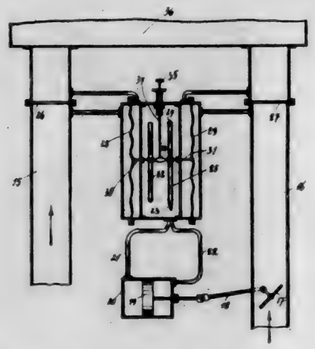
---

1,558,528. OVERHEAD ELECTRICAL CONDUCTOR SYSTEM. HENRY B. P. WRENN and ALOYSIUS S. O'DONOGHUE, Cleveland, Ohio. Filed May 17, 1923. Serial No. 639,512. 12 Claims. (Cl. 191—41.)



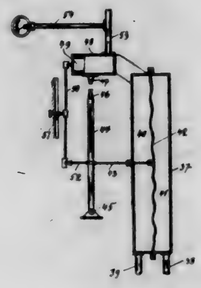
1. An electrical system of the character set forth comprising a plurality of feeder conductors, and a contact wire connected to each conductor, said contact wires being arranged in a series of overlapping loops.

1,555,529. GAS-MIXTURE REGULATOR. GUIDO WÜNSCH, Steglitz, near Berlin, Germany, assignor to Askaniawerke A.-G. vormals Centralwerkstatt-Dessau und Carl Bamberg-Friednau, Friedenau, near Berlin, Germany, a Corporation of Germany. Original application filed Feb. 29, 1924, Serial No. 696,103. Divided and this application filed Feb. 20, 1925. Serial No. 10,716. 5 Claims. (Cl. 137—78.)



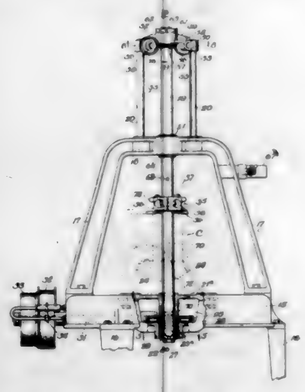
1. In a gas mixture regulator in combination pressure pipes carrying the gases to be mixed, a further pipe through which flows a medium under pressure, means adapted to move said last mentioned pipe in opposite directions corresponding to the rising or falling pressure in said pressure pipes and means operated by the said medium escaping from said further pipe and adapted to effect the mixture regulation.

1,558,530. DEVICE FOR INCREASING SMALL PRESSURE DIFFERENCES. GUIDO WÜNSCH, Steglitz, near Berlin, Germany, assignor to Askaniawerke A.-G. vormals Centralwerkstatt-Dessau und Carl Bamberg-Friednau, Friedenau, near Berlin, Germany, a Corporation of Germany. Original application filed Feb. 29, 1924, Serial No. 696,103. Divided and this application filed Feb. 20, 1925. Serial No. 10,718. 4 Claims. (Cl. 137—78.)



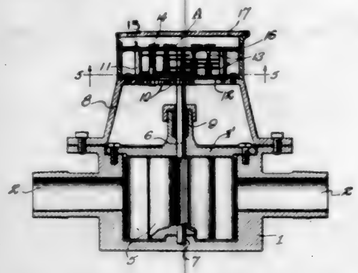
1. In a device for increasing small pressure differences for the purpose of measuring or utilizing them in combination a pipe through which flows a pressure medium, means adapted to transmit the pressure variations to said pipe and thereby move it, a cylinder having fixed inlet opening opposite to the free movable opening of said pipe, a piston within said cylinder connected with said pipe and producing a return movement of the said pipe opposed to its forward movement by said means, so that the pressure in the cylinder becomes proportional to the pressure difference and means for measuring or utilizing the pressure within said cylinder.

1,558,531. CYLINDER-BORING MACHINE. JOHN G. ZUBER, Chicago, Ill. Filed Dec. 27, 1920. Serial No. 433,198. 15 Claims. (Cl. 77—2.)



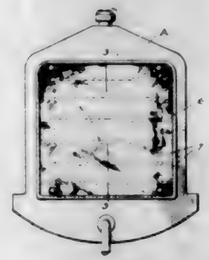
1. A boring machine comprising a base, a standard extending up therefrom, said base and standard having aligned bearing apertures, an endwise movable boring bar, rotatively mounted in said bearing apertures, a boring head removably secured to said boring bar between said bearing apertures, a driven, rotative member capable of rotating on an axis non-centric with respect to the axis of said boring bar, and a compensating member having drive connections with said rotative member and with said boring bar.

1,558,532. WATER METER. JOSEPH CHESLER, Sidney, Ohio, assignor to Chesler Meter Company, Sidney, Ohio. Filed Jan. 19, 1923. Serial No. 613,741. 1 Claim. (Cl. 73—37.)



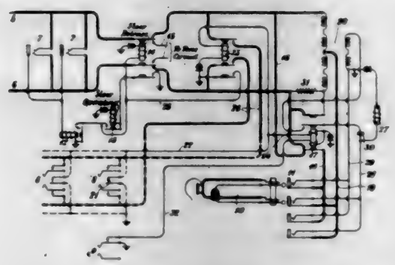
A water meter comprising upper and lower casings having abutting flanges which are bolted together, the lower casing being provided with inlet and outlet nipples and having a countersink in its top, a top plate bolted in the countersink for closing the lower casing from the upper casing and permitting the upper casing to be removed without shutting off the flow of water through the lower casing, a gland on said plate, a shaft passing through the gland and having its lower end journaled in the bottom of the lower casing, a water wheel in the lower casing and attached to the shaft, a register mechanism including a shaft and supporting plates, the bottom one of which is fastened to the top of the upper casing, gears connecting the shaft of this mechanism with the first mentioned shaft, a boxing for enclosing the register mechanism and bolted to the upper casing and a hinged top for the boxing.

1,558,533. RADIATOR SCREEN FOR AUTOMOBILES. BURTIS O. CONE, Richmond, Va., assignor to Crawford Manufacturing Co., Inc., Richmond, Va., a Corporation of Virginia. Filed Apr. 24, 1925. Serial No. 25,526. 4 Claims. (Cl. 257—132.)



1. A screen for closing the air opening of motor vehicle radiators, comprising a plurality of hingedly connected slats, guide-bars secured to the front of the radiator, fastener elements carried by said bars, eyelets carried by said slats and slidable on said bars, and snap fasteners carried by the top slat and adapted for co-operative engagement with the fasteners carried by said bars.

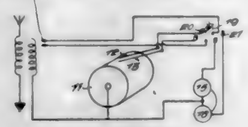
1,558,534. TELEPHONE CIRCUITS. JOHN DAVIDSON, Jr., Montclair, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 1, 1924. Serial No. 741,043. 3 Claims. (Cl. 179—78.)



1. A trunk circuit, a call circuit, an operator's set normally connected to the trunk circuit, said set comprising a transmitter, a receiver and a balancing element, means to disconnect said operator's set from said trunk circuit and connect it to said call circuit, said means operating also to render said transmitter operative, connect said balancing element in circuit and connect said receiver in an anti-side tone connection between the balancing element and the transmission circuit.

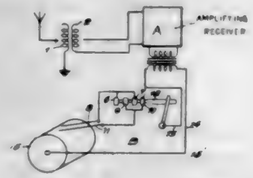
1,558,535. SECRET WIRELESS. PATRICK B. DELANY, South Orange, N. J., assignor, by mesne assignments, to International Telepost Company, Inc., a Corporation of Delaware. Filed Feb. 1, 1922. Serial No. 533,246. 3 Claims. (Cl. 250—10.)

3. A system for receiving radio signals in which fragmentary and mutilated portions of the signals are transmitted secretly on a plurality of different frequencies, comprising in combination a plurality of receiving circuits each responsive to one of the signaling frequencies, a record receiving device connected with said circuits, said device comprising a plurality of receiving means corresponding in number to the number



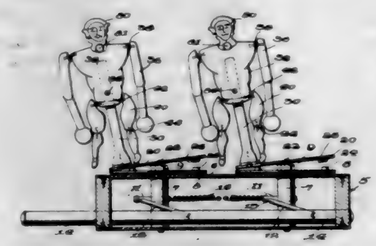
of transmitted frequencies each operative by fragmentary and mutilated portions of said signals on different frequencies whereby said signals may be combined to secure an intelligent record of the transmitted signals.

1,558,536. ELECTROCHEMICAL RECORDER. PATRICK B. DELANY, South Orange, N. J., assignor, by mesne assignments, to International Telepost Company, Inc., a Corporation of Delaware. Filed Feb. 8, 1922. Serial No. 535,055. 18 Claims. (Cl. 178—62.)



1. An electro-chemical recorder comprising a receiving circuit, a plurality of recording fingers, a switch in said circuit, and means controlled by the switch for alternately connecting the recording fingers to the receiving circuit.

1,558,537. MECHANICAL FIGURE TOY. CHARLES L. DRAKE, West Los Angeles, Calif. Filed Jan. 27, 1925. Serial No. 5,145. 14 Claims. (Cl. 46—40.)

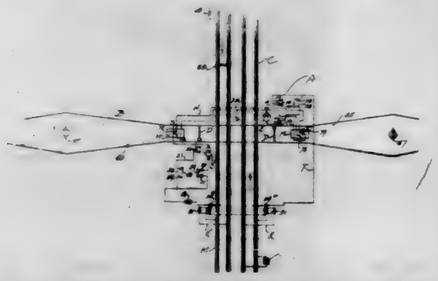


1. A toy comprising supports, base members rotatably and loosely mounted on the supports for turning and tilting movement, and figures mounted on the base members adjacent the edges of the same.

1,558,538. CROSSING-GATE APPARATUS. ADOLPH FICK and RUDOLPH FICK, Boone, Iowa. Filed May 7, 1924. Serial No. 711,086. 7 Claims. (Cl. 246—130.)

7. In a safety system for railway and highway grade crossings the combination of a gate normally adapted to assume a closed position across the highway to prevent travel of vehicular traffic across the grade crossing, an electric circuit, a motor for said circuit, means connecting the motor with said gate for operating the latter, means adapted to be operated by travel of vehicular

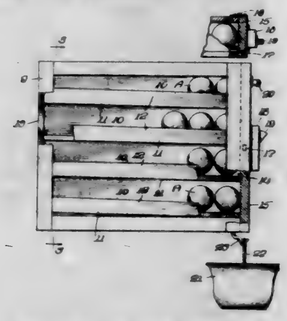
traffic over the highway to close said circuit for operating the motor and elevating the gate, and circuit maker and breaker means for said circuit of the motor



operable by trains running over the railway bed in the vicinity of the grade crossing to maintain said motor circuit inoperative.

---

1,558,539. POOL-BALL RACK. DAVID FREEMAN, Chicago, Ill. Filed May 7, 1921. Serial No. 467,762. 5 Claims. (Cl. 273—16.)



1. In a device of the class described, a plurality of superposed compartments for the reception of balls, said compartments having forwardly opening outlets for the passage of balls; the bottoms of said compartments being inclined longitudinally of said compartments to direct the balls toward one end thereof and being forwardly inclined to direct the balls into said outlets; a swingingly mounted door cooperating with all of said compartments for preventing the passage of balls through said openings; coin controlled mechanism for locking said means in operative position; and a receptacle for the reception of the balls in passing from said compartments upon the opening of said door.

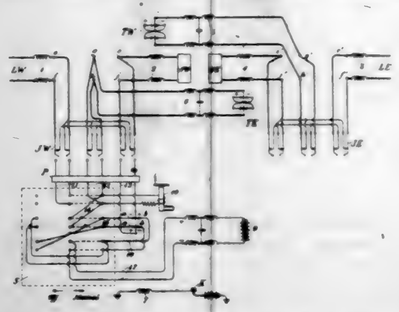
---

1,558,540. POOL-BALL RACK. DAVID FREEMAN, Chicago. Ill. Filed May 7, 1921. Serial No. 467,763. 24 Claims. (Cl. 273—16.)

1. In a device of the class described, a supporting element for balls, a barrier pivotally mounted in said element at one end thereof, means adjacent said supporting element for locking said barrier in a position preventing the insertion of balls into said element, and coin controlled mechanism for temporarily disabling said locking element.

---

1,558,541. MONITORING SET FOR TELEGRAPH REPEATERS. JOSEPH HERMAN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 27, 1923. Serial No. 648,096. 6 Claims. (Cl. 178—71.)



1. A transmission line including two line sections interconnected by a telegraph repeater, said telegraph repeater including line windings and balancing network windings in each line section, pole changers connected to the midpoints of said windings, the pole changers connected to the midpoints of the windings in one line section being controlled by the windings in the other line section, and switching means connected to each set of said windings and their midpoints, and monitoring apparatus including switching means adapted to be connected to either of said last mentioned switching means, and means associated with said switching means for reversing the polarity of the current normally applied to the network windings of the set.

---

1,558,542. SKYROCKET. RAYMOND W. HOLLAND, Kent, Ohio. Filed Mar. 7, 1925. Serial No. 13,878. 3 Claims. (Cl. 102—23.)

1. In a device of the class described, a skyrocket including an elongated body provided with a firing charge and having a firing fuse projecting through the inner end thereof, and external outwardly projecting guiding wings secured to the body, and means for facilitating supporting and guiding of the body including an element attached to the latter and having guiding eyes at opposite sides thereof, and a supporting stand for the skyrocket including upwardly projecting spaced parallel legs adapted for slidable reception in said eyes, and means upon the legs for limiting movement of the eyes onto the latter whereby the rocket will be supported at the desired elevation above the ground.

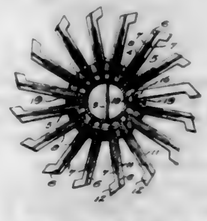
---

1,558,543. MOLDING FLASK. WALTER H. HOLT, Crafton, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Aug. 13, 1924. Serial No. 731,701. 8 Claims. (Cl. 22—111.)

8. In a molding flask, a bar extending across said flask, projections on said bar, a perforated plate, the perforations in said plate being arranged in sets one above the other, any one of said sets of perforations being adapted to receive said projections to adjust the position of said plate.

---

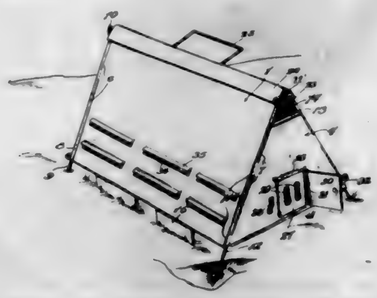
1,558,544. ROTARY BRUSH. ALBERT C. HOLZAPFEL and ARTHUR M. HOLZAPFEL, New York, N. Y. Filed Sept. 7, 1922. Serial No. 586,739. 3 Claims. (Cl. 15—198.)



1. A rotary brush comprising a hub, a plurality of scraping elements projecting from said hub, each of said scraping elements comprising a substantially straight flat plate, and a plurality of similar plates arranged on each side thereof, said plates being of progressively shorter lengths, and means for securing said scraping elements to said hub.

---

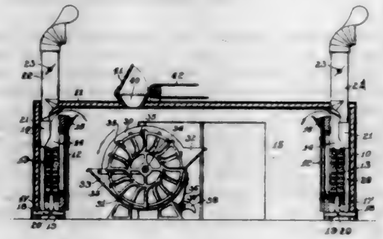
1,558,545. COLLAPSIBLE CHICKEN COOP OR HOG HOUSE. JOHN HOYLE, Winthrop, Iowa. Filed Sept. 14, 1923. Serial No. 662,687. 8 Claims. (Cl. 119—19.)



1. A collapsible structure comprising side walls hingedly connected at their upper portions and provided at their lower portions with spaced depending rest members, a floor hingedly connected at one side with the lower portion of one of the side walls, alined sleeve portions at the other side of the floor and at the lower portion of the other side wall, a rod removably fitted through the sleeve portions, and end walls hingedly connected at one side to the end portions of one of the side walls and separably connected at the other side to the end portions of the other side wall.

---

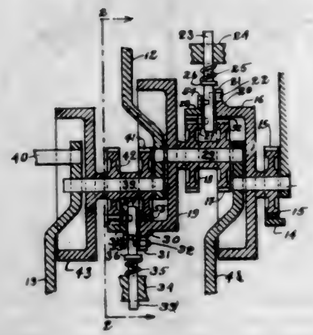
1,558,546. PROCESS AND APPARATUS FOR TREATING RECLAIMED RUBBER. HARRY HUNTER, deceased, late of Indianapolis, Ind., by Paul R. McCampbell, administrator, Indianapolis, Ind., and Oren M. Ragsdale, Indianapolis, Ind., assignors, by mesne assignments, to Carrier Engineering Corporation, Newark, N. J., a Corporation of New York. Filed Mar. 2, 1922. Serial No. 540,427. 11 Claims. (Cl. 34—44.)



1. The improvement in the art of treating rubber, which consists in exposing to air a mass of small pieces of reclaimed rubber to be treated, and agitating and repeatedly dropping the pieces through the air to separate the pieces and maintain at a maximum the surface exposed to the air, and maintaining such air at a relative humidity of between 15% and 75% and at a temperature higher than 110° F.

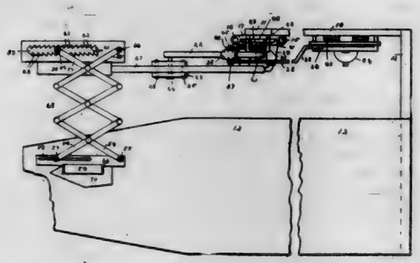
---

1,558,547. COUNTING MECHANISM. MOSES JACOBSON, New York, N. Y., assignor of one-half to William A. Schacht, Brooklyn, N. Y. Filed Aug. 7, 1924. Serial No. 730,637. 5 Claims. (Cl. 235—139.)



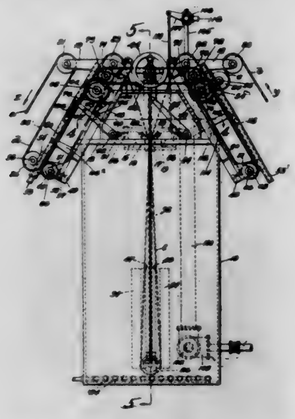
1. In a counting mechanism a series of units consisting each of a spur gear and an insignia wheel rigidly connected thereto, the spur gear of the successive unit of the series being eccentrically positioned with relation to the wheel of the preceding unit of the series, and an internal tooth on the insignia wheel of the preceding unit of the series to engage the gear of the successive unit of the series, to turn the same through a suitable part of a revolution.

1,558,548. IRONING MACHINE. MONTGOMERY H. JOHNSON, Utica, N. Y. Filed Apr. 28, 1922. Serial No. 557,169. 13 Claims. (Cl. 68—9.)



1. In an ironing machine the combination of an ironing board, a head spaced from said board and movable back and forth parallel thereto, a smoothing iron and means extending from said traveling head and carrying said iron over the board and imparting the motion of said head to the iron the said iron-carrying means being adjustable in length during operation of the machine whereby the iron may be made to travel lengthwise of the board in any position crosswise of the board, and means automatically adjusting said carrying means to successively carry the iron at different positions crosswise of the board.

1,558,549. APPARATUS FOR SATURATING FIBROUS MATERIALS. ROBERT T. JOHNSTON, Brooklyn, N. Y., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 17, 1921, Serial No. 445,878. Renewed Mar. 21, 1925. 28 Claims. (Cl. 91—32.)



2. An apparatus for saturating sheet material, comprising a tank which is closed except for a throat, means for forming a loop of sheet material in the tank through said throat, and valve mechanism located at said throat for closing the same on said sheet material.

15. An apparatus for saturating fibrous sheet material, comprising an upright tank adapted to contain a saturating compound and automatic mechanism outside said tank for periodically or intermittently feeding successive lengths of a sheet into said tank.

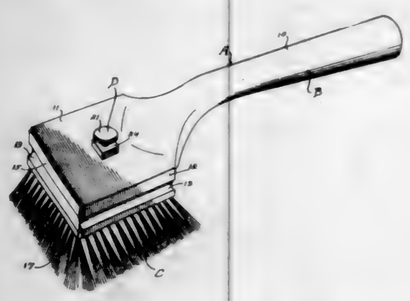
25. An apparatus for saturating fibrous sheet material, comprising a tank adapted to contain a saturating compound under pressure, a stand pipe communicating with said tank and having its upper end closed, means for feeding saturating compound to said stand pipe, and means for delivering fluid under pressure to the upper end of said stand pipe.

28. An apparatus for saturating sheet material, comprising a main tank, a supplemental tank thereabove and communicating therewith by a throat, said tanks being adapted to contain saturant in which said throat is submerged, means for guiding an indeterminate length of fibrous material through said supplemental tank and throat and in looped formation through said main tank, and means for subjecting the saturant in said main tank to a different pressure than that in said supplemental tank.

1,558,550. CONVEYER. JOSEPH F. JOY, Franklin, Pa., assignor to Joy Machine Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Apr. 15, 1924, Serial No. 706,656. Renewed Sept. 12, 1925. 5 Claims. (Cl. 198—174.)

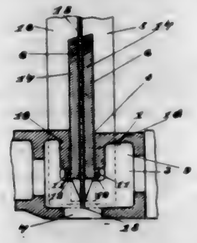
1. In an endless chain and scraper conveyer member, a scraper bar of substantially inverted V-shape in cross section having one flange inclined and of gradually increased width from the ends to the center thereof.

1,558,551. BRUSH. VICTOR KALINOWSKI, South Chicago, Ill. Filed Aug. 2, 1924. Serial No. 729,803. 3 Claims. (Cl. 15—172.)



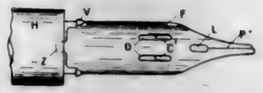
1. A brush comprising a handle, a head plate at one end of said handle, having depending side walls formed at the longitudinal edges thereof and provided intermediate their upper and lower edges with inwardly extending guides extending longitudinally throughout the length of the side walls, a removable and reversible brush head comprising a head portion having a face and side walls and bristles extending from said face, each of said side walls being provided with longitudinally extending grooves for sliding interfitting relation with said guides of the head plate, and means for retaining the brush head in the head plate and in the desired adjusted relation with respect to said handle.

1,558,552. CAR CONSTRUCTION. FELIX KOCH, Pittsburgh, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed July 13, 1923. Serial No. 651,426. 16 Claims. (Cl. 105—402.)



1. In a railway car, an underframe having a recess formed therein, a member inserted in said recess from above and having a lug for engaging said underframe within said recess, a post seated in said recess and means securing said post and member together.

1,558,553. FOUNTAIN PEN. THEODOR KOVÁCS, Meran, Italy. Filed June 16, 1924. Serial No. 720,431. 6 Claims. (Cl. 120—50.)

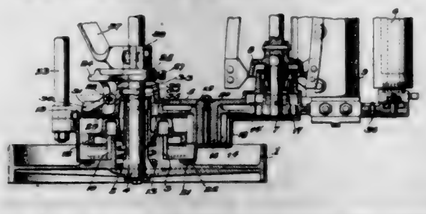


1. A fountain pen, comprising, in combination: a shaft; an ink-supplying member inserted into the shaft and projecting forth therefrom at the pen-end thereof; a pen proper lying freely, supported by the projecting end of the ink-supplying member; and hook-like fastening members arranged to connect detachably the pen with the said ink-supplying member.

1,558,554. PROCESS OF SEPARATING SUGAR FROM RESIDUAL MOLASSES. CHRISTOFER G. LEONIS, Salt Lake City, Utah. Filed Dec. 29, 1924. Serial No. 758,757. 3 Claims. (Cl. 127—46.)

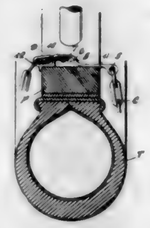
1. The process of separating sugar from molasses which comprises treating dried residual molasses with concentrated acetic acid to precipitate the sugar, separating the precipitated sugar from the residue contained therein, and washing the sugar with alcohol.

1,558,555. LAWN MOWER. HARRY R. LONTZ, Richmond, Ind., assignor, by mesne assignments, to The F. & N. Lawn Mower Company of Delaware, Richmond, Ind., a Corporation of Delaware. Filed Jan. 16, 1923. Serial No. 612,991. 21 Claims. (Cl. 56—7.)



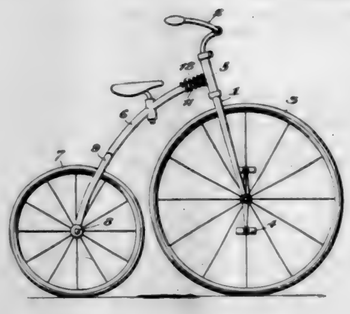
1. A lawn mower comprising a ground-engaging driving wheel, a gear slidably mounted on said wheel, a cutting reel shaft driven by said wheel through said gear, and means for moving said gear to non-driving position.

1,558,556. ANTISKID-CHAIN FASTENER. JAMES A. LUKE, Cleveland, Ohio, assignor of one-half to Edward N. Smith, Cleveland, Ohio. Filed Feb. 12, 1925. Serial No. 8,686. 4 Claims. (Cl. 152—14.)



1. A device for fastening a transverse anti-skid chain to an automobile wheel, said device comprising, a bar arrangeable transversely upon a felloe, means for limiting relative movement of the bar upon the felloe, a portion of said bar being off-set to form a recess between the bar and felloe, and a lug carried by the bar and arranged in the recess, said off-set portion having a slot to permit insertion of one chain link for engagement with said lug.

1,558,557. VELOCIPEDE AND THE LIKE. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Original application filed Apr. 27, 1922, Serial No. 556,969. Divided and this application filed Sept. 8, 1923. Serial No. 661,654. 8 Claims. (Cl. 208—94.)

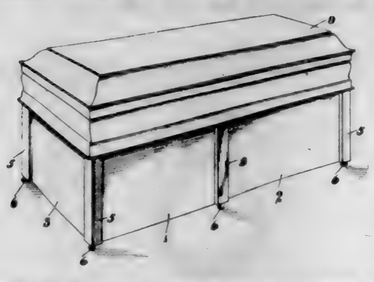


1. A device of the class described comprising a rear frame member, a front frame member having pin and slot connection with said rear member, and resilient means for resisting relative angular movement of said frame members around a longitudinally extending axis.

1,558,558. BIER CONSTRUCTION. JAY H. METCALF, Grand Rapids, Mich. Filed Nov. 24, 1923. Serial No. 676,806. 2 Claims. (Cl. 27—27.)

1. In a construction of the class described, a front plate adapted to be vertically positioned, said plate at each end being formed with a plurality of key-hole slots, the larger portions of the slots being located below the narrower portions thereof, corner posts one at each end of the front plate, the end edges of the plate being located back of the corner posts, headed members attached to

the posts at the rear sides thereof, one for each slot in the front plate, the plate and posts being detachably connected together by passage of the said members



through the slots, and two end plates, one at each end of the front plate connected to the corner posts and extending to the rear therefrom.

---

1,558,559. PRODUCTION OF OXYGENATED ORGANIC COMPOUNDS. ALWIN MITTASCH, Ludwigshafen-on-the-Rhine, MATHIAS PIER, Heidelberg, and KARL WINKLER, Ludwigshafen-on-the-Rhine, Germany, assignors to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed Sept. 6, 1923. Serial No. 661,321. 10 Claims. (Cl. 260—156.)

1. The manufacture of methanol or other oxygenated organic compounds, which consists in passing a mixture of carbon oxids with at least about an equal volume of hydrogen at a temperature of between about 200 and 600 degrees centigrade and pressure of about 50 atmospheres or higher over a contact mass containing in an intimate mixture at least two oxides, non-reducible to the metals under the conditions of working, of metals belonging to different groups of the periodic system, with the more basic oxid in preponderating quantity but substantially in the absence of iron and nickel.

---

1,558,560. HAMMER-ACTUATED ICE PICK. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Sept. 8, 1923. Serial No. 661,680. 1 Claim. (Cl. 82—62.)

An implement of the class described, comprising a handle member of a substantial weight and having a longitudinal bore, an operating tool having a shank slidably mounted in said bore, a bearing collar on said shank and fitted to slide and guide the shank in said bore, a coiled spring in said bore acting against the upper end of said handle bore and against said tool shank collar to normally hold the tool extended in the handle, an anvil projection at the upper end of said bore of a greater diameter than that of said shank and a spring spread to about engage said projection and be out of contact with said shank and its lower end contracted about the tool shank, said spring acting on said tool to hold it in contact with the work during the reciprocating action of the heavy handle in producing hammer-like blows through the tool upon the work, and a screw plug in the outer end of the handle bore through which the tool works endwise to limit the relative outward motion of the tool.

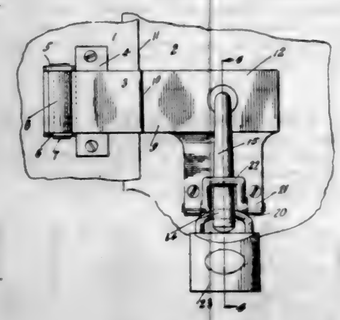
---

1,558,561. BOBBIN. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Nov. 27, 1923. Serial No. 677,311. 6 Claims. (Cl. 96—15.)

1. A yarn package holder having a spindle, a pair of spaced sheet metal sleeves thereon each having one end secured to said spindle and each having a plurality of spring ribs for engaging and yieldingly securing a yarn package to the spindle.

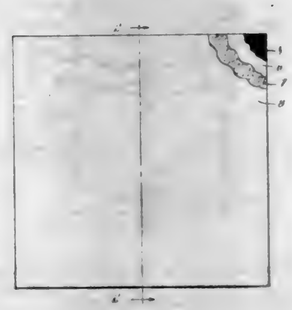
---

1,558,562. LOCK. MANSEL E. NAYLOR, Los Angeles, Calif. Filed May 4, 1920. Serial No. 378,766. 13 Claims. (Cl. 292—210.)



1. A door fastener embracing a hinged plate and a fixed plate having an opening, a crank handle carried by and rotatably mounted in the end of the first plate and having a latch to project through the opening in said second plate and engage the inner surface thereof, a loop hinged to the lower end of said second plate and adapted to swing up over said handle.

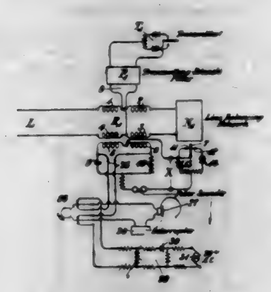
1,558,563. FABRIC FOR WEARING APPAREL. FRANK B. NEWTON, Milton, Mass. Filed Mar. 27, 1924. Serial No. 702,340. 2 Claims. (Cl. 91—68.)



1. An article for wearing apparel comprising a layer of flexible fabric, an inner layer of adhesive material thereon and granules imbedded in said adhesive material whereby said fabric is provided with a rough surface and a thin outer layer of adhesive material of a less sticky nature than that of said inner layer of adhesive material covering said granules and forming a protective covering therefor.

---

1,558,564. ELECTRICAL TESTING SYSTEM. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 16, 1921. Serial No. 485,309. 5 Claims. (Cl. 178—58.)



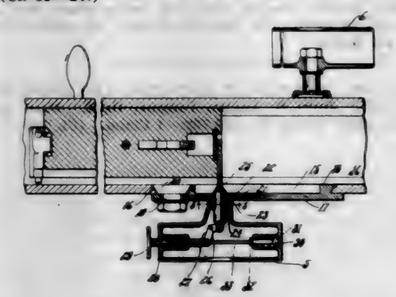
1. In an electrical testing system, the combination with a line circuit, of a balancing network, a signal transmitting circuit, a signal receiving circuit, both effectively connected with the said line circuit and said network, and means connected with the said receiving circuit to measure the magnitude of the unbalance between the said line circuit and the said network resulting from the transmission of telegraph signal impulses, the said means including a source of potential for comparison with the potential set up in said receiving circuit by unbalance between the line circuit and the said network, and means for varying the magnitude of the potential from said source.

1,558,565. SHELL FILLER. FREDRICK OLSEN, Dover, N. J. Filed Jan. 9, 1923. Serial No. 611,609. 8 Claims. (Cl. 52—5.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A filler for projectiles embodying guanidine picrate compressed to a density of not less than 1.50.

---

1,558,566. AUTOMATIC GUN. HUGH M. ROCKWELL, Bristol, Conn., assignor, by mesne assignments, to The Marlin Firearms Corporation, New Haven, Conn., a Corporation of Delaware. Filed Jan. 17, 1919, Serial No. 271,741. Renewed Aug. 7, 1925. 8 Claims. (Cl. 89—27.)



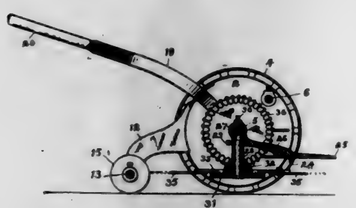
2. In an automatic gun, a firing-pin, means for retaining said firing-pin in inoperative position, means for releasing said retaining means, a handle pivotally mounted on the gun, and means in said handle operable in any position thereof to actuate said releasing means, said means including a tapered pin reciprocatively mounted in said handle.

---

1,558,567. AIRCRAFT LANDING PLATFORM. ALEXANDER B. SCHEM, New York, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 27, 1922. Serial No. 590,750. 33 Claims. (Cl. 244—2.)

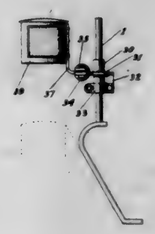
1. The combination of a ship stabilized against rolling and a platform mounted on the ship and stabilized against pitching.

1,558,568. LAWN CLIPPER. CYRUS R. ST. JOHN, Richmond, Ind., assignor of one-half to Raymond H. Smith, Richmond, Ind. Filed Sept. 11, 1922. Serial No. 587,549. 2 Claims. (Cl. 56—255.)



2. A lawn clipper comprising end-discs, means for rigidly connecting said end discs in spaced relation to each other, ground-wheels surrounding said end-discs, a horizontal shaft connecting said wheels, a guard-bar connecting said end discs, an arm extending rearward from the center of said bar, a bearing carried by said arm and forming a central bearing for said shaft, a vertical stationary shaft whose upper end is rigidly secured to said arm, a head formed on the lower end of the vertical shaft, a cutter wheel disc revolvably mounted on the vertical shaft and supported by said head, flanges radiating from the cutter wheel disc and forming a plurality of right-angular shoulders, a blade secured to each of said shoulders, a bevel gear secured on the horizontal shaft, a pinion formed integral with said cutter wheel disc and located in mesh with said bevel gear, all substantially as set forth.

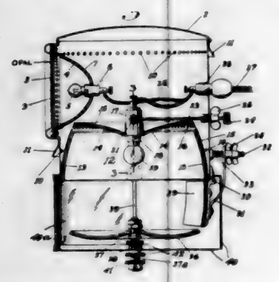
1,558,569. HEADLIGHT MOUNTING AND CONSTRUCTION. JOHN S. ADAMS, Pomona, Calif. Filed Sept. 20, 1923. Serial No. 663,752. 1 Claim. (Cl. 240—57.)



A headlight mounting including a supporting post, a sleeve mounted for vertical adjustment on the post, a plate member turnably mounted on the sleeve, a down-turned ear on the plate, a clamp on the ear adapted to be clamped to the post and support the sleeve, and a lamp adjustably mounted on the plate.

1,558,570. HEADLIGHT. JOHN S. ADAMS, Pomona, Calif. Filed Jan. 21, 1924. Serial No. 687,443. 3 Claims. (Cl. 240—41.)

1. In a headlight, a fixed reflector arranged to throw light rays out at diverging angles to the axis of the reflector, an auxiliary reflector projecting outwardly of the fixed reflector and extending about the latter for a portion of the periphery thereof, a third reflector mounted outwardly of the auxiliary reflector and facing the fixed reflector, means for adjusting the spacing of the

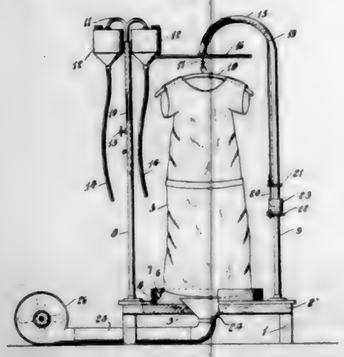


third reflector relative to the fixed reflector, and means for adjusting the angle of setting of the auxiliary reflector relative to the other reflectors.

1,558,571. RAILROAD DEVICE. NORTON H. ALLISON, Florence, Kans. Filed June 22, 1925. Serial No. 38,814. 2 Claims. (Cl. 214—85.)

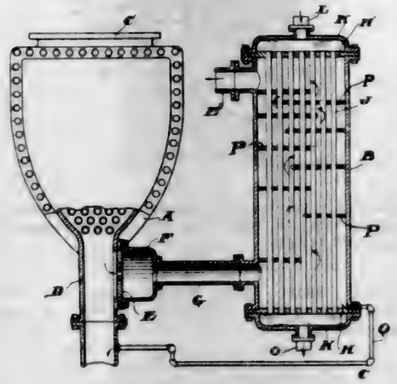
1. The combination with main and auxiliary tracks, of a truck movable along the auxiliary track, a pedestal adapted to be mounted removably on the main track and a skid pivoted to the pedestal for vertical and horizontal swinging movement, the skid being of such length that it will reach from the pedestal to the truck.

1,558,572. GARMENT CLEANING AND DRYING DEVICE. ALPHONSE P. BADEAUX, New Orleans, La. Filed Nov. 15, 1924. Serial No. 750,080. 8 Claims. (Cl. 34—26.)



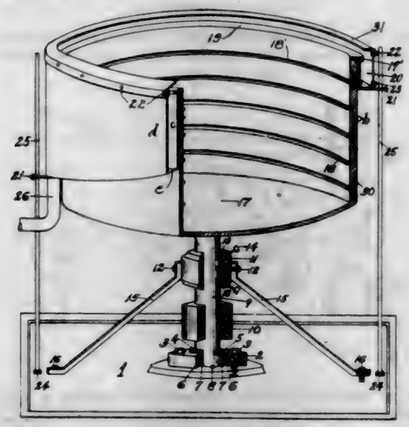
A garment cleaning and drying device comprising means for supporting and holding a garment with its surfaces surrounding an enclosed space and free from contact with each other, means for forcing a drying fluid under pressure into the space bounded by the garment at one end thereof for the flow of the fluid along the inner surface of the garment and toward and out of the garment at the opposite end of such enclosed space, and means for retarding the fluid in its course of flow to cause it to "balloon" the garment and pass in part laterally outward through the material of the garment.

1,558,573. CONDENSER UNIT. PAUL A. BANCEL, Nutley, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 25, 1923. Serial No. 641,306. 4 Claims. (Cl. 257—43.)



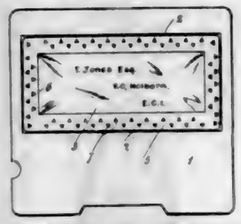
1. A condenser unit having a steam inlet at the top and a condensate outlet casing at the bottom, adapted to be connected to evacuating apparatus, and a perforated suction distributor located in the side of the said condensate outlet casing and also located in the connection to the evacuating apparatus for distributing the suction from the evacuating apparatus over substantially the length of the condenser.

1,558,574. CENTRIFUGAL AMALGAMATOR. HAROLD N. BANKS and GEORGE E. BANKS, Delta, Utah. Filed Oct. 18, 1921. Serial No. 508,555. 2 Claims. (Cl. 83—67.)



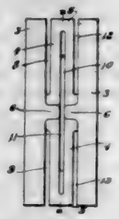
1. A centrifugal amalgamator comprising a rotary bowl having vertical lateral grooved sides and unobstructed rim, and resilient riffles held in said grooves by spring tension and adapted to entirely fill said grooves and projecting horizontally into said bowl.

1,558,575. STENCIL CARD FOR USE WITH ADDRESSING MACHINES. LOUIS MAURICE BARMAN, London, England, assignor to Roneo Limited, London, England, a Company of Great Britain. Filed Aug. 27, 1924. Serial No. 734,412. 4 Claims. (Cl. 101—127.)



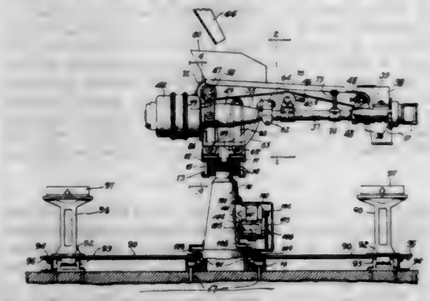
1. A thin metal frame for stencil cards which is engageable with only one face of a stencil, said frame having a central opening and provided with a plurality of projections capable of penetrating through said stencil and into one surface of a card, and said frame capable of fitting into a recess in the card to engage said stencil directly with the bottom of the recess.

1,558,576. FLEXIBLE COUPLING. KARL BAUMANN, Urmston, England, assignor, by mesne assignments, to Westinghouse Electric and Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 4, 1922. Serial No. 604,924. 5 Claims. (Cl. 64—96.)



1. A one-piece flexible coupling comprising end coupling members united by a rectilinear frame the centre of which coincides with the axis of the coupling and the corners of which are connected alternately with said end coupling members, said frame being spaced from the end coupling members and said connecting corners being formed by a plurality of machined cuts.

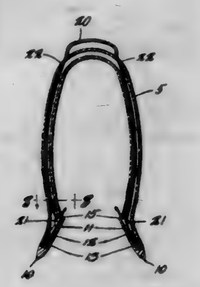
1,558,577. MACHINE FOR FILLING MOLDS. ELMER O. BEARDSLEY and WALTER F. PIPER, Chicago, Ill., assignors to The Beardsley & Piper Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1923. Serial No. 634,445. 31 Claims. (Cl. 22—36.)



1. In a molding machine, the combination of an arm, a sand projector mounted on and movable with said arm,

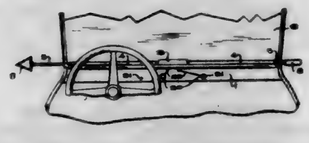
a motor for driving the projector, means for conveying sand to the projector, and a link-suspension for the arm pivoted to permit longitudinal movement thereof.

1,558,578. HAIRPIN. WILLIAM E. BENNETT, Craig, Mont. Filed Mar. 16, 1925. Serial No. 15,948. 1 Claim. (Cl. 132—51.)



A hollow hairpin having divergent hollow barbs and provided with a pair of openings in its crest, spring pressed tines movable in the barbs and projected from the inner ends of the latter, and a U-shaped operating element having its legs arranged in the legs of the hairpin and connected with the tines, the intermediate part of the operating element being normally disposed exteriorly of the hairpin and being adapted to be pushed downwardly to retract the tines, the outward movement of the tines from their respective barbs serving to raise the operating element to dispose its intermediate part above the crest of the hairpin where it can be readily operated.

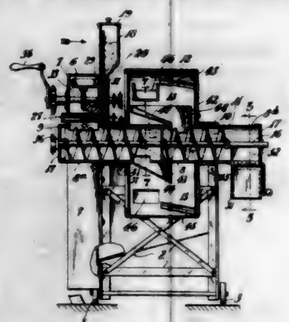
1,558,579. AUTOMOBILE DIRECTION INDICATOR. WILLIAM JAMES BISHOP, Collingwood, Ontario, Canada. Filed Dec. 6, 1923. Serial No. 678,969. 3 Claims. (Cl. 177—329.)



1. In an automobile direction indicator, a signal laterally slidable into and out of the operative position, said signal normally spring-held in its operative position, an electric lamp in the signal one of its terminals being grounded, a rotatable drum of electrical insulating material, a cable of electrical conducting material secured at one end to the drum and wound thereon, the other end of the cable being connected to the second terminal of the electric lamp, means for rotating the drum, and means coacting therewith adapted to contact with the cable thereon when the signal is in the operative position.

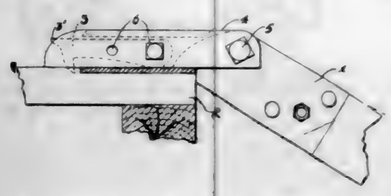
1,558,580. APPARATUS FOR PICKLING AND/OR MIXING GRAIN AND FOR OTHER ANALOGOUS PURPOSES. ALFRED JAMES BISHOP, Melbourne, Victoria, Australia. Filed June 18, 1925. Serial No. 38,028. 14 Claims. (Cl. 53—28.)

1. Mixing apparatus, comprising a drum, the interior of which constitutes a mixing chamber; a stationary casing passing substantially horizontally through the drum and whereon said drum is rotatably mounted, said casing having orifices to establish communication between its interior and the mixing chamber; and screw conveying



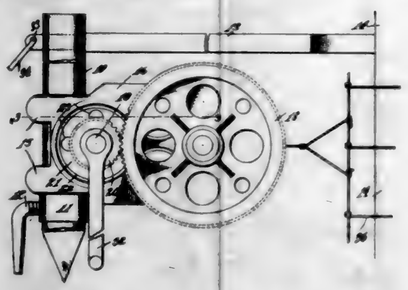
means within the casing for conducting the materials to be mixed into and away from said mixing chamber by way of said orifices.

1,558,581. SKID. ALBIN BLOOM, Miles City, Mont. Filed June 4, 1923. Serial No. 643,419. 2 Claims. (Cl. 193—41.)



1. In combination with a skid, including a pair of side members, a channeled member pivoted to the upper end of each side member and having its bight forming a continuation of the side member and a hook pivoted in each channeled member under the bight for engaging a part of a support against which the skid is placed.

1,558,582. WIRE STRETCHER. THOMAS J. BLOSICK, Portland, Oreg. Filed July 28, 1925. Serial No. 46,620. 2 Claims. (Cl. 254—162.)



1. A stretching device including a support, a yoke supported on the support, a winding drum on the support, gears for rotating the drum and including a disk having openings, a spring pressed bar having an end arranged to successively enter said openings as the disk is rotated, means for urging the bar into the openings, and means for withdrawing and retaining the bar out of engagement with said openings.

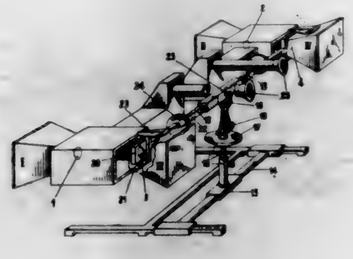
1,558,583. LIGHT BULB. WILLIAM E. BOCK, Chicago, Ill. Filed July 19, 1922. Serial No. 576,076. 2 Claims. (Cl. 176—126.)

1. A vacuum lighting tube including a tube of transparent insulating material having a rounded end, a nipple formed upon the axis of the rounded end and extending a short distance into the tube, an electrode molded in said nipple and projecting a short distance into the tube beyond the inner end of said nipple, a cap mounted upon the end of said tube, the inner end of said cap embracing the walls of the tube, means embracing the end of the tube and spacing the end of the cap therefrom, a frusto-conical contact carried by and insulated from said cap, said contact engaging the electrode and a binding post carried by the apex of the contact.

1,558,584. COMPLEX GOLD COMPOUND AND PROCESS OF MAKING SAME. MAX BOCKMÜHL, GUSTAV EHRHART, and PAUL FRITZSCHE, Hochst-on-the-Main, Germany, assignor to Farbwerke vorm. Meister Lucius & Brüning, Hochst-on-the-Main, Germany, a Corporation of Germany. Filed Nov. 29, 1924. Serial No. 752,937. 4 Claims. (Cl. 260—11.)

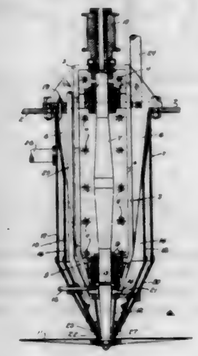
4. As new products, the bodies obtainable by causing gold salts to act upon thiobenzimidazolecarboxylic acids and converting the gold compounds thus obtained into their salts, the said bodies being yellowish powders, soluble in water.

1,558,585. METHOD AND STEREOSCOPIC DEVICE FOR REPRODUCING OBJECTS. HANS BOYKOW, Schoneberg, near Berlin, Germany, assignor to the Firm Optische Anstalt C. P. Goerz Aktiengesellschaft, Friedenau, near Berlin, Germany. Filed Feb. 25, 1921. Serial No. 447,903. 6 Claims. (Cl. 88—29.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



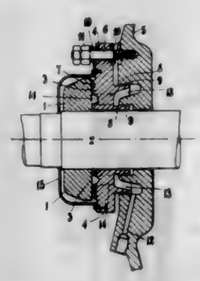
1. In a method of stereoscopic topography, producing sets of stereoscopic photographs of overlapping parts of the three-dimensional object, adjusting them relatively to each other so that their optical three-dimensional images appear with identical overlapping parts in register, determining the adjusted positions of the photographs of the one set relatively to the positions of the photographs of the other set, and correlating the topographic reproduction of the part of the object corresponding to the one set of stereoscopic photographs, to the reproduction of the part of the object corresponding to the other set in accordance with the adjusted positions of the sets of photographs relatively to each other.

1,558,586. SPRAYER. CHARLES E. BRADLEY, Montclair, N. J., and JOSEPH G. COFFIN, Hempstead, N. Y., assignors to General Rubber Company, a Corporation of New Jersey. Original application filed Dec. 7, 1921, Serial No. 520,505. Divided and this application filed Apr. 3, 1922. Serial No. 549,859. 8 Claims. (Cl. 299—63.)



1. A sprayer for latex or other liquid comprising a smooth, unobstructed disc, means for rotating the same, and means for discharging the liquid centrally of the disc comprising a tubular wall terminating closely adjacent the disc, and a surrounding adjustable wall concentric therewith and coacting with the disc to form an adjustable outlet.

1,558,587. LIQUID-SEALED GLAND FOR ROTATING SHAFTS. THOMAS BRIGHOUSE, Stretford, England, assignor, by mesne assignments, to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 2, 1919. Serial No. 269,384. 6 Claims. (Cl. 286—9.)

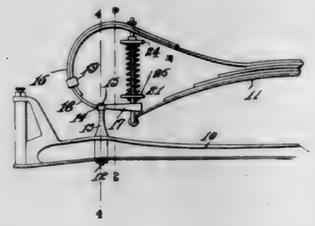


1. The combination with a casing element and a shaft, of a gland comprising a collar fixed to the shaft and a bush element contiguous to the collar to provide therewith radially opposed surfaces having a close clearance therebetween, adjustable means for regulating the extent of clearance between the opposed surfaces of said collar and said bush element, male and female centering ele-

ments provided in the bush element and the casing element respectively, and means for supplying an extraneous sealing liquid between the contiguous surfaces of the collar and the bush element.

---

1,558,588. SHOCK ABSORBER. PEARL G. BURDINE, Chester, Miss. Filed Aug. 8, 1924. Serial No. 730,915. 3 Claims. (Cl. 267—28.)



1. The combination with the axle and main spring of a vehicle, of a post carried by the axle, a spring element having an end connected with the post and its intermediate portion connected with the main spring, a spring means between the end of the main spring and the said spring element, and means for engagement with the spring means for limiting the lateral movement of the main spring.

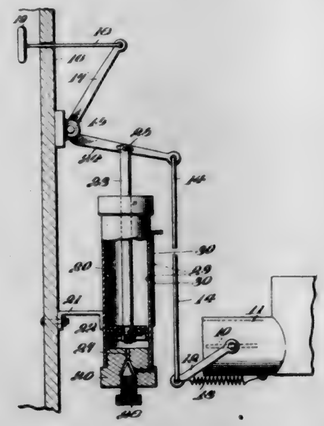
---

1,558,589. COMPOSITION FOR PREVENTING CORROSION. RAY B. CANUTE, Minneapolis, and ERVIN H. TANK, St. Paul, Minn. Filed Oct. 16, 1924. Serial No. 744,082. 1 Claim. (Cl. 134—1.)

A composition of the character described composed of the following ingredients approximately in the proportions stated, towit: Carbonate of soda, 4 pounds; petroleum jelly, 5 pounds; oil of cedar, 1 ounce.

---

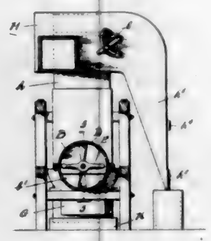
1,558,590. CONTROL FOR CARBURETORS. RAYMOND E. CARLSON, Washington, D. C. Filed Sept. 27, 1924. Serial No. 740,368. 5 Claims. (Cl. 137—139.)



4. The combination with a carburetor, of manually operable means for restricting the supply of air to the carburetor, and automatic means associated therewith for gradually increasing the admission of air to the carburetor.

---

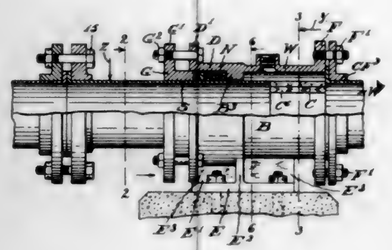
1,558,591. APPARATUS FOR CLEANING WHEAT. JAMES G. CHALMERS, Macon, Ga., assignor of one-half to Modern Flour Mills, Macon, Ga., a Corporation of Georgia. Filed July 20, 1922. Serial No. 576,232. 12 Claims. (Cl. 83—30.)



2. In a wheat cleaning apparatus, means for scouring and removing the outer coating of bran and crease dirt or other impurities from the wheat, comprising a cylindrical casing, a shaft journaled in said casing and having fixed thereon a series of scourer arms and carrier flights alternating with said arms, said scourer arms having no conveying tendency, but adapted to remove from the wheat the outer coating of bran and crease dirt while the carrier flights are adapted to force the wheat toward the discharge end of the casing, and means for separating the cleaned wheat from the bran and impurities, together with means for separating the heavier particles or screenings from the air and dust and forcing the dust-laden air into a dust collector.

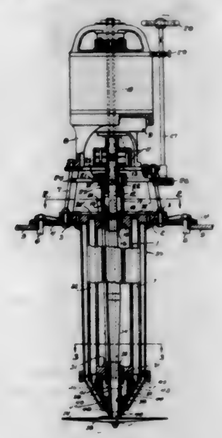
---

1,558,592. EXPANSION JOINT. DICK HUBERT CHESTER, Buffalo, N. Y. Filed May 12, 1922. Serial No. 560,310. 24 Claims. (Cl. 285—162.)



1. An expansion joint, comprising a casing having an encircling integral inwardly extending wall portion near one end thereof, and a plurality of longitudinally disposed casing-wall reinforcing members integral with said wall and casing extending from said wall to the opposite end of said casing.

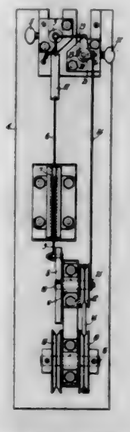
1,558,593. SPRAYER. JOSEPH G. COFFIN, Hempstead, N. Y., assignor to General Rubber Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 30, 1923. Serial No. 635,536. 14 Claims. (Cl. 299—63.)



1. A sprayer for latex or other liquid comprising a disc, means for rotating the same, means forming an annular orifice for delivering liquid centrally of the disc, and successive overflow means for evenly supplying liquid to said orifice.

---

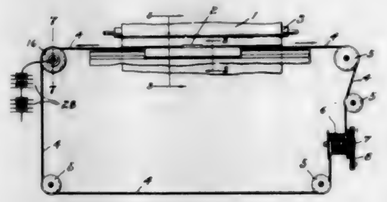
1,558,594. TESTING MACHINE. JOSEPH G. COFFIN, Hempstead, N. Y., assignor to L. Candee & Company, New Haven, Conn., a Corporation of Connecticut. Filed Jan. 11, 1924. Serial No. 685,509. 16 Claims. (Cl. 265—2.)



1. In a testing machine, a recordably operable member, and a plurality of means for simultaneously operating the member whereby the resultant operation may be recorded said means effecting the resultant operation in part through action induced thereby in a test specimen of the material to be tested by subjecting the specimen to strain whereby the recordable operation will be in part dependent upon the action of the specimen.

---

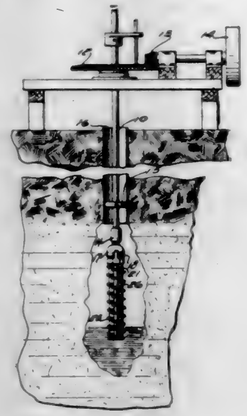
1,558,595. POWER-STOPPING DEVICE. NOAH LOUIS DAUPLAISE, South Manchester, Conn. Filed Mar. 7, 1924. Serial No. 697,681. 5 Claims. (Cl. 192—116.5.)



1. In a machine of the character described, means for applying power to the machine, a lever for shutting off and turning on the power, yielding means adapted to urge the power lever towards off power position, a pivoted lever engaging the power lever to hold it in on power position, a solenoid engaging one end of the pivoted lever, an idler wheel having an electric circuit therein and a separated portion and a freely movable metal member adapted to close the space in the circuit by gravity to energize the solenoid to operate the pivoted lever to release the power lever and throw it to an off power position and to move away from the separated portion of the circuit by centrifugal action when the idler wheel is moving when the power lever is in on power position.

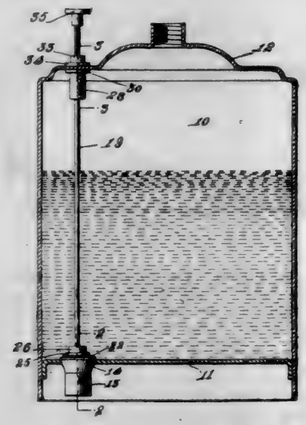
---

1,558,596. CENTRIFUGAL REAMER FOR OIL WELLS AND THE LIKE. WADE HAMPTON DE FONTAINE, New York, N. Y., assignor, by mesne assignments, to Gauntlett & Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 2, 1922. Serial No. 591,759. 5 Claims. (Cl. 255—76.)



1. A device of the class described, comprising a head and three reamer arms which are pivotally mounted in substantially equidistant radial slots in the lower end of the head and carry each a plurality of cutter wheels, the arms being of heavy construction and the cutter wheels of maximum diameter permitting the arms normally to depend vertically downward below the head with the outer peripheries of the wheels substantially flush with the periphery of the head.

1,558,597. OIL CAN. OBED F. ECKARD, Hickory, N. C. Filed Mar. 30, 1925. Serial No. 19,424. 2 Claims. (Cl. 221—15.)



1. An oil can of the character described having a tubular casing extending through the can bottom an appreciable distance, said casing having an upper enlarged portion which includes a beveled valve seat upon the upper periphery and inner sides thereof, a valve rod, a valve mounted upon the valve rod, means included upon the valve rod and upon the opposite sides of the valve for rigidly securing the same thereto, a casing provided upon the under side of the can top and receiving the upper end of the valve rod therethrough, means included adjacent the upper end of the valve rod and upon the outer side thereof and engaging the upper and outer side of the can top for restricting the movement thereof, means included upon the upper and outer free end of the rod for facilitating the lifting of the same, and spring compression means included in the lower and upper casings for normally seating the valve.

1,558,598. OXIDATION OF AMMONIA. CARLETON ELLIS, Montclair, N. J., assignor to Ellis Foster Company, a Corporation of New Jersey. Filed Apr. 26, 1918, Serial No. 231,014. Renewed Jan. 13, 1925. 27 Claims. (Cl. 23—234.)

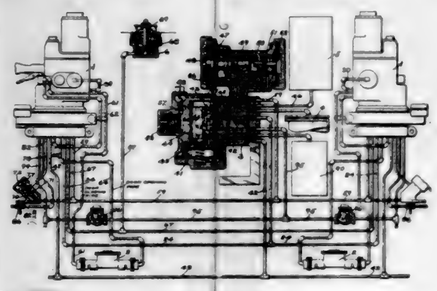
26. In the oxidation of ammonia, the step of passing a mixture containing ammonia and air, in contact with a catalyzer containing oxygen, a metal of the cobalt group, and an acid-forming element which is capable of increasing its catalytic activity.

1,558,599. FOAM-STABILIZING COMPOSITION. GUSTAVUS J. ESSELEN, Jr., Swampscott, Mass., assignor to Badger Fire Extinguisher Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 22, 1924. Serial No. 708,188. 7 Claims. (Cl. 23—244.)

4. A foam-forming fire extinguisher charge comprising a liquid containing in dispersion the residue of neutralized and evaporated sulfite waste liquor.

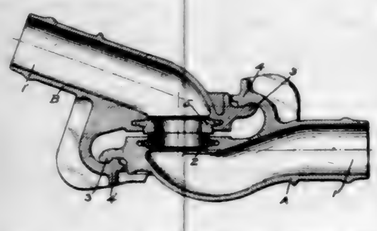
1,558,600. SAFETY CAR CONTROL EQUIPMENT. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 22, 1923. Serial No. 664,232. 21 Claims. (Cl. 303—6.)

1. The combination with a brake valve handle having an emergency brake application position, of means acting on said handle only when the hand is removed from the brake valve handle for shifting said handle to emer-



gency position, said means being rendered inactive when the handle is grasped.

1,558,601. HOSE COUPLING. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 21, 1924. Serial No. 694,300. 3 Claims. (Cl. 285—54.)

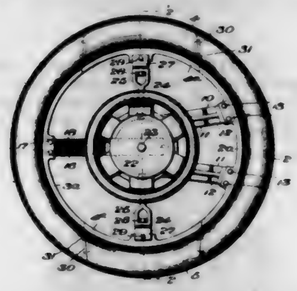


1. The method of introducing into service improved hose couplings having gaskets adapted to provide increased flow area, which consists in first equipping the improved hose coupling with a temporary gasket having an internal diameter corresponding with the internal diameter of the existing standard hose coupling gasket and in then substituting for the temporary gasket, a gasket having a greater internal diameter.

1,558,602. DRINKING CUP. PHILIP A. FISCHER, New York, N. Y. Filed Nov. 18, 1924. Serial No. 750,572. 8 Claims. (Cl. 229—53.)

1. A folding drinking cup comprising a body portion, an open-topped pouring extension, flaps along the sides of the pouring extension forming liquid confining pockets for guiding liquid toward the discharge edge of the pouring extension, the adjacent ends of said flaps being secured to the pouring extension near its discharge edge for reenforcing that edge.

1,558,603. COLLAPSIBLE CORE. ANDREW J. FLEITER, Akron, Ohio. Filed Apr. 6, 1922. Serial No. 549,967. 3 Claims. (Cl. 154—9.)



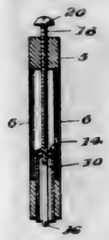
1. An annular core comprising, a hub portion, a fixed segmental section mounted concentrically of the hub member, a second segmental section mounted in diametrically opposite relation to said first member for reciprocable movement upon the hub and in the plane of the core, oppositely disposed key sections adapted to be positioned between opposed ends of said first and second sections, a rotatable element upon the hub, and a connection between the rotatable element and each key section including a link having a pivotal connection to said element and a swivel connection to said section.

1,558,604. COIL MOUNTING. HUGO GERNSBACK, New York, N. Y. Filed Feb. 24, 1923. Serial No. 621,048. 5 Claims. (Cl. 171—119.)

1. A coil unit for radio work comprising a base, pairs of angle brackets formed of electric conducting material secured to the base, binding posts connected with the brackets, electric conducting sockets secured to and between the pairs of brackets, said sockets forming terminal members respectively for engaging the brackets, a removable manipulating handle detachably connected with each pair of sockets, a removable coil associated with each handle, and terminal members for the coil associated with the handle for engaging the sockets.

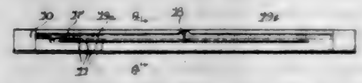
1,558,605. AUXILIARY-AIR-SUPPLY DEVICE. WALTER L. GRAVES, Hatfield, Mass. Filed Jan. 2, 1925. Serial No. 275. 2 Claims. (Cl. 48—180.)

1. An auxiliary air supply device comprising a slightly compressible fibrous body having an opening, reticulated members arranged at opposite ends of said opening and secured to the walls of the same, an air inlet tube extending into said opening and terminating above the bottom wall of the same, a combined valve and spray head of concavo-convex formation arranged at the outlet



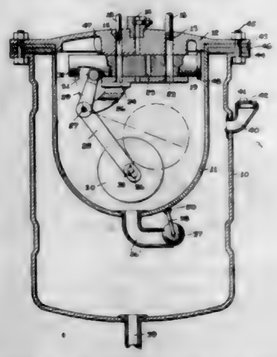
end of said tube and adapted to spread the auxiliary air supply, and a screw bolt threaded through said fibrous body and adapted to engage said head to limit the opening of the same or hold the same in closed position.

1,558,606. PLAYER PIANO. AXEL G. GULBRANSEN, River Forest, and ARTHUR H. BOETTCHER, Evanston, Ill., assignors to Gulbransen Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 15, 1920. Serial No. 417,075. 2 Claims. (Cl. 84—169.)



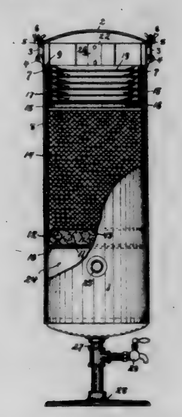
1. A tracker bar for player pianos having a series of player openings therein and a groove in the face thereof parallel to said series of player openings, said groove containing material of one color adjacent the bass player openings and of another color adjacent the treble player openings.

1,558,607. LIQUID-FEED DEVICE. ROBERT H. HAZELTINE, New York, N. Y. Filed Apr. 7, 1921. Serial No. 459,390. 7 Claims. (Cl. 103—236.)



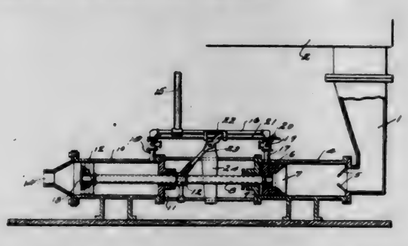
1. In a device of the class described, in combination, a liquid container, an air vent therein, suction and fuel feed pipes leading into said container, a valve controlling the opening and closing of said pipe lines and said air vent, said air vent being adapted to be opened after the closure of one of said pipe lines and means operatively connected to said valve to control the movements thereof.

1,558,608. FILTER. WILLIAM L. HILDISH, Fort Wayne, Ind. Filed Apr. 7, 1924. Serial No. 704,565. 2 Claims. (Cl. 210—140.)



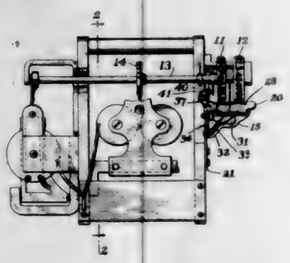
1. In filtering apparatus, a closed tank having a removable head at its top and an internal annular shoulder in its upper part spaced from the head; a removable sleeve in the tank having an external flange at its top seated on the shoulder, and an internal flange at its lower end; a series of perforated plates spaced apart and arranged in the sleeve; filter packs in the spaces between the perforated plates; a series of filtering drums positioned in vertical succession in said sleeve above the uppermost of said plates, each drum comprising a hoop and a series of fabric sheets folded over the hoop and closing the opening thereof; and a spider positioned in the space within the tank between the top of the sleeve and the removable head and extending over the series of drums, said tank having an inlet at a point beneath the lower end of the sleeve and an outlet at a point above the top thereof.

1,558,609. PUMPING APPARATUS. ALBERT H. HILL, Arkansas City, Kans. Filed Mar. 8, 1924. Serial No. 697,775. 1 Claim. (Cl. 103—51.)



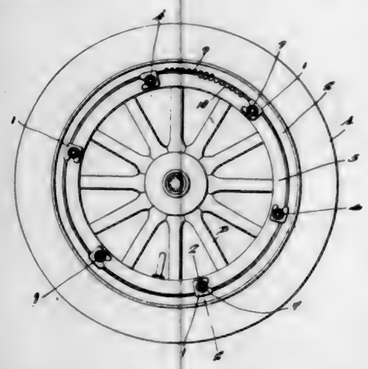
A pumping apparatus comprising an intake chute, an intake cylinder connected to the chute, clapper valves between the intake chute and the end of the cylinder, an intake piston mounted in the said intake cylinder and provided with a central conical opening, a hollow piston rod extending through the closed end of the intake cylinder and in open communication with the said opening in the intake piston, a discharge cylinder, the said hollow piston rod being extended through the closed end of the discharge cylinder, a discharge piston in the said discharge cylinder connected to the end of said hollow piston valve, a clapper rod carried by the said discharge piston and arranged to open and close the open end of the said hollow piston rod, a steam line, steam valves in the said steam line, a connecting rod connecting the said steam valves, a yoke on the said connecting rod, and a lever connected to the said hollow piston rod and engageable with the said yoke to impart motion to the said valves when the said piston rod is actuated.

1,558,610. PRINTING MECHANISM FOR PRINTING TELEGRAPH RECEIVERS. GEORGE S. HILTZ, Brooklyn, N. Y., assignor to Stock Quotation Telegraph Company, New York, N. Y., a Corporation of New York. Filed Mar. 28, 1923. Serial No. 628,193. 7 Claims. (Cl. 178—34.)



1. In a printing telegraph receiver, in combination, a pair of type disks rotatable to bring selected characters thereon to a printing position, a printing lever, a platen pivotally mounted on the printing lever to swing in a plane transverse thereto and having a pair of printing-arms, one for each type disk, and means associated with the platen and the type disks and operable at will to rock the platen in said transverse plane and thereby present the platen printing-arms singly to their respective type disks.

1,558,611. RIM. CHARLES L. HOBBS, Tulsa, Okla. Filed Feb. 5, 1924. Serial No. 690,846. 1 Claim. (Cl. 301—17.)

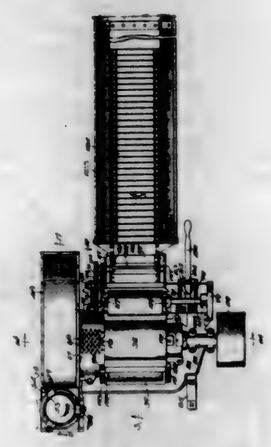


In combination with a wheel and its demountable rim, bolts passing through the felly of the wheel with their screw threaded portions projecting from the outer face of the felly, lugs connected with the rim and extending inwardly and each lug having a slot therein opening out through one side thereof and each lug having a recess in its outer face which has the inner end of the slot in its bottom and nuts engaging the threaded ends of the bolts, each nut having a flat under face for engaging a recess in the lug and said slots permitting removal of the rim upon a relative rotation thereof when the nuts have been removed sufficiently to clear said recesses.

1,558,612. STOOL. WILLIAM F. HOHORST, U. S. Army. Filed Jan. 19, 1923. Serial No. 613,783. 2 Claims. (Cl. 155—196.)

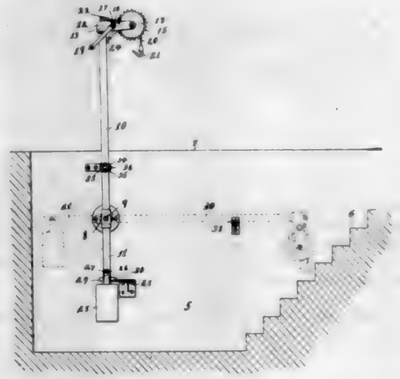
1. A knockdown stool, having a seat member and a plurality of rigid supports of triangular shape removably mounted at their upper ends in the seat member each consisting of vertical seat supporting members and horizontal brace members permanently mounted at one end near the lower end of said seat supporting member and removably secured at its other end to the adjoining seat supporting member, and diagonal brace member permanently mounted at its upper end near the upper end of said seat supporting member and secured at its lower end near the outer end of said horizontal brace, removable means for securing the supports to the seat, and removable means for securing horizontal brace to the adjoining brace.

1,558,613. CUTTING AND GRINDING APPARATUS. JOHN HOLLAND-LETZ and LUDWIG HOLLAND-LETZ, Crown Point, Ind., assignors to The Letz Manufacturing Company, Crown Point, Ind., a Corporation of Indiana. Filed Apr. 18, 1922. Serial No. 555,486. 8 Claims. (Cl. 146—107.)



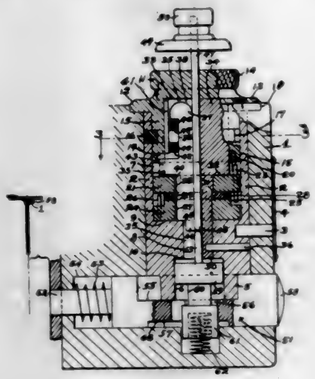
1. In a cutting and delivering device, the combination with a casing, of a shaft journaled therein, a comminuting head on the shaft, a delivery fan on the shaft, a fan casing having an inlet above the axis of the hereinafter mentioned screw conveyor a trough beneath the shaft into which the material cut by the head falls, a screw conveyor in the trough, and a lifting element on the end of the screw conveyor to lift the material to the fan-casing inlet.

1,558,614. HOISTING APPARATUS. EDWARD D. HOOKER, New York, N. Y., assignor to Gillis & Geoghegan, Inc., New York, N. Y., a Corporation of New York. Filed June 20, 1924. Serial No. 721,158. 5 Claims. (Cl. 212—8.)



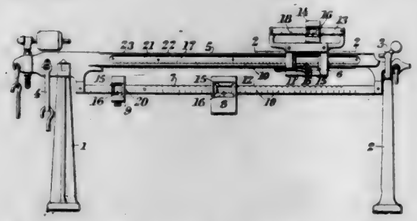
1. A counterbalanced hoisting apparatus swingingly mounted intermediate its ends in a sidewalk area and arranged to be swung from an inoperative position below the sidewalk level to an operative position above such level, and means disposed upon opposite sides of the pivot for holding it in such operative position.

1,558,615. PERMUTATION LOCK. FRANK HORAK, Valparaiso, Ind., assignor of one-half to Max Hirsch, Valparaiso, Ind. Filed May 2, 1921. Serial No. 466,289. 8 Claims. (Cl. 70—53.)



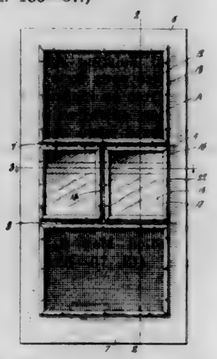
1. In permutation locks, a suitable housing, a plurality of revolvable disks therein, each disk having a central opening therethrough and a radial notch formed in the periphery of the opening, a slotted spindle within the housing passing through the openings, a rotatable dialed cap secured in the housing to enclose the spindle, a spring pressed key permanently located in the slot of the spindle, means for actuating the disks through a movement of the cap to bring the internal notches of all the disks in line opposite the key, and means for moving the key radially into said notches and thereby perform an unlocking operation by said means.

1,558,616. WEIGHBEAM. ALFRED C. HOWARD, Moline, Ill., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed Oct. 15, 1924. Serial No. 743,653. 5 Claims. (Cl. 265—49.)



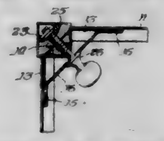
1. A weigh-beam having a longitudinally extending track provided with an upstanding rib, and a poise suspended from said beam by a pair of flanged rollers so formed as to afford a three-point contact with the track, one point of contact being with said rib.

1,558,617. SCREEN DOOR. CARL J. JACKSON, Superior, Wis. Filed Mar. 6, 1924. Serial No. 697,407. 1 Claim. (Cl. 156—37.)



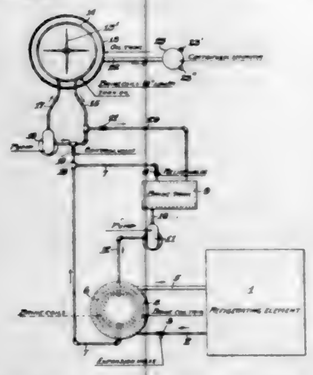
. A screen door comprising side stiles and end stiles, transverse rails connecting the side stiles together and arranged in spaced relation defining upper and lower openings and an intermediate opening, wire mesh screening closing the upper and lower openings, and a glass panel closing the intermediate opening, the glass panel including a lower relatively wide section arranged adjacent to the front face of the door and a relatively narrow depending section carried by one of the transverse rails arranged adjacent to the rear face of the door, the sections being arranged in different vertical planes and in overlapping spaced relation relative to one another defining a passage way therebetween, the relatively wide section terminating short of the transverse rail engaged by said relatively narrow depending section.

1,558,618. METAL FURNITURE. PETER C. JASPER, Michigan City, Ind., assignor of thirty per cent to Joseph Dirckx, Chicago, Ill. Filed Oct. 11, 1922. Serial No. 593,703. 2 Claims. (Cl. 45—48.)



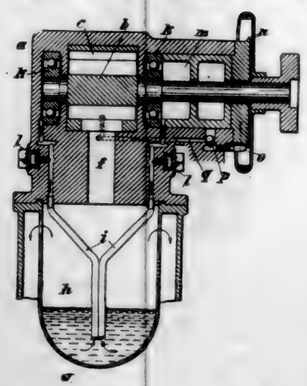
1. In metal furniture, the combination of angularly disposed side frames terminating at a point short of intersection, a plate secured to the side frames and extending diagonally between their respective ends, a leg having a vertical slit in its upper end, the leg being dimensioned to fit between the ends of the side frames and to admit said plate within said slit, a clamp-supporting member spaced away from said plate and extending between the side frames, and a clamping screw extending through said supporting member and plate and having threaded engagement with the leg outside of said slit.

1,558,619. METHOD AND APPARATUS FOR AVOIDING SHOCK CHILL IN PRECIPITATING SUBSTANCES FROM LIQUIDS. LEO D. JONES, Philadelphia, Pa., assignor to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 5, 1921. Serial No. 442,691. 6 Claims. (Cl. 62—173.)



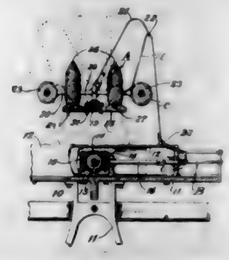
1. The method of treating liquid containing a substance precipitable by cooling which comprises forming a discontinuous precipitate of said substance in the liquid by reducing the temperature thereof at a substantially constant rate by heat absorption in refrigerant cooled at a rate bearing a substantially constant relation to changes in the temperature of the liquid.

1,558,620. ROTARY COMPRESSOR WITH CRESCENT-SHAPED WORKING SPACE. EMIL KÄGI, Winterthur, Switzerland, assignor to Gebruder Sulzer, Aktiengesellschaft, Winterthur, Switzerland. Filed June 3, 1924. Serial No. 717,477. 2 Claims. (Cl. 230—30.)



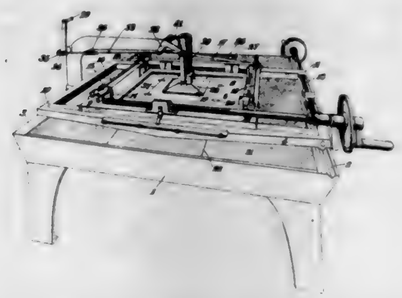
1. The combination with a rotary piston gas compressor having a crescent-shaped compression space of means for adding to the gas to be compressed before it enters the compression space a quantity of liquid which serves, without the addition of further liquid, to fill the compression spaces in increasing measure to thereby increase the pressure of the gas delivered by the compressor.

1,558,621. ATTACHMENT FOR QUILLING MACHINES. DAVID NORMAN, New York, N. Y. Filed June 11, 1924. Serial No. 719,385. 3 Claims. (Cl. 242—18.)



2. In combination with the square tension bracket bar of a quilling machine, an arm, spindles rising from said arm, and means for slidably mounting said arm on said bar.

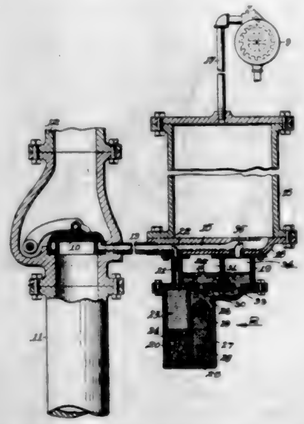
1,558,622. PHOTOGRAPHIC-PRINTING DEVICE. ASHLEY G. ODDEN, Baltimore, Md., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Mar. 5, 1921. Serial No. 449,801. 15 Claims. (Cl. 95—73.)



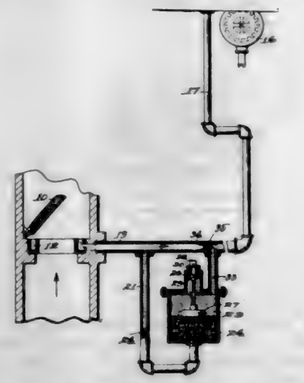
1. In a photographic printing device, the combination with a shield having an opening for a negative, of a sensitized surface holding device adapted to be shifted to a plurality of printing positions across said shield to be exposed to the negative, a black pile surface on the shield, and a black pile surface on the holding device adapted to lie against the first pile surface to form a light-tight joint around the sensitized surface.

1,558,623. AUTOMATIC DEVICE FOR DRAINING VARIABLE-PRESSURE ALARM SYSTEMS. HALFORD W. PARK, Scarsdale, N. Y., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 31, 1921. Serial No. 526,427. 11 Claims. (Cl. 169—23.)

1. In a water alarm system, the combination with an alarm valve, a water motor nozzle, and a passage for conducting water from the alarm valve to a water motor nozzle when the alarm valve opens, of a drain outlet for the water in the system located between the alarm valve and the water motor nozzle and connected with said passage, a valve adapted to completely close said outlet, and means for causing the pressure due to the flow of water through the system to act on the valve to close it, whereby the valve will open as soon as the water stops flowing.

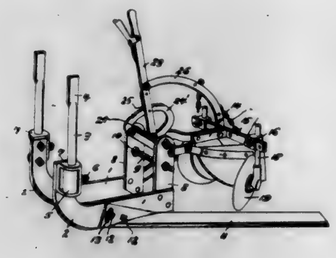


1,558,624. AUTOMATIC VALVE FOR DRAINING VARIABLE-PRESSURE ALARM SYSTEMS. HALFORD W. PARK, Scarsdale, N. Y., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 31, 1921. Serial No. 526,429. Renewed Mar. 13, 1925. 5 Claims. (Cl. 169—23.)



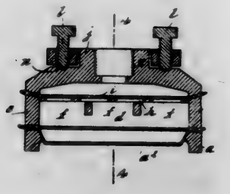
1. In an alarm system, the combination with an alarm motor and a pipe for conducting water thereto, of a restricted orifice within said pipe, a chamber below the pipe communicating at the top with said pipe close to the low pressure side of said orifice and constituting a suction chamber and having an outlet port, the bottom of said chamber communicating with the pipe on the other side of the orifice, a valve in the suction chamber adapted to rise therein and close the port, and means for transmitting the variation in pressure due to the velocity of water past the restricted opening to the top and bottom of said chamber and to said valve to cause it to be elevated and seated.

1,558,625. CULTIVATOR ATTACHMENT. WILLIAM JONES PETTY, Hollis, Okla. Filed Aug. 25, 1924. Serial No. 734,094. 1 Claim. (Cl. 97—179.)



A device of the class described comprising a sled having runners, boxes at the front ends of the runners, an upright rotatably supported in each box, means for holding the uprights against rotary movement in the boxes, said uprights being adapted to be fastened at their upper ends to a wheeled cultivator, a knife carried by each runner, a plow carrying frame pivotally connected with the rear part of the sled and a hand lever on the sled for adjusting the frame, said lever extending forwardly so that it may be actuated by an operator on the wheeled cultivator.

1,558,626. DRAWING-FRAME CARRIER FOR THE SPINNING OF ARTIFICIAL TEXTILE MATERIALS. GEORGES PIGNAL, Tubize, Belgium, assignor to Fabrique de Soie Artificielle de Tubize, Societe Anonyme, Brussels, Belgium. Filed July 22, 1924. Serial No. 727,407. 5 Claims. (Cl. 18—8.)

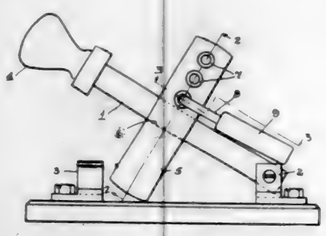


1. In a device of the kind described in combination with a base having a longitudinal groove, a gutter, the said gutter being provided with holes, a filtering surface the said surface having a section considerably larger than the maximum section of the gutter and means for holding the filtering surface above the gutter.

1,558,627. PRODUCTION OF NUTRIENT MEDIA FOR GROWING YEAST. ALFRED POLLAK, Vienna, Austria. Filed Mar. 16, 1923. Serial No. 625,616. 6 Claims. (Cl. 195—20.)

1. The process of producing a richly nitrogenous food for yeast production, which comprises treating water insoluble protein matter with an aqueous solution of sufficiently high hydrogen ion concentration to dissolve the protein and to convert some of the protein present into peptone and albumose and some into less complex nitrogen compounds, and then substantially reducing the hydrogen ion concentration and continuing the conversion to increase the relative amount of said less complex nitrogen compounds.

1,558,628. SAFETY LOCK FOR KNIFE SWITCHES. WILLIAM F. PURCELL, Buffalo, N. Y., assignor to The Safety Equipment Service Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 12, 1925. Serial No. 1,877. 4 Claims. (Cl. 200—42.)



1. A device of the character described, comprising a slotted block of insulating material, the slot in said block being adapted to fit over one of the members of a standard knife switch so as to prevent the closing of such switch, and said block being apertured transversely of such slot so as to permit the insertion of a locking member.

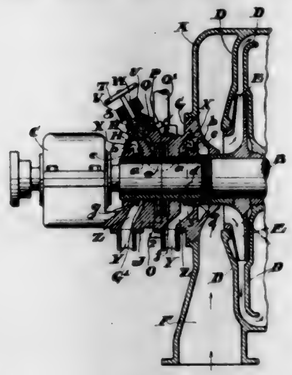
1,558,629. CARD-INDEX DEVICE. JAMES H. RAND, Jr., Tonawanda, N. Y. Filed Nov. 24, 1922. Serial No. 603,018. 5 Claims. (Cl. 129—16.7.)

4. In an index device, an insert holder having an insert-receiving pocket formed along an edge thereof, a signal adapted to enter and be moved in said pocket, and interengaging parts on said holder and on said signal for retaining said signal in said pocket, said holder having a notch in the edge thereof which is disposed in said pocket and which extends adjacent the outer edge of said pocket whereby said signal may be inserted and removed from said pocket.

1,558,630. HYDRAULIC SEAL FOR ROTARY ENGINES. ROBERT H. REED, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 18, 1924. Serial No. 693,640. 1 Claim. (Cl. 286—9.)

In a machine of the class described, the combination with a main casing, of a rotary shaft in said casing, an auxiliary chamber associated with said shaft and main casing and adapted to be supplied with liquid under pressure, supply and discharge lines for the liquid

in said auxiliary chamber, manually operable means for controlling the flow of liquid to said auxiliary chamber, a rotary impeller extending into said auxiliary chamber adapted to create a hydraulic seal therein for the shaft, secondary chambers associated with said auxiliary chamber adapted to receive a portion of the liquid therefrom, said secondary chambers being formed with an inclined



wall and a groove, an impeller in each of said secondary chambers adapted to throw the liquid against said inclined wall, whereby the liquid will flow into said groove, discharge lines for said secondary chambers, and a manually adjustable spring pressed valve in the discharge line of said auxiliary chamber for maintaining substantially constant liquid pressure in said auxiliary chamber.

1,558,631. MEDIUM FOR BLEACHING, CRACKING, AND DESULPHURIZING PETROLEUM AND OTHER HYDROCARBON COMPOUNDS AND PROCESS OF PREPARING SAME. HERMAN REINBOLD and HUGO REINBOLD, Omaha, Nebr.; said Hugo Reinbold assignor to said Herman Reinbold. Original application filed Jan. 21, 1924. Serial No. 687,654. Divided and this application filed May 19, 1924. Serial No. 714,470. 8 Claims. (Cl. 23—233.)

2. An oil treating medium comprising hydrous silicic acid in combination with lithium chloride.

3. The use of lithium chloride in an oil treating medium.

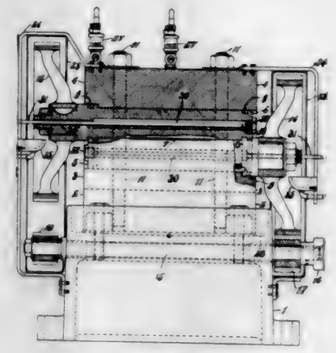
1,558,632. MEDIUM FOR BLEACHING, CRACKING, AND DESULPHURIZING PETROLEUM AND OTHER HYDROCARBON COMPOUNDS AND PROCESS OF PREPARING SAME. HERMAN REINBOLD and HUGO REINBOLD, Omaha, Nebr.; said Hugo Reinbold assignor to said Herman Reinbold. Original application filed Jan. 21, 1924, Serial No. 687,654. Divided and this application filed May 19, 1924. Serial No. 714,471. 12 Claims. (Cl. 23—233.)

2. An oil treating medium comprising lithium chloride combined with aluminum chloride.

4. The process of preparing a medium for the refining and distilling of oils comprising: the treating of an alumino-silicate clay with hydrochloric acid and adding lithium chloride.

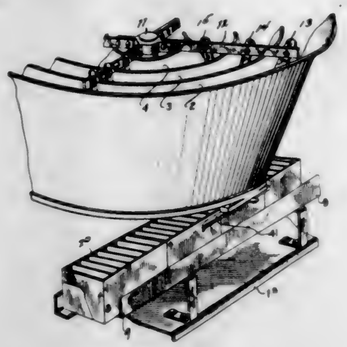
1,558,633. METAL-ROLLING DEVICE. ALBERT F. ROCKWELL, Bristol, Conn., assignor to Marlin-Rockwell Corporation, New York, N. Y., a Corporation of New York. Filed June 25, 1919. Serial No. 306,545. 2 Claims. (Cl. 80—55.)

2. A device for rolling metal into sheet form comprising: a pair of rollers of comparatively small diameter, and bearing members in which said rollers are journaled at and intermediate their ends, said bearing mem-



bers intermediate the ends of the rollers preventing lateral and also upward and downward movement of the rollers.

1,558,634. METHOD OF PACKAGING ICE CREAM. CHARLES E. ROGERS, Detroit, Mich. Filed Dec. 3, 1921. Serial No. 519,724. 2 Claims. (Cl. 226—93.)



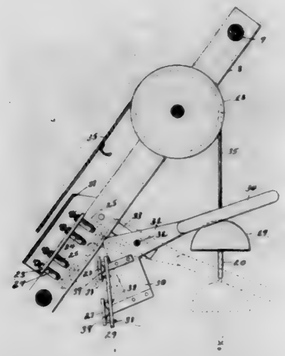
1. The method of filling receptacles with different materials in strata which consists in spacing longitudinally of the receptacle within the same, a series of material enclosures designed ultimately to encompass an individual portion of the material and flowing the strata of materials into the enclosures.

2. The method of filling a receptacle with material consisting in spacing longitudinally of the same, a series of material enclosures designed to ultimately encompass an individual portion of the material, and flowing the material into the enclosures.

1,558,635. HOISTING APPARATUS. WILLIAM M. RUTAN, Roosevelt, N. Y., assignor to Gillis & Geoghegan, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 2, 1924. Serial No. 703,576. 2 Claims. (Cl. 212—39.)

1. In a hoisting apparatus a jib, an electrically operated hoisting cable carried thereby, a lever pivotally mounted on the jib and having at its free end a loop

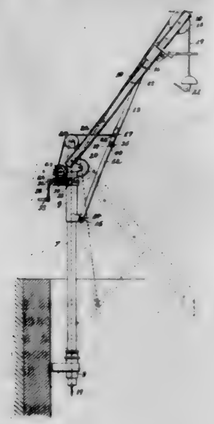
through which the hoisting cable passes, relatively fixed contacts on the jib, contacts carried by the lever upon



one side of its pivot, and means on the cable cooperable with said loop to control the movement of said lever in upward direction of movement of the hoist.

---

1,558,636. HOISTING APPARATUS. WILLIAM M. RUTAN, Roosevelt, N. Y., assignor to Gillis & Geoghegan, Inc., New York, N. Y., a Corporation of New York. Filed June 20, 1924. Serial No. 721,152. 9 Claims. (Cl. 212—61.)

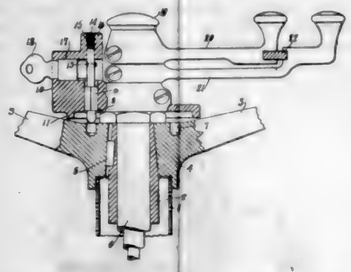


1. A hoisting apparatus having a pivotally mounted jib, a pivotally united sectional foldable strut therefor, and means for folding and straightening said strut.

---

1,558,637. LOCK FOR STEERING WHEELS. LOUIS R. RUTHENBURG, Dayton, Ohio. Filed Feb. 23, 1923. Serial No. 620,794. 4 Claims. (Cl. 70—129.)

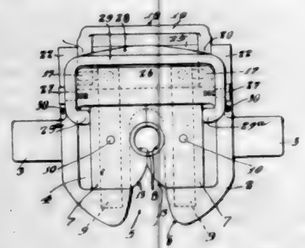
1. In combination, a steering wheel and a steering column, a stationary column supporting the lock above said steering wheel, a locking plunger carried by said lock and adapted to engage with apertures in said steering wheel and means for actuating said locking plunger into and out of engagement with said steering wheel,



means carried by said lock for concealing and protecting the locking plunger and a portion of the steering wheel with which it engages.

---

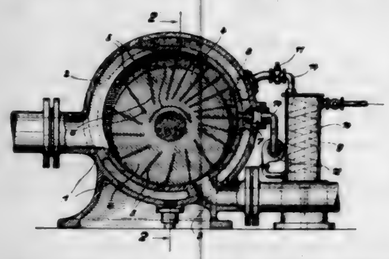
1,558,638. SUCKER-ROD ELEVATOR. WILLIAM P. SCHLINGER and GEORGE R. PARANTEAU, Oxnard, Calif. Filed June 23, 1924. Serial No. 721,750. 15 Claims. (Cl. 294—91.)



1. In a rod elevator, a body having a lateral rod receiving way, and jaws having meeting faces providing a circular closure for the way, the jaws being operative by pivoting on a substantially horizontal axis to and from a closed position, the jaws being mounted to pivot above their axis in moving to the open position.

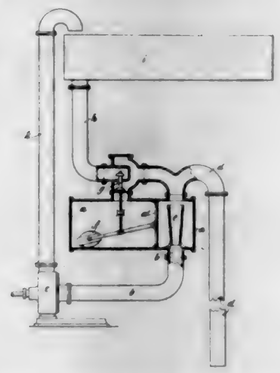
---

1,558,639. ROTARY MACHINE. WALTHER SCHMIED, Egnach-on-the-Bodensee, Switzerland. Filed July 27, 1923. Serial No. 654,282. 10 Claims. (Cl. 230—80.)



1. In a system of the class described, the combination, with a rotary machine comprising fluid chambers of gradually decreasing capacity and increasing pressure, of a conduit communicating with successive chambers of different pressure and including cooling means.

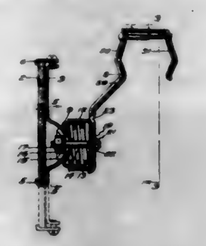
1,558,640. PRIMING AND REGULATING DEVICE FOR PUMPS OF THE SCREW, CENTRIFUGAL, AND VALVELESS TYPE. ALLEYNE BURTON SEABORNE, North Finchley, London, England. Filed Oct. 4, 1924. Serial No. 741,686. 2 Claims. (Cl. 103—113.)



1. A priming and regulating device for pumps of the centrifugal and valveless type comprising a closed tank between the suction pipe and the pump, a connection between the lower part of the tank and the inlet of the pump which is situated below said tank, a connection between the upper part of the tank and the suction pipe, a coned tube within said tank, a passage connecting together the suction pipe where it enters the tank and a reservoir into which the liquid is pumped, a valve situated in said passage and a float within said tank adapted to control the opening and closing of said valve, as set forth.

---

1,558,641. REAR-VIEW MIRROR. RUEL I. SHORT, Los Angeles, Calif. Filed June 1, 1922. Serial No. 565,035. 6 Claims. (Cl. 45—97.)



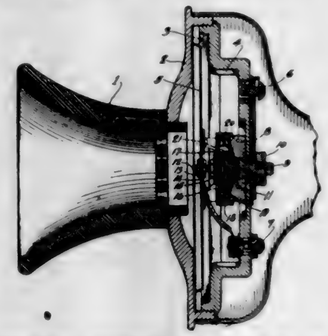
6. A mirror mounting comprising a bracket having a plurality of vertically spaced apertures therein, a mirror, a frame secured to said mirror, convex boss on said frame, a resilient member, composed of telescoping members enclosing a spring, interposed between said boss and bracket, said member having a concave surface engaging said boss, a bolt extending through said boss, resilient member and one of said apertures, a nut on said bolt disposed within said boss, a washer surrounding the bolt below the nut and means for preventing rotation of the nut with respect to the washer.

---

1,558,642. SHAVING SOAP. CURTIS A. SIPE, York, Pa. Filed Sept. 28, 1923. Serial No. 665,466. 2 Claims. (Cl. 87—5.)

1. A shaving soap comprising the reaction products of lye, fat, boric acid, together with much smaller quantities of acetanilid and hydrogen peroxid.

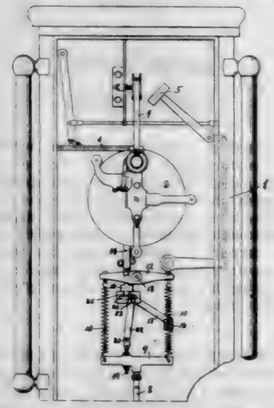
1,558,643. TELEPHONE TRANSMITTER. ARTHUR BESSEY SMITH, Evanston, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 7, 1923. Serial No. 637,169. 1 Claim. (Cl. 179—122.)



A microphone comprising two electrodes with oppositely disposed parallel faces, comminuted resistance material occupying the space between said electrodes, an auxiliary diaphragm parallel to and midway between said electrodes, said diaphragm having a centrally located insulated portion equal in size to one of said electrodes, and a plurality of openings outside of said insulated portion, said auxiliary diaphragm reducing the effective cross section area of the comminuted resistance material and also increasing the length of the current path through it.

---

1,558,644. SCALE. THEODORE L. SMITH, Jr., Detroit, Mich., assignor to The Caille Brothers Company, Detroit, Mich., a Corporation of Michigan. Filed May 28, 1925. Serial No. 33,369. 5 Claims. (Cl. 265—8.)



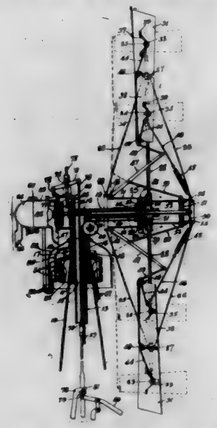
1. In a scale, a rack-bar and a weight indicating mechanism actuated thereby, a load receiving mechanism, a link and a pivot therefor connected to the load receiving mechanism, a second link and a fixed pivot therefor, and a pin connecting the free ends of the links, said pin being caused to travel vertically and laterally as the weight receiving mechanism moves up and down, the lower end of the rack-bar being sufficiently wide to contact with said connecting pin throughout its movements.

---

1,558,645. WINDMILL. HARVEY TERHORST, Donnybrook, N. Dak. Filed May 17, 1924. Serial No. 713,943. 21 Claims. (Cl. 170—69.)

1. In a windmill wheel the combination of a hub, a circular series of blades disposed about said hub, a sec-

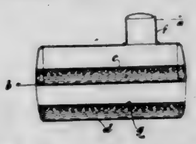
ond circular series of blades disposed about said hub within said first series, each blade of one series adapted to register with a blade of the other series to form in



effect an extension thereof, and supports for the blades of both series permitting said blades to rock into and out of the plane of said series.

---

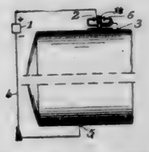
1,558,646. METHOD OF PROTECTING FROM INCRUSTATIONS METALLIC SURFACES WHICH ARE IN CONTACT WITH WATER OR OTHER LIQUIDS. WALTER THALHOFER, Vienna, Austria, assignor to A. G. Für Chemische Industrie in Liechtenstein. Filed Oct. 25, 1922, Serial No. 596,774. Renewed Feb. 2, 1925. 6 Claims. (Cl. 204—1.)



1. The method of protecting from incrustations metal surfaces in contact with liquids, which comprises connecting both poles of a source of current to the metal of the metallic object to be protected or to connected metallic parts, at spaced points to get a distributed flow of current through the metal of said object and causing an electric current to flow through the metal of said object of a magnitude less than that sufficient to produce a drop of potential acros ssaid object high enough to decompose the contained liquid.

---

1,558,647. PROTECTION OF METALLIC SURFACES AGAINST INCRUSTATION AND CORROSION. WALTER THALHOFER, Vienna, Austria, assignor to A. G. Für Chemische Industrie in Liechtenstein, Schaan, Liechtenstein. Filed Aug. 14, 1923. Serial No. 657,457. 17 Claims. (Cl. 204—25.)



1. Method of protecting from incrustations metal surfaces in contact with liquids, which comprises connecting both poles of a source of current to the metal of the metallic object to be protected or to connected metallic parts, at spaced points to get a distributed flow of current through the metal of said object and causing a "pulsating" electric current to flow through said object, of a magnitude insufficient to produce a drop of potential across said connected points high enough to decompose water.

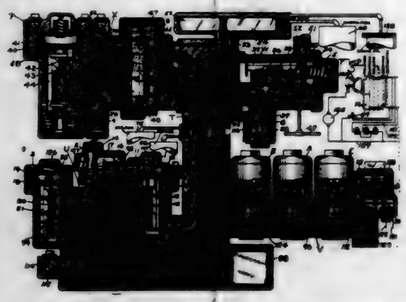
---

1,558,648. WINDOW CONSTRUCTION. LOUIS A THOMAS, Los Angeles, Calif. Filed Sept. 25, 1923. Serial No. 664,695. 5 Claims. (Cl. 20—52.1.)

1. Window construction comprising; opposed sashes, vertically slidable in opposite directions, and suspended at each side of the window by a single chain over a pulley that is perpendicular to the sash plane; and sash pockets above and below the sashes; said pulleys and chains being recessed in the sash guideways to permit free movement of the upper sash; and the sashes having meeting rails adapted for mutual rabbeted engagement.

---

1,558,649. ELECTROPNEUMATIC BRAKE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 29, 1924. Serial No. 752,958. 38 Claims. (Cl. 303—15.)

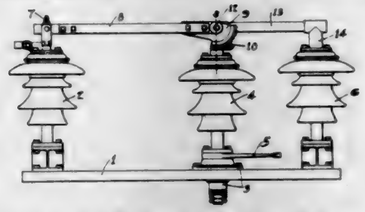


1. In an electro-pneumatic brake, the combination with valve means operated by variations in fluid under pressure for controlling the release of the brakes, of electrically controlled means for controlling the release of the brakes independently of the position of said valve means.

---

1,558,650. ELECTRIC SWITCH. JOSEPH S. THOMPSON, San Francisco, Calif. Filed Dec. 10, 1923. Serial No. 679,760. 4 Claims. (Cl. 200—48.)

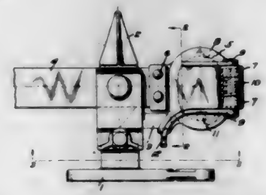
1. In a circuit controller, a rotary insulator, a blade rotatable about an axis at an angle to that of the insulator, and means for transmitting the motion of the insulator to the blade, including a stationary bearing on which the blade is pivoted, said bearing having an aperture accommodating a portion of the insulator rotating



structure, a shaft for the blade carried by the bearing, a strut engaging the bearing for holding it against movement, a bevel gear on the rotary insulator and a gear on said shaft outside of the bearing in mesh with said bevel gear.

---

1,558,651. LATCH FOR ELECTRIC SWITCHES. JOSEPH S. THOMPSON, San Francisco, Calif. Filed May 11, 1925. Serial No. 29,283. 5 Claims. (Cl. 200—169.)



1. A device of the character described comprising a pivoted switch blade, cooperating fixed contacts therefor and means for locking said blade in closed position on said contacts comprising a fixed element and a hinged catch carried on the free end of said blade adapted to swing in a plane at right angles to the movement of said blade and engaged said element.

---

1,558,652. PIPE CLEANER. ERNEST A. THORNTON, Valentine, Nebr. Filed May 27, 1924. Serial No. 716,231. 1 Claim. (Cl. 131—13.)

A pipe cleaner assemblage comprising a casing, a plurality of cleaner elements disposed longitudinally in the casing, said casing having longitudinal slots and having a partition slightly rearward of the front end through which partition said cleaner elements extend, and means on the cleaner elements available from the exterior of the casing for moving the same forward or back to project the elements beyond the casing or to withdraw the same within the casing, the rearward movement of said cleaner elements being limited to prevent the movement of the front ends of the cleaner elements through the partition, said partition constituting a scraper device to remove matter from the cleaner elements and said casing presenting a recess in front of said partition.

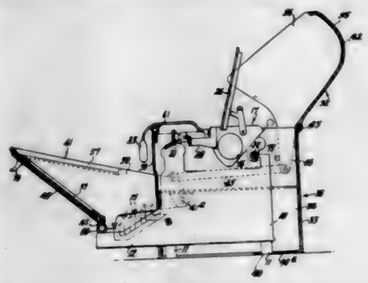
---

1,558,653. WARDROBE BAG. ARTHUR H. TREULIEB, Amsterdam, N. Y. Filed Nov. 12, 1923. Serial No. 674,152. 2 Claims. (Cl. 206—7.)

1. A wardrobe bag having a flexible envelope closed except for a side opening, a frame for holding the upper end of the envelope expanded, said frame including a rigid middle longitudinal bar and two separated rigid longitudinal side bars on a lower plane than, and connected with, said middle bar, a rigid clothes-hanger-receiving cross-bar connecting together said side bars, and exterior bag-supporting means connected with said middle bar.

---

1,558,654. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 5, 1921. Serial No. 505,603. 15 Claims. (Cl. 197—186.)

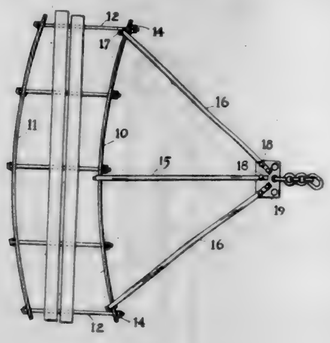


1. A combined sound-deadening casing and typewriting machine having a carriage, said casing including a body-part, and said carriage having paper-controlling means including an auxiliary device rising from said carriage substantially above said body-part, a top for said body-

part comprising a section in rear of said auxiliary paper device and hinged to the body-part and having a rear wall and side walls, and a section in front of said auxiliary device and having a forwardly and downwardly inclined window and side walls pivoted on the body-part, and connections between the front section and rear section to cause them to move simultaneously to open or closed positions.

---

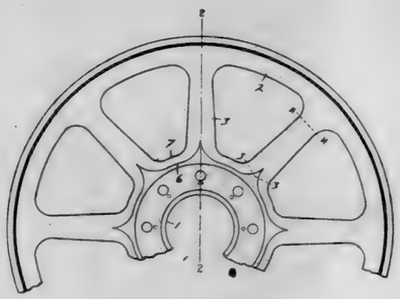
1,558,655. AUTOMATIC ROAD CROWNER. JOHN BRISBEN WALKER, Mount Falcon, Colo. Filed Dec 24, 1920. Serial No. 432,932. 4 Claims. (Cl. 37—175.)



1. A yieldingly framed road-crowner comprising vertically arched and horizontally concave front and rear transverse blades each extending continuously from one side of the road to the other, the blades being yieldingly held in edge relation to the road and horizontally concave whereby they automatically adjust their curvature and alignment partially to the road while being drawn thereover.

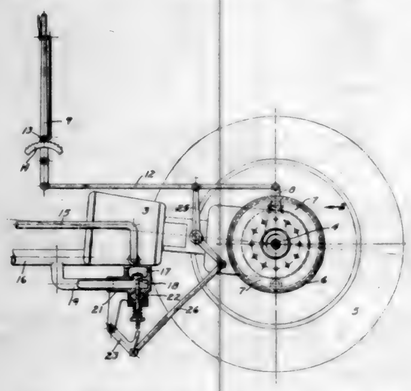
---

1,558,656. CAST-WHEEL CONSTRUCTION. ELMER F. WATERBOR, Detroit, Mich., assignor to Christine McD. Simpson, Detroit, Mich. Filed Feb. 2, 1925. Serial No. 6,378. 2 Claims. (Cl. 301—65.)



1. A cast metal wheel including a hub section and spokes integral therewith and merging thereinto, said spokes at their points of mergence into said hub section having substantially parallel portions and arcuate portions merging into said parallel portions.

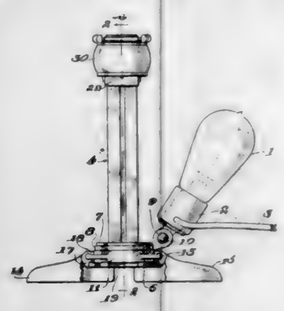
1,558,657. STEAM-ENGINE CONTROL. ROY A. WILSON, Berkeley, Calif., assignor to Doble Steam Motors Corporation, a Corporation of Delaware. Filed Dec. 26, 1924. Serial No. 758,173. 6 Claims. (Cl. 192—3.)



1. The combination with a steam engine, of a shaft arranged to be driven thereby, a live steam pipe connected to the engine, a brake associated with said shaft and means operative by the application of the brake for establishing communication between the steam pipe and a low pressure space.

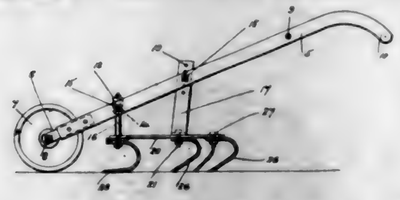
---

1,558,658. PORTABLE ELECTRIC-LIGHT STAND. STEFAN WIMMER, West New York, N. J. Filed Sept. 26, 1924. Serial No. 740,065. 14 Claims. (Cl. 240—81.)



1. The combination in a clamping device, of a tube, a flexible member disposed lengthwise in said tube, a movable carrier within said tube to which one end of said member is attached, a plurality of fulcrum elements slidably mounted on said member, a stop at the free end of said member to hold said elements in place on the same, means on said tube for moving said carrier, an abutment within said tube fixedly supported with respect to said means whereby said carrier may be moved with respect to said abutment, the said fulcrum elements being disposed on said flexible member below said abutment and the said member passing through said abutment, the stop-carrying end of said flexible member extending beyond the adjacent end of said tube, said fulcrum elements, when said carrier is moved away from said abutment, adapted to impart a curved form to that portion of the flexible member extending beyond the tube.

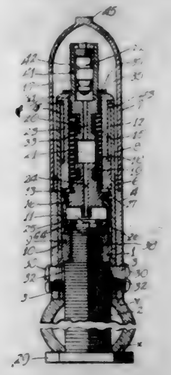
1,558,659. CULTIVATOR. VERN WISE, Waterloo, Ind. Filed Aug. 2, 1924. Serial No. 729,757. 1 Claim. (Cl. 97—59.)



A cultivator, comprising a pair of handle bars provided with a ground wheel, a crossbar pivoted between the handle bars, a pivot pin having its upper end secured to the said crossbar and adjusted circumferentially of the pivot of the crossbar, substantially horizontal frame bars having their front end portions pivoted on the lower part of the said pin, cultivating tools secured to the frame bars, an adjustable bracket comprising a horizontal member and upwardly projecting arms at the ends thereof, means for adjustably securing the said arms to the handle bars to hold the horizontal member at various elevations, and adjustable means for securing the frame bars to the said horizontal member at various angles to each other.

---

1,558,660. COMBINED PRESSURE GAUGE AND VALVE CAP. JOSEPH E. WOOD, Chicago, Ill., assignor to W. Lee Provol, Chicago, Ill. Filed Jan. 17, 1924. Serial No. 686,901. 4 Claims. (Cl. 152—165.)

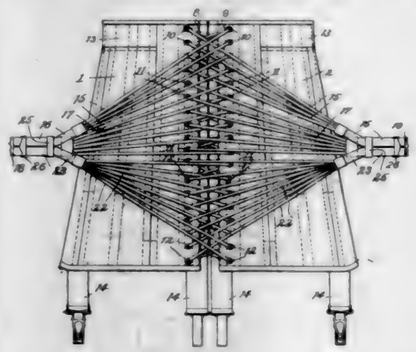


1. A device of the type described comprising a casing, an air pressure indicating member adapted to move with respect to said casing, and an expanable air receiving compartment connecting said indicator with a tire valve, the walls of said compartment enclosing the upper portion of said valve.

---

1,558,661. CORSET. MITCHEL YEGANIAN, New York, N. Y. Filed June 10, 1922. Serial No. 567,358. 2 Claims. (Cl. 2—39.)

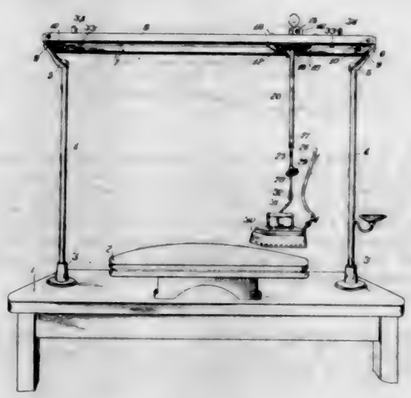
1. In a corset having sectional portions with eyelets adjacent the opening edges of said portions, a center lacing unit having a plurality of laces engaging the complementary eyelets in the center of said portions, a top lacing unit having a plurality of laces engaging the complementary eyelets in the top of said portions, a bottom lacing unit having a plurality of laces engaging the complementary eyelets in the bottom of said portions, a divided belt member, the end of one portion having attached thereto all the ends of the laces on one side of said center unit, one end of the other portion of said belt member having attached thereto all the



ends of the laces on the opposite side of said center unit, tabs for uniting the ends of each group of laces in the top and bottom lacing units, and means for adjustably attaching said tabs to the belt members.

---

1,558,662. SUPPORT FOR PRESSING IRONS. ANTON ZEMAN, Chicago, Ill., assignor to Joseph Saltzman, Chicago, Ill. Filed Oct. 27, 1924. Serial No. 746,095. 3 Claims. (Cl. 68—9.)



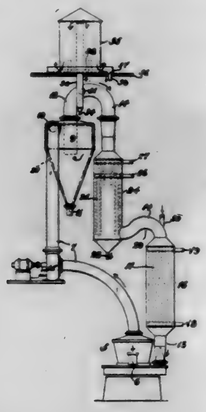
1. In a pressing device, the combination of a pair of supports, a track member extending between and pivoted to the supports and having spaced rails positioned respectively at opposite sides of the axis of the pivots, a carriage interposed between the rails and having supporting wheels operating therealong, and a hanger carried by the carriage and having a yielding connection with the pressing iron.

---

1,558,663. FUEL-PULVERIZING APPARATUS. JOHN E. BELL, Brooklyn, N. Y., and HENRY KREISINGER, Pittsburgh, Pa., assignors to Combustion Engineering Corporation, a Corporation of New York. Filed Sept. 16, 1922. Serial No. 588,582. 16 Claims. (Cl. 83—9.)

1. A fuel pulverizing system comprising an aerating pulverizer, an air and fuel separator receiving air-borne

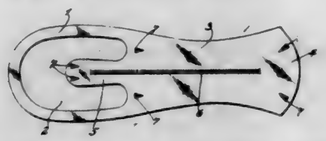
fuel from said pulverizer and returning the separated air thereto, means for heating the returning air, and



means for abstraction of moisture from the return side of the system on the way to said heating means.

---

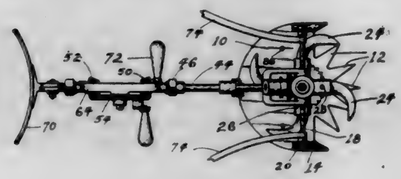
1,558,664. SHANK FOR TURN SHOES. JULIUS R. BINDNER, St. Louis, Mo. Filed July 11, 1924. Serial No. 725,338. 6 Claims. (Cl. 36—76.)



5. A shank for turn shoes comprising a metallic plate of a length sufficient to extend from a point behind the breast wall of the heel of the shoe for which the shank is intended to a point near the break line of said shoe and having a hole through the rear portion thereof, and a longitudinal depending flange integral with the under side of said plate and terminating between the ends thereof for engagement in a groove in a shoe sole.

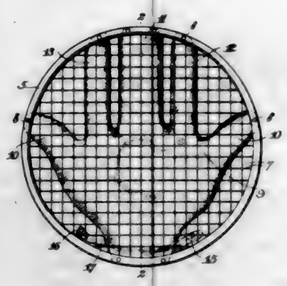
---

1,558,665. HEDGE CUTTER. CARL NICHOLAUS BREIT, Louisville, Ky. Filed Dec. 21, 1922. Serial No. 608,331. 3 Claims. (Cl. 83—11.)



1. A hedge cutter including a base plate, cutting edges on said plate, blades movable over said plate, a rotatable support for the blades, a pair of reversely operating driving gears on the support, a power mechanism for operating either of said gears, and a pair of reversely operating driving connections between the power mechanism and the rotatable support.

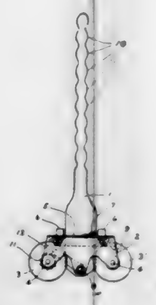
1,558,666. HANDBALL BAT. JOSEPH BREWER and HAROLD S. WILKS, New York, N. Y. Filed June 4, 1924. Serial No. 717,795. 4 Claims. (Cl. 273—67.)



1. A striking bat comprising a striking element, and means for attaching the striking bat in operative position, said means being in the nature of a glove attached to said element at the back thereof, the attachment of the glove to said striking element being effected by fasteners extending respectively through the tips of the finger and thumb members and the heel of the glove to afford a yieldable body portion.

---

1,558,667. SKATE. JULIEN A. BRIED, Oakland, Calif. Filed Apr. 13, 1921. Serial No. 461,048. 20 Claims. (Cl. 208—182.)

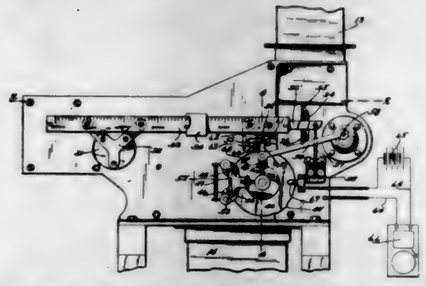


1. In a roller skate, a handle secured to the side thereof extending upwardly at the outer side of a rider's foot and leg when upon said skate, said handle being adapted for gripping by the rider's hand at various places along its upper portion for holding the skate to the foot.

---

1,558,668. FEED REGULATOR. CLARENCE W. CARTER, Minneapolis, Minn., assignor to Carter-Mayhew Manufacturing Company, Minneapolis, Minn. Filed Nov. 26, 1923. Serial No. 677,198. 23 Claims. (Cl. 83—44.)

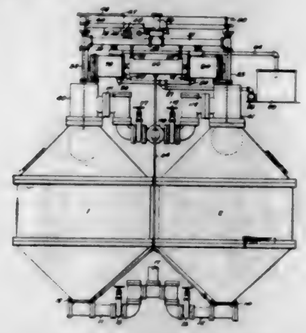
1. An automatic feed regulator comprising feed-controlling mechanism, a flow-actuated device for controlling said feed-controlling mechanism, and a power device that derives its force from a source independent of



the flow of material through said regulator and which furnishes power for actually adjusting said feed-controlling mechanism.

---

1,558,669. MIXING APPARATUS. OSCAR PRIETO Y CRUZ, Ponce, P. R. Filed June 6, 1923. Serial No. 643,805. 8 Claims. (Cl. 127—14.)



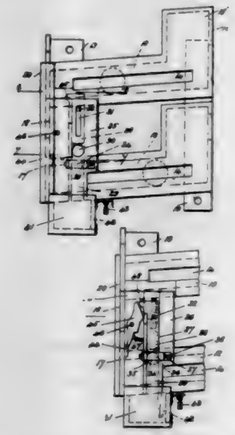
1. An apparatus for handling sugar juices, which includes a pair of tanks, inlet and discharge pipes leading from said tanks, check valves in said inlet and discharge pipes, means for feeding the juice to said tanks under pressure, said valves in the inlet pipes adapted to admit the juice except when a counterbalancing pressure is introduced into the tanks, said valves in the discharge pipes adapted to permit the discharge of fluid therethrough only when pressure is applied to the tanks, a source of fluid pressure, conduits connecting said source to said tanks, a fluid controlling valve in said conduit, means for operating said valve, and means adapted to be actuated in accordance with the liquid level in said tanks for controlling said valve operating means, said valve adapted to connect the source of fluid pressure to onetank while admitting atmospheric pressure to the other tank.

---

1,558,670. RACK FOR POOL BALLS. EDWARD L. GUSTAFSON, Holdrege, Nebr. Filed June 13, 1925. Serial No. 36,979. 8 Claims. (Cl. 273—16.)

1. In a rack for pool balls, a ball chamber having an opening in one end portion of it stop, and an entrance chamber for the balls arranged over the said opening and provided with an entrance opening in one of its vertical sides.

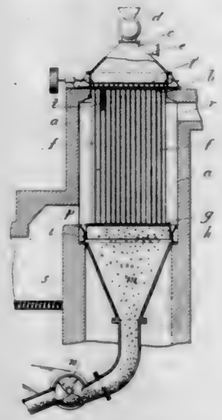
3. In a rack for pool balls, a ball chamber, a ball delivery slide normally closing one end of the ball chamber, a pivoted pawl normally preventing the opening movement of the said slide, a block provided with a guide channel having a coin opening in one side, a coin push-bar slidable in the upper part of the guide channel and provided with means for retracting the said pawl, and



a retractable stop for the push-bar arranged crosswise of the guide channel below the coin opening, the said push-bar operating positively to retract the pawl after retracting its stop by means of a coin.

---

1,558,671. RETORT APPARATUS FOR THE TREATMENT OF MATERIALS SUCH AS SHALE, COAL, AND THE LIKE. WILLIAM GUY-PELL, London, England. Filed July 17, 1924. Serial No. 726,511. 5 Claims. (Cl. 202—14.)

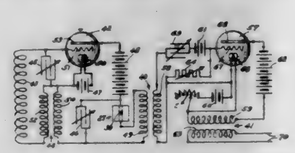


1. A retort comprising a casing having an inlet for the heating medium at one side and an outlet therefor at the opposite side, a stationary tube plate forming an end wall of the casing, a chamber adjacent said tube plate having an inlet for material to be heated and an outlet for gas or vapour, a plurality of tubes extending from said tube plate substantially throughout said cas-

ing and through which material from said chamber passes, a receiver for spent material at the end of the casing opposite to that at which the chamber aforesaid is located, and into which receiver the said tubes discharge, the tubes forming a single group around all of which collectively the heating medium flows, and means whereby spent material can gradually be discharged from the receiver aforesaid, substantially as described.

---

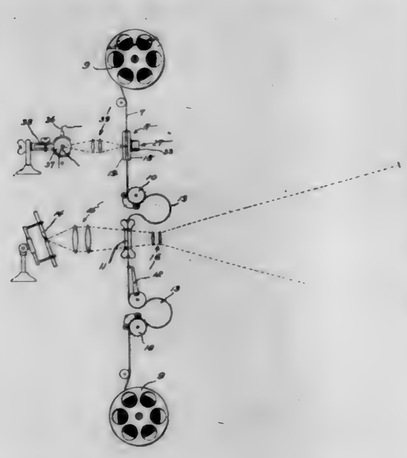
1,558,672. TELEPHOTOGRAPHIC SENDING APPARATUS. RUSSELL HART, Los Angeles, Calif. Filed July 2, 1923. Serial No. 649,086. 5 Claims. (Cl. 178—6.)



1. Apparatus of the character described comprising; means for projecting optical images upon a plane; an oscillating circuit including a photo-electric cell and an audion, whereby a photo-modulated current may be produced; and means for causing said cell to traverse said plane for modulating said current; said cell being connected in the plate circuit of said audion.

---

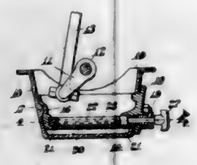
1,558,673. MEANS FOR REPRODUCING SOUND FROM GRAPHICAL RECORDS. RUSSELL HART, Los Angeles, Calif. Filed Aug. 13, 1923. Serial No. 657,260. 4 Claims. (Cl. 179—100.1.)



1. Apparatus for sound reproduction comprising; a uniformly movable film having a sound record thereon adapted for continuously intercepting light rays in varying degrees; a tenuous illuminable filament in tension; an intermediate lens adapted for focusing an image of said filament upon said record transversely to its direction of motion; and means for transforming the light rays that pass through the record into sound waves.

4. In apparatus of the character described, in combination, a photo-electric cell; a spaced optical film; and an intermediate aperture having highly reflecting walls.

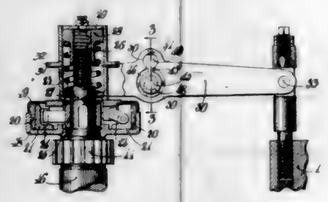
1,558,674. CRANK CASING FOR INTERNAL-COMBUSTION ENGINES. PARKER B. HASKELL, Lynn, Mass., assignor, by direct and mesne assignments, of one-third to Walter B. Pohle, Lynn, Mass., and one-third to Susan V. Russell, Chelsea, Mass. Filed Aug. 18, 1924. Serial No. 732,741. 15 Claims. (Cl. 184—13.)



1. A crank casing having an opening in one wall thereof; and a removable oil containing splash trough having a length to extend across the said casing and adapted to be inserted through said opening and secured to said wall.

---

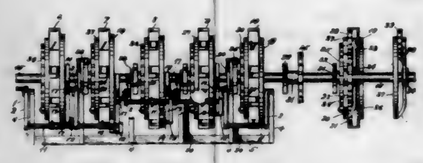
1,558,675. CONTROLLING MECHANISM. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 11, 1921. Serial No. 476,903. 22 Claims. (Cl. 192—99.)



10. In a mining machine, in combination, a friction device, a lever for operating said friction device, a crank pin for operating said lever, and a link disposed within the limits of said lever connecting said lever and crank pin.

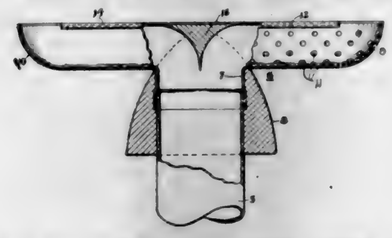
---

1,558,676. COMPUTING MACHINE. JUSTIN T. HURLEY, Elizabeth, N. J. Filed July 25, 1925. Serial No. 46,169. 8 Claims. (Cl. 235—133.)



1. In a machine of the class described, the combination of digit wheels, planetary operating gears for the wheels, transfer devices in sets pivotally connected together and mutually operative, said transfer set effective when its respective wheel on the higher order side indicates ninth position, to transfer to said wheel and advance the next higher set one step to transfer from the ninth position of said respective whel.

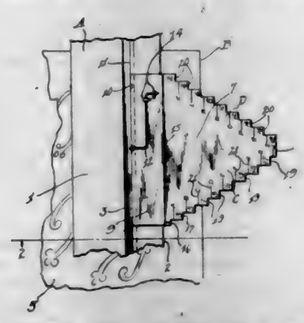
1,558,677. SPRAY HEAD. ARTHUR W. KIRTON, Philadelphia, Pa. Filed Oct. 11, 1922. Serial No. 593,747. 13 Claims. (Cl. 299—69.)



1. A spray head comprising a revolubly mounted member embodying a plurality of substantially horizontally disposed, hollow, open-topped radiating arms, a removable cover member thereover, said cover member being perforated, and means for supplying fluid to the interior of said head.

---

1,558,678. PAPER-HANGER'S TRIMMING GAUGE. RICHARD F. KOENIG, Jackson, Mich. Filed Mar. 16, 1925. Serial No. 15,967. 1 Claim. (Cl. 33—168.)



The combination with a straight edge having a work engaging surface, of a measuring means comprising a plate normally disposed in a plane parallel with and closely adjacent to the plane of the work engaging surface of the straight edge, said straight edge have a secured to said plate for engaging with said groove, whereby the plate may slide longitudinally of said straight edge, and whereby the plate may be yieldingly disengaged with the straight edge at will, as by drawing the plate upwardly away from the work, said plate being provided with edges parallel with the edge of the work engaging surface.

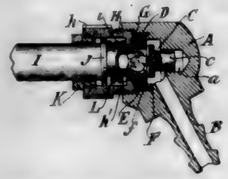
---

1,558,679. HAIR-DRYING COMB. JEAN U. KORÉE, New York, N. Y., assignor to The Korimpex Co. Inc., New York, a Corporation of New York. Filed July 16, 1924. Serial No. 726,386. 1 Claim. (Cl. 34—26.)

In a hair-drying comb, the combination with a comb having a hollow back extending beyond the body portion extension of said hollow back is adapted to be seated, said back extension being provided with a longitudinal slot, and a heater on said handle adapted to be inserted into said hollow back, said heater extending through said socket and being provided within the latter with a projection adapted to be received by said slot to prevent rotation of said comb relative to said handle.

---

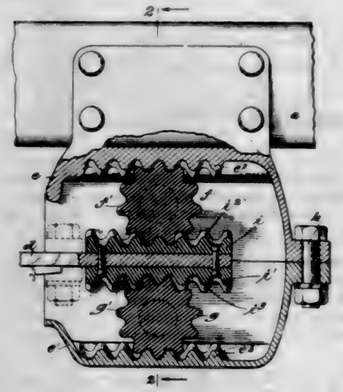
1,558,680. VALVE-CONTROLLED NOZZLE. HENRY PHILLIP KRAFT, Ridgewood, N. J.; Edgar J. Phillips and Earl A Daar, executors of the will of Henry P. Kraft, deceased. Filed Feb. 16, 1922. Serial No. 537,078. 3 Claims. (Cl. 299—150.)



1. In a device of the type described, a casing having a valve gasket, a check valve adapted to normally seat against said gasket, a member having a passage therethrough carried by said casing and adapted to simultaneously unseat the check valve and contact with the gasket to form a leak-tight seal with the casing.

---

1,558,681. CUSHION CONNECTION FOR VEHICLE CONSTRUCTION. AUGUST H. LEIPERT and GUSTAVUS HAAG, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed May 23, 1924. Serial No. 715,387. 7 Claims. (Cl. 267—54.)



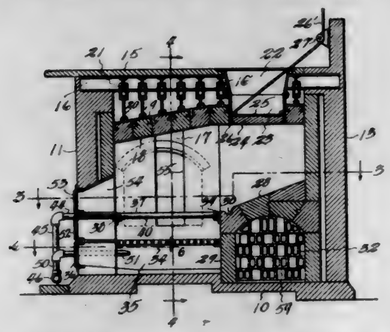
1. In combination with the spring and frame of a motor vehicle, a mechanical connection and support interposed between one end of the spring and the frame, and a wholly non-metallic support interposed between the other end of the spring and the frame, and including a plurality of non-metallic yielding elements engaging opposite sides of the spring and adapted to roll on their own axes, respectively, upon longitudinal movement of the spring.

---

1,558,682. BURNING CHAMBER FOR INCINERATORS. GUS F. LENK, Dallas, Tex. Filed Aug. 1, 1924. Serial No. 729,652. 5 Claims. (Cl. 110—8.)

1. In an incinerator, the combination of a burning chamber having a charging hole in its roof and an outlet at one side, a baffle wall in the chamber having an open-

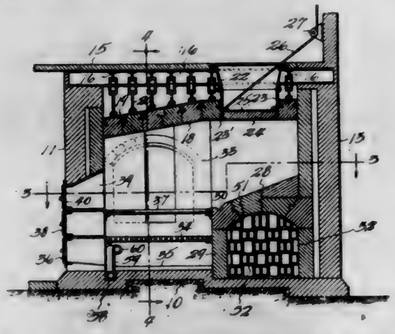
ing therethrough, fire grates extending on each side of the wall, the opening of the wall extending above said



fire grates, and suspension grates on each side of the wall, the opening of the wall extending above and below the suspension grates.

---

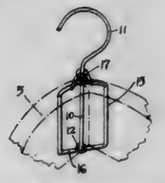
1,558,683. INCINERATOR. GUS F. LENK, Dallas, Tex. Filed Aug. 1, 1924. Serial No. 729,653. 3 Claims. (Cl. 110—8.)



1. In an incinerator, the combination of a main burning chamber having a charging hole in its roof, an elevated inclined drying table contiguous to the rear wall of the chamber and having a liquid evaporating trough along its front edge, baffle walls in said chamber extending from the front walls to the table, grates mounted between said baffle walls in front of said table, the chamber having doors in the front walls above and below said grates, and a tunnel outside of the chamber extending under said table and connected with said chamber.

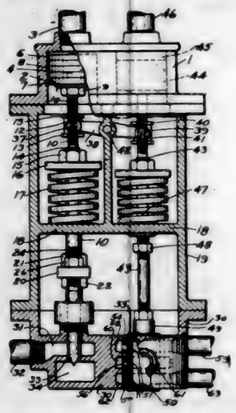
---

1,558,684. GARMENT HANGER. EDWARD LEVIN, Brooklyn, N. Y. Filed Oct. 2, 1923. Serial No. 666,069. 3 Claims. (Cl. 211—13.)



3. A garment hanger comprising two frame pieces having ends meeting each other, a hook having a shank held between said meeting ends, each of said frame pieces having a bore spaced from said ends, and a U-shaped wire binder passing through said bores and having protruding ends coiled around the hook shank.

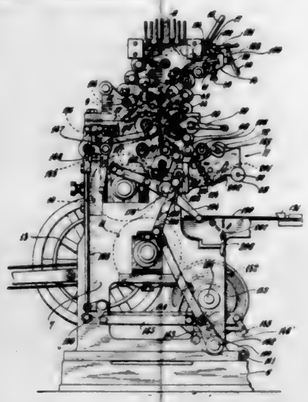
1,558,685. FUEL-OIL-BURNER REGULATOR. WILBERT F. LEWIS, Tacoma, Wash., assignor of forty one-hundredths to A. Hyndman. Filed Dec. 26, 1923. Serial No. 682,653. 6 Claims. (Cl. 236—24.5.)



1. A fuel oil burner regulator comprising needle valves inserted in the oil and steam passages to the burner; a cylinder connected to the boiler so that as pressure in the boiler increases the cylinder will close the needle valves; a spring for equalizing the pressure on the cylinder; another cylinder connected to the steam supply line beyond the throttle valve; a walking beam for transmitting the movement of the piston in the latter cylinder to the piston in the former cylinder; and suitable valves operated by the movement of the cylinders for controlling a draft regulator.

---

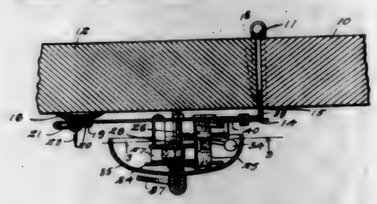
1,558,686. PRINTING PRESS. MORRIS LIPTON, Rutherford, LOUIS HAENLEIN, East Rutherford, and FREDERICK W. HILL, Rutherford, N. J., assignors to The Fuchs & Lang Manufacturing Company, a Corporation of New York. Filed June 21, 1922. Serial No. 570,001. 20 Claims. (Cl. 101—144.)



1. A printing machine having a plate cylinder adapted to carry a printing plate, a source of printing fluid supply, an inking drum, an inking roller adapted to transfer printing fluid from said source of supply to said inking drum, a pair of ratchet wheels cooperatively associated with said inking roller, a pair of pawls adapted to cooperate with said ratchet wheels, means for oscillating said pawls in a given path whereby said inking roller is intermittently actuated, and means yieldably connected with said pawls for lifting the same out of engagement with their respective ratchet wheels.

---

1,558,687. BURGLAR ALARM. CARL F. LOAR, Sunbury, Ohio. Filed Mar. 24, 1925. Serial No. 17,942. 5 Claims. (Cl. 116—91.)



4. A burglar alarm in combination with a door and door frame, comprising a plate, means for attaching said plate to a door, a pair of parallel spaced extensions formed on said plate, said extensions having the free ends thereof bent at right angles and extending between the door and door frame, an angled member having a slot in one arm thereof while the other arm is positioned between the bent portions of the parallel spaced extensions and between the door and door frame, a pin carried by said plate and extending through said slot in said angular member, an upturned flange formed on the inner edge of one of the parallel spaced extensions for acting as a guide for the slidable movement of the angled member on the plate, a spring operated means for sounding an alarm comprising a series of gears, a lug carried by said angled member for engaging between the teeth of one of the gears of said means for sounding an alarm to prevent the sounding of the alarm while the door is in a closed position, and a leaf spring secured to said plate and having the free end thereof engaging said lug for moving the same away from the gear when the space between the door and door frame is increased by the opening of the door.

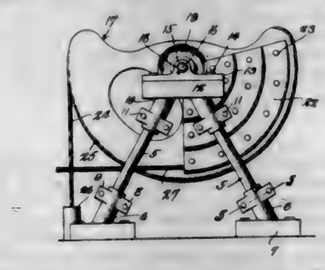
---

1,558,688. PROCESS OF COMPOUNDING RUBBER. CHAUNCEY C. LOOMIS, Yonkers, and HORACE E. STUMP, Brooklyn, N. Y., assignors, by mesne assignments, to The Hevea Corporation, a Corporation of New York. Filed Mar. 10, 1923. Serial No. 624,275. 2 Claims. (Cl. 18—50.)

1. The process which consists in preparing compounding ingredients for subsequent addition to a body of rubber, which consists in surrounding and encasing the particles of such ingredients in a thin coating of rubber, and then introducing the so-treated ingredients into a main body of rubber material.

---

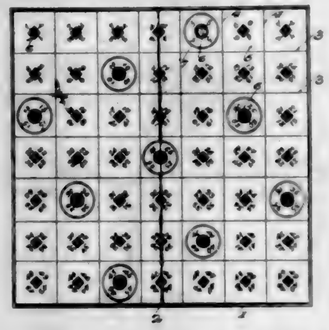
1,558,689. PULLEY JACK. DONALD C. MCBRIDE, Luling, Tex. Filed Apr. 10, 1925. Serial No. 22,165. 1 Claim. (Cl. 74—5.)



In a pump jack, a body portion formed with a curved surface and having a shaft opening, shoulders formed adjacent to the shaft opening, lateral members having outer curved edges and straight end edges extending to the shoulders, the inner ends of the lateral members resting on the shoulders, outwardly curved flanges arranged one above the other and formed integral with the lateral members defining grooves, and bolts extending through the lateral members and body portion for securing the lateral members to the body portion.

---

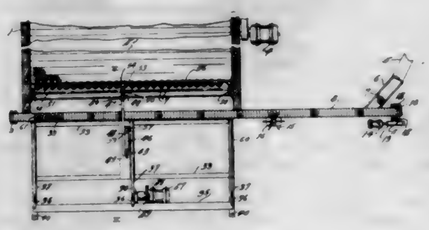
1,558,690. GAME APPARATUS. EDWIN P. MCCOLLOM, Baltimore, Md. Filed Dec. 29, 1923. Serial No. 683,441. 2 Claims. (Cl. 273—135.)



1. In a game apparatus, a game board having forty-nine spaces provided on the face thereof, said spaces being arranged in a square consisting of seven parallel rows each containing seven spaces, said spaces being numbered sequentially from "1" to "49", inclusive, beginning with one of the corner spaces and ending with the corner space diagonally opposite to the first-named corner space, each of said spaces also having a central marking produced thereon, the central marking on the spaces indicated by numbers divisible by "5" being of such character as to distinguish such central marking from that on the remaining spaces, and a pack of fifty playing cards each adapted to be placed on one of said spaces on the game board, one of said cards being designated "cheater" and being playable on any one of said spaces, and the respective remaining cards being numbered and marked to identify such cards with the corresponding spaces on the game board.

---

1,558,691. LEER-CHARGING MECHANISM. JOSEPH MCDERMOTT, Toledo, Ohio. Filed July 23, 1924. Serial No. 727,722. 6 Claims. (Cl. 198—31.)



1. A leer comprising a first conveyor therethrough, a transverse second conveyor thereinto in position adjacent said first conveyor, and an independent transfer device shiftable relatively to said two conveyors into position at an end of the leer and alongside the second conveyor, said transfer device embodying a pusher for moving ware from the second conveyor to the first conveyor.

5. A leer charger comprising a horizontally shiftable ware moving pusher, a guard for holding ware against toppling over as shifted by said pusher; control connections therebetween embodying linkage, a rock shaft, a rack and pinion connection therefrom to said pusher, and rack and pinion connection therefrom to said guard, and pusher actuating means for simultaneously controlling said guard and pusher.

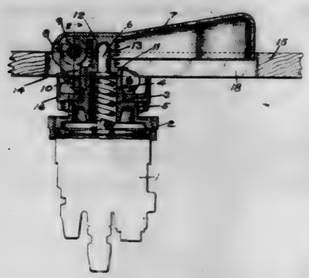
---

1,558,692. COMBINATION DESK AND CHAIR. JAMES E. MCGINLEY, Breckenridge, Tex., assignor of one-tenth to John Turmes, Breckenridge, Tex. Filed Dec. 31, 1923. Serial No. 683,760. 2 Claims. (Cl. 155—3.)

1. A combined all metal desk and chair comprising a column having a semi-cylindrical extension formed on its upper end defining a shoulder, a rigid supporting plate arranged on the shoulder, a sheet metal seat back rigidly secured to said extension and resting upon said rigid plate, a desk top formed on and continuous with said back and projecting laterally from one face thereof, side walls formed on and depending from the desk top, a desk bottom supported by the side walls, and a pivoted seat carried by the lower edge of the seat back and arranged to rest upon the rigid supporting plate when in its lowered position.

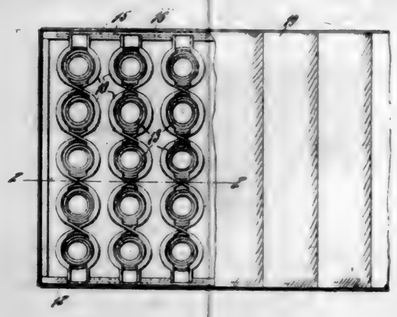
---

1,558,693. AUTOMOTIVE BRAKE DEVICE. WILLIAM C. MCWHIRTER, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 14, 1923. Serial No. 674,668. 2 Claims. (Cl. 137—139.)



1. The combination with a brake controlling valve device having a flexible diaphragm, a spring acting on said diaphragm, and a movable member for compressing said spring, of a sleeve secured to said valve device and having lugs, and a pedal lever having a lug pivotally mounted between the lugs of the sleeve and provided with a boss having a recess for receiving the end of said movable member.

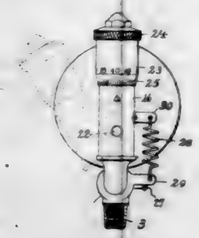
1,558,694. SPRING-CUSHION CONSTRUCTION. TINE HEATH MACE, Las Cruces, N. Mex., assignor of one-half to R. P. Porter, Las Cruces, N. Mex. Filed Oct. 27, 1924. Serial No. 746,182. 3 Claims. (Cl. 5—264.)



1. In a seat cushion construction involving a plurality of springs, strips arranged in pairs with the strips of each pair passing to the left of one spring and to the right of the adjoining spring and secured together at their points of crossing, the strips being channel shaped in cross section and conformingly receiving the endmost convolutions of the springs, and anchoring means for the ends of the strips.

---

1,558,695. ADJUSTABLE RELEASE VALVE. CHARLES J. MANUEL, Elmsford, N. Y. Filed May 24, 1924. Serial No. 715,663. 2 Claims. (Cl. 137—53.)



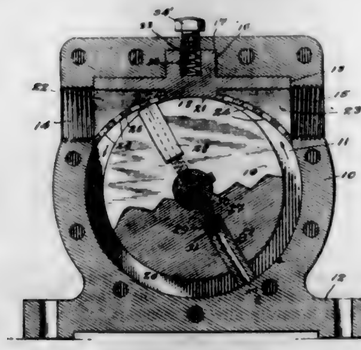
2. The combination of a valve body having a threaded plug for screwing into engagement with a compressed gas container, a cock turning in said body having an elbow, a safety valve carried by said elbow and communicating with said cock, a pressure gauge communicating with said cock, said cock having a nipple taking the compressed gas through said valve, the latter having a longitudinal bore, a notch in its normally under surface, a notch in its normally upper surface, and holes from said notches to said bore.

---

1,558,696. ROTARY PUMP. FRANK MARION, Lebanon, N. H., assignor of one-half to Jamie E. Jacobs, Barre, Vt. Filed Dec. 8, 1922. Serial No. 605,636. 1 Claim. (Cl. 103—136.)

In a device of the character described, a casing having a cylindrical chamber therein, a cylindrical rotor concentrically revoluble therein, having spring-pressed reciprocable vanes therein, said vanes having channels across their outer ends stopping short of the sides of said vanes, having also passages from the channels

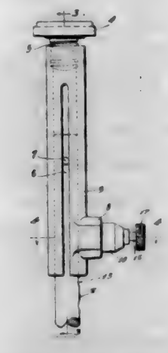
through the inner ends of the vanes, an abutment in the chamber, inlet and outlet ports opening on the chamber and of the same width as the channels named,



the ratio between the circumferential measurement of the chamber and the width of the vane being less than the ratio between the linear interior surface measurement of the cylinder within the ends of said ports and the corresponding measurement of the vane.

---

1,558,697. FOOT-PEDAL EXTENSION. GEORGE E. MARTS, Long Beach, Calif. Filed July 22, 1924. Serial No. 727,435. 1 Claim. (Cl. 74—81.)

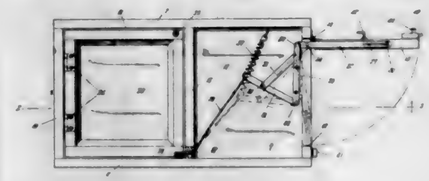


In a foot pedal extension, the combination of an operating rod, a split hollow rod carrying a pedal telescoped over the first rod and slidable thereon, the first rod having a series of recesses, a dog carried by the hollow rod and provided with an operating handle, a spring yieldingly urging the dog towards the recesses, and a pin on the operating rod guidably engaging the split in said hollow rod.

---

1,558,698. HEN NEST AND TRAP. MANUEL BROWN MATHIAS, Hanford, Calif. Filed Feb. 24, 1925. Serial No. 11,250. 3 Claims. (Cl. 119—49.)

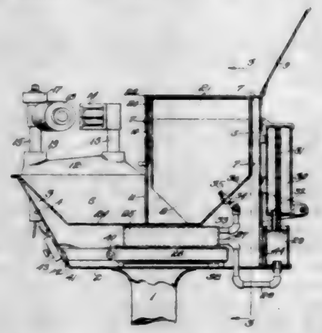
1. A device of the character described comprising a casing having an entrance opening, a door hinged at one edge to the casing to close said opening and arranged to swing open outwardly, a depressible platform within the casing, a lever pivoted to the casing near said edge of the door and extending in the same general direction as the door along one of the edges of the door disposed at an angle to the first-named edge, said lever and second-named edge of the door having a sliding and pivotal connec-



tion, spring means for swinging the door open and means connecting said lever and platform to swing the door closed when the platform is depressed.

---

1,558,699. SHOE-BOTTOM-FILLER MACHINE. GEORGE H. MAXWELL, Phoenix, Ariz. Filed Aug. 9, 1923. Serial No. 656,496. 32 Claims. (Cl. 18—1.)



1. In a machine of the kind described, a filler supply reservoir, a heater spaced below said reservoir a short distance sufficient for heating the apparatus speedily at a high heat without danger of burning the filler, a closed water chamber and steam producer between said heater and the bottom of the reservoir, and steam conveying means for conveying the steam from said chamber into the reservoir.

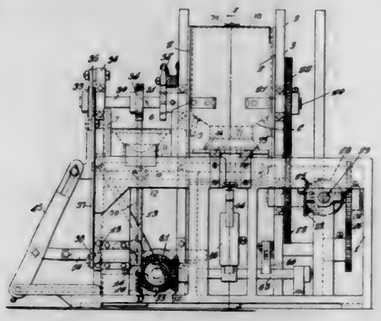
11. In a shoe-bottom filling machine for the rapid handling with high heat of a heat responsive, sticky filler which is normally slowly penetrative by heat and liable to burn at high heat, the combination with a filler supply reservoir adapted to the rapid handling of a mass of said filler and to maintain the filler supported on and above the bottom of said reservoir in a loose, open, non-compressed and non-compacted condition, of heating means arranged to maintain two kinds of heat on the opposite sides of said bottom of said reservoir, namely, a dry heat immediately beneath and in heating contact with said bottom and a wet protective heat immediately above and in protective contact with said bottom and in the adjacent filler mass, all constructed and arranged for safety at high heat and to cause the filler to loosen bottomward and tend to disintegrate downward as distinguished from solidifying and compacting at the bottom.

---

1,558,700. MACHINE FOR HANDLING MILK CANS. WILLIAM N. MERWIN, Waukegan, Ill., assignor to The M. & R. Mfg. Co., Waukegan, Ill. Filed Mar. 3, 1924. Serial No. 696,607. 13 Claims. (Cl. 113—114.)

1. The combination with a movable table for supporting an inverted can and a fixed table for supporting an

inverted cover, of separate means for successively positioning the inverted cover beneath the can and withdrawing the movable table from under the can, and rotatable



means for overturning the container and its cover to a position away from the table and with the cover uppermost.

---

1,558,701. RUBBER COMPOUND AND ITS PROCESS OF MANUFACTURE. ERWIN E. A. G. MEYER, Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Mar. 13, 1925. Serial No. 15,406. 6 Claims. (Cl. 18—50.)

3. That method of compounding unvulcanized rubber which consists in milling a batch of unvulcanized rubber composition and adding rubber latex to facilitate the milling.

---

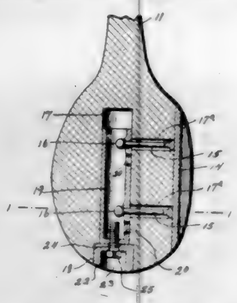
1,558,702. CHECK PROTECTOR. ALLEN H. MIDDLESWART, Piqua, Ohio. Filed Dec. 19, 1924. Serial No. 756,914. 7 Claims. (Cl. 101—20.)

1. In a check protecting device the combination of an upper plate provided with a depressed central portion and integral radial arms extending outwardly and upwardly; a plurality of projections disposed near the extremity of each arm; a lower plate contacting with the central portion of said upper plate and provided with a plurality of perforations adapted to register and coact with the projections of each of said arms to cut disks of paper from a check interposed between said upper and lower plates; means to hold said interposed check in contact with said lower plate during the operation of the device; a base member; means to secure together said upper plate, said lower plate and said base member in fixed rigid and unrotatable relation to each other; and means associated with said base member to receive the said disks of paper.

---

1,558,703. GOLF CLUB. ARNOLD W. MILLER, Lima, Ohio. Filed June 10, 1924. Serial No. 719,179. 6 Claims. (Cl. 273—77.)

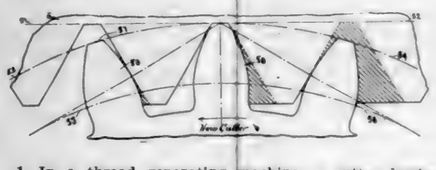
1. In a golf club having a head, a face plate for the head having inwardly extending members, and a locking member disposed within the club and movable longitudinally therethrough and adapted, when shifted in one



direction, to lockingly engage said inwardly directed members and, when shifted in the other direction, to release said inwardly directed members.

---

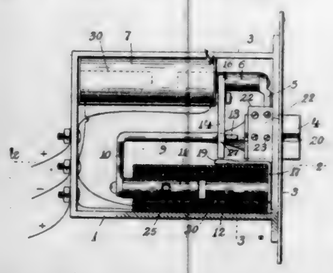
1,558,704. CUTTER FOR GENERATING THREADS AND THE LIKE. EDWARD W. MILLER, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a Corporation of Vermont. Filed Mar. 31, 1923. Serial No. 629,124. 6 Claims. (Cl. 29—103.)



1. In a thread generating machine, a cutter having its cutting edges of an outline similar to the teeth of a spur gear and adapted to generate threads by rolling movement relative to the work, such cutter being formed to roll on a pitch circle approximately coincident with the points of its teeth and on a pitch line in the work approximately coincident with the root of the thread to be cut therein.

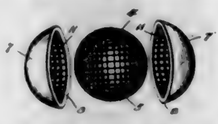
---

1,558,705. ELECTRIC LOCK. JOSEPH H. MILLIGAN, East Holliston, Mass. Filed Apr. 5, 1924. Serial No. 704,394. 3 Claims. (Cl. 75—50.)



1. An electric lock comprising a bolt, a solenoid having a plunger therein adapted when the solenoid is energized to throw the bolt, and a pivoted latch adapted to engage and retain said bolt at an end of its throw, a portion of said latch being adapted to be attracted by said plunger when the solenoid is energized and thereby to release the bolt from the latch.

1,558,706. GOLF BALL. HARVEY F. MITTEL, Providence, R. I., assignor, by mesne assignments, of one-half to The Golf Ball Corporation of America, Wilmington, Del., a Corporation of Delaware. Filed Oct. 6, 1922. Serial No. 592,751. 3 Claims. (Cl. 273—62.)



1. A golf ball composed solely of a vulcanized spherical centre and an outer shell covering of balata, the two being permanently united by a multiplicity of interengaged integral portions thereof whereby the two are rendered relatively non-movable in use.

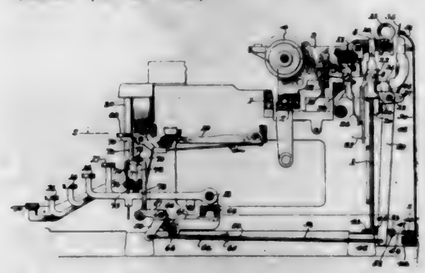
---

1,558,707. RUBBER VULCANIZATION AND PRODUCT THEREOF. STUART B. MOLONY, Wellesley Hills, Mass., assignor, by mesne assignments, to R. T. Vanderbilt Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 20, 1919. Serial No. 346,307. 27 Claims. (Cl. 18—53.)

10. The process of accelerating the vulcanization of rubber comprising vulcanizing the same in the presence of thiuramdisulphide.

---

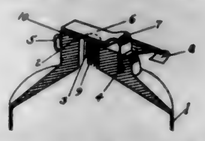
1,558,708. TYPEWRITING MACHINE. LEWIS C. MYERS, Freeport, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed May 15, 1924. Serial No. 713,525. 15 Claims. (Cl. 197—176.)



1. Tabulating mechanism for typewriting machines comprising a stop bar, a plurality of removable stops adapted to be placed manually on said bar at desired letter space positions while said bar retains its normal position, a plurality of key actuated stops cooperating therewith, and fixed means adjacent said key actuated stops indicating the position in which an adjustable stop should be set to stop the carriage at the position which it then occupies.

---

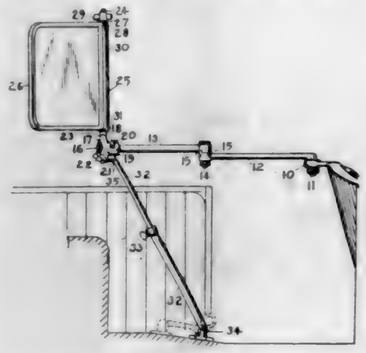
1,558,709. SELF-CLOSING TOP FOR CONTAINERS. WILLIAM C. NENSTIEHL, Wilmington, Del. Filed Jan. 26, 1925. Serial No. 4,785. 1 Claim. (Cl. 221—60.)



The combination with a container having an outlet hole in the top thereof and a slot in the top adjacent said hole, of a valve having a depending spring with a projection on the end thereof and a lever all constructed in one piece of sheet metal, the valve being mounted on the top of the container and adapted to move away from the outlet hole, said spring being bent downward between the valve and the lever, the projection end of the spring extending downward into said slot, and the outside wall of the container top adjacent the slot being clinched over the projection on the end of the spring thereby holding the valve fast and normally in a closed position.

---

1,558,710. WINDSHIELD FOR AUTOMOBILES. THEODORE B. NISBET, Irvington, N. Y. Filed Mar. 12, 1921. Serial No. 451,686. 9 Claims. (Cl. 296—85.)



1. The combination of a pair of folding, horizontally extensible arms embodying sections which are mutually associated for relative movement, a sleeve rotatably mounted on each arm, and a transversely disposed windshield carried by and connecting the sleeves and movable therewith around the axes of the arms from an erect to a pendent position in respect to said axes when the sleeve bearing portions of the arms are in substantial alignment, and means associated with the sleeves for co-operating with certain sections of the arms when the wind shield is in erect position, and for co-operating with other sections of the arms when the wind shield is in pendent position, to retain the wind shield, respectively, in its erect and pendent positions.

---

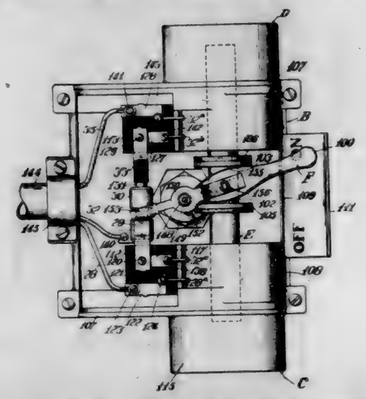
1,558,711. HOLDER FOR THE BLADES OF SHAVING APPARATUS. CARL NITTINGER, Breslau, Germany. Filed Feb. 28, 1925. Serial No. 12,404. 1 Claim. (Cl. 30—25.)

A holder for blades of shaving apparatus comprising in combination with blades having holes at the middle, a handle having a reduced blade receiving portion provided at the inner end with a transverse set of longitudinally disposed substantially segmental bearing lugs undercut to present inclined lower faces, a nose arranged at one corner of the outer end of the reduced portion, and transversely tapered and undercut at the inner side to present an inclined face set diagonally by the taper of the nose, studs mounted on the reduced portion of the handle at one of the longitudinal edges of the same and a highly resilient cover plate provided at one of its edges with recesses to receive the said studs, said cover plate being provided at its inner end with substantially segmental recesses having bottom walls and conforming to the configuration of the segmental lugs and engaged beneath the same, the segmental lugs forming pivots or bearing to permit the cover plate to swing transversely of the handle in the plane of the adjacent face

of the reduced portion thereof, the outer end of the cover plate being frictionally engaged with the nose and maintained in such engagement by the resiliency of the cover plate.

---

1,558,712. SWITCH-OPERATING MECHANISM. PAUL B. PARKS, Oak Park, and JOHN VAN VULPEN, Chicago, Ill., assignors to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Original application filed May 19, 1923, Serial No. 640,133. Divided and this application filed Apr. 18, 1924. Serial No. 707,434. 15 Claims. (Cl. 200—100.)



1. In combination with a rotary member, a lever carried by said member and a circuit breaker comprising a fixed contact, a revolubly mounted longitudinally movable cylindrical contact, and means on said lever which engages said movable contact so as to revolve it while moving it longitudinally.

---

1,558,713. SAFEGUARDING AGAINST AERIAL ATTACKS. JOSEPH A. STEINMETZ, Philadelphia, Pa. Filed Nov. 3, 1923. Serial No. 672,539. 5 Claims. (Cl. 244—1.)

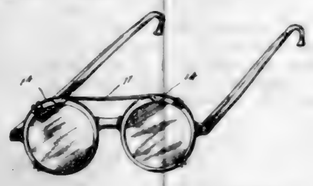
1. The method of defending against aerial attack which consists in releasing at intervals from moving aircraft a series of parachutes each supporting far below a contact bomb by means of a cable transverse to both the direction and probable plane of attack to form a slowly descending barrage of aerial bombs.

1,558,714. METHOD OF SURFACING. HERBERT R. STRATFORD, Cleveland, Ohio, assignor to the Stratmore Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 15, 1924. Serial No. 756,082. 2 Claims. (Cl. 51—278.)

1. In a method of surfacing metal panels, the steps which consist in forcing against a relatively small portion of the metal surface a flexible and yieldingly supported abrasive disc with a force sufficient to flex said disc and then rotating such abrasive disc at a speed higher than that causing heating of the metal to the warping temperature but below the speed at which the abrasive disc is converted into a non-yielding element by the action of centrifugal force.

---

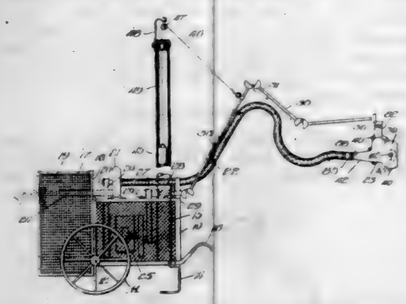
1,558,715. ATTACHMENT FOR OPHTHALMIC MOUNTINGS. LEOPOLD STRAUSS, New York, N. Y., assignor to Optical Products Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 30, 1924. Serial No. 746,766. 5 Claims. (Cl. 88—41.)



1. An attachment for ophthalmic mountings, comprising a pair of supplemental lenses, a spring bridge member connected at its opposite end portions to their upper edges and normally tending to bow outwardly each lens having engaging members at its outer edges adapted to be clamped by tension of said bridge onto the permanent mounting.

---

1,558,716. COTTON PICKER. LOUIS CARROLL STUKENBORG, Chicago, Ill., assignor, by mesne assignments, to Stukenborg Corporation, Wilmington, Del., a Corporation of Delaware. Filed June 25, 1918. Serial No. 241,745. 28 Claims. (Cl. 56—13.)

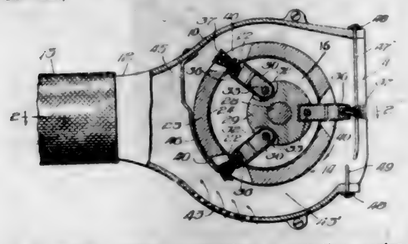


1. A cotton picker comprising a manually manipulated head, interacting picker and fibre loosening mechanism therein, constructed to comb and loosen the cotton locks, to segregate them and their adhering seeds from each other and loosen boll dirt therefrom to produce a fluffy seed cotton, said mechanism including oppositely disposed, coacting, rotative, picker means arranged to rotate rearwardly at their coacting sides, a foraminated element, and pneumatic means connected to the head to carry the cotton rearwardly from the head constructed to deliver the cotton and loosened boll dirt against said foraminated element.

26. In a cotton picker, a picker head embracing a casing having an open mouth, interacting picker means at said mouth for engaging the cotton boll, and means carried by the head for opening unopened burs.

---

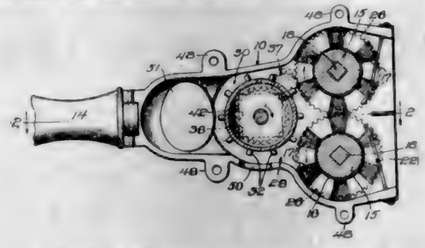
1,558,717. COTTON PICKER. LOUIS CARROLL STUKENBORG and GEORGE H. HANDY, Chicago, Ill., assignors, by mesne assignments, to Stukenborg Corporation, Wilmington, Del., a Corporation of Delaware. Filed Oct. 3, 1919. Serial No. 328,272. 14 Claims. (Cl. 56—32.)



1. A cotton picker comprising a rotative series of bristle brushes adapted for contact with cotton bolls, a rotative member to which said brushes are connected to advance the brushes toward and cause them to recede from picking positions and hollow rotative stripper means enclosing and axially eccentric to and co-operating with the moving brushes to strip the cotton therefrom.

---

1,558,718. COTTON-PICKER MECHANISM. LOUIS CARROLL STUKENBORG, Chicago, Ill., assignor, by mesne assignments, to Stukenborg Corporation, Wilmington, Del., a Corporation of Delaware. Filed Sept. 4, 1920. Serial No. 408,280. 6 Claims. (Cl. 56—32.)

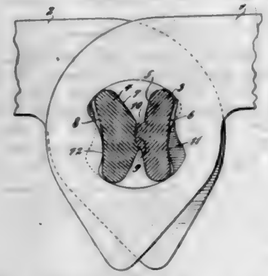


1. A cotton picker head comprising a casing having a mouth formation and a pneumatic outlet, picker means at the mouth and a rotative take-off shell in the casing in rear of the picker means and having external, relatively fixed, formations to remove cotton from the picker means and terminating at its ends closely adjacent to opposing casing walls and bearings carried by said casing walls for the take-off device, said take-off device having endwise hollow extensions to axially overlap said bearings.

---

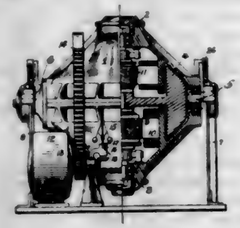
1,558,719. CHAIN AND PARTS THEREFOR. HAROLD E. STURTEVANT, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed Nov. 15, 1923. Serial No. 674,815. 3 Claims. (Cl. 74—32.)

1. In a chain of the link type, a pin comprising two members each having concave and convex surfaces and placed with their convex surfaces adjacent each other, rounded projections on the chain links engaging the concave surfaces of said members, one of said members having a concave portion on its convex side and the other of said members having a convex portion engaging the concave portion of the other, whereby said members are articulated one with the other.



---

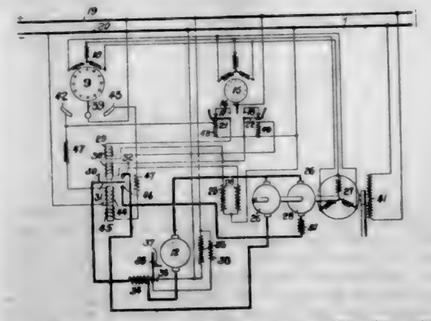
1,558,720. CONTROLLING AND BRAKING DEVICE FOR SHIPS' GYROSCOPES. HERBERT H. THOMPSON, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed July 23, 1917. Serial No. 182,189. 35 Claims. (Cl. 74—78.)



28. In a ship stabilizing apparatus, the combination with a moving part to be accelerated and retarded during a rolling cycle, of a fly wheel, and means for utilizing the energy generated in retarding said part for rotating said fly wheel.

---

1,558,721. GYROSCOPIC STABILIZING SYSTEM. HERBERT H. THOMPSON, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 13, 1920. Serial No. 373,659. 24 Claims. (Cl. 74—78.)

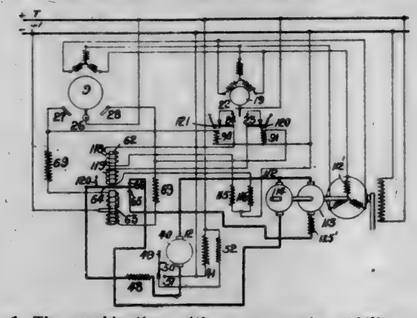


16. In a gyroscopic stabilizer, the combination with the rotor, of a substantially constant speed motor spinning said rotor, an electric power plant for driving said

motor, a second motor for controlling the precession of the gyroscope driven from said power plant, said motors and power plant being adapted either to absorb or to utilise said rotor to equalise the total energy of the system.

---

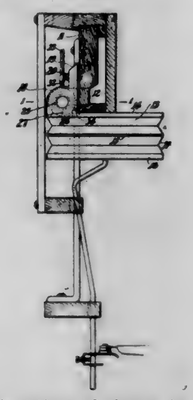
1,558,722. CONTROLLING AND BRAKING DEVICE FOR SHIPS' GYROSCOPES. HERBERT H. THOMPSON, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Continuation of application Serial No. 182,189, filed July 23, 1917. This application filed Aug. 31, 1922. Serial No. 585,407. 7 Claims. (Cl. 74—78.)



1. The combination with a gyroscopic stabilizer, of a spinning motor and a precession motor therefor, a generator for each of said motors, a common means for rotation of said generators, and means varying the relative field strengths of the precession motor and its generator for causing said motor to assist the prime mover during a predetermined portion of the precessional cycle.

---

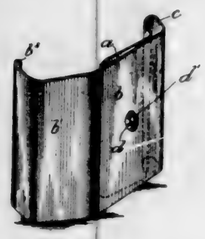
1,558,723. PNEUMATIC ACTION OF MECHANICAL PLAYERS FOR MUSICAL INSTRUMENTS. HENRY THOMSON, Waverley, near Sydney, New South Wales, Australia. Filed Jan. 4, 1922. Serial No. 526,894. 8 Claims. (Cl. 84—53.)



1. In pneumatic actions of players for musical instruments, an operating pneumatic having a plate constituting a fixed wall thereof arranged with an integral laterally extending casing arranged with a valve chamber therein in communication with the pneumatic through an opening in the plate, a diaphragm chamber arranged in said casing, alined openings in opposite walls of the casing one of said openings communicating with the diaphragm and valve chambers of the casing and the other in open communication with the valve chamber and atmosphere, and a valve in the valve chamber connected with the diaphragm through the opening connecting the diaphragm and valve chambers to control said openings and operative to connect the pneumatic with the diaphragm chamber and to shut the pneumatic off from the atmosphere or to connect the pneumatic with the atmosphere and shut it off from the diaphragm chamber for the purpose specified.

---

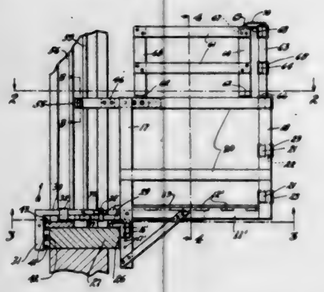
1,558,724. HOLDING MEANS FOR DOORS AND THE LIKE. JOHN ISAAC THORNYCROFT, Bembridge, Isle of Wight, England. Filed Nov. 23, 1921. Serial No. 517,243. 4 Claims. (Cl. 292—76.)



1. A door holding device comprising a strip of springy material bent upon itself and forming two adjacent laterally displaced side portions connected together by an intermediate loop portion, one of the side portions being flat throughout its length and adapted to be fixed to the side of a door frame and the other portion, which is adapted to form a striking plate, is of greater width than the said flat portion and consists of two integral parts one of which adjacent to the loop portion, is flat and the other of which, extends beyond the free edge of the first mentioned portion and is bent laterally in the direction of and so as to overlap the free edge of the first mentioned side portion and also the edge of a door to which such side portion is attached, substantially as described.

---

1,558,725. WINDOW STAGING. FRANK A. UPHAM, Oelwein, Iowa. Filed Oct. 25, 1924. Serial No. 745,778. 11 Claims. (Cl. 304—26.)



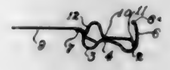
1. A window staging comprising sections adjustably connected together, vertically extending post members at the front of each staging section adapted to engage the outer face of a window ledge and means on said post members comprising vertically adjustable brackets and pivotally mounted arms for supporting the staging from a window frame and ledge, substantially as described.

1,558,726. COLLAR. JOHN MANNING VAN HEUSEN, Boston, Mass., assignor to Van Heusen Products, Inc., a Corporation of Delaware. Filed July 23, 1921. Serial No. 486,934. 12 Claims. (Cl. 189—384.)

8. A foldable article of wearing apparel made of woven integral fabric comprising at least two plies, there being, when said article is laid flat, a bulged or convexed zone on the outer surface of the fold area thereof, but not on the inner surface of said fold area, whereby the said article has a tendency to fold at and along said bulged or convexed zone.

---

1,558,727. SCREEN FRAME AND SHOE FOR SUPPORTING THE SAME. JOHN O. WAGNER, Chicago, Ill. Filed Nov. 1, 1922. Serial No. 598,237. 2 Claims. (Cl. 156—14.)



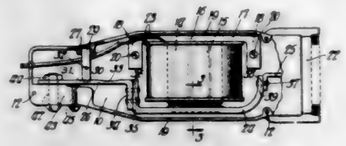
1. In a screen frame, a frame member having an intermediate raised fulcrum, an outer arcuate flange with an inwardly extending lip and an inner curved or sloping portion provided with a marginal lip, and a rockable member within said frame member having an intermediate fulcrum resting upon the fulcrum of said frame member, and having an arcuate outer edge in slidable engagement with said arcuate flange and a flanged inner edge adapted to be wedged within said curved portion of said frame member for the purpose described.

---

1,558,728. CAR-WINDOW SCREEN. JOHN O. WAGNER, Chicago, Ill. Filed Feb. 19, 1923. Serial No. 619,785. 2 Claims. (Cl. 156—14.)

2. The combination with a screen having lateral guideways, of guides for cooperating with said guideways, one of said guides being hollow, and a strut pivoted in said hollow guideway and swingable therebeyond for latching the screen in elevated position.

1,558,729. CLIPPER. LEO J. WAHL, Sterling, Ill. Filed Apr. 7, 1924. Serial No. 704,701. 6 Claims. (Cl. 175—338.)



1. In a device of the character described, a vibratory member comprising an armature, a resilient member secured to one end of said armature and an arm secured to the other end of said armature, said vibratory member being offset between the ends thereof, the joint between said armature and said resilient member lying in one of the offsets to stiffen the same.

---

1,558,730. TOY. FRED WEINBERG, Schenectady, N. Y. Filed Apr. 14, 1922. Serial No. 552,606. 5 Claims. (Cl. 46—45.)

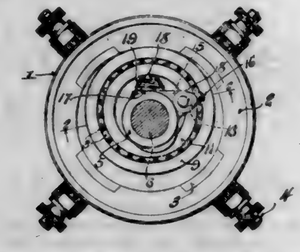
1. In a toy, the combination of spaced side plates adapted to be rotated, a counterbalanced figure of lesser dimensions than the side plates pivoted in the space between them to one side of the center of the plates, the pivot for the figure being eccentric of the figure and sufficiently close to the periphery of the plates that in one position the figure projects partly beyond the periphery of the plates, and stop means which prevents said figure from turning on its pivot beyond a predetermined amount.

---

1,558,731. RETAINING DEVICE. FLOYD G. WITHROW, Grand Rapids, Mich. Filed Sept. 2, 1925. Serial No. 54,166. 1 Claim. (Cl. 287—96.)

In combination with a carburetor throttle lever and a throttle rod having an end portion turned to pass downwardly through an opening in the end of said lever, said end portion of the rod being provided with a transverse opening through it, of a retaining device formed from a single piece of wire located alongside of the throttle rod and formed at one end with a hook to engage said throttle rod, the opposite end of the device being bent back upon itself and formed with an out-turned terminal section passing through said opening in the down-turned end of the throttle rod.

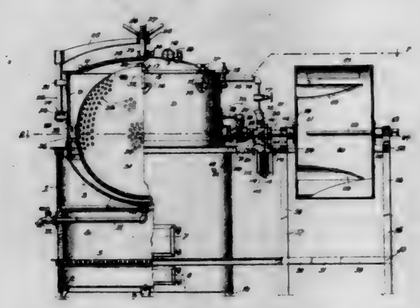
1,558,732. TIMER. HARRY W. YOUNG, Milwaukee, Wis. Filed Aug. 14, 1923. Serial No. 657,317. 4 Claims. (Cl. 200—36.)



3. A timer comprising a casing provided with a stationary insulating ring having a plurality of contacts carried thereby, a shaft projecting into said casing, a hub secured to said shaft having a pair of spaced integral ears projecting therefrom, an inner ring provided with a raceway and having an apertured inwardly projecting enlarged portion, said inner ring having a lateral notch adjacent said enlarged portion and leading into said raceway, a pintle pin directly joining the enlarged portion of said inner ring with the projecting ears of said hub with one of said ears closing said notch, an outer ring surrounding said inner ring and provided with a raceway, a plurality of balls positioned between said raceways, and a spring urging a portion of said inner ring outwardly from said hub.

---

1,558,733. WASHING MACHINE. HERMAN I. LIPPARD, Philadelphia, Pa. Filed Jan. 17, 1923. Serial No. 613,195. 4 Claims. (Cl. 68—16.)

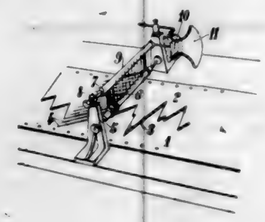


1. In a washing machine the combination of a steam-preasure boiler adapted to receive a quantity of water; means for heating said boiler to generate steam from the water; a clothes receptacle mounted for oscillatory movement in said boiler; and an engine operatively connected to the clothes receptacle for oscillating the receptacle, said engine being connected to the boiler for operation by the steam generated therein.

---

1,558,734. PROCESS FOR THE REPRODUCTION OF THE RECORDED DISPLACEMENTS OR VIBRATIONS OF A MEDIUM SUCH AS AIR. WILLIAM ARTHUR LOTH, Paris, France, assignor to Société Industrielle des Procédés W. A. Loth, Paris, France. Filed Jan. 3, 1922. Serial No. 526,834. 3 Claims. Cl. 274—5.)

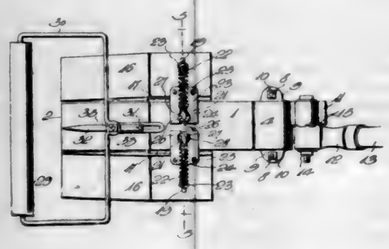
2. In the installation for the reproduction of movements to which a medium such as air is subjected, a movable surface on which the diagrammatic tracing showing the movements divides the said surface into parts of relatively different heights, the projecting part having a progressively decreasing height from one to the other edge of the surface, parallel needles whose ends engage with the parts of the movable surface, an



axis arranged transversely to said movable surface, rods extending the needles beyond their pivot point on the common axis, a reproducing diaphragm, and an intermediate axis arranged transversely with respect to the film, pivoted at one of its ends and the other end acting on the reproducing diaphragm.

---

1,558,735. BARK-REMOVING TOOL. ARTHUR R. MCARTHUR, Newport, Wash. Filed May 1, 1924. Serial No. 710,405. 9 Claims. (Cl. 144—208.)



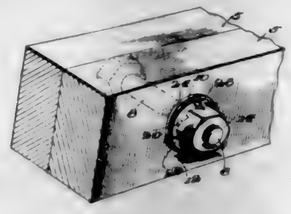
1. A bark removing tool comprising a blade adapted to be moved longitudinally of a log and curved transversely of its line of movement, said blade being formed of a plurality of longitudinally disposed angularly related sections, and connecting means between said sections adjustable to vary their angular relation, thereby allowing varying of the blade curvature according to the circumferential curvature of the log from which bark is to be removed.

---

1,558,736. LOCK WASHER. JOHN ALEXANDER MCCOY, Weed, Calif. Filed Aug. 4, 1923. Serial No. 655,583. 1 Claim. (Cl. 151—33.)

A combination locking washer of the character described, comprising a rigid split washer, a relatively thin washer of ductile metal superposed thereon and permanently secured thereto at a single point, and both of said washers having a central opening for mounting on a bolt, one end of said split washer bent downward obliquely and tapered to a knife edge adapted to bite into and imbed in the work to prevent retrograde rotary movement of said washer, said split washer also having radial V-shaped notches in its outer face, a nut carried on the bolt and having similar radial notches on its inner face adapted for alinement with the notches of the rigid washer, whereby portions of the ductile washer may

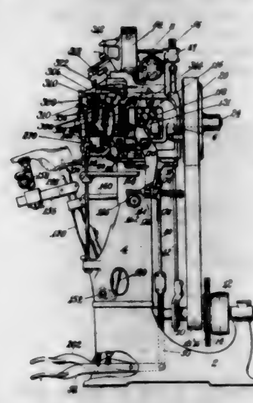
be upset into locking engagement with the notches of the rigid washer and the nut, the periphery of the ductile washer disposed entirely within the periphery of the



rigid washer whereby to protect said ductile washer from accidental blows, and also facilitate the use of the tool used to upset said ductile washer.

---

1,558,737. LASTING MACHINE. RONALD F. MCFEELY, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 16, 1916, Serial No. 115,230. Renewed May 24, 1922. Serial No. 563,369. 137 Claims. (Cl. 12—4.)

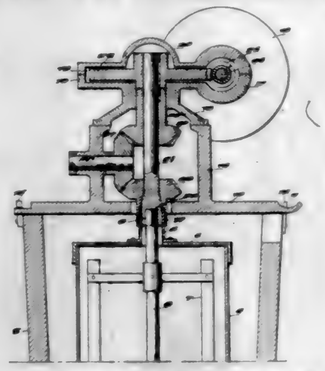


6. A machine of the class described having, in combination, end lasting wiper plates for closing over a last bottom, manually operable means determinately to adjust the positions of the wiper plates to initially position the wiper plates to act on the marginal portions at the end of a shoe upper mounted on the last, means to effect bodily and swinging movement of the wiper plates to wipe said marginal portions over the bottom of the last into position to be fastened on the bottom of the last, and tacking units co-operating with the wiper plates and having means to maintain them in predetermined relation to the wiper plates in all positions of adjustment of said plates.

---

1,558,738. DRIVING APPARATUS FOR ICE-CREAM FREEZERS. JOHN B. MCFERRAN, Jr., Louisville, Ky. Filed Apr. 22, 1924. Serial No. 708,140. 2 Claims. (Cl. 74—7.)

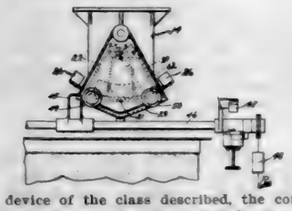
1. In driving mechanism for ice cream freezers, a gear case having an open top, a cap on said top, a vertical shaft extending through the gear case into the top, a loose gear journaled on the lower end of the shaft in the gear case, a gear fixed to the shaft within the gear case, a reversing gear in the gear case in mesh with the fixed



and loose gears, a gear fixed to the upper end of the shaft within the cap, and a motor having a gear element in mesh with the gear in the cap.

---

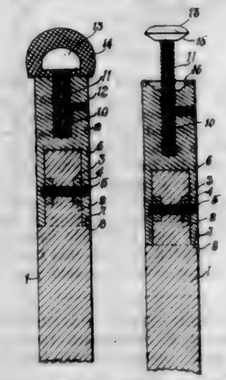
1,558,739. COAL BUNKER. ROY A. MCMULLIN, Boston, Mass., assignor to Stephens-Adamson Mnfg. Co., a Corporation of Illinois. Filed Apr. 15, 1925. Serial No. 23,417. 8 Claims. (Cl. 214—41.)



1. In a device of the class described, the combination of a spout, a gate including two pivotally mounted sections connected to rotate simultaneously in opening and closing the spout, a pivotally mounted drip pan extending beneath the gate, and a lost motion connection between the drip pan and each of the gate sections.

---

1,558,740. POOL-CUE TIP. HOWARD A. MALLORY, Cooperstown, N. Y. Filed Mar. 30, 1925. Serial No. 19,325. 3 Claims. (Cl. 273—70.)

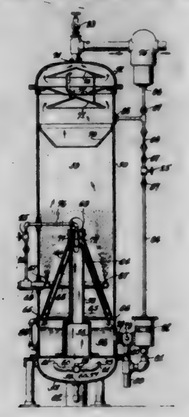


1. In a cue, a shaft, a head mounted thereon, a tip detachably mounted on the head consisting of a threaded member threaded in the head, a retaining head and a

yielding covering on the retaining head to form the cue tip, said covering being enclosed at the bottom between the bottom of the retaining head and the end of the cue head.

---

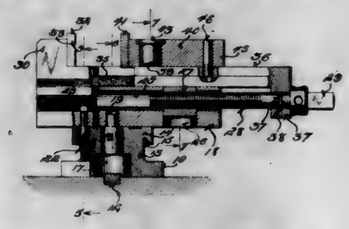
1,558,741. SYSTEM OF DEHYDRATION. JOSEPH A. MARTOCELLO, Philadelphia, Pa. Filed Nov. 14, 1923. Serial No. 674,749. 21 Claims. (Cl. 183—23.)



1. In a dehydrator, an air cooler having one stage of cooling and dehydration out of direct contact with brine but in contact with walls of a brine pool to approximately the frosting point and a subsequent stage in direct contact with brine below the frosting point through a brine spray.

---

1,558,742. COMBINATION MACHINE VISE. ALEXANDER MASZCZYK, Chicago, Ill. Filed Mar. 23, 1923. Serial No. 626,997. 1 Claim. (Cl. 81—33.)

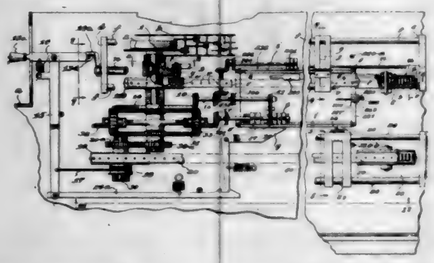


A machine vise comprising a bed-plate having a table integral therewith, a stud carried by said table, a vise bed pivoted upon said stud, locking means for temporarily holding said vise bed and table together, said vise bed having a movable slide adjustably carried thereby, a stud projecting upwardly from said slide and rigid therewith, a block having a clamping face and pivotally mounted upon said stud with the stud closely adjacent said clamping face, said block having a rearward extension, said extension and said slide having registering apertures, a screw passing through said apertures, and a stationary gripping jaw carried by said vise bed.

---

1,558,743. ELAPSED-TIME CALCULATOR AND PRINTER. MERLE E. MERRIMAN, Deer Park, Ohio. Filed Sept. 5, 1922. Serial No. 586,172. 12 Claims. (Cl. 234—43.)

2. In an apparatus for the purpose specified, the combination of a time keeping instrumentality, a time expression instrumentality controlled thereby, a pattern, means for recording the beginning time and quitting time of a working period on the pattern, a pattern forming mechanism for marking the pattern in accordance with the beginning time, a differential driving mechanism connecting the time expression instrumentality and the time keeping instrumentality whereby the former normally expresses current time, means for reversing the movement of said differential driving mechanism which includes a movable band and a pattern follower carried



thereby, whereby the pattern follower engages the mark on the pattern made by the pattern forming mechanism to limit the reverse movement of said differential when the same has been reversed an amount equal to the beginning time, for the purpose of subtracting the beginning time from the quitting time to calculate the elapsed time, and a spring for returning the band thereby returning the time expression instrumentality to normal position for again expressing current time.

---

1,558,744. EYEGLASSES OR SPECTACLES. EVERMONT BLEVINS MINER, Portland, Oreg. Filed Apr. 6, 1923. Serial No. 630,381. 1 Claim. (Cl. 88—48.)

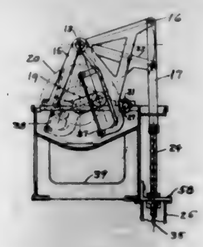
In combination with a pair of lenses, posts connected with the lenses, a bridge bar connecting the posts, nose grips carried by the posts and supporting devices for the lenses, a combined brace and positioner including a substantially rigid bar extending from one lens to the other and rigidly and positively connected at its ends with the lens, said bar having a portion intermediate its ends engageable with the nose for holding the lenses rigidly in position and always at the same angle with the eye, said combined brace and positioner being substantially rigid and being rigidly and positively connected with the posts.

---

1,558,745. PUMPING APPARATUS. THEODORE R. MINERT, Milwaukee, Wis. Filed Feb. 5, 1923. Serial No. 617,073. 1 Claim. (Cl. 74—14.)

A pumping apparatus comprising in combination, an oil receptacle formed by a supporting frame, a plurality of parallel webs formed therein, a crankshaft journalled to revolve in bearings thereon, vertical side frames mounted thereon, carrying the horizontal supporting shaft of the bell cranks, a plurality of rocking bell cranks coaxially arranged on said shaft, a plurality of crank pins on said crank shaft arranged diametrically opposite slidably and pivotally connected to the vertical arms

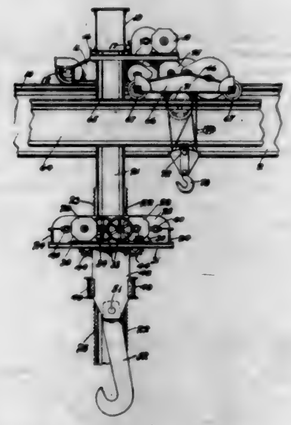
of said bell cranks, a plurality of plunger pump shafts pivotally connected to the other end of said bell cranks by means of connecting rods, actuating means whereby



said crank shaft is rotated, and said plunger pump shafts are made to reciprocate together in one direction a small part of each stroke and alternately the remainder of each stroke.

---

1,558,746. TRAVELING CRANE. GEORGE EDWARD MOORE, Muskegon, Mich., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Feb. 11, 1924. Serial No. 691,955. 17 Claims. (Cl. 212—130.)

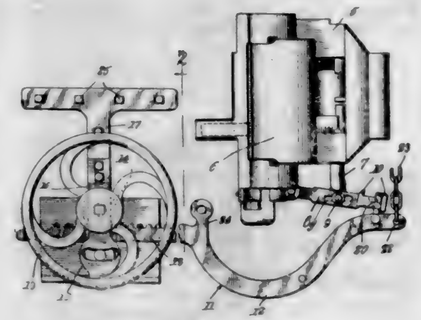


1. A crane comprising a bridge, a trolley mounted to traverse the bridge in a direction at right angles to the movement of the bridge, spaced apart depending supporting members depending from the trolley between the ends thereof, a vertically movable carriage mounted on and extending horizontally between said members for vertical movements, and means for moving said vertically movable carriage up and down on said members, substantially as and for the purposes described.

---

1,558,747. CAR COUPLING. ALBERT AUGUSTUS MOSS, Newark, N. J. Filed June 25, 1924. Serial No. 722,347. 1 Claim. (Cl. 213—159.)

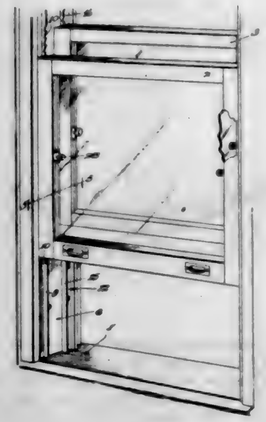
The combination with a car coupler having a vertically movable operating bar of an operating mechanism including a supporting bracket, said supporting bracket including spaced bars, said spaced bars having elongated curved openings, a roller mounted within the openings, a laterally movable arm having teeth formed along the upper edge thereof and resting on the roller, and a pinion mounted between the spaced bars and co-



operating with the teeth of the laterally movable arm to move the laterally movable arm, and means for connecting the arm to the coupler to operate the vertically movable operating bar.

---

1,558,748. WINDOW-SASH HOLDER. WILLIAM S. MUCK, Dickson, Pa., assignor to James F. Arthur, Dickson, Pa. Filed Sept. 24, 1924. Serial No. 739,586. 3 Claims. (Cl. 292—175.)

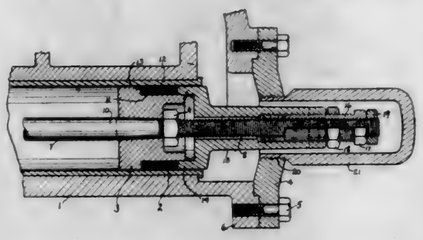


1. The combination with a window frame and sashes mounted thereon, said sashes being provided in the outer edges of their stiles with longitudinal grooves, of rack members comprising strips secured to the inner faces of the stiles of the frame and having outstanding toothed flanges, the flanges of the rack members engaging in the grooves in the sashes and constituting means for guiding the sashes, the strips constituting

smooth surfaces along which the edges of the stiles of the sashes are to move, and pawls upon the sashes coacting with the racks.

---

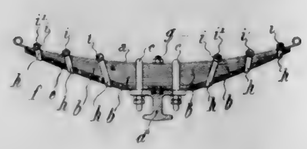
1,558,749. ADJUSTABLE PUMP PISTON. ROBERT A. MUELLER, Houston, Tex. Filed Apr. 20, 1925. Serial No. 24,638. 8 Claims. (Cl. 74—109.)



1. In a pump, a cylinder, a cylinder head detachably mounted thereon, a piston rod, a piston on said rod in said cylinder, a seat on said piston, a packing ring in said seat, a follower plate on one end of said piston bearing slidably against said ring, a sleeve on said plate adapted to extend through an opening in said cylinder head, and a nut on said piston rod having a threaded engagement with said rod and said sleeve, and adapted to be rotated to slide said plate against said packing ring without rotating said plate.

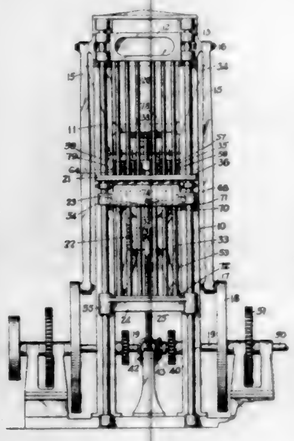
---

1,558,750. SHOCK-ABSORBING MEANS. MARCEL CHARLES ERNEST MULOT, Paris, France. Filed Oct. 13, 1922. Serial No. 594,232. 11 Claims. (Cl. 267—47.)



1. A leaf spring comprising a series of laminæ of different lengths, means for holding said laminæ together, said laminæ being so arranged that said spring has a portion of a wedge shape, the said spring including a relatively compressible portion and annular means connected to the said spring and adapted to embrace the laminæ thereof and to press them together, the said annular means being inclined to the longitudinal axis of the said spring when the said spring is in its normal position and being so connected to the said spring that said means are adapted to partake of a turning movement when the said spring is distorted from its normal position, said annular means being adapted to increase the compression of said compressible portion when their angle to the longitudinal axis of said spring is increased, said annular means being rigidly connected to the lower part of said spring.

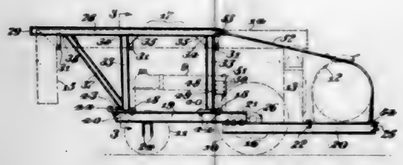
1,558,751. CORK-PACKING MACHINE. JULIUS NUBSKE, Jr., Brooklyn, N. Y., assignor to L. Mundet & Son, Inc., Brooklyn, N. Y., a Corporation of New York. Filed May 28, 1924. Serial No. 716,288. 26 Claims. (Cl. 18—5.)



1. In a machine of the character described, a tube, a plunger adapted to enter said tube for compressing the material therein, and positively acting means operatively connected to said tube and independent of said plunger for withdrawing said tube and the contents thereof axially of and away from said plunger.

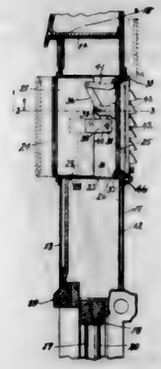
---

1,558,752. TRACTOR-ATTACHMENT FRAME. JOSEPH S. OECHSLE, Philadelphia, Pa., assignor to The Metalweld Service Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 19, 1925. Serial No. 16,693. 6 Claims. (Cl. 180—1.)



1. A tractor attachment comprising a framework of spaced longitudinal I-beams with integrally welded transverse channels with means for securing said framework to the tractor front suspension and rear axle housings, in combination with a removable superstructure of I-section longitudinals and spaced integrally welded verticals, said longitudinals being connected at the forward end by an interfitted channel section welded thereto, I-section braces welded intermediate the longitudinals and forward verticals, spaced stirrup straps transversely intermediate the longitudinals integrally joined to the flanges thereof, foot plates weldingly attached to the lower ends of the verticals, and means whereby the footplates are attached to the framework top flanges.

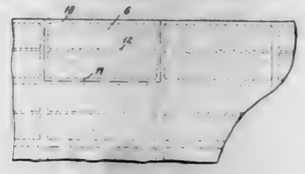
1,558,753. WINDOW ARRANGEMENT FOR SLEEPING CARS. PETER PARKS, Chicago, Ill., assignor to The Pullman Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 23, 1923. Serial No. 658,970. 10 Claims. (Cl. 105—314.)



1. In a railway car, a vertically movable window in the side wall of said car, an upper window and means for mounting said upper window in said side wall above the movable window for moving the same laterally of said wall.

---

1,558,754. CUFF. ISAAC L. PHILLIPS, New York, N. Y., assignor, by mesne assignments, to Van Heusen Products, Inc., a Corporation of Delaware. Filed Sept. 14, 1921. Serial No. 500,611. 2 Claims. (Cl. 139—407.)

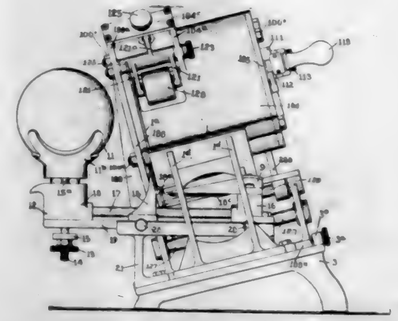


1. A cuff fabric composed of multiple ply interwoven fabric having therein a series of narrow longitudinal and transverse tubular portions which indicate the outline or edge portions of a plurality of cuff blanks and along which tubular portions the cuff blanks are cut out; the main portions of the cuff blanks being multiple ply interwoven fabric and the tubular portions being of sufficient width to provide a divided edge suitable for edge binding purposes on each of the cuff edges formed by cutting along the said tubular portions.

---

1,558,755. PORTABLE POSTAGE-METER MACHINE. ARTHUR H. PITNEY, Stamford, Conn., assignor, by mesne assignments, to Pitney-Bowes Postage Meter Company, Stamford, Conn., a Corporation of Delaware. Filed June 22, 1923. Serial No. 647,143. 48 Claims. (Cl. 101—91.)

1. In a machine of the character specified, a frame, a meter drum rotatably mounted upon said frame, a printing surface on said drum adapted to print stamps, a register in the drum, and gearing whereby the register



is actuated at each rotation of the drum in accordance with the denomination of the stamp printed.

---

1,558,756. INDEX GUIDE. JAMES H. RAND, North Tonawanda, N. Y., assignor to Rand Kardex Company, Inc., North Tonawanda, N. Y., a Corporation of Delaware. Filed Dec. 26, 1923. Serial No. 682,646. 7 Claims. (Cl. 129—6.7.)

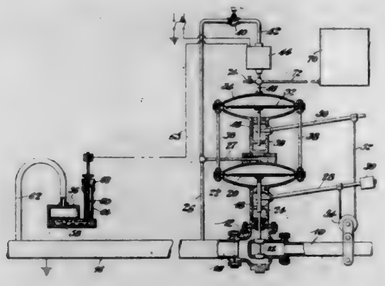
1. In an index device the combination with a receptacle for record sheets, of a plurality of guides for spacing said sheets, the portions of the guides toward the open side of the receptacle being of flexible material and the portions toward the opposite side of being relatively stiff material.

---

1,558,757. VARIABLE-PRESSURE GAS REGULATOR. CHARLES S. REED, New York, N. Y., assignor, by mesne assignments, to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 23, 1920. Serial No. 412,416. 16 Claims. (Cl. 50—10.)

1. A method of regulating gas pressure in distributing lines, comprising admitting gas to said lines through a regulating valve, controlling said valve in accordance with the pressure on the outlet side thereof to main-

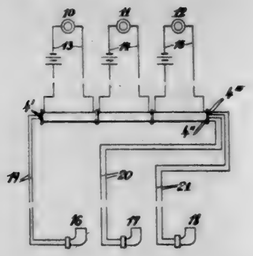
tain a substantially constant pressure on said outlet side, and utilizing the motive force of the gas adjacent said valve to modify the action of said valve control in accord-



ance with pressure existing at a point in the lines distant from said valve where approximately the lowest pressure is to be maintained.

---

1,558,758. INDUCTION COIL. DR ELBERT A. REYNOLDS, West Hoboken, N. J., assignor, by mesne assignments, to Audiphone Company of America, New York, N. Y., a Corporation of Delaware. Filed Nov. 22, 1917, Serial No. 203,382. Renewed Apr. 17, 1925. 3 Claims. (Cl. 179—1.)



1. The combination of a plurality of telephone transmitters, means for mounting said devices in close proximity to one another to receive sounds emanating from a single source, an induction coil comprising a plurality of primary windings, means connecting said primary windings respectively with said telephone transmitters, said induction coil further comprising a plurality of secondary windings in inductive relation with said primary windings and separate telephone receivers connected to said secondary windings.

---

1,558,759. WEATHER GUARD. EDWARD EDWARD RICHARDSON, Maumee, Ohio, assignor of fifty-one per cent to F. O. Richey, Elyria, Ohio. Filed Feb. 18, 1922. Serial No. 537,408. 16 Claims. (Cl. 74—81.)

1. A mat for an automobile foot board provided with substantially parallel flanges cast integral therewith protruding from the surface of the mat, said flanges constructed of flexible material and tensioned toward each other, a slot in said mat between said flanges whereby a reciprocating member may project through said mat between said flanges and via said slot.

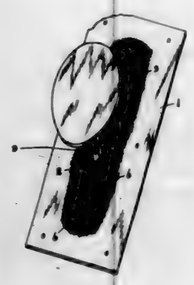
---

1,558,760. NO-DRAFT MAT AND PROCESS OF MAKING SAME. EDWARD EDWARD RICHARDSON, Maumee, Ohio, assignor of fifty-one one-hundredths per cent to F. O. Richey, Elyria, Ohio. Filed Apr. 21, 1924, Serial No. 707,934. Renewed Apr. 11, 1925. 11 Claims. (Cl. 74—81.)

1. In a mat for an automobile foot board, a combination of a pair of slabs or sheets of rubber or the like, each formed so as to have oppositely extending tongues therein, means to connect the slabs together with the tongues superposed but pointing in opposite directions, said tongues adapted to be deflected from the slabs or sheets to project from the same side of the mat and when released deflected towards each other in an effect to regain their natural unstressed position, and each being prevented from returning to normal by the other tongue.

---

1,558,761. DRAFT-PREVENTING MAT. EDWARD E. RICHARDSON, Maumee, Ohio. Filed Dec. 11, 1924. Serial No. 755,187. 7 Claims. (Cl. 74—81.)



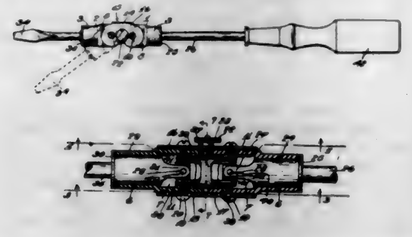
1. In a slot-closing mat of the class described, a flat sheet base having a slot opening therethrough, a facing for portions of the base adjacent the slot and the edges of the slot comprising hide and animal's wool fibres secured to the hide and projecting outwardly therefrom and across the slot to close the same, the resiliency of the wool fibres maintaining the slot closed.

1,558,762. INSTRUCTION DEVICE. BENJAMIN RICHTER, St. Louis, Mo. Filed June 10, 1925. Serial No. 36,152. 3 Claims. (Cl. 273—35.)

1. In a device for instructing posture, a frame, a mirror therein, a panel immediately adjacent to each side of the mirror, and cards removably positioned in said panels, said cards containing complementary illustrations of posture.

---

1,558,763. ANGULARLY-ADJUSTABLE TOOL HOLDER. ARTHUR L. ROSSBERG, Portland, Oreg. Filed Dec. 26, 1924. Serial No. 757,976. 1 Claim. (Cl. 145—67.)

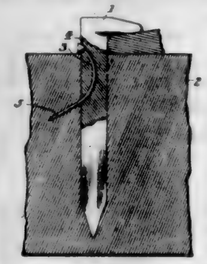


A tool-holder, consisting in a pair of barrels each including a cylindrical portion having a bore therethrough and a rectangular chambered portion, said chambered portions having intermeshing gear-teeth upon one side and arcuate beveled edges upon their opposite sides, a frame having side-plates overlying the side walls of said chambered portions having pivotal connections therewith, a screw threaded in one of said side-plates having a tapered head bearing upon said beveled edges of the chamber-portion, spindles rotatively mounted in the respective bores of said barrels, and universal-joint connections between said spindles having their axes in the transverse planes of said pivotal connections, respectively.

---

1,558,764. RAILROAD SPIKE. WILLIAM F. RUHTER, Juanita, Nebr. Filed June 9, 1921. Serial No. 476,259. 1 Claim. (Cl. 85—23.)

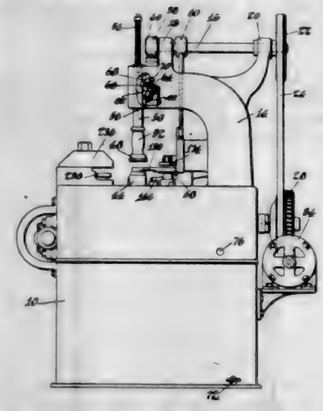
A spike having a shank and a head thereon, said shank being provided with an arcuate keyway in the upper half thereof, the crown of said arcuate keyway being in the plane of the vertical axis of said shank and the ends of said keyway being in vertical alignment in the one face of said shank opposite that to which the head of said spike is directed, the upper terminal end of said keyway being enlarged and beveled outwardly, and a coated nail adapted to be introduced through said key-



way, the head of said nail being adapted for seating in the enlarged end of the keyway, as and for the purposes described.

---

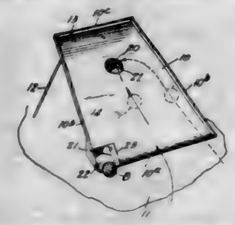
1,558,765. HEEL-MAKING MACHINERY. RALPH C. SIMMONS, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 26, 1921. Serial No. 455,754. 20 Claims. (Cl. 12—42.)



1. In a heel machine, the combination of manually controlled lift cutting mechanism, a separate source of lift supply, and means operating entirely automatically to produce lifts from said source of supply and assemble them with lifts cut by said lift cutting mechanism.

---

1,558,766. GOLF PLAYING APPARATUS. FRANK STEWART SMITH, Los Angeles, Calif. Filed Jan. 11, 1922. Serial No. 528,438. 8 Claims. (Cl. 273—35.)

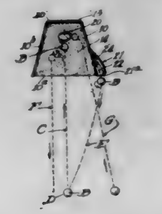


1. In a device of the class described, the combination of a table; members hingedly connected to said table for supporting it in an inclined position with its bottom

edge upon the floor; an aperture in said table to receive a ball; and means for returning the ball to the player after it has passed through said apertures, said means comprising a collapsible chute secured to the underside of said surface.

---

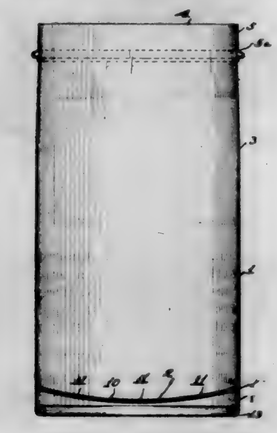
1,558,767. GOLF APPARATUS. FRANK S. SMITH, Los Angeles, Calif. Filed Apr. 19, 1923. Serial No. 633,075. 20 Claims. (Cl. 273—35.)



1. In a device of the class described, the combination of a plane adapted to be supported in an inclined position with one edge upon the floor, the floor engaging edge being curved, an aperture in said plane to receive a ball, and means to return the ball in the direction of the player after passing through said aperture.

---

1,558,768. ICE-CREAM CAN. LEE STURGES, Elmhurst, Ill., assignor to Solar-Sturges Manufacturing Company, a Corporation of Illinois. Filed Sept. 19, 1921. Serial No. 501,645. 2 Claims. (Cl. 220—69.)

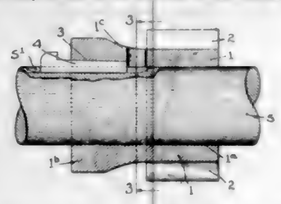


1. A can, comprising a substantially cylindrical body portion having a taper at its upper portion, and a beaded band surrounding the upper margin of said tapered portion and lying substantially flush and in line with the untapered portion.

---

1,558,769. GEAR. ANDREW W. AITKEN, Springfield, Ohio. Filed Oct. 12, 1923. Serial No. 668,240. 1 Claim. (Cl. 287—52.)

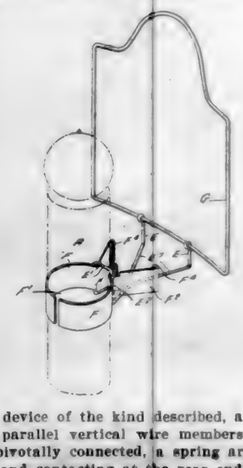
In combination, a gear for the purpose specified comprising a body portion having a hub extension of greater thickness than that of the body, said hub extension and body being provided with a keyway extending through the hub extension only; a shaft provided with a keyway cooperating with the keyway in the hub extension; and a key adapted to fit said cooperating keyways;



said hub extension being provided with an opening adjacent the gear to facilitate the key-seating and key-unseating.

---

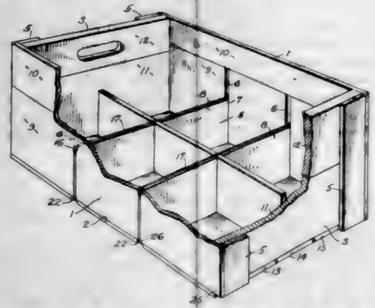
1,558,770. CANDLE-SHADE HOLDER. LAURITS W. ANDERSEN, Waterbury, Conn. Filed Aug. 3, 1922. Serial No. 579,363. 3 Claims. (Cl. 240—141.)



1. In a device of the kind described, a pair of clamping jaws, parallel vertical wire members to which said jaws are pivotally connected, a spring arranged between said jaws and contacting at the rear ends with the rear ends of said jaws, said wire members extending horizontally rearwardly and then vertically, and a shade frame attached to said vertically extending ends of said wire members.

---

1,558,771. REENFORCED CONTAINER. OSCAR WILLIAM ANDERSON, Chicago, Ill., assignor to Alec J. Gerrard, Chicago, Ill. Filed Jan. 22, 1925. Serial No. 4,014. 3 Claims. (Cl. 217—22.)



1. In a wooden box, the combination of side and bottom walls; and a wire under tension forming a part of the bracing structure passing through said side walls over said bottom wall, over a portion of the inside of the box, and having its ends secured together.

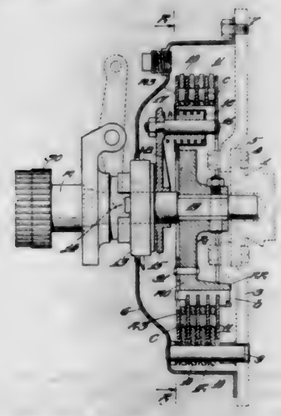
---

1,558,772. CRANK-HANDLE ASSEMBLY. THOMAS PORTER ARCHER, Detroit, Mich., assignor to Ternstedt Manufacturing Co., Detroit, Mich., a Corporation of Michigan. Filed Mar. 26, 1924. Serial No. 701,906. 4 Claims. (Cl. 292—356.)

1. A crank handle assembly, having in combination with a base provided with a socket, an escutcheon thimble, a crank provided with a hub permanently locked rotatably into the escutcheon thimble before assembly onto the support, and an escutcheon plate having an irregular configuration requiring a predetermined location in rotation and rotatably mounted upon the escutcheon thimble.

---

1,558,773. CLUTCH FOR AUTOMOBILES. STUART G. BAITS, Detroit, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 2, 1923. Serial No. 655,259. 2 Claims. (Cl. 192—69.)

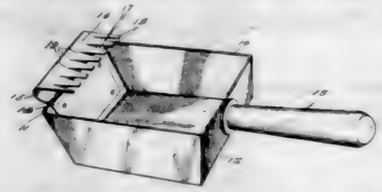


1. In a disk clutch for motor vehicles, the combination of a driven shaft, a spider thereon having forked arms, driven rings having lugs engaging the said forked arms, a backing plate secured to said spider, and thimbles for clutch springs inserted in said backing plate.

---

1,558,774. BERRY PICKER. IRA J. BARNES, Queen City, Mo. Filed Sept. 17, 1923. Serial No. 663,288. 3 Claims. (Cl. 56—330.)

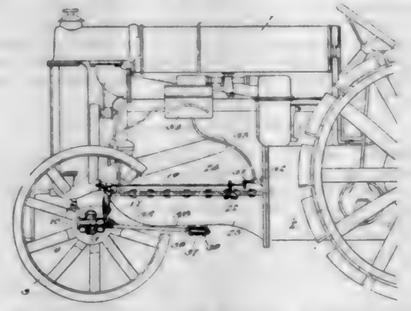
1. A device of the character described comprising an open topped scoop, a handle at one end thereof, and a blade mounted on the other end, said blade having a curved portion overlying the scoop, the edge of said overlying curved portion being formed with a plurality of V-shaped notches defining teeth, the ends of said teeth



being blunt and the side edges of the teeth being sharpened to a knife edge whereby stems engaged between the teeth will be severed by said edges.

---

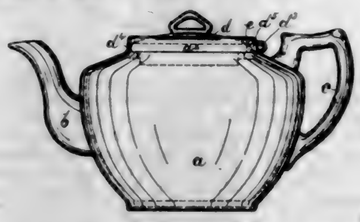
1,558,775. CUT-OUT FOR TRACTORS. HERBERT P. BARRAS, Jeanerette, La., assignor of one-fourth to Paul A. Le Bourgeois and one-fourth to Paul G. Le Bourgeois, both of Jeanerette, La. Filed Sept. 20, 1924. Serial No. 738,877. 4 Claims. (Cl. 180—82.)



1. In a tractor, the combination of a frame, a front axle, a pin on the axle, the frame having an elongated slot to receive the pin whereby the frame is connected to the axle but permitting relative movements through said frame and axle, a lever pivoted on the pin, means connecting the lever with the frame, a rock shaft on the frame, means operatively connecting the rock shaft with the lever, an ignition system, means actuated by the rock shaft for grounding the ignition system during relative movements between the front axle and the frame.

---

1,558,776. TEAPOT AND COFFEEPOT PROVIDED WITH LOOSE LIDS. WILLIAM GEORGE BARRATT, Burslem, Stoke-on-Trent, England. Filed Nov. 29, 1924. Serial No. 752,997. 2 Claims. (Cl. 53—3.)

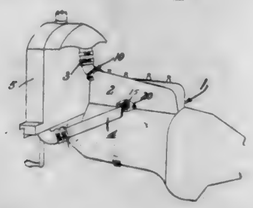


1. A pouring vessel having a spout on one side, said vessel having also an upwardly projecting flange at its top provided with a groove extending around its inner side, and a cover slidable upon the top of the vessel and

adapted to engage with the side portion of the said groove adjacent to the spout when the vessel is tilted to pour out its contents, said cover being provided with a laterally projecting member which engages with the said flange on the other side of the vessel from the spout and retains the cover in place when the vessel is tilted.

---

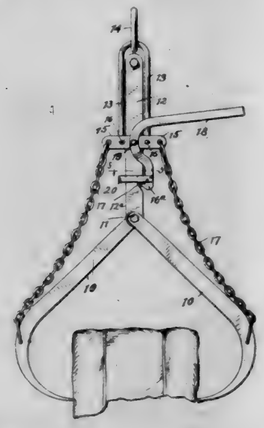
1,558,777. GASKET CHECK VALVE. JAMES H. BARRETT, Beggs, Okla. Filed Apr. 5, 1923. Serial No. 630,124. 1 Claim. (Cl. 123—170.)



The combination with an engine having a water jacket and radiator, a coupling between said radiator and jacket at the top of the engine and a pipe connecting the lower portion of the radiator with said water jacket; of gasket carried check valves located between said coupling and jacket and supply pipe and jacket, the valves in said gaskets opening in the same direction.

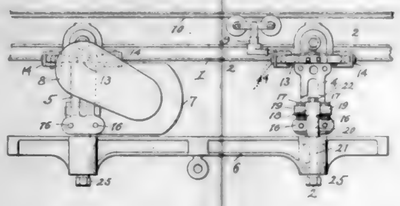
---

1,558,778. GRAB. EARL T. BENNINGTON, Cleveland, Ohio, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed Feb. 6, 1922. Serial No. 534,316. 6 Claims. (Cl. 294—109.)



1. In a grab of the character described, an extensible and contractible head including two relatively movable members, one comprising a vertically slidable bar, and the other adapted to be connected to a hoist and having a gravity actuated latch pivotally suspended therefrom which is adapted to engage the bar to latch the parts in relatively shortened position, said latch having a laterally extending handle portion, the weight of which serves to hold the latch in engagement with the bar and by which the latch may be manually operated, grab hooks connected to the lower end of the bar, and flexible members connecting the hooks to said other member of the head.

1,558,779. TRAMRAIL CARRIER. EARL T. BENNINGTON, Cleveland Heights, Ohio, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed Sept. 25, 1924. Serial No. 739,793. 10 Claims. (Cl. 105—154.)



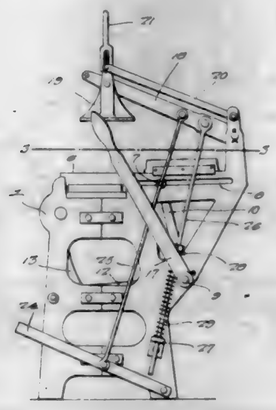
2. A carrier comprising spaced supporting heads having supporting wheels adapted to run on a track, a load bar, and means connecting each of said heads to the load bar, said connecting means permitting relative pivotal movement about a plurality of axes between the load bar and each of said heads.

---

1,558,780. RAILROAD-BAGGAGE COUPON TICKET. WILLIAM R. BETHAM, Chicago, Ill.; Edna M. Betham executrix of said William R. Betham, deceased. Filed Jan. 22, 1923. Serial No. 614,227. 5 Claims. (Cl. 283—20.)

5. The combination with a baggage claim check having a serial number, of a railroad ticket comprising a rectangular body portion, one end of said body portion constituting a ticket head, said body portion being divided by a weakened line extending to the opposite end of the ticket head and having a series of transverse weakened lines, said central lines and said transverse lines dividing the body portion up into a series of rectangular areas, the areas on one side of the line constituting ticket portions, each having indicia indicating transportation between designated points and the serial number of the ticket, and the areas on the opposite side of the ticket constituting baggage coupons, each of said baggage coupons having the same indicia as the ticket portion on the opposite side of said central line, and being detachable from said ticket portion, and each of said baggage coupons being provided with a blank space for insertion of the claim check number.

1,558,781. BRICK MACHINE. ELIE BLANCHETTE, Lawrence, Mass., assignor of one-third to Atwood C. Delano, Lawrence, Mass., and one-third to Fred E. Gregg, Marblehead, Mass. Filed Sept. 19, 1924. Serial No. 738,621. 1 Claim. (Cl. 25—41.)



In a brick machine of the class described, a table, a fixed wall at one edge of the table provided with a plurality of vertically disposed slots, a pivoted wall at the opposite edge of the table and provided with a plurality of slots, a plurality of partitions slidable across the table through the slots of the walls, means for simultaneously sliding the partitions across the table through the slots of the wall and swinging the pivoted wall to an upright position, said means comprising a shaft, arms extending from the shaft, a rod extending through the ends of the partitions, a structure in which the shaft is journaled and provided with slots for receiving the rods, arms extending from the shaft and having slotted terminals receiving the rods, other arms projecting from the shaft at an angle to the first arm, curved members extending from the pivoted wall and engageable with the second arm so that when the partitions are moved across the table, said second arms will engage the members for swinging the pivoted wall to a vertical position, and spring means engaged with the members for normally urging the pivoted wall to a lowered position.

---

1,558,782. SURFACING PROCESS. WARREN F. BLEECKER, Boulder, Colo. Filed July 22, 1922. Serial No. 576,887. 7 Claims. (Cl. 94—23.)

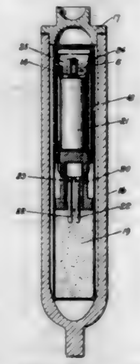
1. The process of surfacing a non-bituminous structure consisting in first coating a cleaned surface with a plastic material under a partial vacuum, subjecting the coating to a fluid pressure whereby it is forced into the pores and crevices of the surface, and covering the coating with a plastic material.

1,558,783. PROCESS OF REPAIRING CONCRETE. WARREN F. BLEECKER, Boulder, Colo. Filed July 22, 1922. Serial No. 576,888. 8 Claims. (Cl. 94—24.)

1. The process of repairing concrete or cement structures consisting in cleaning a broken surface of the structure, then filling the space above said surface with a concrete mass, and dividing the mass by contraction grooves to but not through the surface of the structure.

---

1,558,784. ELECTROLYTIC TIMER. WARREN F. BLEECKER, Boulder, Colo. Filed Apr. 16, 1925. Serial No. 23,611. 12 Claims. (Cl. 102—4.)

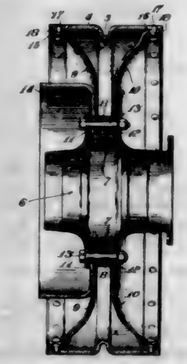


9. The combination with a circuit, of a resistance and an electrolytic cell connected in series therein, the electrolytic cell including two normally spaced electrodes relatively disposed to bridge the space between them by electrolytic decomposition.

10. An electric bomb comprising in combination a shell, an explosive charge, an electrical igniter for the charge, a source of electricity, and an electrolytic timer in circuit with the source and the igniter.

---

1,558,785. METAL WHEEL. ROBERT J. BURROWS, Buchanan, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a Corporation of Michigan. Filed Jan. 17, 1920. Serial No. 352,072. 5 Claims. (Cl. 201—63.)

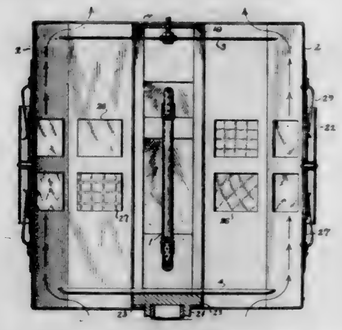


5. A metal wheel comprising in combination an integral rim having an intermediate inwardly projecting annular rib, a hub, and separate outwardly diverging discs fixedly

connected with the hub and with the rim at opposite sides of said rib, the margins of the rim having inwardly extending flanges opposite to and abutting against the outer edges of said discs.

---

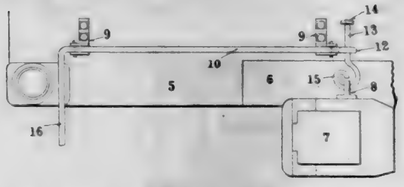
1,558,786. COLOR-FADE-TESTING APPARATUS. LEROY J. BUTTOLPH, East Orange, N. J., assignor to Cooper Hewitt Electric Company, a Corporation of New Jersey. Filed Sept. 27, 1923. Serial No. 665,247. 3 Claims. (Cl. 23—253.)



1. In combination a source of light rich in ultra violet rays, a frame member about said light, shell members removably mounted on either side of said frame to form an enclosure for said light, openings at the top and bottom of said enclosure, an adjustable baffle plate at the top opeing, a baffle plate at the bottom opening, said bottom baffle having its edge turned upwardly to form a pan, openings in the walls of the shell members, baffle plates on the outside of said openings closed at the sides and open at the top and bottom, and removable sample frames with the last said baffles, said sample frames having openings registering with the openings in the shell member.

---

1,558,787. COUPLER-RELEASE RIGGING. STERLING H. CAMPBELL, St. Louis, Mo., assignor to Railway Devices Company, St. Louis, Mo., a Corporation of Missouri. Filed June 13, 1925. Serial No. 36,952. 2 Claims. (Cl. 213—170.)

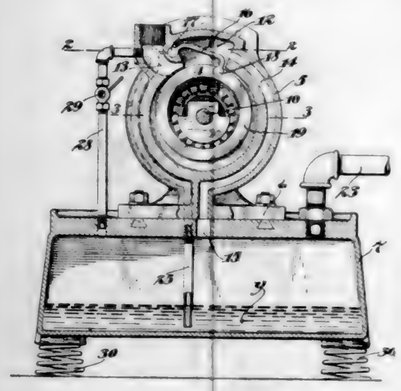


1. In a device of the class described, the combination with an operating arm, of a lock pin provided with an eye, and a connector having sliding connection with the arm and terminating at its lower end in an open loop in the form of a flat spiral engaging the eye.

---

1,558,788. PUMP. WILLIAM H. CAMPBELL, Minneapolis, Minn. Filed Sept. 13, 1924. Serial No. 737,495. 4 Claims. (Cl. 230—30.

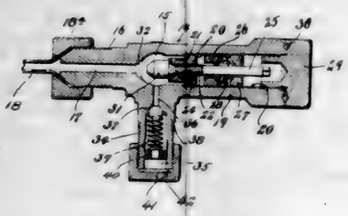
1. A pump comprising a cylinder, an eccentric piston working in said cylinder, said cylinder having admission and exhaust ports, an oil chamber below said cylinder in which the exhaust port is connected, said oil chamber having an air discharge conduit leading back to the admission port, and an oil conduit leading from the lower portion of the oil chamber and delivering into the cylinder on the suction side of said piston, under which ar-



rangement the surplus oil will be carried with the air back into the oil chamber and there separated from the air and redeposited in said chamber.

---

1,558,789. DISCHARGE AND CONTROL VALVE. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey-Morse Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 8, 1924. Serial No. 754,581. 7 Claims. (Cl. 277—65.)



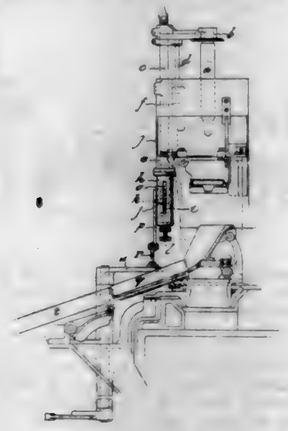
1. A valve fitting having an inlet extension and an outlet extension, a tubular member formed integral with said fitting in coaxial alignment with said outlet extension, a control valve, a stem therefor screw-seated in said tubular member and operable to seat said valve against said outlet extension, thereby closing the communication between the latter and said inlet extension, and a check valve arranged in the discharging portion of said fitting for permitting discharge of fluid from said fitting to the atmosphere.

---

1,558,790. APPARATUS FOR FEEDING MOLTEN GLASS. HARRY BLACK CHALMERS, Yarraville, Victoria, Australia, assignor, by mesne assignments, to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed June 4, 1923. Serial No. 643,246. 12 Claims. (Cl. 49—55.)

1. In apparatus for feeding molten glass wherein a container is provided with an outlet for molten glass which is controlled by a reciprocating needle having a fixed connection with guide shafts supported reciprocating

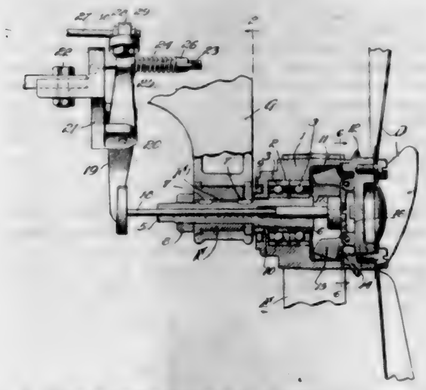
in bearings, a sleeve extension on one of one of the guide shafts, a resiliently mounted abutment supported by said extension, and means for placing the said abut-



ment in the path of movement of the guide shaft upon each alternate movement of the needle to vary the sizes of charges delivered from the feeding apparatus.

---

1,558,791. GOVERNOR. RAY F. CHENEY, Rockford, Ill., assignor of one-third to William H. Williamson and one-third to Carroll H. Starr, both of Rockford, Ill. Filed Oct. 17, 1921. Serial No. 508,253. 1 Claim. (Cl. 264—3.)

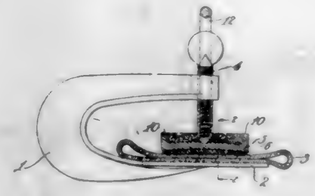


A governor device comprising a hollow fan pulley, a cap fitting the front end of the pulley, fan blades attached to the front of the cap, a hollow bearing spindle projecting into the rear end of the pulley, governor arms mounted on the inner side of the cap and enclosed within the space between the front end of the spindle and the cap, and an operating connection extending from the governor arms thru the spindle.

---

1,558,792. VULCANIZING MATERIAL AND APPARATUS. RALPH H. CHURCHILL, Chicago, Ill. Filed Mar. 19, 1923. Serial No. 626,008. 7 Claims. (Cl. 18—18.)

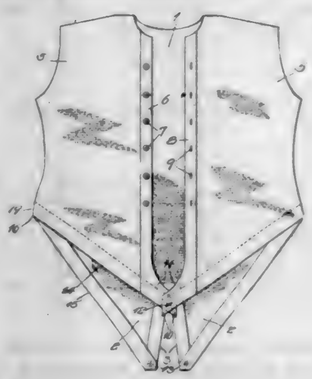
5. In vulcanizing apparatus, the combination of a fuel which is normally quick burning at a high temperature combined with a blanketing material intermingled with the fuel and adapted to retard combustion, said material also serving to absorb the heat of combustion and to radiate it gradually to the material to be



vulcanized; and a thick walled container for the fuel which shields the rubber from the high temperature of combustion by absorbing heat and radiating it gradually.

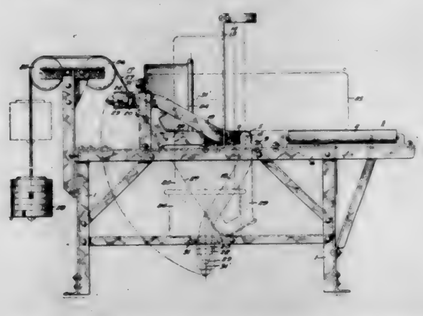
---

1,558,793. SHIRT. ELMER E. COBLE, Chicago, Ill., assignor of one-fourth to W. Lee Provol, Chicago, Ill. Filed Oct. 12, 1921. Serial No. 507,239. 1 Claim. (Cl. 2—77.)



A shirt comprising front and back portions, the lower edge of said back portion and lower edges of said front portion inclined downwardly from the hip portions to the center of the shirt, forming hip covering portions, said back portion being longer than the front portion and terminating in a centrally divided tail to provide separate triangular leg portions, said front portion having inwardly curved lower ends, terminating in tabs which extend transversely of and a substantial distance beyond the meeting edges of the sides of said front portion, said tabs and triangular leg portions carrying cooperative holding means to secure the same together near a central point at the inner sides of the wearer's legs, causing the lower side portions of the shirt to encircle the wearer's legs, along lines inclined from points below the crotch to points on the hips whereby said shirt is free of the wearer's leg at the crotch and causes a clutching action on the legs only below the crotch and at the hips when the shirt is pulled upwardly.

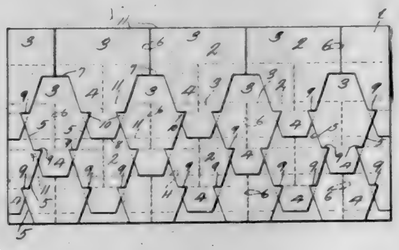
1,558,794. CHEESE-TURNING MACHINE. THOMAS E. DAY, San Francisco, Calif., assignor to Golden State Milk Products Company, San Francisco, Calif., a Corporation of California. Filed July 30, 1925. Serial No. 46,985. 13 Claims. (Cl. 31—49.)



6. A cheese turning machine comprising a horizontal removable roller, a cup-shaped element adapted to receive a portion of the cheese when in a horizontal position and a pivoted frame movable in a vertical plane rotatably supporting said element about a central axis.

---

1,558,795. SHINGLE ROOFING. JOSEPH F. DONAHUE, South Bend, Ind. Filed Aug. 11, 1923. Serial No. 656,923. 1 Claim. (Cl. 108—8.)

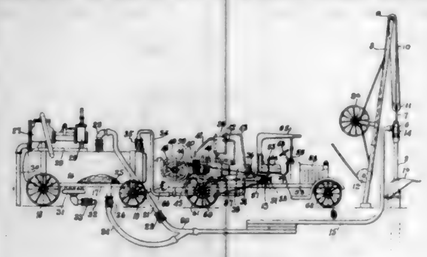


A roof formed from a plurality of independent horizontally and vertically alined shingles, said shingles comprising rectangularly shaped body portions having their adjacent ends in abutting engagement in each course horizontally, angularly disposed projections carried by the lower side of each of the body portions, said projections being spaced from opposite sides of the body portions, thereby forming shoulders in horizontal alinement with each other, said projections having their sides converging towards their ends and provided with slits intermediate their ends, said projections interengaging with adjacent diverging sides of adjacent angularly disposed projections, the shoulders formed by the angularly disposed projections forming means cooperating with the slits for preventing movement of the shingles and maintaining the same in horizontal courses.

---

1,558,796. APPARATUS FOR AND METHOD OF RENEWING OIL WELLS. IRWIN L. DUNN, Marietta, Ohio, assignor to Tidal-Dunn Company, Tulsa, Okla., a Corporation of Oklahoma. Filed Jan. 5, 1925. Serial No. 564. 22 Claims. (Cl. 166—16.)

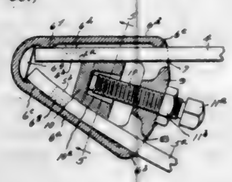
8. In a portable well renewing system, the combination with a pressure tank, of a hammer conduit consisting of a series of pipe sections adapted at one end to receive water and air under pressure from said tank



and a connection to raise and lower it, and having at the other end a tubular hammer head adapted to strike disintegrating blows by the fall of the conduit.

---

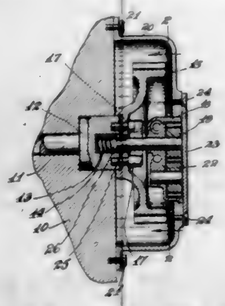
1,558,797. BUMPER. WAYNE E. DUNSTON, Kalamazoo, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed July 26, 1922. Serial No. 577,529. 12 Claims. (Cl. 293—55.)



2. In a bumper, the combination, with a pair of bars or plates, of a cap adapted to receive corresponding ends of the bars or plates therewithin and provided with longitudinally spaced seats for each such end, a wedge block mounted in each cap and movable between and of less length than the distance between the seats therein, said wedge block tending to expand said bars or plates between said seats, and means connected with said cap for so moving the said block.

---

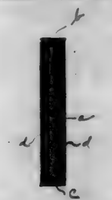
1,558,798. PUMP HOUSING AND OPERATING MECHANISM. STEVEN F. EVELYN, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed Mar. 27, 1922. Serial No. 547,334. 21 Claims. (Cl. 103—126.)



1. In combination, a housing, a shaft mounted to rotate in the housing, a gear secured to the end of the shaft, a gear case secured to the housing for enclosing said gear and having an opening in line with the central portion of said gear, a plate for closing said opening, a pump secured to said plate and having a driving shaft extending towards said gear, and driving connections between said first mentioned shaft and said pump driving shaft.

---

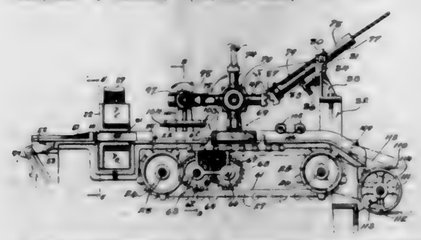
1,558,799. ASPHALT EXPANSION JOINT. ALBERT C. FISCHER, Chicago, Ill. Filed July 28, 1922. Serial No. 578,181. 7 Claims. (Cl. 94—18.)



1. An expansion joint for separating sections of paving, comprising a thin wooden strip providing a cellular compressible center and a bituminous jacket on opposite sides and at the top edge thereof; that portion of the jacket overlying the top edge being of greater thickness and providing a crown to resist traffic wear.

---

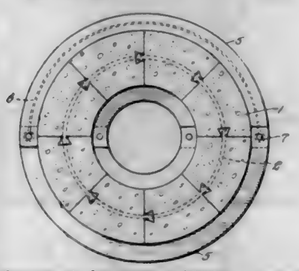
1,558,800. LABELING MACHINE. EDWARD F. FOSTER, Milwaukee, Wis. Filed May 8, 1922. Serial No. 559,403. 9 Claims. (Cl. 216—55.)



1. The combination of a magazine containing labels gummed on one side, means for removing said labels from said magazine with their gummed sides held outwardly and for carrying said labels to a package, and means for intermittently spraying steam upon the gummed side of said labels after the labels leave the magazine and before reaching the package, such means furnishing steam only when a label opposes it.

---

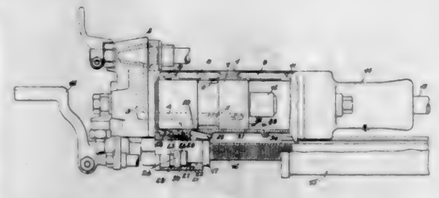
1,558,801. INTERLOCKING REENFORCED CONCRETE CONSTRUCTION. CHARLES FREY, Chicago, Ill. Filed May 26, 1924. Serial No. 715,950. 2 Claims. (Cl. 72—9.)



1. Reenforcement for cement blocks, a cement block, a projecting dove-tailed tongue on said reenforcement and dove-tailed groove in said reenforcement, said tongue and groove being adapted to form close fitting reenforced joints between cement blocks.

---

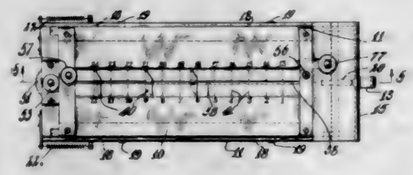
1,558,802. PNEUMATIC TOOL. ELMER GEORGE GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 26, 1919. Serial No. 299,704. 29 Claims. (Cl. 121—9.)



1. In a drilling apparatus, a tool, means for moving said tool comprising a member carried by said tool, and having its axis laterally disposed from the tool axis, and a cooperating member adjustable relatively thereto, and means for controlling the operation of said tool including means carried by one of said members and coaxially arranged with respect to the other thereof.

---

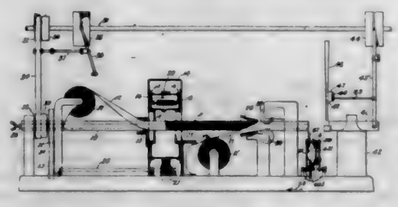
1,558,803. COMBINATION LOCK. JOHN GEMZA, Brownville, Me., and CONSTANTY BALAZY, Donora, Pa. Filed Sept. 15, 1924. Serial No. 737,653. 5 Claims. (Cl. 70—113.)



1. In a combination lock, a rectangular casing, a movable locking element having fixed thereto a pair of bars extending along the opposite sides of the casing, projections spaced along said bars, a series of transversely movable plunger members adapted to be selectively moved to engage at their ends between said projections to lock the said element, and devices adapted to selectively engage said plunger members to move certain ones thereof to operative position.

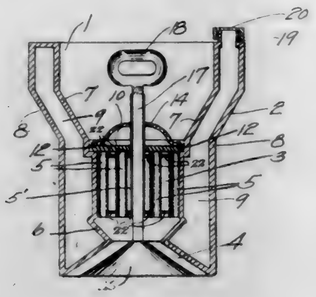
---

1,558,804. METHOD OF AND APPARATUS FOR MAKING REENFORCED PRODUCTS. EUGENE L. GREENEWALD, Washington, D. C. Filed Nov. 20, 1918. Serial No. 263,327. 89 Claims. (Cl. 93—39.)



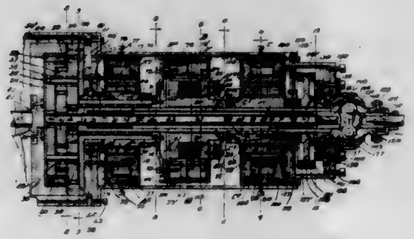
1. The method of corrugating and reenforcing a rod or tube that comprises applying corrugating means to the outer surface of a rod or tube while said rod or tube is moved in the direction of its axis and retaining said corrugating means in place on the rod or tube to reenforce the same.

1,558,805. MILK STRAINER AND COOLER. CARL E. HENKE, Hutchinson, Minn. Filed Mar. 18, 1921. Serial No. 453,260. 1 Claim. (Cl. 31—4.)



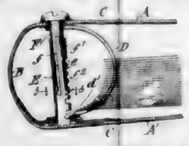
A milk strainer and cooler for filling containers, comprising in combination a double walled funnel-like structure having a filling port, the inner wall thereof, near the lower end, being contracted inwardly to form a ledge upon which the milk may fall, the said inner wall being then flared outwardly to meet the outer wall, and there being an annular recess formed medially of the inner wall; a circular strainer adapted to releasably engage the said annular recess of the inner wall; a float adapted to enter the container, and having an indicator rod slidingly extended up through the apparatus.

1,558,806. ELECTROMECHANICAL POWER-TRANSMISSION MECHANISM. ALMA C. HESS, Jr., Union, Oreg. Filed Dec. 7, 1921. Serial No. 520,562. 18 Claims. (Cl. 290—10.)



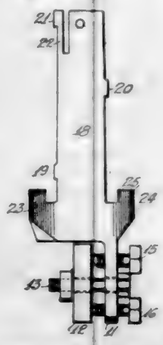
1. A mechanism for transmitting the power from the motor of a vehicle to the driving wheels thereof, comprising a motor shaft, a transmission shaft, a planetary gearing, a driving coupling means between said planetary gearing and said motor shaft, a driving connection between said planetary gearing and said transmission shaft, a plurality of dynamo electric machines arranged independently over the said transmission shaft and operatively connected with said gearing for effecting the starting up of the motor of the vehicle and further for varying the speed of the transmission shaft from the minimum power of the motor to the maximum power thereof, and means for selectively controlling the operation of said dynamo electric machines for the purpose aforesaid.

1,558,807. LOOSE-LEAF BINDER. HENRY STANLEY HORN, East Orange, N. J. Filed Apr. 17, 1922. Serial No. 553,820. 5 Claims. (Cl. 129—13.)



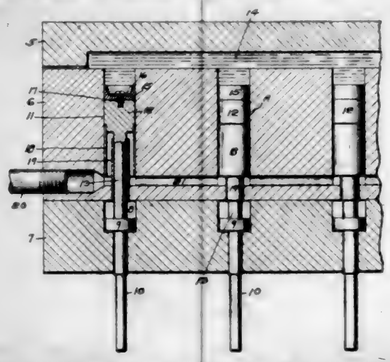
1. A loose leaf binder comprising a pair of telescopic members having interengaging means and a resilient element connected with said members adjacent their remote ends.

1,558,808. LAMP BRACKET. SAMUEL P. HULL, Yonkers, N. Y. Filed Oct. 16, 1924. Serial No. 744,056. 7 Claims. (Cl. 240—57.)



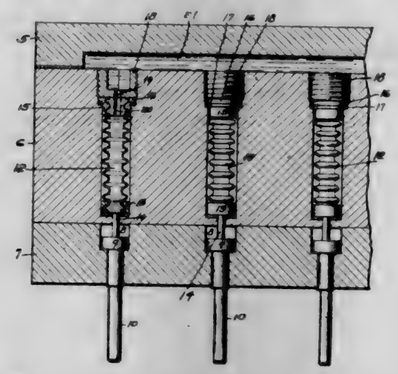
6. In a lamp support of the class described, the combination of a one piece bracket with a vertical stem having a plurality of spaced inclined planes, a lantern with a plain sleeve engaging said stem, means associated with said stem for determining the horizontal position of said lantern and means including said inclines for determininig the vertical position of said lantern.

1,558,809. MEANS FOR INSURING UNIFORM PRESSURE UPON EXPLOSIVE CHARGES OF DETONATORS. DANIEL D. HUYETT, Wilmington, Del., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed June 23, 1925. Serial No. 39,093. 6 Claims. (Cl. 86—20.)



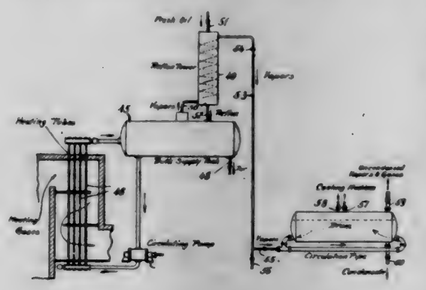
6. A device of the character described comprising a plurality of press points, a plurality of pistons in alignment therewith and exerting pressure thereon, cylinders in which said pistons move, sleeves having fluid tight engagement with the pistons and movable therewith and tubes projecting upwardly from the lower ends of the cylinders into said sleeves, there being a pressure fluid discharge conduit leading from the lower ends of said cylinders.

1,558,810. MEANS FOR INSURING UNIFORM PRESSURE UPON EXPLOSIVE CHARGES OF DETONATORS. DANIEL D. HUYETT, Wilmington, Del., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed June 23, 1925. Serial No. 39,094. 4 Claims. (Cl. 86—20.)



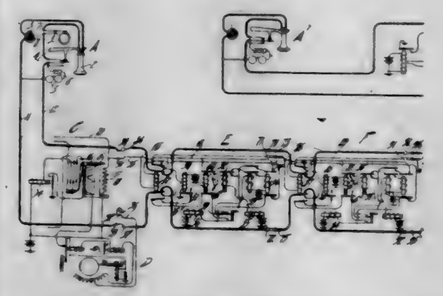
2. The combination with a movable press head, a plurality of press points, carried thereby, a plurality of elements having expansible walls mounted in alignment with said press points and comprising portions bearing upon said points, compression nuts for securing said elements in place and means for admitting pressure fluid, from a common source, to all of said elements through said compression nuts.

1,558,811. PROCESS FOR CONDENSING VAPORS. EDWARD W. ISOM, Locust Valley, and JOHN E. BELL, Brooklyn, N. Y., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Original application filed June 23, 1921, Serial No. 479,796. Divided and this application filed Nov. 12, 1924. Serial No. 749,408. 6 Claims. (Cl. 196—94.)



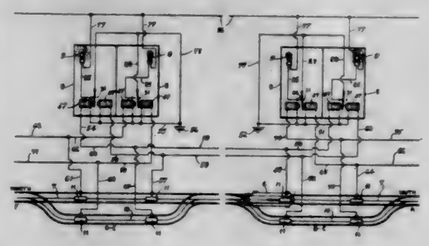
1. An improved method of condensing hydrocarbon vapors, which comprises maintaining a body of condensate of corresponding composition, cooling said body, circulating a stream of said condensate from and to said body through an external circuit, injecting the vapors into said circulating stream and maintaining the circulation by the injection of the vapors.

1,558,812. AUTOMATIC TELEPHONE SYSTEM. EMIL JACOBSEN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 11, 1917. Serial No. 174,013. Renewed June 22, 1925. 87 Claims. (Cl. 179—27.)



2. In a telephone system, a temporarily establish connection including in serial relation an automatic switch, a trunk line, and an operator's cord circuit, a signal at the operator's position, a calling device at the calling substation for controlling said switch, a relay responsive to the operation of said calling device after the connection is established for reversing the direction of current flow in said trunk line, and a device responsive to such reversal to actuate said signal.

1,558,813. RAILWAY-SIGNAL SWITCH. HENRY KASSIK, Yonkers, N. Y. Filed Apr. 6, 1925. Serial No. 20,994. 7 Claims. (Cl. 246—84.)

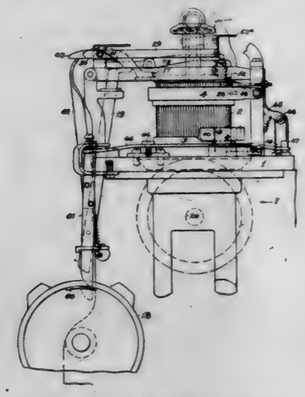


6. In a railway signal switch, in combination with the trolley wheel of a car, a signal box including signal lights, a circuit for lighting said lights, a contact plate mounted in said box and connected to one conductor of said lighting circuit, a contact post carried by said box and connected to the other conductor of said lighting circuit, a breaking post mounted on said box, a fork member pivotally mounted on said contact plate and in continuous engagement therewith, one of the prongs of said fork member adapted to engage either said contact post or said breaking post, a spiral spring capable of pressing against the handle portion of said fork member to hold one prong thereof normally in engagement with either said contact post or said breaking post, a contact finger operatively connected to said fork member, sets of magnets mounted in said box and disposed at either side of said contact finger, said magnets capable of drawing said contact finger to either side of the pivot point of said fork member whereby said fork member is moved against the action of said spiral spring into engagement with either the contact post or the breaking post, respectively, upon the energization of the magnets, and means cooperating with said trolley wheel for energizing said sets of magnets.

1,558,814. PARACHUTE TOY. WILLARD E. KASTEAD, St. Petersburg, Fla. Filed Apr. 15, 1925. Serial No. 23,314. 1 Claim. (Cl. 46—37.)

In a toy of the class described, a casing formed in a pair of sections hinged together, an elastic having its ends fixed to the free edges of the sections of the casing, a parachute including a cord fixed to the casing, said parachute adapted to be folded and placed into the casing with the elastic thereabout so that said elastic will tend to open the casing and eject the parachute, a cord having one end fixed to the casing and adapted to be wound about the casing to hold it normally closed as the casing is being thrown into the air, and a spring associated with the sections of the casing to close the sections after the parachute has been ejected therefrom.

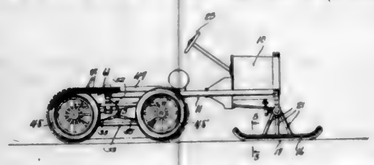
1,558,815. CIRCULAR-KNITTING MACHINE. HARRY E. KATZENMOYER, Rosedale, Pa., assignor of one-half to Patrick Henry Fisher, Wyomissing, Pa. Filed Sept. 30, 1922. Serial No. 591,517. 1 Claim. (Cl. 66—21.)



In a circular knitting machine comprising a circular series of needles, a main yarn guide therefor and main knitting cams for all the needles, an extra yarn guide movable into and out of position for feeding to a part circle series only of said needles, extra knitting cams for the latter movable into and out of the needle path, a sinker ring and a movable cam therein adapted to additionally actuate the sinkers in cooperation with said extra knitting cams, a lever mechanism adapted to actuate said extra yarn guide, a separate lever mechanism adapted to actuate both said extra knitting cams and said extra sinker ring cam, and a pattern controlled push rod jointly operative upon both said lever mechanisms.

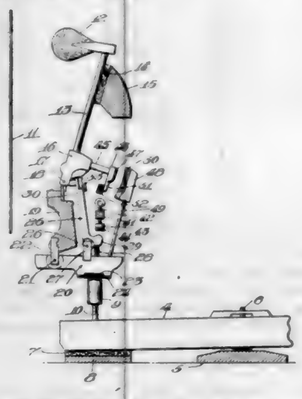
1,558,816. SLED ATTACHMENT FOR MOTOR-DRIVEN VEHICLES. GILBERT V. KING, Princeton, Wis. Filed Mar. 7, 1922. Serial No. 541,767. 6 Claims. (Cl. 305—8.)

6. In a sled attachment for motor-driven vehicles, the combination of an upper side frame member, a lower side frame member, means securing said members together, a spring, said lower side frame member having a chamber receiving said spring, a plunger movable in said lower side frame member and contacting with said spring, a link pivoted to said upper side frame member,



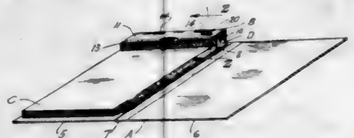
and means securing said link and said plunger together, whereby said link may be moved rearwardly against the action of said spring and forwardly by the force of said spring.

1,558,817. PIANO ACTION. CHARLES KOEHLER, Chicago, Ill. Filed July 9, 1923. Serial No. 650,380. 4 Claims. (Cl. 84—242.)



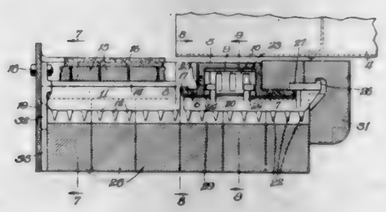
1. A piano action comprising in combination a hammer, a hammer stem therefor, a hammer butt, a pivotal mounting therefor, the lower portion of said hammer butt having a relatively narrow tongue, a wippen pivoted beneath the position of the hammer butt, a jack pivoted to said wippen and having its upper end bifurcated and adapted to receive the tongue of the hammer butt, there being an inwardly reaching slot in said tongue, a cord between the bifurcations of the jack adapted to engage said slot, a sidewise projecting heel on the jack, a stop on said heel for limiting its upward movement, and means for adjusting the elevation of said stop with respect to the wippen substantially as described.

1,558,818. PAD HOLDER AND PENCIL SHARPENER. BUNTARO KUMAGAI, Los Angeles, Calif. Filed June 23, 1924. Serial No. 721,745. 3 Claims. (Cl. 120—1.)



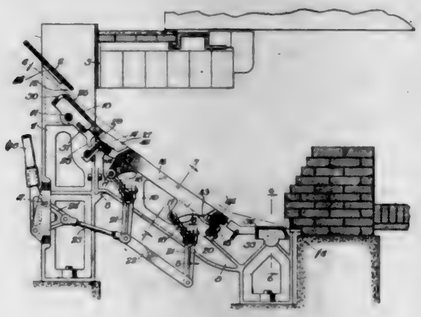
1. In a device of the character described, the combination of a pad holder head having opposing jaws for embracing a pad thereby providing a cavity therebetween, a spring catch mounted on said head in said cavity, and a pencil sharpener unit having a notch for the receipt of the catch whereby to provide a connection for detachably holding said unit in the cavity of said head.

1,558,819. FURNACE-FIRE-ARCH CONSTRUCTION. ROBERT H. KUSS, Chicago, Ill., assignor to K-R Furnace Company, a Corporation of Illinois. Filed May 12, 1921. Serial No. 468,926. 20 Claims. (Cl. 110—99.)



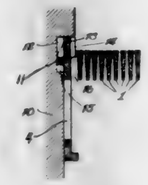
1. In furnace fire arch construction, the combination of a transverse hollow metal supporting member, blocks forming the lower surface of the arch, parallel means to engage the blocks in a plane below said member, extending longitudinally from block to block to hold the blocks in longitudinal rows, so that the members of each row all directly engage the same horizontal support, having provisions for the circulation and passage of cooling air over the blocks and around the supporting means and down to the space below the arch, thereby to cool and prevent the supporting means from burning out, and means to supply cool air to said member, so that air passes into and from said member to said provisions in the arch construction, and then to the fire.

1,558,820. FURNACE-GRATE CONSTRUCTION. ROBERT H. KUSS, Chicago, Ill., assignor to K-R Furnace Company, a Corporation of Illinois. Filed May 12, 1921. Serial No. 468,927. 17 Claims. (Cl. 110—33.)



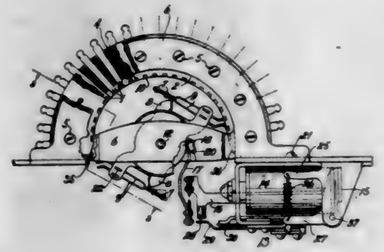
1. In a furnace grate, the combination of stationary inclined bars arranged in groups, with the bars of each group united at their lower ends but separated at their upper ends, movable inclined bars alternating with the stationary bars, the stationary bars extending beyond the upper and lower ends of the movable bars, and mechanism to operate said movable bars and to raise and lower them a distance to move the fuel on the grate.

1,558,821. FURNACE AIR-SUPPLY CONSTRUCTION. ROBERT H. KUSS, Chicago, Ill., assignor to K-R Furnace Company, a Corporation of Illinois. Filed June 28, 1921. Serial No. 479,748. 5 Claims. (Cl. 110—75.)



1. In furnace grate construction, the combination of side frame members spaced apart, a grate structure between said members, side bars disposed on the upper edges of said members and having their inner sides provided with teeth overhanging the inner sides of said members, interlocking means on said bars to extend down a distance outside said members, means on said members to engage said interlocking members, said bars extending above the plane of the grate, and outer walls disposed in position to maintain said bars in position on said members, with space between said members and the grate structure to permit air to pass upwardly between said teeth to the sides of the bed of fuel on the grate.

1,558,822. SELECTOR SWITCH. CLARENCE I. BAKER, Elizabeth, N. J., assignor to Western Electric Company Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 2, 1923. Serial No. 672,323. 6 Claims. (Cl. 179—27.5.)

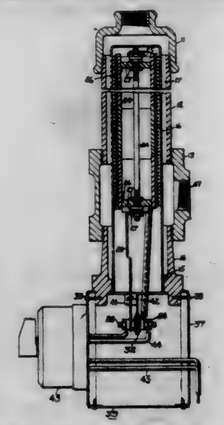


1. A rotary switch comprising, a plurality of units each consisting of a layer of insulated terminals arcuate in form paralleled by an arcuate serrated metal strip, a rotatable member equipped with a plurality of wipers, one or more wipers cooperatively associated with each unit and capable of passing over the contacting surfaces thereof, thereby electrically connecting said metal strip with the terminals in succession, and electromagnetic means for moving the rotatable member.

1,558,823. WATER HEATER. GEORGE M. BAYNE, Hamilton, Ontario, Canada, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 23, 1923. Serial No. 670,847. 6 Claims. (Cl. 219—38.)

1. In an electric water heater, in combination, an elongated inner casing having a closed upper end, an electric heating element in the upper part only of said inner casing, terminal leads connected thereto and extending beyond the lower end of said inner casing, and

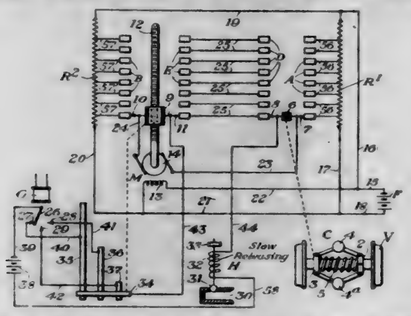
an elongated outer casing enclosing said inner casing, operatively connected thereto at its lower end only, and providing an annular water chamber, said outer casing



having an outlet at the top thereof and an inlet intermediate its ends, that portion of the water chamber below the inlet constituting a thermal lock for the terminal leads.

---

1,558,824. RAILWAY VEHICLE GOVERNING APPARATUS. CHARLES R. BEALL, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 1, 1924. Serial No. 723,528. 11 Claims. (Cl. 246—182.)

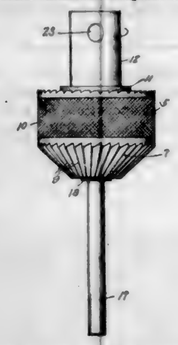


4. In combination, a railway vehicle, a speed responsive device operatively connected with a wheel of said vehicle, two resistances on the vehicle each connected across a source of current, a controlling contact operated by said device and moved into engagement with different points on one resistance according to the speed of the vehicle, a controlled contact movable into engagement with different points on the other resistance, a motor for moving said controlled contact, means causing operation of said motor when said two contacts do not engage points of equal potential on said two resistances, and governing apparatus on the vehicle controlled at least in part by the position of said controlled contact.

---

1,558,825. TOOL FOR REAMING VALVES AND VALVE SEATS. LAWRENCE O. BEARD, Lancaster, Pa. Filed May 31, 1923. Serial No. 642,621. 3 Claims. (Cl. 90—12.5.)

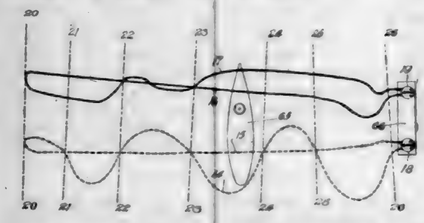
1. A reamer comprising a cylindrical member having a concave cavity and a conical extremity, said cavity and said extremity formed with cutting teeth, a ratchet member having a concave extremity formed with teeth spaced and inclined similarly to the teeth in said cavity, the teeth on said ratchet member adapted to engage the teeth



in said cavity to rotate said cylindrical member when said ratchet member is rotated in one direction and means for rotating said ratchet member.

---

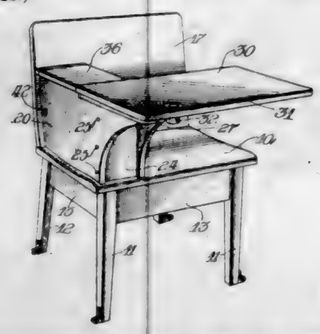
1,558,826. ELECTRICAL TESTING SYSTEM. MURRAY C. BEMIS, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 21, 1920. Serial No. 360,308. 6 Claims. (Cl. 177—385.)



1. A submarine detecting system comprising a plurality of submerged conductive loops, each said loop being characteristically transposed to form with another loop a series of observational sectors, and electro-responsive means connected to said loops and responsive to current impulses induced therein.

---

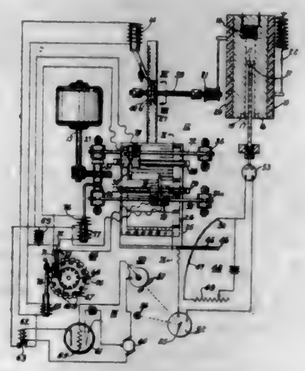
1,558,827. SCHOOL DESK. ALFRED C. BOLSTAD and ARCHIBALD E. MACQUARRIE, Minneapolis, Minn. Filed Sept. 27, 1922. Serial No. 590,786. 9 Claims. (Cl. 155—128.)



1. A self-supporting unitary school desk comprising a seat, a book container supported entirely by said seat and having a plurality of walls extending upwardly from the upper surface of said seat with said seat forming the lower wall of the container, and a desk top secured to and supported entirely by the forward portion of said book container and extending laterally from said book container in front of the portion of said seat to be occupied by the pupil.

---

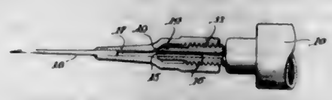
1,558,828. RECORDING CHRONOGRAPH. PORTER H. BRACH, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 23, 1921. Serial No. 454,818. 24 Claims. (Cl. 234—11.)



18. A recording chronograph for obtaining a thermal analysis of a sample to be tested comprising means for heating the sample between two predetermined degrees of temperature, means for recording the interval of time required by the sample to attain a predetermined increment or decrement in temperature, a thermocouple responsive to the temperature of the sample, a potentiometer automatically adjusted to balance the thermal electromotive force of the sample at the temperature of the sample, the sample having attained the predetermined increment or decrement in temperature, and means responsive to a balance between the thermocouple electromotive force and the potentiometer drop of potential for automatically adjusting the heating of the sample to develop a different temperature therein corresponding to a predetermined increment or decrement and for simultaneously adjusting the effective drop of potential of the potentiometer to a value corresponding to the electromotive force to be developed in the thermocouple after having attained the predetermined increment or decrement in temperature.

---

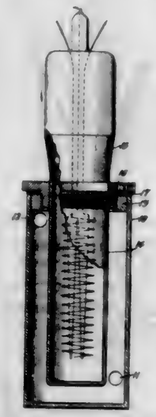
1,558,829. HYPODERMIC SYRINGE. WILLIAM BRODY, New York, N. Y. Filed May 1, 1924. Serial No. 710,878. 8 Claims. (Cl. 128—218.)



8. The combination with a hypodermic syringe having a nipple, of a needle shank having an opening to receive said nipple, said nipple being adapted to contact with the interior of the opening in the needle shank, at a single line about its surface.

---

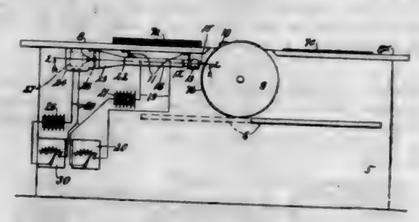
1,558,830. ELECTRON-DISCHARGE DEVICE. WILLIAM R. BROUGH, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 13, 1922. Serial No. 560,648. 1 Claim. (Cl. 250—27.)



In combination, a water jacket having an inwardly projecting screw-threaded annular flange, an electron discharge device comprising an envelope having a metal portion, and a screw-threaded collar carried by said metal portion to cooperate with said flange to produce a watertight connection between said water jacket and said metal portion.

---

1,558,831. STATIC-ELECTRICITY REMOVER AND DRIER FOR PRINTING PRESSES. GEORGE W. BRUNNER, OTTO G. WOOD, and CHARLES P. WOOD, St. Paul, Minn. Filed Apr. 14, 1924. Serial No. 706,251. 3 Claims. (Cl. 34—18.)



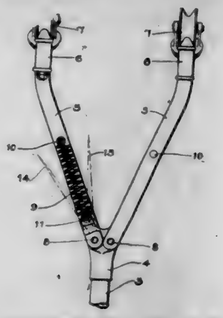
1. The combination with a printing press, of an air-blowing tube arranged to distribute air against the printing paper between the time it is printed and the time it is delivered from the press, and means for heating said air before it reaches the paper; said air-blowing tube extending parallel to the face of the moving paper and having perforations in the side adjacent the paper; said tube having also a longitudinal wing to prevent upward escape of the heated air.

---

1,558,832. TROLLEY POLE. LELAND F. BURNHAM, Wilkinsburg, Pa., assignor to H. D. Nuttall Company, a Corporation of Pennsylvania. Filed July 5, 1922. Serial No. 572,932. 6 Claims. (Cl. 191—57.)

1. The combination with a trolley pole, of a pair of collector-supporting arms pivotally mounted thereupon,

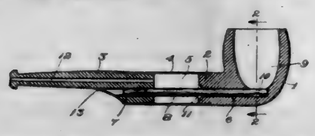
a helical centering spring for each of said arms, one end of each spring being connected to its associated arm



at a point intermediate the ends of the arm and the other end thereof to the pole head.

---

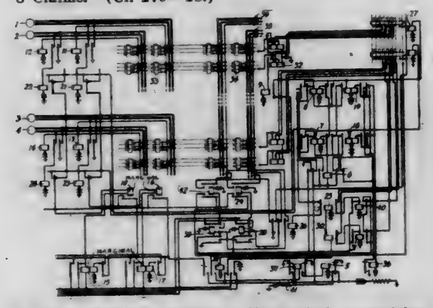
1,558,833. TOBACCO PIPE. ROBERT BUTLER, Boston, Mass. Filed Apr. 28, 1925. Serial No. 26,508. 4 Claims. (Cl. 131—12.)



1. A tobacco pipe having a condensing chamber, a mouthpiece having an inlet passage leading from the outside air to said chamber, a tube extending across the lower portion of the fire chamber of the bowl, thence through the condensing chamber and into said inlet air passage in the mouthpiece to communicate with the outside air, said tube having a port communicating with the fire chamber at or near the bottom of said fire chamber and so constructed and located that the smoke shall divide to enter the tube, said tube having intermediate its ends a port which communicates with said condensing chamber, the portion of the tube on one side of said last mentioned port constituting an air passage and the portion of the tube on the other side of said port constituting a smoke passage.

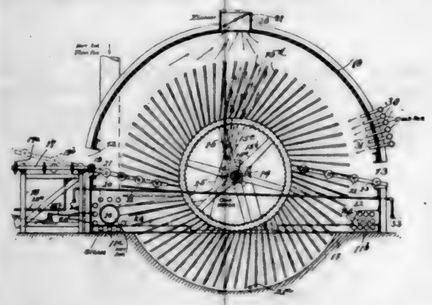
---

1,558,834. TELEPHONE SYSTEM. WARREN W. CARPENTER, Queens, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 31, 1923. Serial No. 660,305. 8 Claims. (Cl. 179—18.)



1. In a telephone system, a line switch comprising a plurality of sections each serving a different group of lines, a testing and controlling means common to all of said sections, and a marker for temporarily associating said means with said different sections.

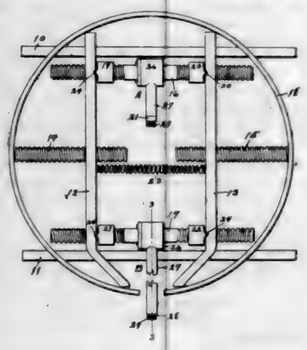
1,558,835. DRIER. ROBERT CATHCART, Cleveland, Ohio, assignor to The Lino Paint Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 2, 1918. Serial No. 247,927. 22 Claims. (Cl. 34—19.)



11. In a drying apparatus, a chamber having an inlet opening at one point and an outlet opening at a different point, a conveyor for conveying articles from the inlet point to the outlet point, heating means extending adjacent the inlet point, means for conveying a heating medium and for discharging the same onto the articles carried by the conveyor while passing through a predetermined portion of their path of movement, means for directing a cooling medium onto the articles after passing from the heating medium, and an outlet at the top of the chamber.

---

1,558,836. RING EXPANDER. FLOYD W. CHENOWETH, Perry, Iowa. Filed Mar. 10, 1921, Serial No. 451,282. Renewed Feb. 27, 1925. 4 Claims. (Cl. 157—1.)



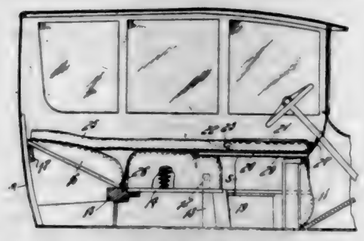
1. A ring-expanding device of the class described, comprising a support, a bar fixed to said support, a bar parallel with the first bar and slidable on the support, separate pressure devices adjustably mounted at central portions of the respective bars, pressure devices mounted loosely through both of said bars adjacent the respective ends thereof, said last-named pressure devices having opposite screw connections with the respective bars, and lever means for rotating the last-named pressure devices.

---

1,558,837. CONVERTIBLE BODY FOR MOTOR CARS. THEODORE CHREY and ERNEST R. MILLIGAN, Bremerton, Wash. Filed Jan. 22, 1924. Serial No. 687,851. 1 Claim. (Cl. 5—118.)

In a device of the class described, a mattress, a flexible supporting strip therefor, adapted to extend transversely of a vehicle body, means retaining the side edges

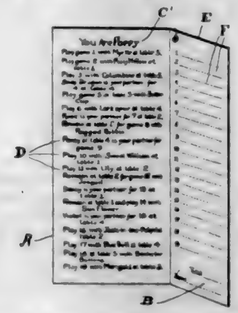
of the strip, reinforcing slats connected with the under side of a portion of said strip, movable resilient supporting elements under the forward and rear portions of the slats, and an additional movable resilient support



under that portion of the strip not reinforced by slats, said strip being secured at points adjacent to the rear base portion of one of the resilient supports for the slats, and being secured at the front end of the strip.

---

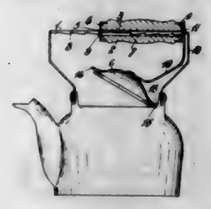
1,558,838. GUIDE AND SCORE CARD FOR CONTROL IN PROGRESSIVE GAMES. CHARLES S. CLARK, Kew Gardens, N. Y. Filed Oct. 17, 1923. Serial No. 669,006. 6 Claims. (Cl. 283—49.)



1. A series of guide cards for games of a progressive tournament, comprising a series of engraved, printed or like permanent guide forms including throughout a predetermined set of common-subject names as play-names, successive directions each coupling a play-name with the progressive order of games, and a different title on each card consisting of one only of said play-names.

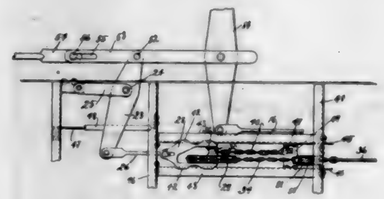
---

1,558,839. MEANS FOR USE IN RAISING THE LIDS OF KETTLES AND LIKE VESSELS. PERCY CLARK, Melbourne, Victoria, Australia. Filed Apr. 23, 1925. Serial No. 25,352. 6 Claims. (Cl. 53—9.)



1. A device for raising the lids of kettles, including a handle fastened to the kettle, a lid having an upstanding rigid link slidable on said handle, and a sliding member on the latter which controls the sliding of said link.

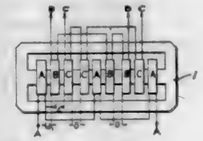
1,558,840. BRAKE MECHANISM FOR RAILWAY CARS. WILLIAM H. CLEGG, Montreal, Quebec, Canada, assignor to Universal Draft Gear Attachment Company, a Corporation of Illinois. Filed June 12, 1924. Serial No. 719,694. 3 Claims. (Cl. 254—149.)



1. In a brake mechanism for railway cars, the combination of a brake staff, a hand brake connection, a brake jaw attached to the connection, means to support the jaw with free longitudinal movement, a lever fulcrumed in the jaw having an arm provided with a drum surface of large diameter connected with a drum surface of small diameter by an inclined face, a chain co-operating with said drum surfaces and inclined face, and in winding engagement with the brake staff, said lever having another arm provided with a drum surface of small diameter and a chain cooperating with the last mentioned arm and an anchorage.

---

1,558,841. TRANSFORMER WINDINGS. HORACE L. COLE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 6, 1923. Serial No. 655,839. 8 Claims. (Cl. 175—356.)



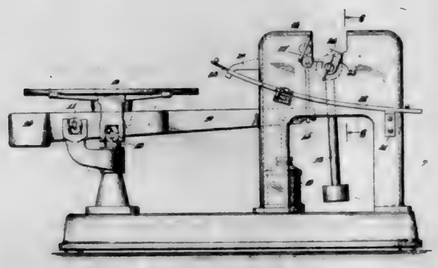
1. In an electrical device, a core member, three or more series of coils thereon, said series of coils being so placed relative to one another that substantially equal distances, across which there is a magnetomotive force which produces leakage reactance, exist between the coils of any one series and the coils of any other series.

---

1,558,842. REVERSIBLE BADGE. LUTHER F. COLE, Sparks, Nev. Filed Oct. 6, 1924. Serial No. 742,050. 6 Claims. (Cl. 40—1.6.)

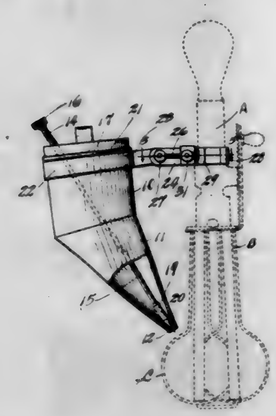
3. A reversible badge comprising a plate having indicia provided at each face thereof, and having an elongated slot adjacent one of its margins, a pin having an eye accommodated in said slot whereby the pin is pivotally connected to said plate, and a keeper shiftable to receive the free end portion of said pin at either face of said plate.

1,558,843. WEIGHT-INDICATING AND PRICE-COMPUTING SCALE. ROBERT CRAIG, Endicott, N. Y., assignor to The Computing-Tabulating-Recording Company, New York, N. Y., a Corporation of New York. Filed Oct. 28, 1919. Serial No. 333,902. 13 Claims. (Cl. 265—37.)



1. In a computing scale for weighing goods and multiplying factors representing the weight of the goods and price per unit-weight, the combination with a support adapted to receive the goods and to be moved thereby; and a calculating device comprising parts capable of relative adjustment and bearing logarithmic scales upon which the factors to be multiplied can be set off; of optical means controlled by said goods support and comprising a part displaced in accordance with the weight upon said support for setting off on said calculating device the logarithm of the factor corresponding to weight on one part of the device and simultaneously on another part the sum of the logarithms of weight and of price per unit-weight.

1,558,844. OIL DROPPER. JOHN J. CRONIN, Dallas, Tex. Filed Jan. 15, 1925. Serial No. 2,643. 2 Claims. (Cl. 221—1.)



1. In a device of the class described, a support having beaters thereon and including a frame, a clip for connection to said frame and having an extended arm, a clamp mounted upon said arm for sliding and rotative adjustment, and a receptacle carried by said clamp and discharging upon said beater and adjustable relative thereto.

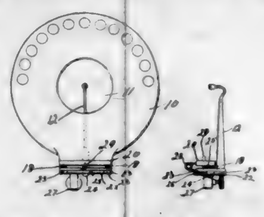
1,558,845. METHOD OF SIZING CELLULOSE FIBERS. JUDSON A. DE CEW, Mount Vernon, N. Y., assignor to Process Engineers Inc., New York, N. Y. Filed June 7, 1924. Serial No. 718,657. 8 Claims. (Cl. 92—21.)

1. The method of sizing paper which consists in withholding the precipitation of the rosin until after the beating action of the Jordan engine is complete.

1,558,846. PAPER-SIZING PROCESS. JUDSON A. DE CEW, New York, N. Y., assignor to Process Engineers, Inc., New York, N. Y., a Corporation of New York. Original application filed Apr. 11, 1923, Serial No. 631,371. Divided and this application filed July 14, 1925. Serial No. 43,621. 4 Claims. (Cl. 92—21.)

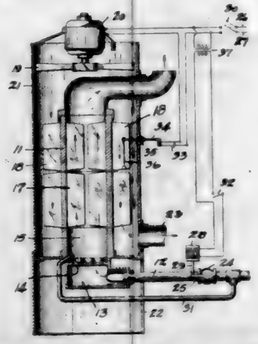
2. A method of sizing paper pulp, which consists in treating the pulp with rosin emulsions and colloidal aluminum hydrate, and after the rosin emulsions are coagulated, adding sulphate of alumina.

1,558,847. REPRODUCER MOUNTING. CHARLES J. DEL'MARMOL, Philadelphia, Pa. Filed Nov. 23, 1923. Serial No. 676,488. 6 Claims. (Cl. 274—35.)



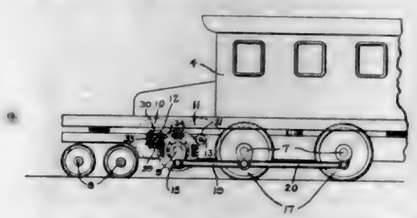
1. In a reproducer mounting, the combinaiton of a rigid supporting member, a stylus bar supporting plate, pins carried by the latter and bearing against the former, a spring having its ends positioned for action upon the supporting plate at diagonally opposite locations, means to support the center of said spring from the supporting member, and a stylus bar and stylus holder carried by the supporting plate.

1,558,848. HEATER. WILLIAM A. DOBLE, Jr., San Francisco, Calif., assignor to Doble Laboratories, San Francisco, Calif., a Corporation of California. Filed Mar. 13, 1922. Serial No. 543,431. 4 Claims. (Cl. 126—90.)



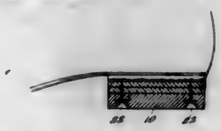
4. In an air heater having an element which is heated by the combustion of fuel, means for supplying fuel to the heater, a fan for driving air past the heated element, a motor for driving the fan, a circuit for the motor and means operative solely by variations in temperature of the element for closing the circuit at a predetermined maximum temperature of the element and for opening the circuit at a predetermined minimum temperature of the element.

1,558,849. FLEXIBLE LOCOMOTIVE DRIVE. GEORGE M. EATON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 11, 1921. Serial No. 468,595. 8 Claims. (Cl. 105—121.)



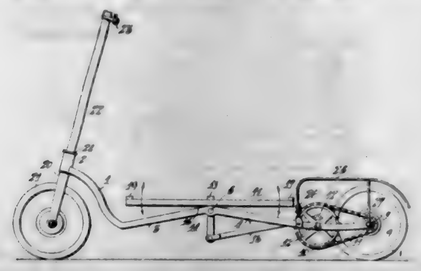
1. In combination, in a locomotive, traction wheels, a jack shaft extending transversely of the locomotive, gear centers mounted on the jack shaft, side rods connecting the traction wheels to the gear centers, gear rims carried by the gear centers, flexible elements enclosed between the gear rims and the gear centers, a pair of motors disposed on opposite sides of the jack shaft, and armature shafts driven by the motors and each provided, at its opposite ends, with pinions that mesh with the respective gear rims, the pinions of one of the said armature shafts being flexibly mounted.

1,558,850. RUBBER HEEL. WILLIAM G. EATON, Hull, Mass. Filed Aug. 23, 1922. Serial No. 583,820. 2 Claims. (Cl. 36—35.)



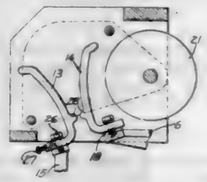
2. A rubber heel comprising a body portion provided with a plurality of nail washers embedded therein, and conical nail guides integral therewith extended and tapering from substantially the tread surface of the heel for directing nails from an automatic nailing machine through the nail washers.

1,558,851. TEETER CAR. LABROT S. EDWARDS and ROBERT O. CASE, Portland, Oreg. Filed May 18, 1925. Serial No. 31,116. 3 Claims. (Cl. 208—34.)



1. A teeter car comprising a frame, a driving wheel journalled at one end of said frame and a steering wheel mounted at the other end of said frame, said frame including forwardly and rearwardly inclined parts, a teeter platform mounted above said inclined parts, means for pivoting said platform at approximately its mid-length to said frame at the juncture of said inclined parts, a lever arm projecting from said platform at its pivot place, a crank shaft journalled in said frame and operative connections between said lever and crank shaft and between said crank shaft and said driving wheel.

1,558,852. ARC-EXTINGUISHING DEVICE. OTTO H. ESCHHOLZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 20, 1922. Serial No. 537,856. 7 Claims. (Cl. 175—294.)

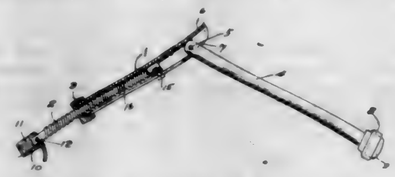


1. The combination with a pair of relatively movable contact members, of a pair of arcing horns located at a point removed from the contact members and spaced apart a distance less than the distance between the contact members when in fully-open position, and a blow-out device for rupturing arcs that form between the contact members and the arcing horns, the arcing horns having electrical connections to the contact members.

1,558,853. PROCESS FOR THE METALLIZATION OF PORCELAIN OR GLASS. ALPHONSE FLORENT EIJSSEN, Heerlen, Netherlands. Filed Dec. 12, 1924. Serial No. 755,580. 5 Claims. (Cl. 204—8.)

1. A process for metallising a dull surface of non-conducting hard material comprising rubbing the surface with a very small quantity of a viscous polyvalent alcohol by means of a metal brush and then depositing electrolytically a further metal coating.

1,558,854. BRAKE-ADJUSTING TOOL. NEIL FALCONER, San Francisco, Calif. Filed Dec. 22, 1924. Serial No. 757,570. 2 Claims. (Cl. 74—81.)

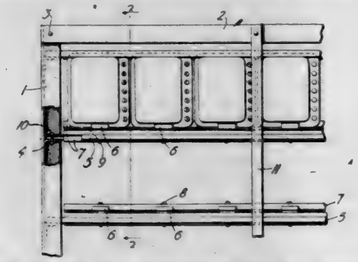


1. A tool of the character described comprising a tubular body, a threaded bar extending therefrom at one end and having a nut bearing against the end of the body, and a bar extending from and pivoted to the other end of the body.

1,558,855. APPARATUS RACK. JOSEPH C. FIELD, Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 7, 1921. Serial No. 506,164. 2 Claims. (Cl. 211—14.)

1. An apparatus rack comprising end standards, a two-branch strip, a plurality of two-branch resilient clips, a plurality of members between which said strip

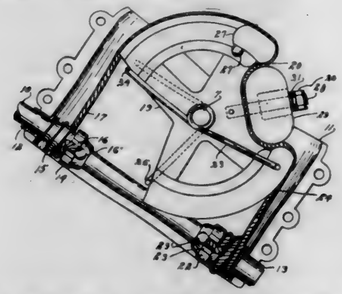
and clips are clamped with the clips spaced apart thus forming a unit, means for securing a plurality of units so formed to said end standards in spaced relation, each



opposed pair of clips cooperating with the branches of said strip to attach a pair of oppositely faced pieces of apparatus having edge portions which slip into the grooves in said strip and snap into said clips.

---

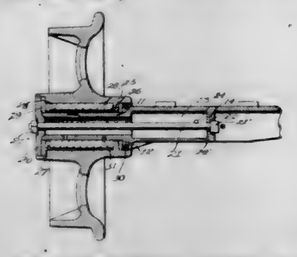
1,558,856. STEERING DEVICE. CHARLES L. FLORA, Sylvania, Ohio. Filed July 13, 1923. Serial No. 651,210. 6 Claims. (Cl. 74—79.)



1. A steering post, a pair of axially spaced grooved pulleys thereon, a member to be rocked, said member being provided with guide ways, flexible means fixed with each pulley and oppositely extending for coacting with the member guide ways and anchored with said member, and a take-up block carried by the member and engaging both flexible means.

---

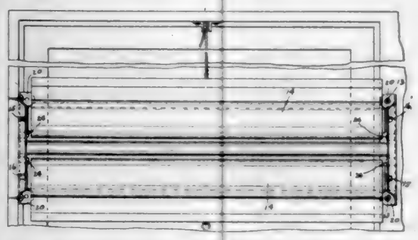
1,558,857. SELF-LUBRICATING AXLE. WALTER B. FLOYD, Columbus, Ohio, assignor to The Bonney-Floyd Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 7, 1924. Serial No. 742,184. 6 Claims. (Cl. 308—103.)



1. As an article of manufacture, an integral axle for a car having hollow integral spindles at its ends, said axle being formed between said spindles with a separate integral lubricant reservoir for each spindle, the reservoirs leading into the spindles, means for passing the lubricant to the exterior of the spindles, and integral body attaching means extending outwardly from the axle between the spindles.

---

1,558,858. REVERSIBLE BRACKET AND SHIELD FOR DOUBLE-SHADE ROLL. WILLIAM H. FORSE, JR., Anderson, Ind. Filed Mar. 28, 1925. Serial No. 19,073. 8 Claims. (Cl. 156—10.)



1. The combination with a plurality of roller shades, of a relatively rigid shade guard and light shield strip including a reinforcement and abutment forming longitudinally extending corrugated portion at each end, and a pair of brackets each having sockets for supporting said shades and a pair of groove forming projecting portions for securing said strip, said abutment forming corrugation being positioned between said groove forming projections for limiting movement of the shield in opposite directions in one groove.

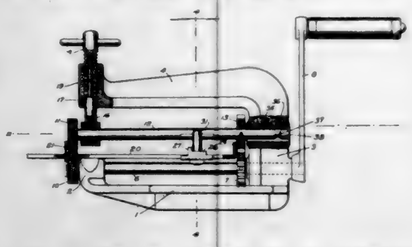
---

1,558,859. ELECTROLYTIC CONDENSER. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 17, 1920. Serial No. 389,595. 2 Claims. (Cl. 175—318.)

1. A structure for electrolytic condensers and the like comprising a pair of electrodes of filming material having a plurality of filming elements extending therefrom and so connected at their ends that the elements of one electrode project between the elements of the other.

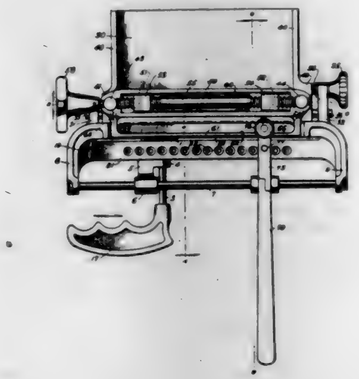
---

1,558,860. BELT-SLITTING MACHINE. ALEC J. GERRARD and LEROY F. HINTZ, Chicago, Ill.; said Hintz assignor to said Gerrard. Filed Apr. 29, 1924. Serial No. 709,798. 8 Claims. (Cl. 164—39.)



1. In a machine for trimming belts the combination of a cutter; a stationary driving shaft; a pivoted driven shaft geared thereto between said pivot and said cutter; means to propel a belt past said cutter; and means to vary the pressure of said propelling means.

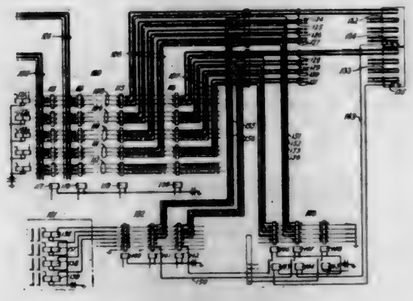
1,558,861. BELT SQUARING AND PUNCHING MACHINE. ALEC J. GERRARD, Chicago, and LEROY F. HINTZ, Highland Park, Ill.; said Hintz assignor to said Gerrard. Filed May 13, 1924. Serial No. 712,977. 15 Claims. (Cl. 164—15.)



1. In a belt squaring and punching machine the combination of a table; means to hold a belt on said table; means to cut square the end of the held belt; means to punch holes in the said belt; and means to adjust the held belt relatively to the punching means.

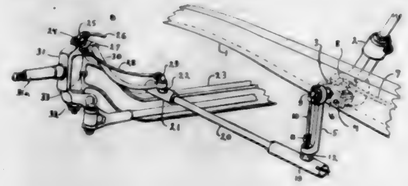
---

1,558,862. CONTROLLING MECHANISM. EARL S. GIBSON, Ridgewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 20, 1923. Serial No. 663,747. 9 Claims. (Cl. 179—27.)



1. In combination, a group of trunks, an automatic switch for selecting said trunks, a controlling device for controlling the selective operation of said switch, a multi-contact relay having a contact for each of said trunks, manual means, and means controlled jointly by said device and by said manual means for operating said relay to place a busy condition upon each of said trunks.

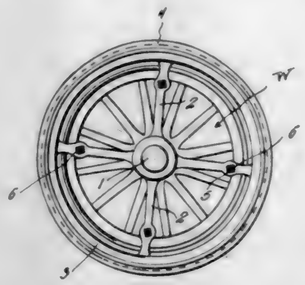
1,558,863. MEANS FOR LUBRICATING DRAG-LINK CONNECTIONS OF THE STEERING GEAR OF VEHICLES. FREDERICK H. GLEASON, New York, N. Y. Filed Sept. 22, 1921. Serial No. 502,890. 12 Claims. (Cl. 184—7.)



9. In a lubricating structure the combination with a steering gear shaft, of a drag link having a bearing, means for supplying lubricant to the steering gear shaft, and means for conveying lubricant from the steering gear shaft to the drag link bearing.

---

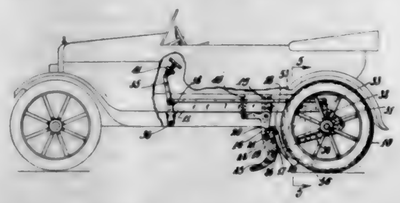
1,558,864. EMERGENCY WHEEL. JEAN T. GOYETTE, Cambridge, Mass. Filed July 29, 1924. Serial No. 728,918. 1 Claim. (Cl. 301—38.)



An emergency vehicle wheel embodying a central cup shaped cap for reception of the hub of the vehicle wheel, a rim, a plurality of radiating spokes connected at their inner ends to said cap and at their outer ends to said rim, said spokes being provided with transverse holes inward of said rim, a tire carried by said rim, and a plurality of hooked retaining bolts carried by said spokes and having their shanks extending through the holes in the latter.

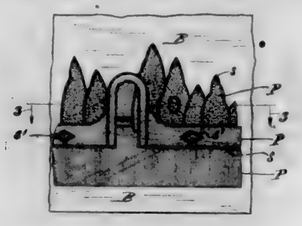
---

1,558,865. COMBINATION BRAKE AND NONSKID DEVICE FOR VEHICLES. MORRIS GREENMAN, New York, N. Y. Filed Mar. 9, 1923, Serial No. 623,984. Renewed Sept. 4, 1925. 4 Claims. (Cl. 188—4.)



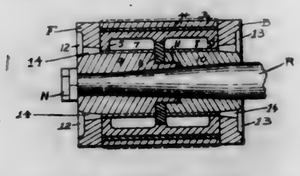
4. In an automobile, a brake shoe adapted to engage the wheel thereof, a non-skid member adapted to engage the ground, a sand delivery device, and a common operating means for all of the said parts.

1,558,866. DECORATIVE FABRIC. MORRIS W. GREENSTEIN, New York, N. Y. Filed Apr. 8, 1925. Serial No. 20,396. 2 Claims. (Cl. 2—278.)



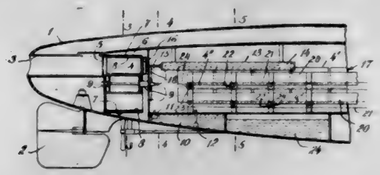
2. As an improved article of manufacture a decorative fabric adapted for the penetration of light therethrough, the same comprising a base of textile fabric, and patches of contrasting designs and colors superposed thereupon and united thereto by open-work stitches following the contour of such patchwork, the material embraced within said stitching being of multi-ply.

1,558,867. PLUNGER. DOLPHICE H. GREENWOOD, Pasadena, Calif. Filed Mar. 19, 1925. Serial No. 16,674. 14 Claims. (Cl. 74—109.)



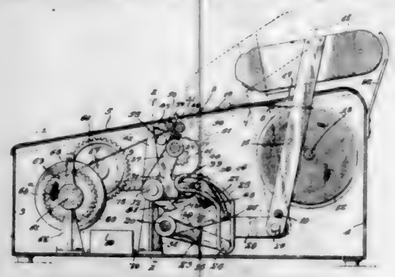
1. In a piston, in combination, a set of metallic members, a set of flanged packing members positioned between said metallic members, said packing members being composed of relatively pliant and rigid materials molded together, all of said members being provided with means whereby they may coact effectively to prevent any fluid from by-passing said members when said piston is subjected to fluid pressure.

1,558,868. MINE-DISCHARGING DEVICE. HUGO E. GRIESHABER, Groton, Conn., assignor to Electric Boat Company, a Corporation of New Jersey. Filed Oct. 29, 1923. Serial No. 671,290. 10 Claims. (Cl. 114—17.)



1. A device of the type described, comprising a mine discharge tube, a chamber arranged in close proximity to said discharge tube and having an outboard scuttle opening into said tube, a casing disposed within said chamber and having a plurality of mine tubes therein, said casing being movably mounted so that the mine tubes may be made to register consecutively with said discharge tube, and means for discharging the said registering mine through said discharge tube.

1,558,869. CHECK PROTECTOR. CHARLES A. GULLING and EVERETT W. CHENEY, Reno, Nev. Filed Nov. 25, 1924. Serial No. 752,149. 15 Claims. (Cl. 101—19.)

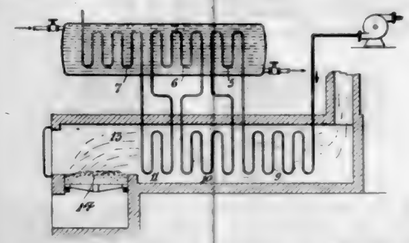


1. A check protector comprising means for carrying a roll of connected stubs and checks, a movable printer, means for causing the printer to move into printing relation with a check and back to normal inoperative position, means actuated to move the printed check, and means for defacing the printed portion of the check.

1,558,870. NECKTIE HOLDER. SHIGEZO HAMANO, Kure City, and TARO HAMANO, Higashi-Katsushika, Japan. Filed July 8, 1925. Serial No. 42,185. 3 Claims. (Cl. 24—57.)

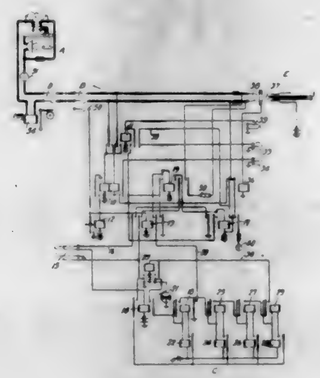
1. As an article of manufacture, a neck tie holder of the character designated, comprising a cross head section and a brace section, the latter formed with a yoke for engagement with a collar button, said sections being adjustively united by male and female screw connections, substantially in the manner and for the purpose set forth.

1,558,871. METHOD OF CONVEYING HEAT ENERGY. JOHN N. DUNDAS HENNAN, Old Colwyn, England, assignor to Power Specialty Company, New York, N. Y. Filed Dec. 11, 1918. Serial No. 266,221. 1 Claim. (Cl. 122—4.)



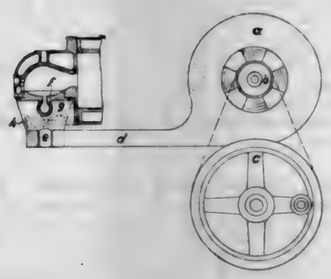
A fluid heater comprising a receptacle for the fluid to be heated, a plurality of heating coils in said receptacle adapted to heat the fluid by a transfer of heat from a heating medium flowing therethrough, each said coil having a progressively greater heating area than the preceding coil from which heating medium is received, a source of heat, a plurality of superheater coils connected intermediate said heating coils and adapted to receive heat from said heat source and to reheat the heating medium flowing therein, said successive superheater coils having a progressively greater heating area as the distance from the heat source increases.

1,558,872. TELEPHONE SYSTEM. EUGENE C. HELWIG, Hackensack, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 3, 1923. Serial No. 622,494. 11 Claims. (Cl. 179—27.)



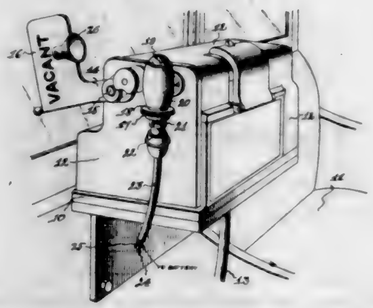
1. In a telephone system, a subscriber's station, an impulse sender, a link circuit adapted to be connected with said station, a signal associated with said link circuit, an automatic switch controlled by said sender for seizing said link circuit, and a chain of pairs of relays operable responsive to the seizure of said link circuit and independent of further actuation of said impulse sender for effecting the operation of said signal at a predetermined length of time after the link circuit is seized.

1,558,873. INTERNAL-COMBUSTION ENGINE. FRANZ-JOSEF HERMANN, Singen-Hohentwiel, Baden, Germany, assignor to Firm of Heinrich Lanz, Mannheim, Germany. Filed Feb. 6, 1925. Serial No. 7,425. 6 Claims. (Cl. 123—32.)



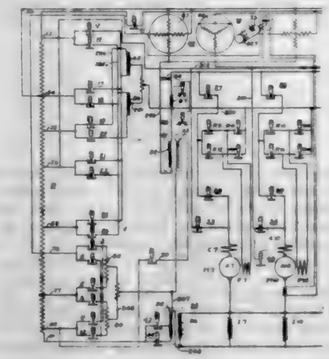
1. In an internal combustion engine, an incandescent head, a receptacle associated with said head and adapted to receive solid fuel the burning of which will heat said head, and means for delivering a current of air to said container to support the combustion of the fuel therein.

1,558,874. INDICATOR FOR TAXIMETERS. HOWARD B. HEWITT, Philadelphia, Pa. Filed July 23, 1924. Serial No. 727,682. 8 Claims. (Cl. 116—134.)



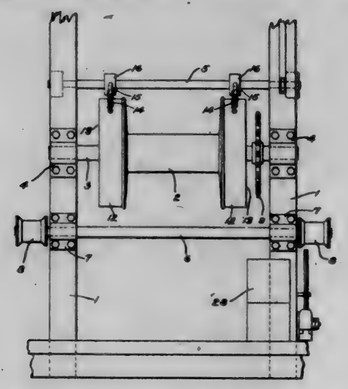
1. The combination of a taximeter, a signal, an indicator in juxtaposition to the signal and controlling the operation or inoperation of the taximeter, and means on said indicator for eclipsing said signal when said indicator is in a position to cause the inoperation of the taximeter.

1,558,875. SYSTEM OF CONTROL. LLOYD J. HIBBARD, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Dec. 17, 1919, Serial No. 345,486. Divided and this application filed Oct. 24, 1923. Serial No. 670,452. 6 Claims. (Cl. 172—179.)



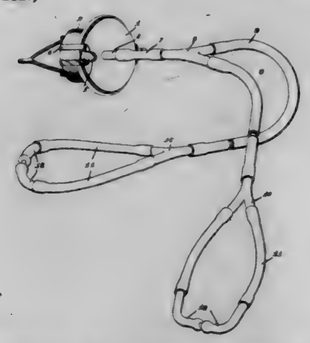
1. In a system of control, the combination with an alternating-current commutator motor having an interpole field winding, of a transformer for energizing the field winding, and means responsive to the load current adapted to automatically vary the ratio of the transformer primary and secondary voltages to vary the voltage applied to the interpole field winding.

1,558,876. BRAKING SYSTEM FOR ELECTRIC EARTH-BORING MACHINES. FREDERIC W. HILD, Los Angeles, Calif. Filed July 28, 1923. Serial No. 654,303. 9 Claims. (Cl. 188—174.)



5. A brake mechanism comprising a brake drum and a plurality of friction bands, means for releasing said bands from the drum and a gravity-actuated weight for engaging said bands with the said drum.

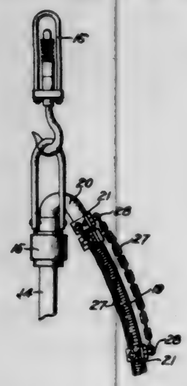
1,558,877. ATTACHMENT FOR TELEPHONE RECEIVERS. HARRY T. HIPWELL, Pittsburgh, Pa. Filed July 31, 1922. Serial No. 578,718. 1 Claim. (Cl. 179—182.)



An attachment for a telephone receiver, including a concavo-convex disk having a single opening therein, said opening being located at the center of the disk, diametrically opposed ears extending from the margin of the disk, a soft packing constituting a covering for the convex face of the disk for engaging the concave surface of a telephone receiver, there being a central opening within the packing concentric with the aperture in the disk, a nipple integral with the disk and communicating with the opening, separate sound conducting tubes in communication with the nipple, and an elastic band having opposed portions engaging the respective projections, said band cooperating with the projections to hold the attachment to a telephone receiver.

1,558,878. SAFETY ATTACHMENT FOR ROTARY HOSE. JAMES E. HITCHCOCK, Fullerton, Calif. Filed Feb. 10, 1923. Serial No. 618,331. 3 Claims. (Cl. 137—90.)

1. In a safety attachment for rotary hose, the combination of: a swivel; a standpipe; a flexible rotary hose connecting said swivel to said standpipe and exposed to special wear and strain in the region of this connection; a clamp secured on said hose between said



standpipe and said swivel; and non-extensible flexible means connecting said clamp to said swivel in such manner as to restrain the movements of said hose in case of breakage in said region.

1,558,879. LINEAR MEASURE OR SCALE. FREDERICK HENRY HOARE, London, England. Filed Mar. 12, 1924. Serial No. 698,674. 9 Claims. (Cl. 33—161.)

6. A linear measure or scale comprising in combination a hollow main body portion, a telescopic extension adapted to form a continuation from one end of said body portion, said extension unit being adapted to telescope within said hollow body portion, a member slidably secured to said body portion to be extensible from the other end thereof in the direction of its length and having a linear scale thereon reading from the outer end inwards, and an index secured to said body portion and arranged to read against the zero of the said scale when the member is in its retracted position.

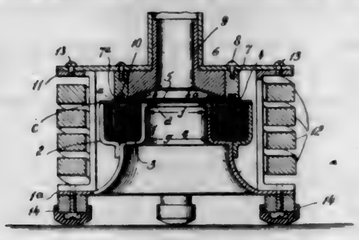
1,558,880. SOLVENT AND VEHICLE FOR RESINOUS AND GELATINIZED MATERIAL. CARL D. HOCKER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1919. Serial No. 344,178. 8 Claims. (Cl. 134—26.)

1. The process of forming a composition of matter which comprises adding free fatty acid to gelatinized castor oil.

1,558,881. LOUD-SPEAKING TELEPHONE. MARCUS C. HOPKINS, Washington, D. C., assignor, by direct and mesne assignments, to Hopkins Corporation, a Corporation of Delaware. Filed May 9, 1924. Serial No. 712,012. 14 Claims. (Cl. 179—115.)

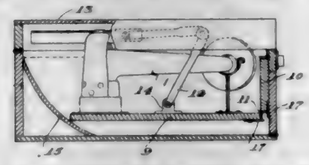
1. In a telephone instrument, means for maintaining a continuous magnetic field, a diaphragm therein, supporting means for said diaphragm, the peripheral portion of said diaphragm extending beyond said supporting means, and magnetic means operable to actuate the peripheral portion of said diaphragm.

11. In a telephone instrument, a diaphragm, means for producing a continuous magnetic field for said dia-



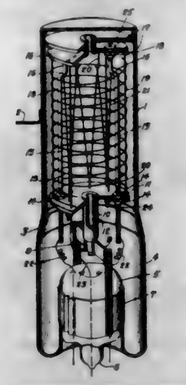
phragm, said means comprising a permanently magnetized bar of helical form with its poles on opposite sides of said diaphragm.

1,558,882. SOUND-REPRODUCING MACHINE. THOMAS HOUGH, London, England. Filed June 28, 1922. Serial No. 571,454. 3 Claims. (Cl. 274—2.)



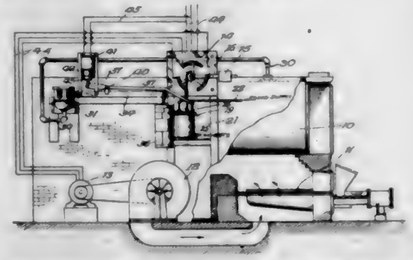
8. In a sound reproducing machine, the combination with a turntable, a tone arm and a casing for housing said turntable and said tone arm and including a lid adapted to move into and out of closed position covering said table and arm, of a platform adapted to be raised and lowered relatively to and alongside said turntable inside the casing comprising a pair of depressible platform leaves hinged together, one of said leaves being hinged to said casing, said tone arm being carried by the other leaf, a curved guide adapted to support the tone arm carrying leaf as it rises and falls and means including a jointed stay connecting the tone arm carrying leaf with said lid and adapted to raise and lower said platform leaves as the lid is opened and closed.

1,558,883. VACUUM TUBE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 20, 1921. Serial No. 462,916. 5 Claims. (Cl. 250—27.)



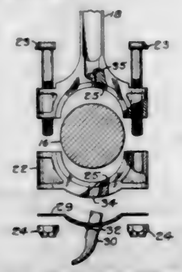
1. An electron discharge device comprising an evacuated vessel having a stem, an insulating plate supported from said stem, rods mounted in said plate near the periphery thereof, a second insulating plate supported by said rods and a filamentary cathode strung between said plates, each end of said cathode being connected to one of said rods adjacent said second plate.

1,558,884. PRESSURE-CONTROLLED MEANS FOR MOTOR REGULATION. CURTIS L. HOWSE, Detroit, Mich., assignor to Craig Damper Regulator Company, a Corporation of Delaware. Filed Mar. 2, 1922. Serial No. 540,650. 3 Claims. (Cl. 236—26.)



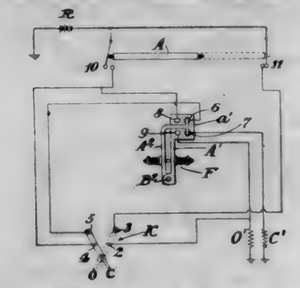
3. The combination with a source of supply of variable fluid-pressure, a motor to be driven at variable speeds according to variations of said pressure, and a speed-controlling rheostat for said motor having a movable element, of means for governing the position of said element including a piston connected with said arm, a hydraulic cylinder for said piston having provision for liquid supply, and a valve movable to control the position of said piston in the cylinder, a pressure-responsive device connected with the source of variable pressure, and operating connections between said pressure-responsive device and said valve including two levers pivotally connected and an electro-responsive device normally rigidifying said levers and adapted to release one said lever for pivotal movement on the other to free said valve for movement independently of the pressure responsive device.

1,558,885. INTERNAL-COMBUSTION ENGINE. GEORGE HUNT, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Oct. 8, 1924. Serial No. 742,474. 5 Claims. (Cl. 184—13.)



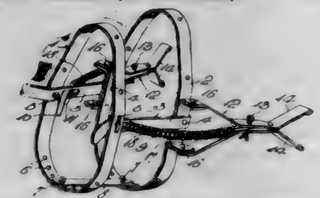
4. In combination with a connecting rod cap provided with bolt receiving openings adjacent its side edges and a central opening leading from the bearing surface to the lower face, an oil dip member comprising an attaching part and a dip portion, said attaching part comprising a sheet metal member formed to match the lower face of said cap and being provided with openings matching the openings in said cap, said dip portion comprising a tubular member received in the central opening in said attaching part and projecting above and below the same, the lower projecting portion being formed to provide a scoop face and the upper projecting portion being received in the central opening in said cap to locate said part in respect to said cap and being provided with outwardly bent portions to secure said dip portion to said attaching part.

1,558,886. AUTOMATIC REVERSER FOR DOOR ENGINES. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Mar. 22, 1922. Serial No. 545,916. 12 Claims. (Cl. 268—8.)



1. The combination with a door-engine, of a yielding connection between it and the door, a magnetic controller for the engine, a hand-switch therefor, and a switch operated by said yielding connection for automatically reversing the effect of said controller.

1,558,887. ANIMAL HEAD CHECK. LEWIS JACKSON, Simpson, Kans. Filed Mar. 30, 1925. Serial No. 19,441. 5 Claims. (Cl. 119—136.)



1. A device of the class described comprising a collar adapted to surround an animal's neck, choking means carried by said collar and projectible inwardly therefrom, and operating means for said choking means carried also by the collar and including rearwardly projecting members for disposition at opposite sides of the animal's body.

1,558,888. BAKING POWDER. ROBERT E. JONES, Longmont, Colo. Filed Feb. 14, 1925. Serial No. 9,346. 5 Claims. (Cl. 99—10.)

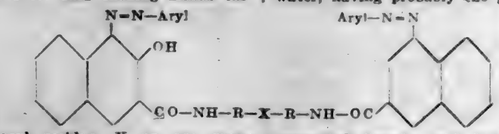
3. A baking powder comprising calcium acid phosphate, sodium bicarbonate, cornstarch and taka-diastase.

1,558,889. PENCIL. FERDINAND KAISER, St. Paul, Minn., assignor of one-half to George B. Leonard, Minneapolis, Minn. Filed Nov. 28, 1921. Serial No. 518,175. 8 Claims. (Cl. 120—18.)

1. A pencil comprising an outer shell having pressed internal threads, a resilient tubular combined lead pusher and lead magazine having pressed threads engageable with the pressed thread of said outer shell, an operating stem rotatable with said combined lead pusher and magazine but permitting the latter to slide thereon, and an operating head connected to the outer end of said operating stem, said combined lead pusher and magazine being made from a single piece of sheet metal bent to form a cylindrical magazine with threads thereon and with closed ends, one of the ends having an integral extension bent to form a stem terminating in a lead-receiving socket.

1,558,890. PROCESS FOR THE PRODUCTION OF NEW AZO DYESTUFFS INSOLUBLE IN WATER. GEORG KALISCHER, Mainkur, near Frankfort-on-the-Main, and KARL KELLER, Frankfort-on-the-Main, Germany, assignors to Leopold Cassella & Co., Gesellschaft mit beschränkter Haftung, a Corporation of Germany. Filed Mar. 24, 1925. Serial No. 18,054. 3 Claims. (Cl. 260—81.)

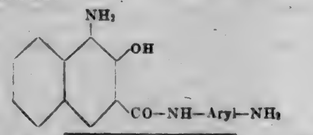
1. As new compounds the azo dyestuffs, insoluble in water, having probably the general formula:



wherein R means an aryl residue, X an azo group

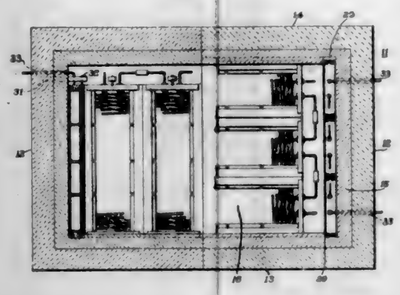
or an azoxy group

which when dry are orange to black powders, dissolving in sulfuric acid with a green to violet color and yielding upon reduction with stannous chloride two molecules of an aromatic amine and an aminoarylide of 1-amino-2- hydroxynaphthalene-3-carboxylic acid of the general formula:



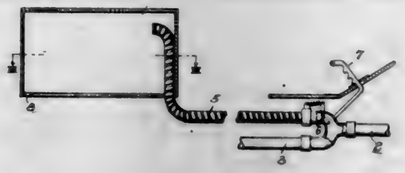
1,558,891. ELECTRIC HEATING UNIT. ALVIN D. KEENE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1923. Serial No. 680,893. 3 Claims. (Cl. 201—63.)

1. In an electric heating unit, the combination with a metal frame, and a plurality of refractory members supported thereby and having a plurality of spaced pockets in one surface thereof, of a resistor member



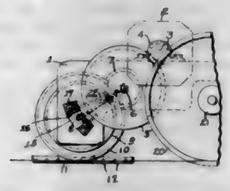
wound in a double pitch flat helix extending between spaced refractory members and having the rounded end portions located in said pockets.

1,558,892. ANIMAL CARRIER. ROBERT KENNINGTON and ROBERT S. SHEARN, Pittsburgh, Pa. Filed Apr. 18, 1925. Serial No. 22,543. 2 Claims. (Cl. 48—125.)



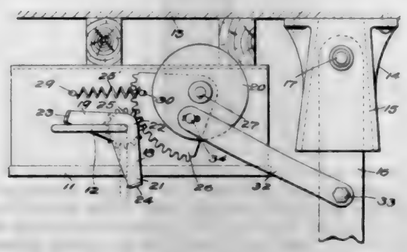
1. In a motor-driven vehicle the combination with the internal combustion engine which drives the vehicle of a chamber with a door in its wall borne by the vehicle, the exhaust pipe from the engine opening into the chamber.

1,558,893. ELECTRIC RACK-LOCOMOTIVE DRIVE MECHANISM. HARALD A. KJELSBERG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 6, 1922. Serial No. 592,781. 4 Claims. (Cl. 105—29.)



1. In combination with a rack-locomotive drive mechanism, means for vertically adjusting the horizontal axis of the rack gear relative to the working surface of the rail, said means comprising an adjustable spacing link connected at its respective ends to the rack gear and to the drive-gear axles and adapted to be fixed in its operative positions.

1,558,894. SWITCH-OPERATING MECHANISM. HUBERT K. KRANTZ, Brooklyn, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 21, 1920. Serial No. 432,339. 10 Claims. (Cl. 74—14.)

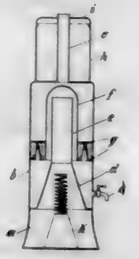


1. Mechanism for operating a switch having an operating shaft, a lever having a lost-motion connection therewith, and an operating member for actuating the said lever and normally yieldingly retained in a neutral position permitting independent movement of the said shaft to operative and inoperative positions.

1,558,895. INDICATING MEMBER. PAUL KREISEL, Newark, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1923. Serial No. 638,622. 7 Claims. (Cl. 116—129.)

4. An indicating device for a measuring instrument comprising a flat sheet-metal target having longitudinally aligned spaced raised portions of substantially U-shape in cross-section on one side thereof and a depressed portion of similar cross-section extending longitudinally between said portions to therewith constitute a socket, and a pointer having an end portion for insertion in said socket, the arrangement of parts operating when pressure is applied normal to the flat surface of the target, to bend the pointer between said raised portions to hold the target and pointer together.

1,558,896. EXTRACTING OR COFFEE MACHINE. LEOPOLD KIRSCHMANN, Berlin-Halensee, Germany. Filed Dec. 20, 1923. Serial No. 681,778. 1 Claim. (Cl. 53—8.)



An extracting- or coffee machine comprising in combination a hollow base, an outer cylindrical body on said base closed at both ends and having a central opening in the bottom plate, a source of heat in said hollow base projecting into the lower end of said cylindrical body, an upwardly projecting truncated cone on the bottom plate of said cylindrical body, a hollow cylinder open at both ends mounted on said truncated cone, a hood over the upper end of said cylinder, a double wire gauze fixed on the outer surface of said hood and on the inner surface of said cylindrical body and designed to receive the material to be extracted, a water reservoir on the perforated top plate of the cylindrical body, a tube serving as chimney for the heating gases extending from the top plate of the cylindrical body traversing said water reservoir and projecting through the lid of the same, and a tap cock at the lower end of said cylindrical body.

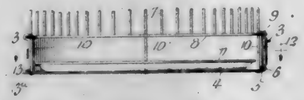
1,558,897. ALUMINUM CHLORIDE PROCESS. HENRY I. LEA, Santa Monica, and CLIFFORD W. HUMPHREY, Burlingame, Calif. Filed June 20, 1923. Serial No. 646,556. 10 Claims. (Cl. 23—95.)

1. A process that includes decomposing aluminum sulphate to separate its aluminum oxide content from its sulphur-oxygen content, using the sulphur-oxygen content for the production of a chlorinating agent, and chlorinating the oxide with that agent.

1,558,898. RAILROAD TICKET HOLDER, TIME TABLE, AND ADVERTISING DEVICE. WENDELL L. LEDINE, New York, N. Y. Filed May 10, 1922. Serial No. 559,731. 5 Claims. (Cl. 283—23.)

1. A holder for a transportation ticket having thereon indications corresponding to a plurality of trips between two stations, comprising a single sheet of stiff material foldable along a fold line to form two leaves and having on one face a time table between said stations, other space on the sheet being available for advertising matter, and hinging means of thin material at one edge of one of said leaves for attachment to one edge of the ticket so that the latter will be enclosed by the folder for protection thereby while leaving all faces of the leaves available for inspection of the matter appearing thereon.

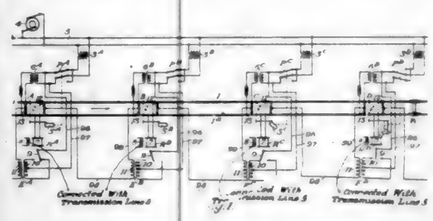
1,558,899. BIRDCAGE. LEWICKI J. LEON, Chicago, Ill. Filed June 23, 1924. Serial No. 721,676. 8 Claims. (Cl. 119—17.)



8. A bird cage, comprising a cage body and base, both circular in shape, said base having a surrounding marginal wall and a bottom wall, the latter being spaced below said cage body, a ring surrounding the cage body at its lower end and carried thereby, rods extending between said ring and bottom wall and connecting the two together, said marginal wall having a fixed and a hinged section, the latter for opening the base through its marginal wall, said rods being inside said fixed section, and a member inside said hinged section and being hinged at its lower end and having a hook at its other end to releasably engage said ring, the latter having a notch to receive said hook.

1,558,900. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LLOYD V. LEWIS, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1924. Serial No. 709,398. 3 Claims. (Cl. 246—63.)

1. In combination, a stretch of railway track divided into sections, means for supplying two alternating currents to the rails of each section, means responsive to the presence of a train in any one section for discontinuing the supply of one said current from the section in the rear and reversing the relative polarity of one said current in the second section in the rear; and train carried apparatus controlled by said currents and operating to enforce a high speed limit when both currents are present and one is of reverse relative polarity and a low speed limit when the supply of either current is discontinued, said apparatus operating to permit unlimited speed when both of said currents are present and both are of normal relative polarity.



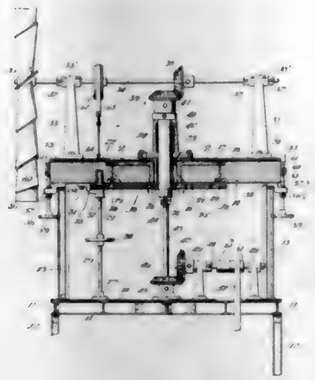
1,558,901. PROCESS OF MAKING ALKALI-METAL CARBONATE. GEORGE NELSON LIBBY, Redwood City, Calif., assignor to National Magnesia Manufacturing Company, San Francisco, Calif., a Corporation of California. Filed May 25, 1922. Serial No. 563,705. 8 Claims. (Cl. 23—63.)

2. The process of making sodium carbonate which comprises adding finely divided magnesium oxide to a saturated solution of trona.

1,558,902. WELL-FISHING TOOL. BERT L. LIGON, Electra, Tex. Filed Feb. 1, 1924. Serial No. 689,913. 1 Claim. (Cl. 294—114.)

A well fishing tool comprising in combination a tubular casing having a transverse slot communicating with its lower opened end, a pair of arms, means for pivotally connecting the lower end of each to the inner wall and adjacent the lower end of said casing, notched gripping members normally projecting within the slot of the casing, means for pivotally connecting the medial portion of said gripping members to the upper ends of said arms, sockets carried by said arms and inner walls of said tubular casing, and coil springs arranged in said sockets for normally forcing said gripping members towards one another.

1,558,903. WINDMILL. JOHN MALUCHNIK, Chicago, Ill. Filed Mar. 18, 1925. Serial No. 16,415. 1 Claim. (Cl. 170—77.)

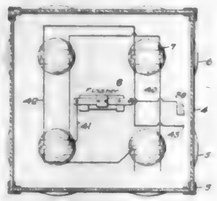


In a windmill, a platform, a disk thereupon, a sleeve in said disk, said sleeve passing through a central bore in said platform, a turn-table on said platform, a sleeve in said turn-table, said sleeve passing through the first mentioned sleeve, the lower end of said second named sleeve projecting beyond the lower plane of said platform and having reduced portions at two diametrically opposite points on its periphery, a spur gear, said spur gear having an elliptical bore for receiving said projecting end of said second named sleeve, a horizontal shaft upon said turn-table, a wind wheel upon said shaft, a vertical shaft cooperating with said horizontal shaft for transmitting the power therefrom, said upright shaft passing through the said second named sleeve, and means for turning bodily said horizontal shaft and said wind wheel.

1,558,904. TIRE BUILDING. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 7, 1921. Serial No. 459,330. 7 Claims. (Cl. 154—14.)

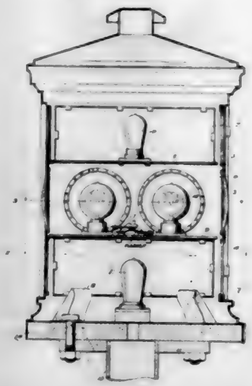
1. In the building of a tire casing, stretching upon an annular former with undercut sides an endless band of tire building material of an initial circumference substantially that of the base of the former, whereby the side portions of the material are caused to extend free of the undercut sides of the former and substantially parallel to the plane of the former, and conforming the side portions of the so placed material to the former by pressure applied substantially axially of the former and simultaneously throughout a circumference of the material.

1,558,905. STREET SIGNAL LAMP. FOSTER MILLIKEN, Lawrence, N. Y. Filed Dec. 17, 1920. Serial No. 431,408. 1 Claim. (Cl. 177—329.)



In a device of the type described, a substantially square casing, a pair of lenses in each wall of the casing, and four lamps in the casing positioned so that there is a lamp substantially at each intersection point of lines drawn between the axes of opposite lenses.

1,558,906. STREET SIGNAL LAMP. FOSTER MILLIKEN, Lawrence, N. Y. Filed Feb. 21, 1922. Serial No. 538,304. 8 Claims. (Cl. 177—329.)

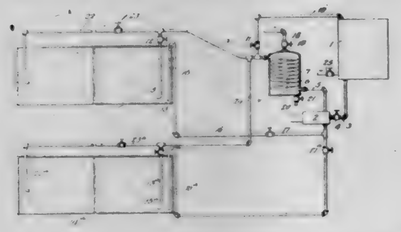


6. In a lamp of the class described, a pair of spaced compartments, a light source in each thereof, windows at the periphery of said compartments adapted to show separate and similarly shaped areas of light from the respective light sources, a third compartment intermediate said two compartments and containing a lamp, means for flashing said lamp, and lenses at the periphery of said third compartment arranged intermittently to show spaced defined spots of light intermediate said areas of light as said lamp flashes.

1,558,907. HEATING SYSTEM. BERNARD MILLS, Brooklyn, N. Y., assignor to Row & Davis Engineers, Inc., a Corporation of Delaware. Filed May 10, 1922. Serial No. 559,862. 20 Claims. (Cl. 126—344.)

12. The method of rendering mobile, the congealed oil of storage tanks which comprises forcing heated oil at a high velocity into the interior of said tank in direct contact with the congealed oil therein to mechanically disintegrate the mass of congealed oil within its range

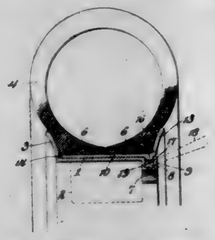
and by the heat of the injected oil render mobile the congealed oil, removing the mobile mixture from a point in the storage tank distant from the point of injection



of the hot oil, and heating a portion of the removed mobile mixture, and returning it to the storage tank to render mobile a further amount of the congealed oil.

---

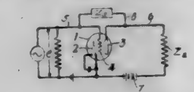
1,558,908. AUTOMOBILE WHEEL RIM. GEORGE T. NICHOLS, Gainesville, Tex. Filed Mar. 10, 1924. Serial No. 698,248. 4 Claims. (Cl. 301—35.)



1. A wheel rim comprising a complete base ring having one edge flanged continuously to form one of the flanges for the tire, and a locking ring section overlying the base ring for its full width and also having a flange at one edge, that edge of the base ring opposite the continuously flanged edge being provided with a plurality of sockets which extend inwardly from the base ring and are open at the outer face of the base ring but are closed at their ends, and the locking ring section having at the flanged edge a corresponding number of inwardly extending lugs depending from the inner face of the ring section to engage in the sockets.

---

1,558,909. SELECTIVE CIRCUITS. HAROLD WILLIAM NICHOLS, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1921. Serial No. 511,475. 31 Claims. (Cl. 179—171.)



1. In an electric circuit, a relay device having input and output circuits, and means connected between said circuits to substantially completely prevent the flow of waves of a given frequency through said output circuit.

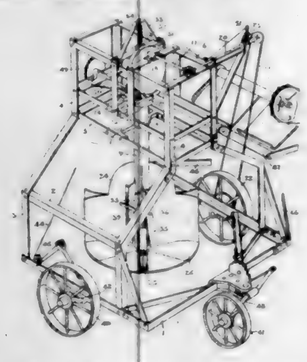
---

1,558,910. ELECTRIC BATTERY. PAUL E. NORRIS, Wilkinsburg, Pa., assignor to Westinghouse Union Battery Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 554,752. 2 Claims. (Cl. 136—168.)

1. A storage battery comprising a jar, a metallic cell cover thereon provided with two holes, an insulating member comprising two hollow legs passing through said two holes respectively, and two plates in said jar provided with lugs passing upwardly through said two hollow legs to form terminal posts for the battery.

---

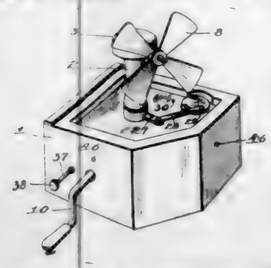
1,558,911. SHOCKER. THOMAS RICHARD O'BRIEN, Buffalo, N. Y., assignor to Alice A. O'Brien, Guelph, Ontario, Canada. Filed Sept. 9, 1921. Serial No. 499,588. 6 Claims. (Cl. 56—412.)



1. A shocker, comprising a frame, a sheaf receptacle vertically disposed in said frame and rotatable therein and formed with rigid radial partitions, means for delivering the sheaves vertically to said receptable, means for rotating said receptacle, bottom plates hinged to said radial partitions, means for releasing the bottom plates allowing the sheaves to drop vertically from said receptacle, and means for raising the receptacle clear of the heads of the sheaves.

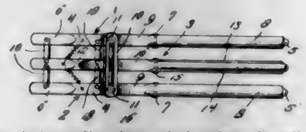
---

1,558,912. MECHANICALLY-OPERATED FAN. FELIX ORDAKOWSKY, Clarksburg, W. Va. Filed July 18, 1921. Serial No. 485,453. 2 Claims. (Cl. 230—1.)



1. In a mechanical fan, in combination with a base including a spring motor and a vertical rotating shaft driven thereby, of a pedestal journalled on said shaft, a cam driven from said spring motor, a link connecting said pedestal and cam, a fan shaft journalled in said pedestal and gearing between the said shafts.

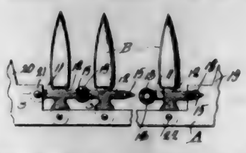
1,558,913. HAIR-CURLING IRON. JAMES C. PARSHALL, Lincoln, Nebr. Filed Feb. 10, 1925. Serial No. 8,198. 2 Claims. (Cl. 132—32.)



1. In a hair curling iron of the class described, a pair of substantially duplicate spaced parallel hair crimping members, an intermediate crimping member arranged between said first named members, all of said members embodying relatively stationary and movable parts between which the hair is adapted to be clamped, the parts being pivotally connected together, and the movable parts extensions being inclined away from the stationary parts, and a link extending crosswise of and connected with the extensions for permitting all of said extensions to be depressed simultaneously for opening said movable parts.

---

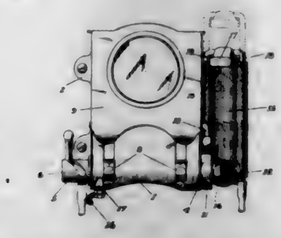
1,558,914. INTERLOCKING GUARD. HORACE S. PATTERSON, Jr., Lewisport, Ky. Filed Jan. 16, 1923. Serial No. 613,021. 4 Claims. (Cl. 56—310.)



1. The combination with a finger bar of a mowing machine, of a plurality of guards secured to the bar, eyes carried by one side of each guard, and hooks carried by the other side of each guard for engaging in said eyes.

---

1,558,915. COMBINED CIGARETTE AND CIGAR LIGHTER. LEWIS PENGILLY, Stockton, Calif. Filed Jan. 12, 1924. Serial No. 685,882. 17 Claims. (Cl. 219—32.)



1. In combination, a cigarette lighting device having a suction member, and a heating element adapted to be placed in opposed alinement with said member and to be removed from such position at will.

---

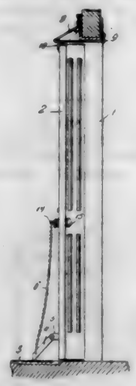
1,558,916. DEVICE FOR AUTOMATICALLY HOOKING FISH. JOHN GEORGE PENNELL, Toronto, Ontario, Canada, assignor to George Kershaw, Toronto, Canada. Filed May 5, 1921. Serial No. 466,877. Renewed Sept. 10, 1925. 4 Claims. (Cl. 43—15.)

1. In a device for automatically hooking fish, a casing having a cross spindle mounted therein intermediately of the length thereof, a loop member freely mounted on the spindle, springs on the spindle normally retaining the loop member in the inoperative position, said loop member having an eye formed on its free end, means for connecting the upper portion of the fishing line to the top of the casing, a hook, a portion of fishing line connected thereto, a catch hinged to the casing below the spindle, a plate hinged to the casing below the catch, said casing having holes in the back thereof situated between the catch and the spindle and between the spindle and the plate respectively, said catch

engaging the free end of said plate for holding the loop member in the set position and the said lower portion of the line extending upwardly through the lower hole in the casing, up through the eye in the loop member, down through the lower hole in the casing in a rearward direction, up through the upper hole in the casing in a forward direction and the upper end of said lower portion of the line being connected to said catch.

---

1,558,917. LOCK ATTACHMENT FOR DOORS. JEFF DAVIS PERKINS, Jacksonville, Fla. Filed Feb. 19, 1925. Serial No. 10,271. 2 Claims. (Cl. 292—338.)

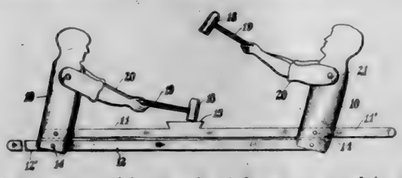


1. In combination, a door, a pawl pivoted to the bottom portion of the door, a bolt slidable through the door, a chain connected to the bolt and to the free end of the pawl, means for holding the bolt against the movement in the door, and means upon the release of the first mentioned means for normally projecting the bolt from the door so that it may be manually engaged to lift the chain so as to hold the pawl in a non-engaging position and when released will function as a weight for retaining the pawl in said non-engaging position.

1,558,918. STEEL ALLOY FOR THE ROLLERS OF PILGER ROLLING MILLS. MATHIAS PETERS, Duisburg, Germany. Filed Mar. 19, 1925. Serial No. 16,822. 4 Claims. (Cl. 75—1.)

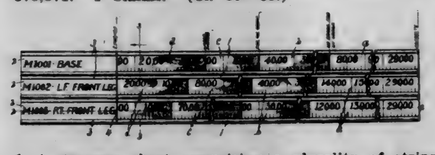
1. A steel alloy for rollers for Pilger rolling mills consisting of steel containing about 2% of chromium, about 1.5% tungsten and about 1.5% nickel.

1,558,919. MECHANICALLY-OPERATED FIGURE TOY. ANTON POLICHEK, Chicago, Ill. Filed Feb. 19, 1925. Serial No. 10,167. 3 Claims. (Cl. 46—40.)



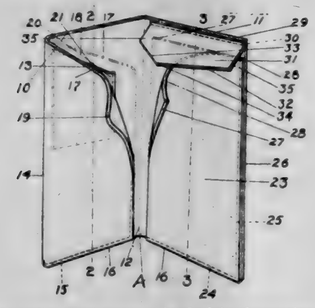
1. A toy comprising a pair of figures arranged in opposition to one another, and a pair of parallel bars to which said figures are pivotally attached, said bars being arranged one above the other, and said figures being bifurcated to straddle the ends of the said bars, arms hinged to the said figures, hammers carried by the said arms, and operative connections between the said arms and one of the said bars whereby the said arms are caused to swing on the figures when the said bars are moved longitudinally upon one another.

1,558,920. PROGRESS CHART. RAYMOND G. RECH, Syracuse, N. Y. Filed Dec. 10, 1923. Serial No. 679,871. 4 Claims. (Cl. 40—65.)



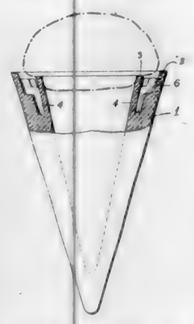
1. A progress chart comprising a plurality of strips relatively adjustable endwise at will one over the other to vary the distance between corresponding ends of the strips and thereby to indicate progressive stages of a working process, the rearmost strip and its overlying strip being provided with reversely arranged lengthwise scales.

1,558,921. LETTER CASE AND WALLET. FREDERICK J. REICHLE, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Nov. 12, 1924. Serial No. 749,416. 10 Claims. (Cl. 150—38.)



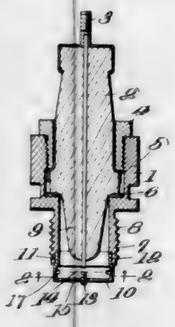
4. A wallet including a book fold formation, a letter case compartment on one side of said wallet, a bill compartment on the other side of said wallet and a card case compartment within and concealed by said letter case compartment.

1,558,922. ICE-CREAM SUNDAE CONE. JOHN S. REILLY, New York, N. Y. Filed Jan. 26, 1925. Serial No. 4,637. 4 Claims. (Cl. 99—16.)



1. An edible container adapted for holding ice cream sundaes having peripheral pockets formed in its top surface, separated by radial portions, each of said radial portions having a shallow peripherally extending groove across its upper surface, to permit flow of excess material from one pocket to the next.

1,558,923. SPARK PLUG. JOSEPH W. RIDOLF, Savannah, Ga. Filed Dec. 15, 1923. Serial No. 680,854. 1 Claim. (Cl. 123—169.)

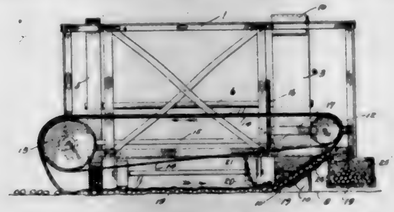


A spark plug comprising a body portion having a firing chamber, the end of said body portion being closed, a porcelain member carried by said body portion and extending into said firing chamber, a spark electrode extending through said porcelain member and cooperating with a spark electrode located centrally of said closed end, the side walls of said body portion having a plurality of inclined ports, said ports being relatively small so as to exclude from the firing chamber a large portion of the oils carried in suspension in the gas, and said ports being inclined relative to the side wall of said body portion so as to direct the gas on its initial entrance into the firing chamber against the porcelain member and away from the points of the spark electrodes whereby any oil carried by the gas in suspension into the firing chamber will be caused to adhere to the porcelain member and separated from the gas.

1,558,924. FRUIT-GATHERING APPARATUS. ARTHUR N. RIGGS, San Jose, Calif. Filed Nov. 14, 1923. Serial No. 674,724. 6 Claims. (Cl. 56—327.)

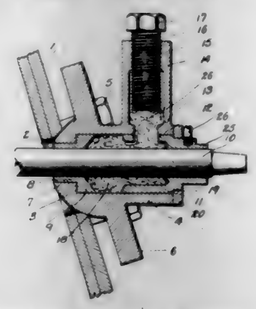
6. An apparatus for gathering fruit or nuts from the ground comprising a frame and a pair of ground wheels, an endless belt passing over said wheels with one side

of the loop in contact with the ground, means for tipping the belt sidewise with one edge against the ground, a screen extending from the side of the tipped portion of the belt, a receiver under the end of the screen, a transversely arranged endless traveling belt operatively



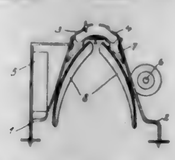
connected with a ground wheel adapted to lie on the fruit and roll it over the ground on and over the first belt over the screen and into the receiver, and means for holding the transverse belt yieldingly against the fruit.

1,558,925. THROTTLE-ROD STUFFING BOX. LEE H. ROGERS, Kansas City, Mo., assignor to Gustin-Bacon Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed July 16, 1924. Serial No. 726,298. 2 Claims. (Cl. 286—38.)



1. A stuffing box comprising a housing open at both ends and having a packing feed opening in its side wall, a gland closing one end of the housing, a combination gland and cylinder valve member closing the opposite end of the housing and having an opening in its side wall registerable with the packing feed opening, and a keeper retaining the combination gland and cylinder valve member in the housing.

1,558,926. PORTABLE POWER UNIT. KARL ROTTGARDT, Dahlem, near Berlin, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 26, 1921. Serial No. 495,592. 1 Claim. (Cl. 290—1.)



In a portable radio set, a prime-mover, a generator, a frame comprising two parts, one part carrying said prime mover and the other part carrying the generator, each of said parts having a pad conforming to the shape of the side of a pack animal, each of said parts having feet with prongs for engaging the ground, said feet being on the side of the center of gravity of its part opposite the corresponding pad and means above said pads for fastening said parts together, whereby when the set rests on said feet the weight of said prime mover and said generator will assist said fastening means.

1,558,927. BATTERY SEPARATOR. WAYLAND L. SCARFF, Auburn, Wash. Filed Dec. 24, 1923. Serial No. 682,583. 2 Claims. (Cl. 136—149.)

1. A storage battery separator consisting of wood of the species *Chamaecyparis nootkatensis*.

1,558,928. FISHLINE BOBBER. MARTIN J. SCHAMERLOH, Fort Wayne, Ind. Filed July 16, 1923. Serial No. 651,688. 1 Claim. (Cl. 43—49.)

In a device of the class described, a float and a pair of line fasteners, one at each end of the float, and each consisting of a wire secured in and extending from the corresponding end of the float, the extending portion of the wire having formed therein a pair of connected coils arranged in tandem fashion with the axes thereof in parallel relation with each other, the coil adjacent the float having a single turn and the other coil having a series of turns.

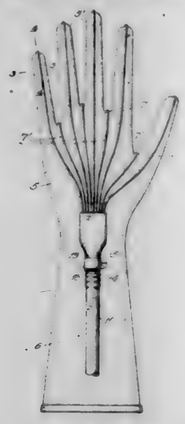
1,558,929. FABRIC-WORKING IMPLEMENT. KARL SCHMUTZ, New York, N. Y. Filed Dec. 16, 1924. Serial No. 756,353. 7 Claims. (Cl. 223—54.)

3. A fabric working implement comprising a base, a clamp bar hinged at one end to said base and provided at its opposite end with a clamping jaw, and a grip member adapted to engage the clamping jaw of said bar and exert a clamping action between the latter and said base, the said grip member being pivotally connected to said base.

1,558,930. FOUNTAIN GLOVE. HAROLD P. SCHUCK, East Orange, N. J. Filed May 10, 1923. Serial No. 638,128. 1 Claim. (Cl. 15—127.)

The combination comprising a glove and a plurality of flexible distributing tubes attached to the back thereof, having the discharge ends of a plurality thereof adjacent the ends of a plurality of the fingers of the glove and

directed toward the palm-side thereof and having the discharge ends of a plurality of said tubes directed through one or more of the spaces between the fingers



and toward the palm-side of the glove, said tubes being connected with a common flexible supply pipe extending along the wrist of the glove, the junction portion of said tubes being rigidly attached to the wrist of said glove.

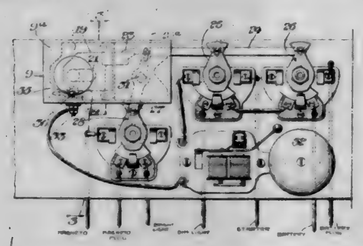
---

1,558,931. MEANS FOR SUPPORTING AUXILIARY HAIR. JEAN SÉNÉGAS, New York, N. Y. Filed Mar. 12, 1925. Serial No. 14,861. 3 Claims. (Cl. 132—54.)

3. As an article of manufacture a straddle band of flexible material having wide median portion and narrow ends, and hooks at the ends, said wider portion having perforations for the attachment of hair.

---

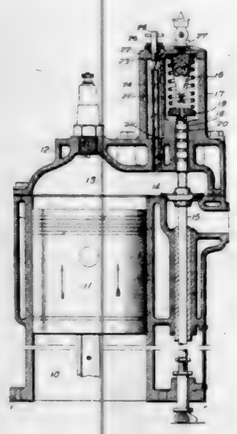
1,558,932. SAFETY LOCKING DEVICE FOR AUTOMOBILES. WILLIAM SHARA, Brooklyn, N. Y. Filed Apr. 5, 1922. Serial No. 549,893. 16 Claims. (Cl. 177—314.)



1. A mechanism of the class described comprising a control switch, a combination lock comprising revolving tumblers, means automatically operated by said combination lock for controlling said switch, an alarm and means operated by said combination lock for operating said alarm only when a predetermined greater number of revolutions of the tumblers is made in one direction than in the other.

---

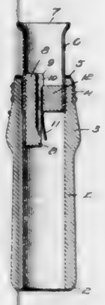
1,558,933. INTERNAL-COMBUSTION ENGINE. FRANK D. SHEPHERD, Salt Lake City, Utah. Filed Feb. 14, 1922. Serial No. 536,409. 4 Claims. (Cl. 123—105.)



1. An internal combustion engine having means to successively remove from and restore to the cylinder on the power-receiving side of the piston a part of the gaseous contents of the cylinder, said means comprising a chamber and a small bore tube extending into the chamber.

---

1,558,934. HAWK CALLER. HUGH SHERRILL, Magnolia, Ark. Filed July 22, 1924. Serial No. 727,493. 1 Claim. (Cl. 46—46.)



An instrument of the character described comprising a hollow tube forming a mouthpiece, a hollow cylinder fitted in the outer end of said tube and projecting beyond the end thereof, an outwardly flared outer end on said cylinder, a block semi-cylindrical throughout its length disposed in the inner end of the cylinder and having a longitudinally extending groove in the flat face extending from a point adjacent the inner end to the outer end thereof, a vibratory reed over said groove extending from a point adjacent the outer end and outwardly bent at its inner end, the inner end of said reed being tongue shaped, and a closure member for the inner end of the cylinder disposed over said reed member and block for clamping the reed member in position.

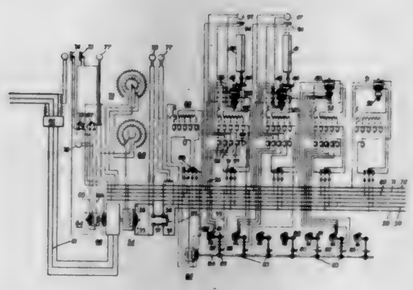
---

1,558,935. SAFETY RAZOR. FREDERICK SIMON, Woodmere, N. Y. Filed June 14, 1924. Serial No. 719,961. 1 Claim. (Cl. 30—12.)

In a safety razor of the character designated, the combination of a blade holder formed with a spine of less length than the blade, and a rectangular blade the rear edge of which is formed with a reduced edge and blade-positioning shoulders for the contactual engagement with the ends of said spine, the ends of said holder being chamfered divergently outward and forward to substantially the full length of the blade, for the purpose and as set forth herein.

---

1,558,936. ELECTRICAL CONTROL FOR PAPER MACHINES. VENNING D. SIMONS, Chicago, Ill. Filed July 15, 1920. Serial No. 396,525. 10 Claims. (Cl. 172—293.)

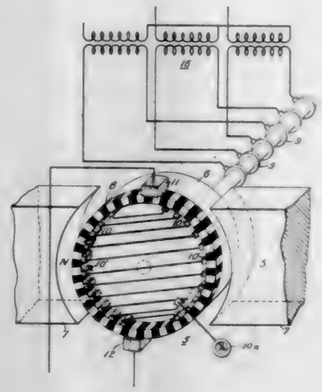


1. In combination, a paper machine comprising a plurality of rolls, a plurality of direct-current electric motors adapted to operate said rolls, a plurality of alternating-current synchronous motors each connected to one of said direct-current motors, means for interconnecting said synchronous motors, and means for varying the speed of any selected synchronous motor.

---

1,558,937. DYNAMO-ELECTRIC MACHINE. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 15, 1919. Serial No. 317,690. 5 Claims. (Cl. 171—123.)

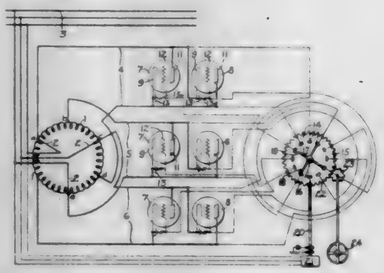
1. In a dynamo-electric machine of the synchronous type, the combination with an armature provided with a commutator and with slip rings connected to a winding thereof, of a field system embracing said armature, means for supplying alternating currents to said slip rings, and brush short-circuiting means for short-circuiting said commutator in an axis inclined at an angle with respect to the normal commutating axis.



3. Means for producing wattless current flow in an alternating-current system comprising means for producing a series of unidirectional current waves and reflecting said waves into said alternating-current system in such time-phase relationship as to produce the desired wattless current effect.

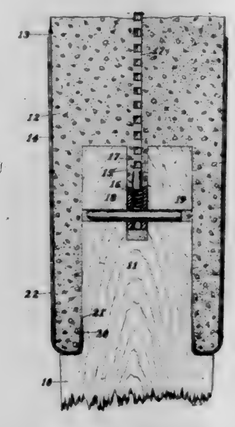
---

1,558,938. ELECTRICAL APPARATUS. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 15, 1923. Serial No. 668,551. 9 Claims. (Cl. 171—228.)



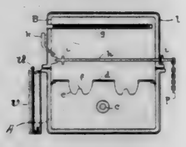
1. In an electrical apparatus, the combination of a magnetic core, a winding upon said core, means for energizing said winding from an alternating current system to induce a magnetic field rotating relatively to said winding, a plurality of space-current valves connected to said winding to control the current flow therein in accordance with the rotation of said field so as to effect arbitrarily the excitation of said machine and control the wattless currents taken from said alternating current system, the entire current flowing in said winding being derived from said alternating current system.

1,558,939. COMPOSITE PILE. HERMAN R. SMITH, Brooklyn, N. Y., and ALBERT E. TWIST, Clifton, N. J., assignors to Raymond Concrete Pile Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 30, 1922. Serial No. 585,129. 9 Claims. (Cl. 61—54.)



1. A composite pile comprising a lower wooden portion and an upper concrete portion, a socket member fastened in the top of the wooden portion, and a locking rod fastened at its lower end in the socket member and having its upper portion embedded in the concrete.

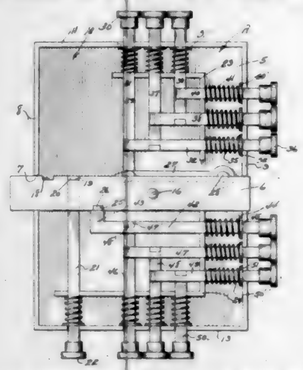
1,558,940. PROCESS FOR MAKING A FROZEN CONFECTION. FERDINAND SMOLA, Omaha, Nebr. Filed Aug. 9, 1923. Serial No. 656,568. 6 Claims. (Cl. 107—54.)



3. The process of making a frozen confection, consisting in enclosing ice cream ingredients in a baked container, subjecting the ingredients to a freezing temperature, placing a covering of dough over the frozen ice cream ingredients and within the opening in the container, subjecting the dough to a baking temperature, while the frozen ice cream ingredients is still being subjected to a freezing temperature to maintain it firm, discontinue the subjecting of the dough covering to a baking temperature, and continue the subjecting of the ice cream ingredients to a freezing temperature to recover any softening that has occurred therein.

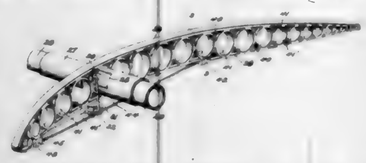
1,558,941. KEYLESS LOCK. JOSEPH G. STEGMAN, Pfeifer, Kans. Filed May 7, 1924. Serial No. 711,708. 3 Claims. (Cl. 70—54.)

1. A door lock comprising a casing, a bolt slidably mounted within the casing, means for actuating the bolt, a pivoted dog engaging the bolt, a sliding key pivotally connected to the dog for actuating the same, a plurality of interlocking keys for normally holding the dog operating key against movement, and a spring pressed key



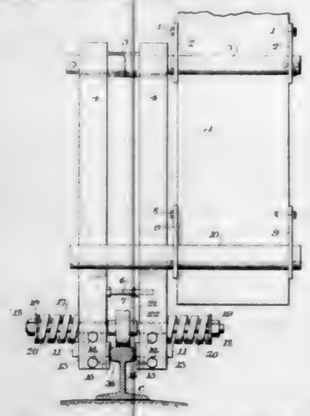
adapted to engage the bolt when the same is in its retracted position for holding the bolt against closing movement.

1,558,942. AIRPLANE. WILLIAM B. STOUT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed Mar. 2, 1918, Serial No. 220,070. Divided and this application filed Apr. 8, 1921. Serial No. 459,641. 11 Claims. (Cl. 244—31.)



1. A rigid metal rib for airplanes comprising top and bottom members and rigid reinforcing rings interposed between, in contact with an integrally joined to, and arranged in the plane determined by said members.

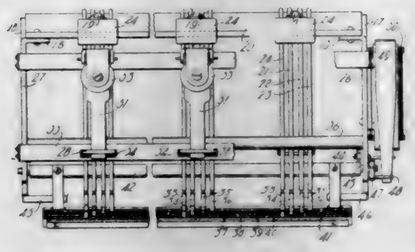
1,558,943. RAIL PLANER. LAMBERT A. SWANSON, Superior, Wis. Filed June 8, 1925. Serial No. 35,672. 10 Claims. (Cl. 104—1.)



2. A rail planer comprising a travelling support, tool holders carried thereby, tools carried by said holders and

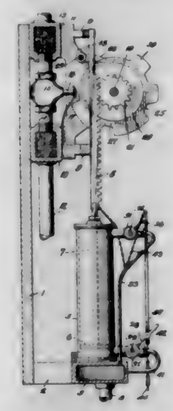
engaging opposite sides of the ball of the rail, spring means for pressing said holders and tools toward the rail and means for limiting the extent of said movement.

1,558,944. TELEPHONE SWITCH. HERBERT B. TAYLOR, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 17, 1923. Serial No. 657,907. 5 Claims. (Cl. 179—27.5.)



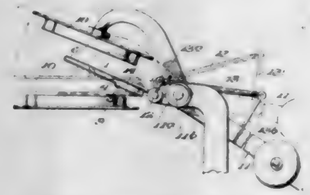
1. In a switching device, the combination of primary contact sets, a longitudinally movable bar therefor, an insulating strip arranged on said bar for operatively engaging said contacts, sets of multiple contacts arranged on a circularly movable bar, and means for positioning said primary contacts for engaging said multiplied contacts upon the movement of said circularly movable bar.

1,558,945. SIGNAL ATTACHMENT FOR LOCOMOTIVES. JAMES A. TAYLOR, Birmingham, Ala. Filed June 5, 1925. Serial No. 35,131. 11 Claims. (Cl. 246—175.)



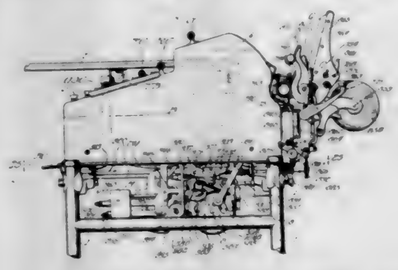
4. Locomotive signal apparatus including a valve for controlling pressure to a whistle or the like, a cylinder, a piston therein, means for directing pressure to both ends of the cylinder, separate valves for controlling the flow of pressure to said ends of the cylinder, there being a vent controlled by each valve, one of said valves being normally positioned to direct pressure against the piston to hold it in one position and the other valve being normally positioned to maintain the vent open, trip operated mechanism for reversing said valves to shift the piston to a second position and open the normally closed vent for the escape of pressure from the path of the piston, means operated by said movement of the piston for actuating the first valve to sound a predetermined signal, means operated by the piston for reversing the cylinder valves and restoring the piston by pressure to its normal position, and means for preventing sounding of the signal during the movement of the piston to normal position.

1,558,946. PRESSING MACHINE. JOSHUA TEDFORD, Chicago, Ill. Filed Mar. 18, 1924. Serial No. 700,079. 5 Claims. (Cl. 68—9.)



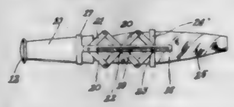
1. In a pressing machine having a pair of relatively movable cooperative presser leaves, a tongue supported between said presser leaves, said tongue being insertable in the lower end of a trousers leg, said tongue being transversely and resiliently bowed and being adapted to be flattened out by pressure applied thereon by said presser leaves to effect stretching of said overlapping portion of the trousers leg.

1,558,947. CACULATING MACHINE. MARTIN TEETOR, Des Moines, Iowa, assignor to Teetor Company, Des Moines, Iowa, a Corporation of Iowa. Filed May 1, 1920. Serial No. 378,246. 44 Claims. (Cl. 235—60.)



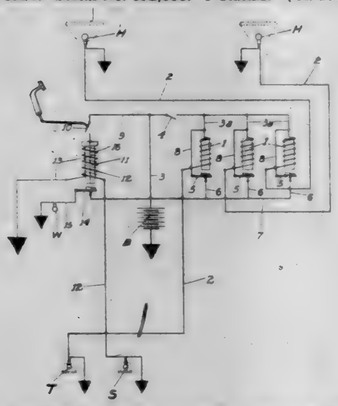
1. In a machine of the character described, a set of dial wheels, a set of overdraft or net credit dial wheels, a set of sectors for operating the first set of dial wheels, a set of sectors for operating the second set of dial wheels, connecting means between the sectors for operating a sector of one set by a sector of the other set, and means for releasing the connection so that one sector may move relatively to its connected sector.

1,558,948. CIGAR HOLDER. EMIL TRICHMÜLLER, New York, N. Y. Filed Apr. 21, 1925. Serial No. 24,722. 5 Claims. (Cl. 131—10.)



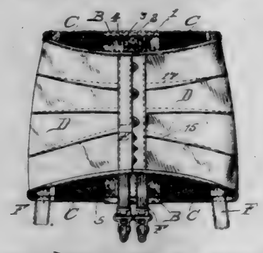
1. A cigar holder comprising a mouthpiece, a ring mounted on said mouthpiece, a bar extending forwardly from said ring, and means slidable on said bar for supporting a cigar at various positions along its length.

1,558,949. DEFECTIVE-LIGHT INDICATOR. FRANK J. THOMPSON and GEORGE V. ARANO, Modesto, Calif.; said Arano assignor to said Thompson. Filed Feb. 11, 1924. Serial No. 692,058. 3 Claims. (Cl. 177—311.)



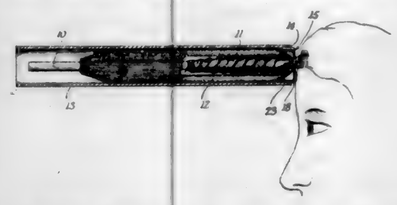
2. A warning signal device for defective lights comprising in combination with separate lights arranged in independent circuits, a common source of current for said circuits, independent switches for the circuits, a common electric signal member for both light circuits, a circuit for said signal member one side of which is connected to the source of current and the other side is adapted to be connected to either light circuit alternately, means in one circuit for causing the signal circuit to be closed only when the corresponding switch is closed but the circuit thereof remains broken adjacent its light, a magnet interposed in the other light circuit, means whereby said magnet will be energized only if the corresponding light circuit remains broken adjacent its light with the switch thereof closed, an armature for said magnet interposed in the signal circuit, normally forming a connection between the signal member and the means in the first named circuit as long as the magnet is deenergized, and a lead from the last named light circuit with which the armature engages when the magnet is energized and the first named connection made by said armature is broken.

1,558,950. CORSET. ROSANNA DU FORA ULMAN, Aurora, Ill., assignor to International Corset Company, Aurora, Ill., a Corporation of Illinois. Filed June 4, 1924. Serial No. 717,674. 3 Claims. (Cl. 2—27.)



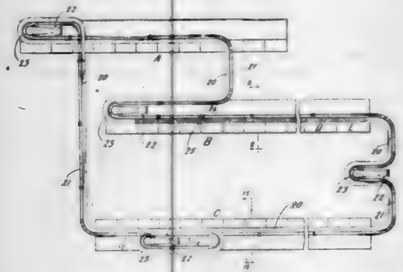
1. In a front opening corset, two inelastic front sections which extend over the abdomen and hips and at their rear slightly towards each other, and a back section comprising a central, non-elastic member and elastic members intermediate the front sections and the non-elastic section, each front section being of a single piece of fabric contracted at its front margin by tucks extending laterally from said front margin.

1,558,951. CLIP FOR SECURING HAIR TO WAVERS. ERNEST G. UNGER, New York, N. Y. Filed Oct. 23, 1923. Serial No. 670,253. 22 Claims. (Cl. 132—36.)



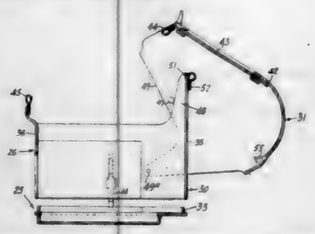
1. A device for enclosing a coil of hair in the practicing of permanent hair waving, comprising a tube for containing the coil and adapted to have a heater inserted on the same, and a closure having a frictionally telescopic fit with one end of the tube and engaging the inner wall of the tube at said end.

1,558,952. CARRIER SYSTEM. CHARLES L. VAN INWAGEN, Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 1, 1922. Serial No. 598,246. 16 Claims. (Cl. 198—42.)



1. In a ticket distributing system, a ticket guide having a spiral turn therein, so that portions thereof are in superposition to other portions of the guide, a chute leading from said guide, an endless cable paralleling said ticket guide, means associated with said cable for moving a ticket in said guide and depositing it in said chute, and a motor and pulley system in association with said cable and located within said spiral turn.

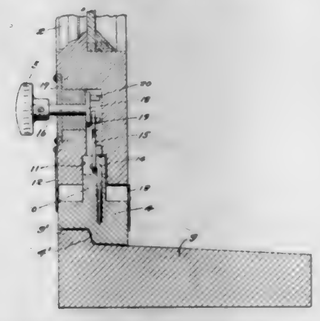
1,558,953. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 5, 1921. Serial No. 505,604. 20 Claims. (Cl. 197—186.)



1. A sound-deadening assemblage for a typewriting machine having a frame and supporting feet therefor, said assemblage comprising a floor extending between the feet and the frame and to the sides and rear of the

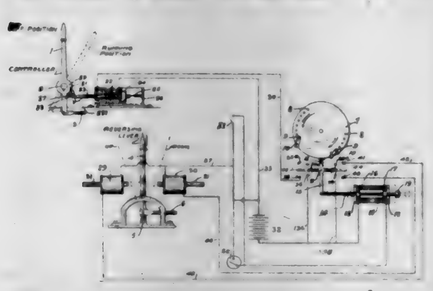
frame and having upstanding flanges at its side and rear edges, the feet extending below the floor, and a casing having overhanging carriage-accommodating extensions and being settable down over the machine to rest on said floor in engagement with the sides of said flanges.

1,558,954. CASEMENT WINDOW. ARCHIE E. WALKER, Portland, Oreg. Filed Aug. 28, 1924. Serial No. 734,772. 1 Claim. (Cl. 20—68.)



In a window having a hinged sash, a movable weather sealing strip at the edge of the sash adapted to engage the frame of the window, and hand controlled means on the sash adapted for withdrawing the strip from such engagement comprising a revolubly supported knob having a shank projecting into the sash above the groove and carrying two pins at its inner end, and a link pivotally connected to one pin and to the strip adapted to stop against the other pin when the strip is withdrawn.

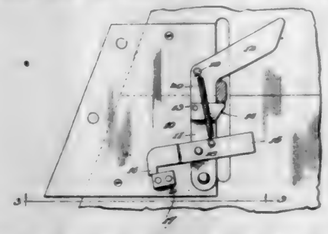
1,558,955. SAFETY DEVICE FOR HOISTS. CLARENCE R. WELCH, Denver, Colo. Filed May 10, 1924. Serial No. 712,497. 5 Claims. (Cl. 192—138.)



1. A hoist safety system comprising, in combination, a controller lever, an indicator adapted to move at a speed proportional to the speed of a hoist cage, an electromagnetic device operatively related to the control lever and adapted to lock the same in "off" position, means operated by the indicator for causing said electromagnetic device to function when the indicator passes a predetermined point, and manually operated means for restoring said device to normal position.

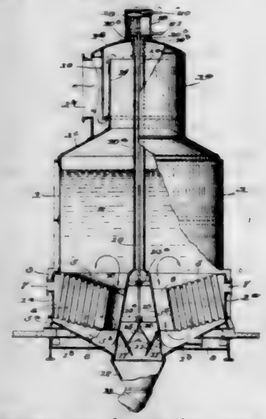
1,558,956. GEAR-SHIFT-PEDAL LATCH. JAMES ALBERT WHIPPLE, Chico, Calif. Filed Dec. 11, 1924. Serial No. 755,248. 5 Claims. (Cl. 74—81.)

1. A pedal latch including a pivoted lever having a stop for limiting the pedal in its rearward movement and provided with a portion to coact with the pedal for swinging the lever and shifting said stop away from the pedal when the pedal is moved forwardly, and means



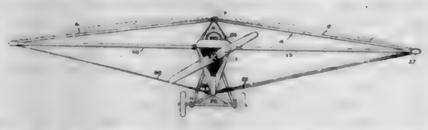
carried by the lever for latching the lever when swung as well as returning the lever when released and disposed to be tripped by the pedal.

1,558,957. VACUUM PAN. CLARENCE WHITE, San Francisco, Calif. Filed Mar. 18, 1925. Serial No. 16,463. 10 Claims. (Cl. 159—27.)



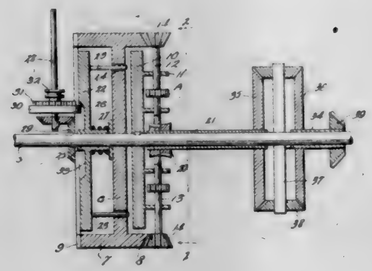
1. In a vacuum pan for treating sugar solutions, a casing with the floor sloping downwardly and centrally, a heater element within the casing and adjacent but spaced above the floor thereof and having a central open space extending upwardly therethrough and constituting a well having an upper and a lower opening with a closed side wall, and an upwardly extending core projecting from the casing floor lengthwise of said well and with its upper end adjacent the top of said well, said core constituting a displacement member whereby the volume of liquid within the well is reduced by the space occupied by the core.

1,558,958. AIRPLANE CONSTRUCTION. PERCY J. WILLIAMS, San Francisco, Calif. Filed May 14, 1923. Serial No. 638,780. 37 Claims. (Cl. 244—12.)



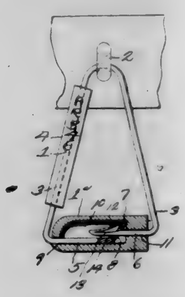
1. In an airplane, a flexible wing capable of curving bodily laterally under flying pressure and means for holding the said wing at an angle of incidence to the line of flight.

1,558,959. TRANSMISSION. FAYETTE WORTHEN, Oakland, Calif. Filed Oct. 9, 1924. Serial No. 742,678. 6 Claims. (Cl. 74—34.)



1. A transmission mechanism comprising a drive shaft, a hollow shaft rotatably mounted on the drive shaft, a drive pinion rotatably mounted on the drive shaft, a differential mechanism including facing gears operatively connected with the hollow shaft and the drive pinion, rigid arms carried by the drive shaft and pinions rotatably carried by the arms meshing with the facing gears, a supporting and guide disk keyed to the drive shaft, a plate rotatably mounted upon the drive shaft, means operatively connecting the plate with the hollow shaft including a worm wheel and worm gears, a counter shaft rotatably connected with the drive shaft, a friction disk carried by the plate and a friction wheel slidably mounted upon the counter shaft arranged to engage the friction disk.

1,558,960. CAR SEAL. LOUIS J. BRUNE, Sr., Algiers, La. Filed June 15, 1925. Serial No. 37,236. 1 Claim. (Cl. 292—317.)

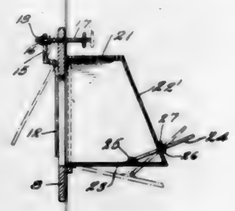


A car seal comprising a body member having a chamber therein and apertures extending through the ends of the body member in communication with the ends of the chamber, a wire loop, arms carried by said wire loop and extending towards each other through the apertures in the end of the body member and into the chamber of the body member, one of said arms being provided with an angularly disposed member having an aperture in registration with one of the apertures in the end of the body member, the other arm extending through one of the apertures in the body member and through the aperture in the angularly disposed portion of the first mentioned arm and an angularly disposed spring arm carried by one of the arms and engaging the inner side of the angularly disposed portion of the other arm.

1,558,961. MANUFACTURE OF FILAMENTS OR CATHODES FOR ELECTRIC LAMPS, THERMIONIC TUBES AND THE LIKE. WILLIAM RICHARD BULLIMORE, London, England. Filed Nov. 24, 1924. Serial No. 751,939. 6 Claims. (Cl. 250—27.)

1. A heated cathode for vacuum tubes, comprising a core of relatively high specific resistance and melting point coated with a noble metal and an active coating of one or more compounds of the alkaline earth metals.

1,558,962. FIRE-BOX DOOR AND DEFLECTOR PLATE. JOHN H. CHIDLOW, Cut Bank, Mont. Filed Mar. 14, 1924. Serial No. 699,228. 1 Claim. (Cl. 110—175.)



A fire box door structure comprising a door panel provided with an opening, wide flanges provided at one side of the door and extending around three edges of the opening, a draft hood fitting in the flanges, said hood having an adjustable bottom panel, the door panel being provided at its opposite sides and at the upper edge of the opening with sockets, a baffle plate having pins which enter the socket, said plate being normally disposed over the opening in the panel and with its lower edge spaced above the lower edge of the opening, the plate being provided at its upper portion with an offset bracket, and a screw passing through the door panel above the opening thereof and connected at its inner end with the offset bracket of the baffle plate, the outer end portion of the screw being disposed above the hood and above the ends of the guide flanges which retain the hood.

1,558,963. PROCESS OF BLEACHING NUTS. ARTHUR W. CHRISTIE, Berkeley, Calif., assignor to California Walnut Growers Association, Los Angeles, Calif., a Corporation of California. Filed Apr. 30, 1925. Serial No. 26,859. 5 Claims. (Cl. 99—9.)

1. A process of bleaching nuts comprising immersing the nuts in a solution from which nascent chlorine is being liberated and then immersing the nuts in a solution of sulphurous acid.

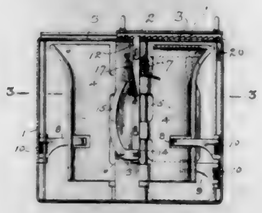
1,558,964. VANITY CASE. SAMUEL CLARK, Newark, N. J., assignor to Gorham Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed June 26, 1925. Serial No. 39,665. 3 Claims. (Cl. 132—83.)

1. The vanity case described comprising two dished shells joined peripherally, each having a circular central opening, a hinged lid on each of said shells received in each of such openings, a mirror on the inner face of each of said lids, and a horizontally disposed diaphragm on one of said shells dividing the interior of said case into two compartments each closed by one of said lids.

1,558,965. APPARATUS FOR TREATING ORES OR THE LIKE. GALEN H. CLEVENGER, Boston, Mass., assignor to Research Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1920. Serial No. 433,355. 5 Claims. (Cl. 266—9.)

1. A furnace of the type described having a reaction unit disposed in a substantially horizontal plane, a preheating unit disposed at a higher level, a material transfer connection between the two units, means for passing a charge successively through the preheating unit and the reaction unit, means for passing a combustible gas in opposite direction through the reaction unit, means for progressively burning said gas in the reaction unit, a combustion chamber interconnecting the two units including means for effecting combustion of unburnt gases coming from the reaction unit and means operative to cause movement of a charge successively through the preheating unit and the reaction unit.

1,558,966. BOTTLE HOLDER. FREDERICK H. COOK, Tippecanoe, Ohio. Filed June 29, 1923. Serial No. 648,436. 16 Claims. (Cl. 232—41.)

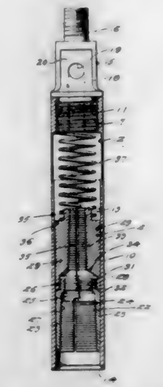


1. In a bottle receiver, an expansible and contractible bottle receiving compartment, a bottle rest projecting within said compartment to support a bottle of reduced size, the expansible compartment and bottle rest being operatively interconnected whereby the expansion of the compartment to accommodate a bottle of larger size will automatically effect the withdrawal of the bottle rest to permit the passage of the larger bottle therebeyond.

1,558,967. FUEL. JEAN F. P. DE LA RIBOISIERE, Washington, D. C. Filed Dec. 17, 1924. Serial No. 756,555. 15 Claims. (Cl. 44—9.)

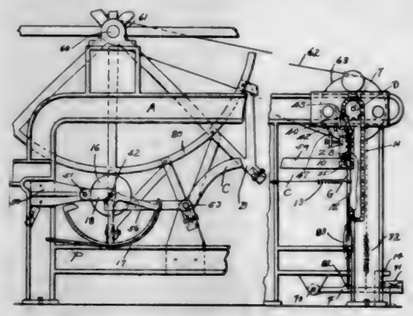
1. The process of increasing the heat-units obtainable from a heavy hydrocarbon fuel comprising combusting the fuel in the presence of a small proportion of a compound of a hydrocarbon radical and a metal.

1,558,968. DEEP-WELL FISHING TOOL. SAMUEL B. DURBIN, Tulsa, Okla. Filed May 21, 1925. Serial No. 31,881. 5 Claims. (Cl. 294—102.)



1. In a deep well fishing tool, a slip socket having an elongated downwardly tapering internal bore, a plurality of separate and independently movable slip units mounted in said bore and a single spring urging all of said slip units downwardly.

1,558,969. YARDAGE STOP MOTION FOR WARPERS. EDWARD J. ENTWISTLE, Lowell, Mass., and RALPH W. DOEG, Exeter, N. H. Filed June 11, 1924. Serial No. 719,336. 4 Claims. (Cl. 192—139.)



4. The combination with a warping machine in which is a revoluble, endless measuring chain having a projecting tooth with a flattened face; of a medially pivoted knock-off lever having at one end means to stop the warping machine, and at the other end an arm; and a detent pivoted laterally to said arm, said detent having a nose in engagement with the chain, and a returning spring.

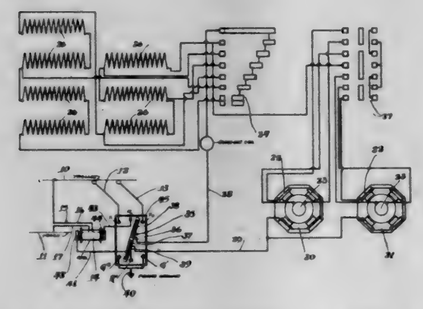
1,558,970. IDENTIFICATION DEVICE FOR TOOTHBRUSHES. MARCUS P. EXLINE, Dallas, Tex. Filed May 22, 1925. Serial No. 32,080. 2 Claims. (Cl. 40—20.)

1. The combination of an article having a stud defined by a surrounding groove and an identifying member comprising a plate with a down turned peripheral

flange adapted to seat in said groove and means for securing the plate to the stud comprising a plurality of inwardly directed peripheral prongs carried by the plate adjacent the edge of the flange.

---

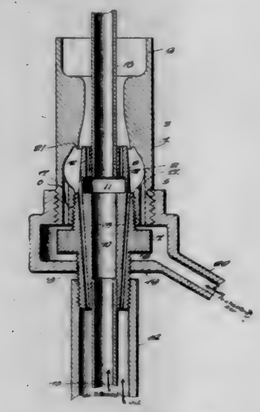
1,558,971. LOCOMOTIVE. SIDNEY W. FARNHAM, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1924. Serial No. 758,023. 1 Claim. (Cl. 191—3.)



In a gathering locomotive provided with a motor circuit adapted to be selectively connected with a source of power supply through a trolley or a gathering reel, a double conductor cable and rotating contactor devices associated with said gathering reel, and switching means completing said motor circuit through the double conductor cable and contacting devices on the gathering reel in one position and completing the circuit through the trolley and a ground connection on the locomotive frame in a second position.

---

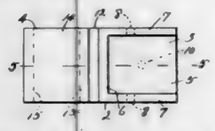
1,558,972. OIL BURNER. CLARENCE A. FIFER, Baltimore, Md. Filed May 21, 1925. Serial No. 31,941. 4 Claims. (Cl. 158—74.)



4. In a burner, the combination with a body provided with an internal mixing chamber having a contracted throat that terminates in an enlarged mouth opening through one end of the body, of a plug threaded into the other end of the body and extending into the chamber, said plug having a bore and outlet ports leading therefrom to the chamber, said plug furthermore having ports extending therethrough and opening into the bottom portions of the chamber, a supply pipe threaded into the bore of the plug, a supply pipe into which the plug is threaded, said body having ports extending through its rear end to the chamber, and a hollow head fitted on the body and having its interior in communication with the said last mentioned ports.

---

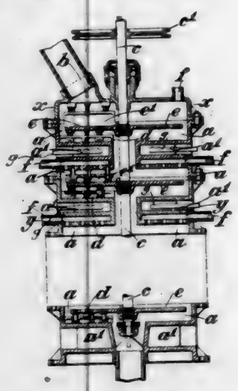
1,558,973. TANK-RAFTER BRACKET. WILLIAM W. FORD, Philadelphia, Pa. Filed June 24, 1924. Serial No. 722,025. 3 Claims. (Cl. 217—4.)



1. A tank rafter bracket comprising a hanger to engage the upper edge and outer face of a tank wall and a stirrup adjustably mounted on the hanger and comprising an end wall engaging the inner surfaces of the tank, a bottom wall and apertured spaced side walls.

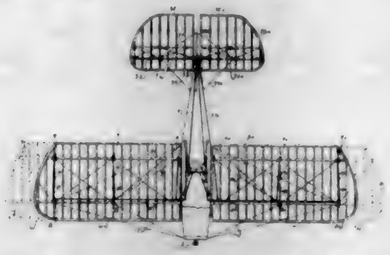
---

1,558,974. CARBONIZING OR DISTILLATION APPARATUS. NAT HARRIS FREEMAN, Holborn, London, England. Filed Feb. 3, 1921. Serial No. 442,196. 1 Claim. (Cl. 202—9.)



A distillation apparatus for coal or other similar material, comprising a casing, partitions in said casing dividing the interior thereof into a series of superposed compartments, conduits situated centrally of the casing and extending between adjacent compartments and independent annular heating chamber for each compartment, means for controlling the heat supply to said heating chambers in such a manner that the temperature in each heating chamber is maintained constant and the temperature of successive heating chambers is different, means for conducting the distillate separately away from each compartment, a platform in each compartment, means for rotating said platforms, means for feeding the material to be distilled onto the platform in the uppermost compartment towards the centre of said platform, means for conducting away the residue from the lowermost compartment, means for causing the material to traverse the platforms from the centre outwards during their rotation and to deliver the material over the outer edge of each platform onto the outer portions of the floor of the compartment to which it is appropriated, and means for traversing the material across the floor of said compartment inwards towards the conduit leading into the next lower compartment.

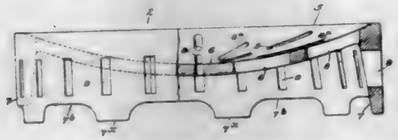
1,558,975. AEROPLANE. EDWARD K. GALWEY, San Jose, Calif., assignor of one-half to Frank W. Calliat, San Jose, Calif. Filed Oct. 30, 1922. Serial No. 597,981. 6 Claims. (Cl. 244—29.)



1. An aeroplane comprising a fuselage, a forwardly tiltable plane mounted on each side thereof, forwardly tiltable tail planes, a control member, cable connections between the latter and each plane, guide pulleys for the cable connections, resilient means supporting the guide pulleys, and adjustable means connected to the resilient supporting means for adjusting the tension of the latter.

---

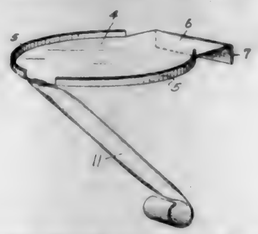
1,558,976. CARAMEL COOKER. GEORGE E. GARABRANT, Irvington, and EDWARD E. BECK, Roselle, N. J.; said Garabrant assignor to said Beck. Filed Jan. 14, 1924. Serial No. 686,091. 1 Claim. (Cl. 126—345.)



A heat distributing unit for confectioner's furnaces comprising an annular vertical wall provided with heat distributing apertures and a dished upper wall formed integral with said annular wall, said upper wall being provided with a plurality of heat distributing apertures of unequal dimensions, the apertures in said upper wall being arranged alternately singly and in pairs with the single apertures spaced equi-distantly between adjacent pairs of apertures.

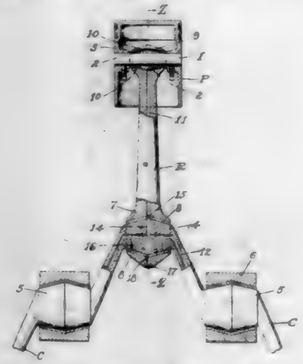
---

1,558,977. COMBINED SHELF AND BRACKET. ALEXANDER M. GRAY, Charleroi, Pa. Filed Oct. 15, 1924. Serial No. 743,831. 1 Claim. (Cl. 248—18.)



A combined shelf and bracket, integral in construction, composed of sheet metal, stamped to form a flat supporting surface, a depending flange or hook portion at the rear edge of said surface, and a yieldable strut member extending downwardly and rearwardly from the front edge thereof, the lower end of the strut being curved outwardly to provide a curved engaging surface and its mid portion curved to channel form.

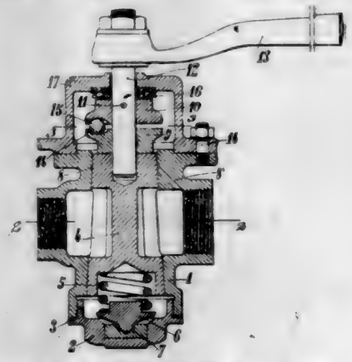
1,558,978. BEARING. CLINTON A. GRIMES, Crum Lynne, Pa. Filed July 3, 1923. Serial No. 649,268. 3 Claims. (Cl. 74—38.)



1. In combination with a wrist pin of a crank, said pin being oppositely tapered from the center thereof, said taper adding strength to the pin, a connecting rod having a bearing at the crank end thereof surrounding the pin and correspondingly tapered to snugly receive the wrist pin, the taper of the crank end bearing and the wrist pin holding the bearing against lateral play with respect to the wrist pin, said wrist pin being provided with means to deliver lubricant to the bearing, the bearing being provided with an opening therethrough opening at the high point thereof, said opening in the bearing providing a discharge for surplus lubricant, the delivery of the lubricant to the bearing being at opposite sides of the opening in the bearing and adjacent to the low points of the wrist pin, the means for delivering the lubricant constituting channels.

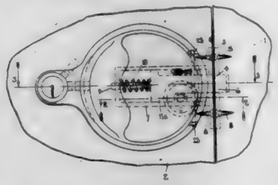
---

1,558,979. COCK. RENÉ GUILLERY, Paris, France, assignor to Etablissements Mallcet & Blin, Oubervilliers, France. Filed Dec. 9, 1922. Serial No. 605,920. 4 Claims. (Cl. 251—112.)



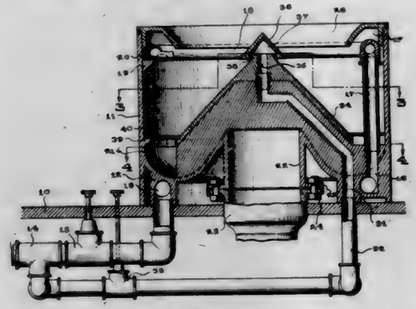
3. In a cock, a shell provided with a frustro-conical bore, a frustro-conical plug substantially filling said bore, means for exerting a very powerful pressure against said plug for tightly forcing the same against the surface of the bore, and means for rotating said plug including elements adapted to exert a powerful pressure on the plug sufficient to substantially counterbalance the pressure exerted by the first mentioned means and thus reduce the friction between the plug and bore to permit the plug to readily turn without breaking the contact between the plug and the wall of the bore.

1,558,980. DOOR LATCH. GEORGE HALINKA, Detroit, Mich. Filed Apr. 24, 1925. Serial No. 25,507. 5 Claims. (Cl. 292—166.)



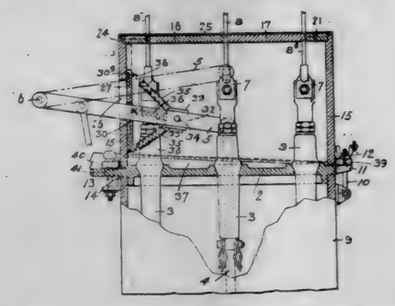
1. A door latch comprising a frame, a latch member slidably mounted therein, a push member and a pull member and means actuating said latch member by actuation of the push or pull member independently.

1,558,981. CUSPIDOR. THOMAS CORWIN HALL, Anamosa, Iowa. Filed May 18, 1925. Serial No. 31,140. 7 Claims. (Cl. 4—262.)



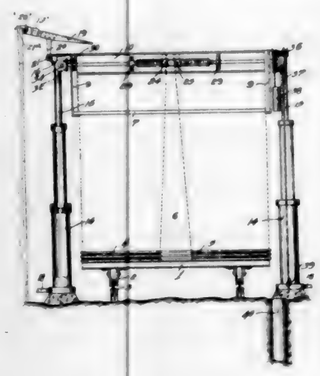
1. A sanitary cuspidor comprising a body, a trap mounted within said body, an outlet casing secured to said trap, baffle plates mounted upon said casing and within said trap, a shield secured to said baffle plates, one of said baffle plates having an opening therethrough, said shield having an opening through the upper end thereof and extending into the opening in said baffle plate, a deflector on said shield, means for spraying water within said body, and means for attaching said outlet casing to a sewer.

1,558,982. SAFETY COVER FOR ELECTRIC SWITCHES. DAVID HANE, Pittsburgh, Pa. Filed Sept. 7, 1923. Serial No. 661,509. 8 Claims. (Cl. 200—168.)



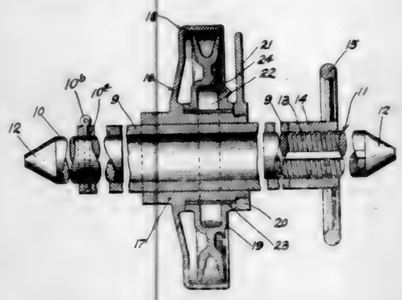
2. The combination with an electric switch provided with a switch box and a cover plate therefor, for supporting a plurality of terminals and conductors leading therefrom, of a safety box comprising a casing having side walls adapted to engage and be closed by said cover plate, and having a removable cover made in two sections with a row of conductor receiving openings formed at their meeting edges.

1,558,983. LUMBER PILER. FREDERICK W. HORSTKOTTE, Spokane, Wash. Filed Nov. 18, 1924. Serial No. 750,691. 3 Claims. (Cl. 214—6.)



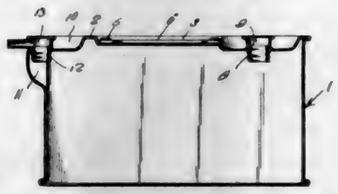
1. The combination with a vertically movable stacking frame, and operating means therefor, of stacking guides carried by said frame and a revolvable actuating member for said guides, a cable-drum on said actuating member, a cable on said drum having a counterweight and an anchor for said cable.

1,558,984. APPARATUS FOR HANDLING LOOSE MATERIAL. JOHN S. HOUSMAN, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 15, 1921. Serial No. 507,857. 1 Claim. (Cl. 254—190.)



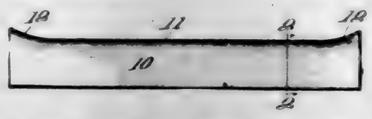
In an advance guide for a reciprocably operated scraper, the combination of a jack adapted to be fixed between lateral abutments, comprising a telescoping pick portion at one end thereof and a screw device adjacent the opposite end thereof, a sleeve member slidably mounted on said jack, a rope guard on said sleeve, a rope sheave loosely mounted coaxially with said sleeve and within said guard, and means for securing said sleeve member in a plurality of positions along said jack.

1,558,985. EMERGENCY GASOLINE CONTAINER. EARL T. HOWELL, Champaign, Ill. Filed July 8, 1925. Serial No. 42,228. 2 Claims. (Cl. 221—26.)



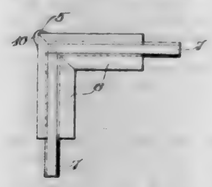
1. An emergency gasoline container comprising a substantially rectangular shaped can, the top thereof being provided with depressions, one of said depressions being provided with a filling neck, a closure cap therefor, a pouring spout mounted in another of said depressions, and a handle normally disposed in another depression, the side portion of the can adjacent the pouring spout being bulged outwardly.

1,558,986. FORMER BLOCK. WALTER A. JONES, Columbus, Ohio. Filed Dec. 1, 1924. Serial No. 753,239. 9 Claims. (Cl. 49—17.)



3. A former block of the character described comprising a solid block of material buoyant with respect to molten glass and capable of being submerged in a glass batu, said block having a convex top surface, the curvature of which is transverse to the longitudinal median line of the block, said top surface being also inclined upwardly contiguous to the ends of the block.

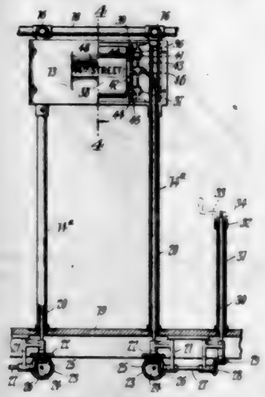
1,558,987. PICTURE FRAME. ANTHONY J. KALLSCHEUER, Chicago, Ill. Filed Sept. 15, 1924. Serial No. 737,929. 6 Claims. (Cl. 40—155.)



1. A picture frame comprising a corner member having branches formed with grooves disposed approximately at right angles to each other, a tongue in one of said grooves and having the inner end portion thereof extended into and permanently secured in the adjacent end of the groove disposed approximately at right angles thereto whereby to permanently connect the branches.

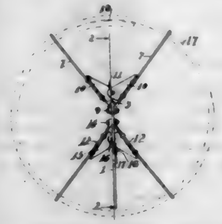
1,558,988. STREET CAR AND STATION INDICATOR. GEORGE A. KARG, Brooklyn, N. Y. Filed Nov. 6, 1924. Serial No. 748,006. 2 Claims. (Cl. 40—86.)

1. A street and station indicator comprising a means for successively displaying the street and station names in their consecutive order, a frame for supporting said indicator, operating rods in the posts of said frame, a universal joint adapted to be operated from said rods to operate said display means, bevel gears at the lower ends of said rods, shafts extending lengthwise of the cars, bevel gears on said shafts in mesh with said first



named bevel gears, stub shafts at an angle to said first named shafts, and means for manually rotating said last named bevel gears to operate said operating rods from a predetermined point of a car.

1,558,989. TIRE-RIM-ADJUSTING DEVICE. CHARLES J. LAUNDRIE, San Jose, Calif. Filed Sept. 25, 1924. Serial No. 739,805. 1 Claim. (Cl. 157—1.)

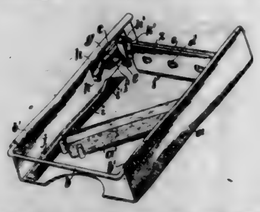


A collapsible and portable tire rim adjuster comprising a link having a plurality of spaced orifices arranged longitudinally therein, a pair of outwardly diverging hooked arms positioned on opposite sides of said link, a bolt passing therethrough and through one of said orifices to secure said link and arms in fixed relation to each other overlapping ears mounted upon the opposed sides of said arms and a pivotal connection between said ears, a lever having an offset end portion pivotally connected to said link, a pair of outwardly diverging hooked arms removably mounted upon opposite sides of said lever adjacent to the point of attachment of said link, overlapping ears mounted upon the opposed sides of said last mentioned arms, and a pivotal connection between said overlapping ears.

1,558,990. RAZOR-BLADE-SHARPENING APPARATUS. EWALD LEIMBERG, Berlin, Germany. Filed Jan. 15, 1925. Serial No. 2,630. 2 Claims. (Cl. 51—153.)

1. In an apparatus for sharpening razor-blades at both edges and at both sides of each edge, in combination: a slide adapted to be reciprocated in a casing; blade-holder bearings at the free ends of said slide, and a blade-holder supported in said bearings; two pairs of

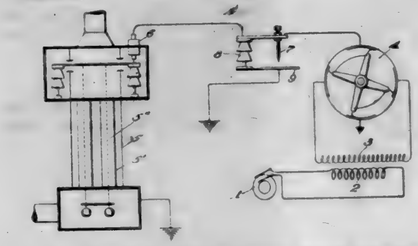
projections arranged at right angles to one another and attached to said blade-holder at one end thereof; a plate spring carried by the bearing adjacent to said projections and arranged to cooperate with one of said pairs



of projections; a guide-ledge on the bottom of said casing, and a stationary projection near the outer end of said ledge and adapted to co-operate with the other pairs of projections, substantially as set forth.

---

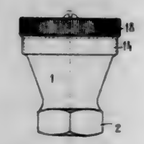
1,558,991. SURGE DISSIPATOR FOR ELECTRICAL PRECIPITATION CIRCUITS. GEORGE R. LEWERS, New York, N. Y., assignor to Research Corporation, New York, N. Y., a Corporation of New York. Filed May 18, 1920. Serial No. 382,328. 3 Claims. (Cl. 188—7.)



1. In combination with an electric circuit including an electric precipitator, of means in parallel with the precipitator for effecting a corona discharge, said means being constructed and arranged to maintain a corona discharge at the normal operating voltage of the precipitator.

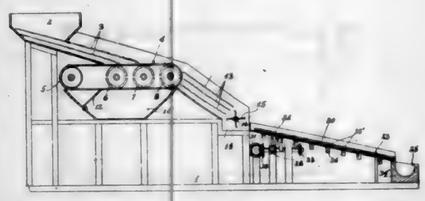
---

1,558,992. VALVE. MARIO LOMBARDI, Naples, Italy. Filed Jan. 29, 1924. Serial No. 689,353. 2 Claims. (Cl. 251—100.)



1. A valve including a tubular body provided with an opening in its wall, a plug in the body having a passageway adapted to lead fluid from the interior of the body to said opening, said plug having a stem and a stop pin projecting beyond one end of the body, a cover arranged at the same end of the body and provided with arc-shaped slots, fastening elements passing through the slots and extending into the body for adjustably holding the cover in position, said cover having an opening to receive the stem of the plug and the cover also having stop surfaces arranged to contact with the stop pin on the plug for limiting the rotation of the latter, and a handle arranged on the stem in close proximity to the cover and covering the cover to prevent any one from tampering with the fastening elements without first removing the handle.

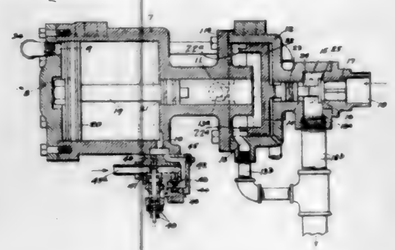
1,558,993. ELECTRIC AMALGAMATOR. WILLIAM C. MCLAUGHLIN, Oakland, Calif. Filed July 17, 1923. Serial No. 652,170. 2 Claims. (Cl. 83—68.)



1. An amalgamating and separating machine comprising a hopper adapted to receive the metal bearing sand, means to separate the iron from said sand, a plurality of mercury plated screens, and a separating table positioned below said screens, riffle bars in said table, and collecting wells positioned in the bottom of said table.

---

1,558,994. AUTOMATIC DRIFTING-VALVE SYSTEM. CLINTON O. MIELE, Portland, Oreg. Filed Dec. 22, 1920. Serial No. 432,548. 9 Claims. (Cl. 121—137.)



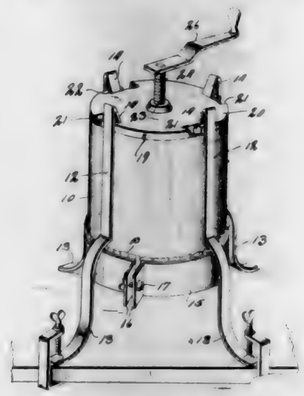
1. In a locomotive drifting valve mechanism, the combination of a drifting valve for controlling the admission of a limited quantity of steam to the engine cylinder when the throttle is closed, and means for controlling the duration of the opening of the drifting valve, comprising a piston connected with the valve and acted upon by the steam from the engine cylinder for closing the valve when the throttle is closed, a timing cylinder, a timing piston movable in the cylinder provided with means to cause operation of the drifting valve piston for actuating the drifting valve to closing position, means for admitting fluid to the timing cylinder for resisting movement of the timing piston, a conduit connecting the timing cylinder with a source of steam, a valve controlling the flow of steam through said conduit, and means connected with the valve and actuated by the steam from the engine cylinder when the throttle is closed for closing said last mentioned valve.

---

1,558,995. COMBINATION JELLY STRAINER AND FRUIT PRESS. MAY NOEL MITCHELL, New Rockford, N. Dak. Filed Apr. 21, 1924. Serial No. 708,071. 3 Claims. (Cl. 100—44.)

1. A fruit expressing device of the character described comprising a cylindrical container having a perforated bottom, a cover having a screw-threaded central opening, a threaded shaft passing through the opening and carrying a piston in its lower end and a handle at the upper end of the shaft, and means for locking the cover in place upon the container comprising strips attached to the side wall of the container and extending above

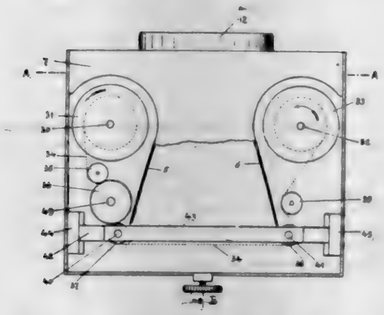
the same, the upper ends of the strips being downwardly and inwardly extended, the margin of the cover being provided with recesses to initially receive said inwardly



bent ends of the strips whereby the cover may be placed within the strips and then shifted to cause the cover to shift into position beneath the downwardly and inwardly extending portions of the strips.

---

1,558,996. PHOTOGRAPHIC APPARATUS. JOSEF MROZ, Vienna, Austria. Filed June 6, 1923. Serial No. 643,763. 22 Claims. (Cl. 95—2.)

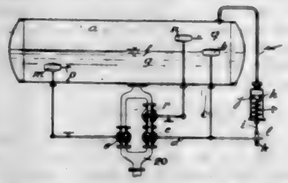


1. A photographic apparatus adapted for the use of film-ribbons running from one spool to a second, comprising an objective, guiding rolls for the film ribbon, two of which are arranged in such a manner as to hold a portion of the film ribbon in a plane perpendicular to the optical axis of the objective, a friction roll against which the film ribbon is pressed and which is driven by the film ribbon, a movable carrier having apertures, color-filters fixed within the said apertures and a mechanism for transmitting the rotations of the friction roll to the said filter-carrier in order to bring the color-filters successively in coincidence with the objective.

---

1,558,997. METHOD AND MEANS FOR CONTROLLING THE WATER LEVEL IN STEAM BOILERS. FRIEDRICH MÜNZINGER, Berlin-Wilmersdorf, Germany. Filed June 19, 1923. Serial No. 646,431. 20 Claims. (Cl. 122—451.)

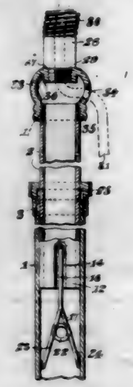
1. Boiler feed water apparatus comprising a feed conduit, means to control flow through said conduit under normal pressure conditions solely in response to water level in the boiler, and means modifying the



action of the first mentioned means for controlling the flow through said conduit under abnormal conditions solely by pressure in the boiler.

---

1,558,998. THERAPEUTIC LAMP APPLIANCE. DELL W. NICHOLS, Minneapolis, Minn. Filed Mar. 18, 1924. Serial No. 700,106. 1 Claim. (Cl. 248—7.)



An adjustable support comprising a base, a sectional standard connected therewith and formed of an adjustable tubular upper section and a stationary tubular lower section, said upper section telescoping in said lower section and having its lower terminal portion provided with lengthwise extending diametrically opposed peripheral grooves, and a contractile frictional clamp provided with right angularly disposed upper ends extending in and pivotally connected to said upper section, said clamp depending from and seating in the grooves of said upper section and further frictionally engaging with the lower section to maintain said upper section in adjusted position.

---

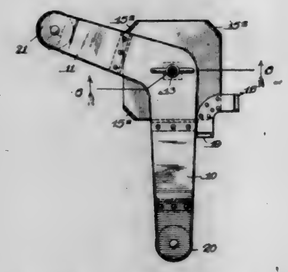
1,558,999. HELVE GUARD. CHARLES OUTLIEB, Little Falls, N. Y. Filed Oct. 26, 1923. Serial No. 670,940. 1 Claim. (Cl. 306—37.)

A helve guard for a tool-handle comprising a thin elongated sheet metal plate curved transversely to conform to the contour of the handle and being of such width as to cover both the bottom and the sides of the handle for an appreciable extent when applied to the underside thereof, the forward edge of the said elongated plate being tapered for forced insertion between the

tool-end of the said handle and the tool carried thereby, a relatively small plate arched transversely to fit the upper edge of the said handle and being normally disposed above the rear end of the said elongated plate, and a connecting strap of flexible sheet metal carried by the said elongated plate, and extending upwardly around opposite sides of the handle with its free ends connected to the said small plate.

---

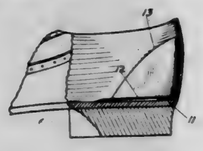
1,559,000. APPARATUS FOR HANDLING LOOSE MATERIAL. GLENN W. PACKER, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 16, 1920, Serial No. 431,251. Renewed Apr. 10, 1925. 17 Claims. (Cl. 37—115.)



1. In a device of the class described, in combination with a scraper, two draft devices for moving the same in opposite directions, and a turning device adapted to be moved by said scraper into a plurality of positions for successively engaging said draft devices.

---

1,559,001. STOCKING PROTECTOR. CHARLES PAPE, Denver, Colo. Filed June 6, 1925. Serial No. 35,469. 1 Claim. (Cl. 36—55.)

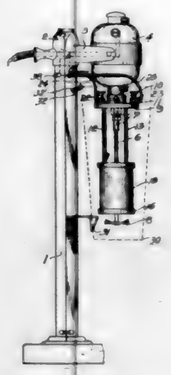


A stocking protector which is adapted to be placed inside a shoe against the inner rear surface thereof, said stocking protector being formed out of a sheet of resilient and noncorrodible material and having a highly polished exposed forward surface and also a rear friction surface, the upper and lateral edges being turned rearwardly so that the edges will engage the lining of the shoe and providing also a curved surface for the passage of the heel of the stocking when putting on the shoe, the upper edge of the stocking protector having a reentrant curve to facilitate the passage of the heel of the foot when putting on the shoe and also providing projections on each side of the reentrant curve for digging into the lining of the shoe, and a plurality of ears projecting from the lower edge of said stocking protector, said ears being adapted to secure the stocking protector to the heel of the shoe.

---

1,559,002. ELECTRIC HEATER. MICHAEL R. PLASTINO, Spokane, Wash. Filed July 21, 1924. Serial No. 727,294. 10 Claims. (Cl. 219—19.)

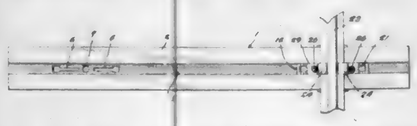
8. The combination with a support of an attaching disk and means for securing it to said support, a pair of tubular supporting bars depending from the disk, a heating device supported from said bars and comprising an inner shell and an outer casing forming an interior



annular space, a heating element located in said space, and electric wires passed through said tubular bars to the heating element.

---

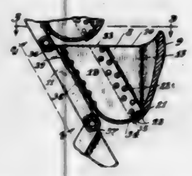
1,559,003. SELF-CUSHIONING METAL TIE. RICHARD L. POWELL, Lewistown, Pa. Filed May 20, 1925. Serial No. 31,644. 5 Claims. (Cl. 238—48.)



1. In a device of the class described, a tie provided with an opening, plates extended transversely of the tie, a block located between the plates, a securing element mounted in one plate and engaging the block, the securing element being insertible through the opening, a rack bar on the tie and having a projection received in the opening and located above the securing element, a rail retainer cooperating with the rack bar, and means for holding the retainer in place.

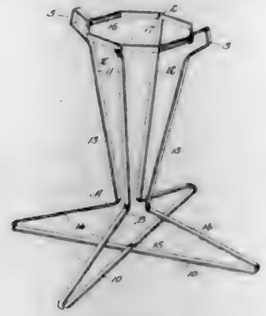
---

1,559,004. DREDGE BUCKET. JOHN J. RATTIGAN, Homestead, Pa. Filed May 18, 1921. Serial No. 470,734. 3 Claims. (Cl. 37—191.)



2. In a dredge bucket, a body portion of comparatively soft material, a spoon-shaped cutting-lip of very hard material covering the whole front face and wearing portion of the ends of the bucket, and having its front face of much greater thickness than the side-walls thereof, for resisting the greater amount of wear on the front portion of the cutting-lip.

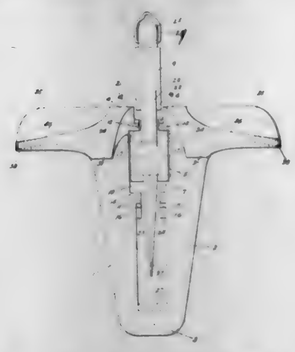
1,559,005. VASE HOLDER. ALICE M. RICHARDS, Oshkosh, Wis. Filed May 2, 1924. Serial No. 710,622. 2 Claims. (Cl. 248—41.)



2. A vase holder comprising a pair of skeleton members each including side portions and a base connecting the lower ends of said side portions, a pivotal connection between the bases of said members, an endless top element pivoted to and between the free ends of one member, and formations on the free ends of the side portions of the other member detachably engageable respectively in recesses formed in the endless top element when the latter is in a plane substantially parallel to the bases of the members, the distance between the side portions of the last named member when the latter is disconnected from the top element being less than the distance between the side portion of the first named member whereby the last named member may be moved to a position to dispose the side portions thereof substantially between the side portions of the first named member.

---

1,559,006. ANCHOR. EDWARD RITCHIE, Astoria, Oreg., assignor to Self Clearing Anchor Company, a Corporation of Oregon. Filed July 19, 1921. Serial No. 485,912. 6 Claims. (Cl. 114—208.)



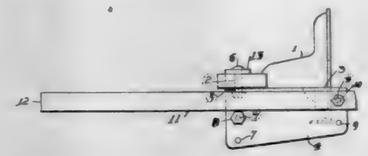
3. In an anchor, the combination with a bifurcated shank having a toe, sides and flukes thereon, and a cross-piece uniting the sides of the shank near its open end, of a draw-bar provided with a longitudinally slotted trunnion-head upon the cross-piece, opposite curved flanges upon the shank sides for the accommodation of the trunnion-head, a latch on the free end of the draw-bar, a keeper on the toe, medial cams upon one pair of the curved flanges, respectively, and snubs upon opposite sides of the draw-bar for operative engagement with said cams, all cooperative substantially as set forth.

1,559,007. AUTOMOBILE SIGNAL. WILLIAM J. SCHIRMANN, Buffalo, N. Y. Filed Jan. 17, 1925. Serial No. 3,024. 5 Claims. (Cl. 116—52.)

1. In a left turn signal of the character described, a casing having an opening, a signal arm arranged in said casing, said signal arm being in the form of an upwardly pointing arrow having a pointed head, means arranged at the lower end of said signal arm for swinging said signal arm in and out of said casing through said opening a cam-shaped detent finger pivotally mounted in said casing above the pointed head of said signal arm, and spring means adapted to force said cam-shaped detent finger against the point and converging faces of said signal arm and thereby force said signal arm in the corresponding direction, whereby said signal arm is held in said casing by the engagement of said detent finger with the outer converging face of said head, and upon moving said signal arm outwardly past the point thereof the detent finger engages the inner converging face and forces said signal arm out of said casing.

---

1,559,008. DRAWBAR. THEODORE G. SCHMEISER, Davis, Calif. Filed July 22, 1924. Serial No. 727,431. 3 Claims. (Cl. 280—33.44.)



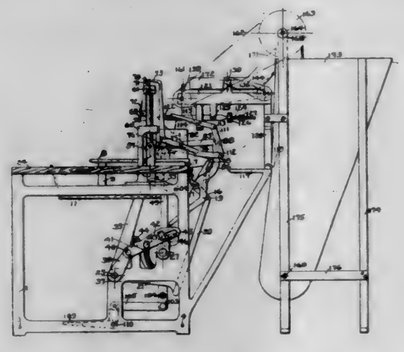
1. A draw-bar structure comprising a plate adapted to be mounted upon a tractor draw-head and having side flanges formed thereon, means for pivotally mounting a draw-bar arm at one end of each flange, and means for limiting the pivotal movement of the draw-bar arms arranged at the other end of each flange.

---

1,559,009. AUTOMATIC CIGAR-BUNCHING MACHINE. WALTER H. SCHUSSLER, Philadelphia, Pa., assignor to The Schussler Tobacco Machine Co. Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 8, 1922. Serial No. 541,914. 4 Claims. (Cl. 131—42.)

1. In an automatic cigar bunching machine, a container for the tobacco, a conveyor, a feed belt to which

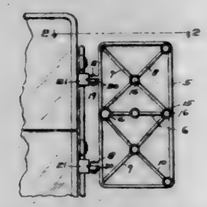
the tobacco is discharged from said conveyor, weighing mechanism to receive the discharge from said feed belt, a retainer to receive the tobacco from said weighing



mechanism, means to discharge the tobacco from said retainer, and a bunching machine to receive the discharge from said discharging means.

---

1,559,010. MOTION AND DIRECTION SIGNAL FOR AUTOMOBILES. GEORGE BEN SCHWIEGER, Phoenix, Ariz. Filed Feb. 4, 1924. Serial No. 690,488. 3 Claims. (Cl. 177—329.)



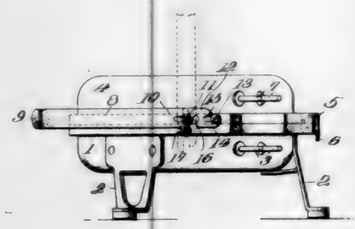
1. A device of the character described comprising a substantially rectangular frame and tubular braces constituting an electrical conduit, lamp casings at the juncture of said frame and braces with which said conduit communicates, the casings being disposed in two diagonal rows and one horizontal row and a sheet of transparent material spanning said frame and secured therein to adapt it to constitute a wind break.

---

1,559,011. DENTAL TOOL. PERRY R. SKINNER, Amsterdam, N. Y. Filed Mar. 5, 1923. Serial No. 622,855. 4 Claims. (Cl. 32—11.)

1. Attaching means of the kind described, for a dental tool, comprising a pivoted plate arranged on one side of a tool to be secured, and a second plate pivotally attached to the first and arranged on the opposite side of the tool, both plates being capable of swinging on their pivots to contact with or be removed from the tool.

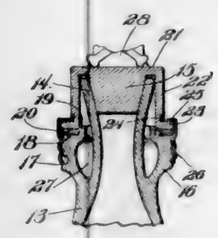
1,559,012. WAFFLE IRON. ALVA T. SMITH, Winsted, Conn., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Mar. 24, 1922. Serial No. 546,231. 7 Claims. (Cl. 53—10.)



2. In a waffle iron, interconnected upper and lower heating sections, a handle permanently connected with one of said sections and adapted to rigidly lock with either the lower or upper section for lifting said waffle iron or for opening said sections.

---

1,559,013. CONTAINER. ORA E. SMITH, Salem, Ill. Filed Apr. 28, 1925. Serial No. 26,452. 1 Claim. (Cl. 215—9.)



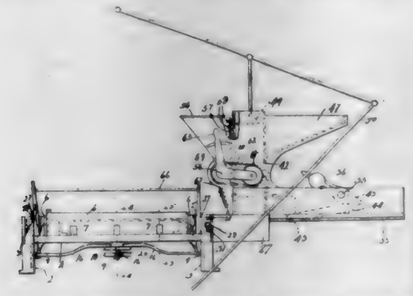
A glass container having a neck provided with an annular flange extending upwardly and outwardly therefrom in spaced relation to the upper end of the neck, the upper end of said flange being formed to provide a seat, the outer face of the flange being threaded, a cap for the neck including a sealing element for the upper end of the neck and a depending flange having at its lower end a horizontal flange confronting the upper end of the first named flange, a gasket disposed upon the upper end of the first named flange, a metallic cap rotatably engaged with the first named cap and having threads for engagement with the flange of the bottle neck, the flange of the bottle neck having an integral upwardly extending flange at the upper end thereof fitting within the depending flange of the cap for the neck.

---

1,559,014. TILE-MAKING MACHINE. WILLIAM R. SNYDER, Philadelphia, Pa. Filed Apr. 4, 1923. Serial No. 629,784. 7 Claims. (Cl. 25—43.)

3. In a tile making machine, the combination of legs or standards, a frame fixed to said standards, pallet supporting means detachably mounted on said frame, a pallet removably seated on said supporting means, side plates removably and adjustably mounted on the frame,

means also supported by the frame to force said plates toward the pallet, face plates adjustably secured to said side plates, a material holding box adapted to be moved



back and forth over the pallet, a slicker movable with the box, and means for moving said slicker independent of the box.

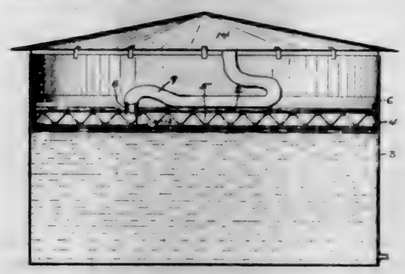
---

1,559,015. WELDING ROD. WINSTON F. STOODY, Whittier, Calif. Filed July 9, 1925. Serial No. 42,584. 2 Claims. (Cl. 219—8.)

2. A welding rod containing iron, chromium approximately 7%, manganese 4% and silicon 1 and ¼%.

---

1,559,016. METHOD OF AND TANK FOR STORING OIL. SMITH L. STOVALL, Kerto, Calif., assignor to C. A. Gibson and J. F. Gibson, jr., both of Visalia, Calif. Filed Jan. 4, 1921. Serial No. 435,013. 1 Claim. (Cl. 220—26.)

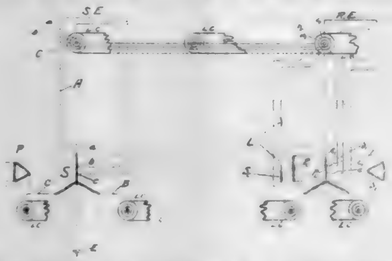


The combination with a tank for containing oil or oil products, of a vertically movable partition in said tank, a depending peripheral wall on said partition forming a chamber below the partition for the accumulation of gas, a gas discharge conduit on said partition, a valve for controlling the flow of gas through said conduit and means operative by variation in the amount of gas in said chamber, for opening and closing said valve.

---

1,559,017. ELECTRICAL POWER-TRANSMISSION SYSTEM. ALFRED MILLS TAYLOR, Erdington, England. Filed Jan. 16, 1925. Serial No. 2,955. 6 Claims. (Cl. 171—97.)

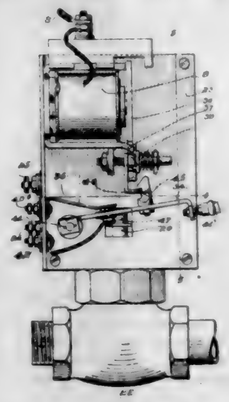
1. In a high-tension, alternating-current system including a concentric cored cable comprising current transmitting conductors in which the requisite capacity current for the outermost core or cores is transmitted through the central core of the cable at a maximum transmission voltage to the point or points at which the current is to be fed to the outer core or cores, means for supplying said capacity current at the required pressure or pressures to said outer core or cores comprising an independent transformer at each point having its primary winding connected with the central core of the cable and neutral of the system and its secondary winding connected with one of the outer cores only and the neutral of the system whereby an efficient proportioning



of the potential gradient applied to the outer core of cores and central core is obtained and the quantity of conducting material required for the outer core or cores is minimized.

---

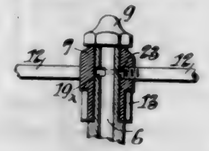
1,559,018. SAFETY CONTROL FOR FLUID-FUEL VALVES. FRANK C. TAYLOR, Rochester, N. Y. Filed May 27, 1925. Serial No. 33,309. 9 Claims. (Cl. 137—139.)



1. The combination with a valve, of means for moving the valve in one direction, detaining means for holding said valve moving means against action, and an electric magnet arranged to hold the detaining means in detaining relation to the valve holding means.

---

1,559,019. ROTATABLE SPRINKLER HEAD. WILLIAM C. TODD and JAMES W. POMEROY, Victoria, British Columbia, Canada. Filed Aug. 17, 1922. Serial No. 582,382. 8 Claims. (Cl. 299—69.)

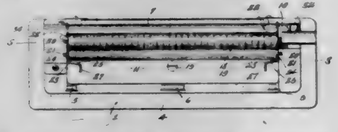


1. In a rotatable water sprinkler, the combination with a hollow stem to which a water service is delivered, said stem having a lateral port the ends of which port are connected together around the other side of the stem by a limiting groove, a sprinkler head rotat-

ably mounted on the stem, said head having a series of jet apertures extending from the bearing outward, which apertures will thus receive a full supply of water while passing the lateral port, and a restricted supply while passing along the groove during the remainder of the revolution of the head.

---

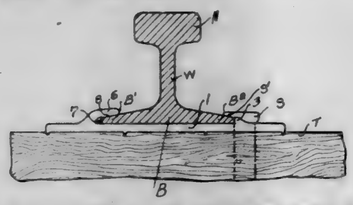
1,559,020. ENVELOPE-OPENING MACHINE. JAMES V. WASHBURNE, Syracuse, N. Y. Filed Oct. 13, 1920. Serial No. 416,665. 11 Claims. (Cl. 164—66.)



1. An envelope opening machine comprising a base formed with uprights, a rotary cutter having axles journaled in the uprights, a shear plate mounted on the base in front of the cutter, a pair of arms mounted on the axles of the cutter and extending forwardly therefrom, and a roller having axles at its ends journaled in said arms, the roller resting on the shear plate, substantially as and for the purpose described.

---

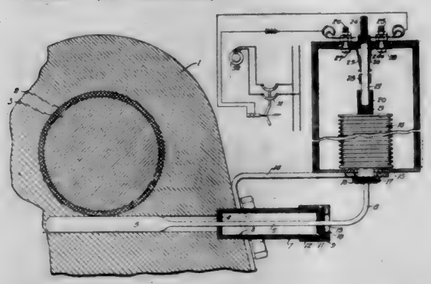
1,559,021. TIE PLATE. THEODORE WEILER, Medical Lake, Wash. Filed June 23, 1924. Serial No. 721,671. 1 Claim. (Cl. 238—304.)



A tie plate having on its bottom two series of diagonally extending, intersecting ribs, a longitudinally extending integral lug on its upper face and an inner shoulder on said lug perpendicular to the top surface of the tie plate, and a spaced overhanging parallel flange with an undercut clearance at its junction with the top surface of the plate and fashioned with an inclined frictional contact face on its under side.

---

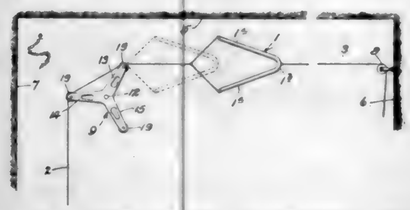
1,559,022. THERMOSTAT. ROY J. WENSLEY, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 10, 1919. Serial No. 343,977. 2 Claims. (Cl. 200—140.)



1. A thermal protective device for machine parts comprising a bulb containing a volatile fluid, a bellows connected with the bulb and responsive only to the volatilized fluid, an insulating rod operable by said bellows, contact members bearing against said rod, and means on the rod for completing an electrical circuit through the contact members.

---

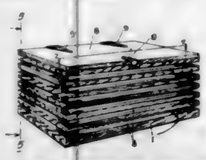
1,559,023. APPARATUS FOR HANDLING LOOSE MATERIAL. ROBERT J. WOOD, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 2, 1921, Serial No. 474,431. Renewed May 4, 1925. 7 Claims. (Cl. 37—115.)



1. In a scraper apparatus, in combination with a scraper having two draft ropes for reciprocably operating the same, a rotatable turning device having three or more bearing members spaced apart, any two adjacent members being arranged to successively engage said draft ropes at both ends of said scraper.

---

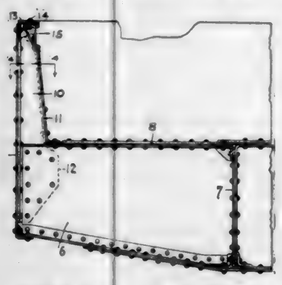
1,559,024. COLLAPSIBLE CRATE. ALVAH GRAY WOODWARD, Detroit, Mich. Filed Apr. 28, 1924. Serial No. 709,416. 8 Claims. (Cl. 217—36.)



1. In a crate, the combination with bars forming the walls of the crate, of spacers insertable between said bars, and members carrying said spacers pivotally secured to the crate bottom to permit a ready removal of said spacers from between said bars.

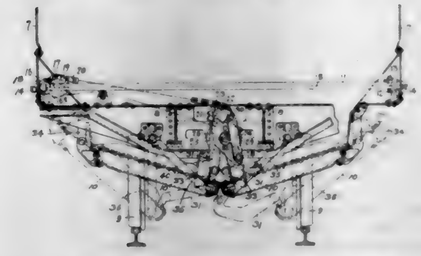
---

1,559,025. CAR FOR HOT METAL. HARRY T. ANDERSON and ANDREW CHRISTIANSON, Butler, Pa., assignors to Standard Steel Car Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 20, 1924. Serial No. 714,654. 6 Claims. (Cl. 105—406.)



1. The combination with a car provided with a side sheet, of an auxiliary inside sheet, means for mounting said inside sheet in spaced relation to said side sheet, and a top rail disposed above one of said sheets and mounted in fixed relation thereto.

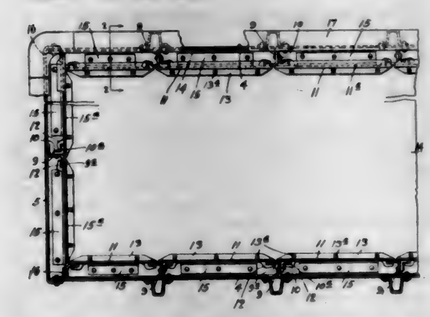
1,559,026. CAR-DOOR-OPERATING MECHANISM. HARRY T. ANDERSON, Butler, Pa., assignor to Standard Steel Car Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 20, 1924. Serial No. 714,655. 5 Claims. (Cl. 105—250.)



1. Car door operating mechanism comprising an operating shaft, a counter shaft disposed at right angles to said operating shaft, cooperating gear wheels carried by said shafts, a sprocket carried by said counter shaft, door closing mechanism, a sprocket for actuating said mechanism, and a drive chain connecting the said sprockets.

---

1,559,027. CAR FOR HOT METAL. HARRY T. ANDERSON, Butler, Pa., assignor to Standard Steel Car Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 20, 1924. Serial No. 714,656. 7 Claims. (Cl. 105—406.)



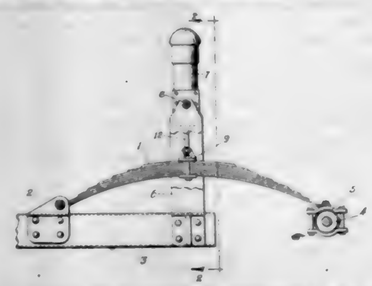
7. The combination with an open top car body provided with a side wall, of auxiliary wall sections each extending from a point adjacent to the top of the car to the floor thereof, locking means mounted in fixed relation to said side wall, and means on said auxiliary wall for effecting interlocking engagement with said locking means.

---

1,559,028. PAPER COVER FOR CONTAINERS. JAMES E. ANNEN and GEORGE O. FROSTAD, Milwaukee, Wis., assignors to The National Paper Can Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 21, 1922. Serial No. 545,531. 2 Claims. (Cl. 229—5.6.)

1. A paper container cover formed of a paper disc having its edge portion folded back upon itself and then bent substantially at right angles to the disc body, and an inner disc having its edge extending into the fold of the first disc, substantially as described.

1,559,029. SPRING SUSPENSION. HALFDAN B. U. AHONSEN, Oakland, Calif. Filed Sept. 20, 1924. Serial No. 738,942. 3 Claims. (Cl. 267—8.)



1. A vehicle spring suspension comprising a leaf spring secured at one end to the vehicle, and at the other end to the axle, a shock absorber secured to said frame, a pitman extending from said shock absorber and secured to said leaf spring.

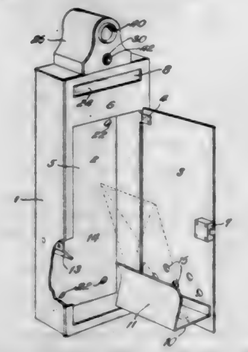
---

1,559,030. CYLINDER SWITCH WITH NO-VOLTAGE OR OVERFLOW-CURRENT RELEASE. REINHARDT THEODOR BÄR and KARL BÖLTE, Frankfort-on-the-Main, Germany, assignors to the Firm Voigt & Haeffner, Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Aug. 29, 1921. Serial No. 496,664. 6 Claims. (Cl. 200—89.)

1. In an electromagnetic switch, a switch shaft, a switch member rotatable on said shaft, a cam fixed on said shaft, a rocking lever having a relatively stationary fulcrum operated by said cam, releasable connections between said rocking lever and switch member, a relatively stationary electromagnet controlling said connections and means for biasing said switch member to open-circuit position.

---

1,559,031. MAIL BOX. HERBERT C. COX, Chicago, Ill. Filed Mar. 16, 1922. Serial No. 544,112. 2 Claims. (Cl. 232—28.)

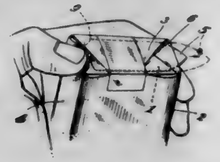


1. A mail receptacle having at the upper part a mail slot and having a vertically hinged horizontally and outwardly swinging door provided with an inwardly projecting ledge positioned for lodgment thereon of matter

entered through the slot, the receptacle having at the side of its chamber proximate to which the free edge of the door closes, an inclined guide plate for the material entered through the slot, sloping down away from that side of the chamber past the proximate edge of the door opening, for preventing encounter of said matter with the edge of the door opening in the opening movement of the door.

---

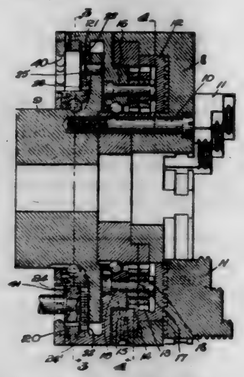
1,559,032. CONTAINER AND DEVICE FOR OPENING SAME. JOHN P. CURRY, Riverside, Conn. Filed Apr. 15, 1924. Serial No. 706,628. 5 Claims. (Cl. 229—51.)



1. The combination with a container having a wall, of an opener having a perforating end within the container, said end being movable endwise in said container with respect to said wall in such a way as to pierce through said wall from the inside and to protrude therefrom sufficiently to be grasped by a person's fingers.

---

1,559,033. CHUCK. WALLACE M. CUTLER, Windsor Locks, Conn. Filed July 8, 1921. Serial No. 483,260. 7 Claims. (Cl. 279—114.)

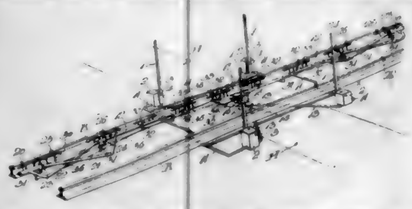


1. A chuck comprising, in combination, a body, jaws, a jaw-operating part mounted for turning movement relative to the chuck body, differential means for turning said part relative to the chuck body and planetary means for actuating said differential means.

---

1,559,034. RAILWAY-CROSSING GATE. RICHARD DAVIS, West Scranton, and EARL GEHLING, Scranton, Pa. Filed July 9, 1925. Serial No. 42,521. 4 Claims. (Cl. 246—272.)

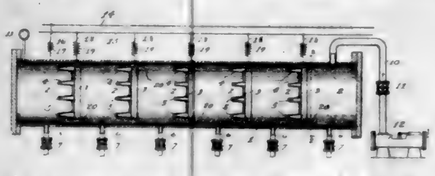
1. In an operating means for a railway crossing gate of a type having a chamber to receive a gate-actuating fluid, and an exhaust valve for said chamber; fluid pressure supply pipes extending along the railway at opposite sides of the crossing and communicating with said chamber, normally closed control valves for said pipes remotely spaced from the crossing and having train-depressed shoes by which they are opened, other train-depressed shoes at spaced points along the track between the first named shoes, bell cranks disposed in vertical planes parallel with the rails and operatively connected with said shoes to be swung thereby about their fulcrums, the bell cranks at each side of the crossing having ends movable away from said crossing



when the shoes are depressed, two flexible lines at opposite sides of the crossing connecting said ends of the bell cranks at their respective sides of said crossing, and means connecting the inner ends of said lines, said connecting means being operatively connected with said exhaust valve to close the latter when either of said valves is opened.

---

1,559,035. PROCESS AND APPARATUS FOR DEHYDRATING EMULSIFIED OILS. GUSTAV EGLOFF and HARRY P. BENNER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Nov. 1, 1920. Serial No. 420,881. Renewed Mar. 28, 1925. 10 Claims. (Cl. 204—24.)



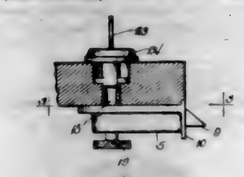
1. A process of dehydrating heated emulsified petroleum oil consisting in passing the oil through a series of spaced foraminated plates, the foraminations being of gradually decreasing size, under pressure and simultaneously subjecting the oil to the action of electrical current as it passes through said plates.

---

1,559,036. PROCESS AND APPARATUS FOR DEHYDRATION OF OIL. GUSTAV EGLOFF and JACQUE C. MORRELL, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Feb. 18, 1922. Serial No. 537,483. Renewed Mar. 28, 1925. 4 Claims. (Cl. 204—24.)

1. A process for dehydrating oil, consisting in dissolving into the oil and water a medium adapted to improve its conductivity, then passing an electric current therethrough to effect separation and permitting the water to separate from the oil in a settling stage.

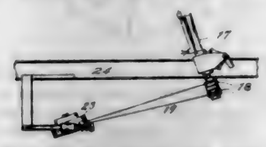
1,559,037. LOCK. JOHN E. FLOYD, Chicago, Ill., assignor of one-half to Wellington S. Wemple, Chicago, Ill. Filed Dec. 9, 1922. Serial No. 605,840. 2 Claims. (Cl. 70—46.)



1. A latch structure having a reciprocatable spring-pressed bolt; a cross-bar secured to the rear end of the bolt; a rotatable tumbler having two ends selectively to engage the bar when rotated to retract the bolt, and a spring-pressed latch-member to engage the other end of the tumbler to yieldingly hold the bolt retracted against the spring.

---

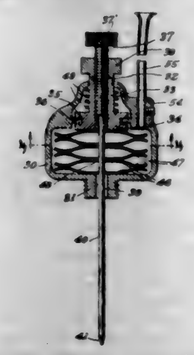
1,559,038. SWITCH FOR VEHICLE SIGNAL SYSTEMS. JOHN A. FORNEY, Reading, Pa. Filed Aug. 31, 1923. Serial No. 660,279. 1 Claim. (Cl. 200—59.)



A switch device for vehicles comprising a casing, a pair of parallel rods on which the casing is mounted, a coil spring surrounding each of said rods, two terminals and a contact member, a steering post, a worm grooved pulley on the lower end of the post, a grooved pulley connected with the contact member, an endless cable connecting the worm pulley on the steering post with the grooved pulley, whereby the actuation of the steering post will effect a contact between said contact member and either of the terminals.

---

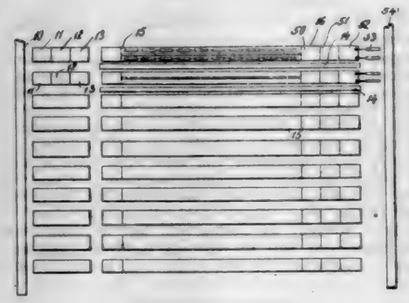
1,559,039. THERMOSTATIC NEEDLE CONTROL FOR CARBURETORS. ERIC T. FRANSEN, Maplewood, N. J. Filed Dec. 4, 1922. Serial No. 604,649. 2 Claims. (Cl. 261—39.)



1. A carburetor attachment comprising in combination with the mixing chamber and supply chamber thereof, of a closed casing separably engaged with said mixing chamber, means for entering air at variable temperature to said casing, a sleeve slidable through the upper part of said casing, a screw operable in said sleeve, means for locking said screw when in adjustment, a needle valve pivoted in the inner end of said screw, said valve controlling the passage between said chambers, and a series of thermostatic couples in said casing adapted to actuate said sleeve.

---

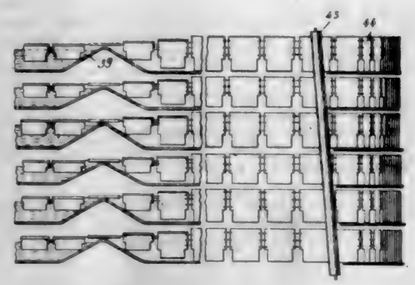
1,559,040. CONTINUOUS PROCESS FOR THE MANUFACTURE OF ROOFING ELEMENTS. JULIUS H. GILLIS, Elizabeth, N. J., assignor, by mesne assignments, to Anaconda Sales Company, a Corporation of Delaware. Filed Mar. 15, 1923. Serial No. 625,286. 34 Claims. (Cl. 204—8.)



1. A process for producing roofing elements consisting of a base and a metallic coating applied to the surface of the base, which comprises moving a series of bases through a cell containing a plurality of spaced anodes, with a step-by-step movement, and depositing a metallic coating on the bases by electrolysis during such movement.

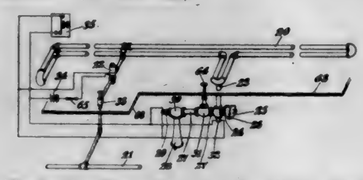
---

1,559,041. METHOD AND APPARATUS FOR CONTINUOUSLY COATING ROOFING ELEMENTS ELECTROLYTICALLY. JULIUS H. GILLIS, Elizabeth, N. J., assignor, by mesne assignments, to Anaconda Sales Company, a Corporation of Delaware. Filed Aug. 15, 1923. Serial No. 657,488. 30 Claims. (Cl. 204—8.)



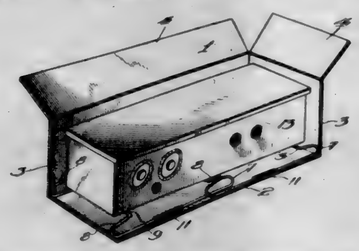
6. A process of coating roofing elements of the type described which comprises supporting a series of elements upon a plurality of electrical conductors within an electrolytic cell, the conductors extending transversely of the series of elements, and moving said elements through the cell in such manner that substantially all of the surface of the individual element to be coated comes repeatedly in contact with a conductor.

1,559,042. HEATING SYSTEM. EDWARD E. GOLD, New York, N. Y., assignor to Gold Car Heating & Lighting Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 10, 1922. Serial No. 593,580. 5 Claims. (Cl. 236—41.)



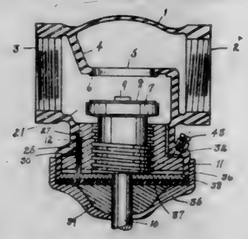
1. The combination with a steam radiator having an electrically operated steam admission valve, and a trapped outlet effective at a predetermined pressure to discharge water of condensation without permitting the escape of steam, of a second outlet connection normally open to atmosphere, a thermostat in said connection, said thermostat being sensitive to the temperature of steam at atmospheric pressure, an electric circuit connecting said thermostat and said valve with a source of energy, whereby the opening and closing of said valve may be controlled by said thermostat, and a valve in said connection between said thermostat and said radiator whereby on closing said last mentioned valve the thermostat will be rendered ineffective and steam may be maintained in said radiator at a pressure above that of atmosphere.

1,559,043. RESILIENT SUPPORT FOR PACKING FRAGILE ARTICLES. SOLOMON H. GOLDBERG, Chicago, Ill. Filed May 1, 1924. Serial No. 710,300. 9 Claims. (Cl. 217—54.)



1. A construction of the character described, consisting of a box having a base portion, a flexible support mounted therein, comprising a single piece of wire bent to form substantially parallel base supports, having return bent ends integrally connected with cross pieces.

1,559,044. VALVE. GEORGE H. HARRIS, Utica, N. Y., assignor to Utica Valve & Fixture Company, Utica, N. Y., a Corporation of New York. Filed Apr. 12, 1922. Serial No. 551,845. 1 Claim. (Cl. 277—15.)

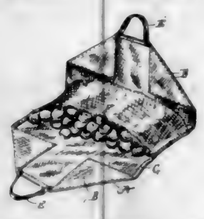


In a valve, a valve casing having a valve seat therein and a waste outlet, a valve having an externally threaded portion adapted to be turned so as to be moved toward and from its seat, an internally threaded sleeve held from rotatable movement and adapted to be moved longitudinally by the turning of said valve for controlling the discharge of waste water through the waste outlet, said sleeve having its opposite peripheral surfaces cut off straight to provide passages for the waste water to the outlet.

1,559,045. LIFTING JACK. ROBERT C. MCCOLLEY, Indianapolis, Ind. Filed Mar. 9, 1925. Serial No. 14,077. 2 Claims. (Cl. 254—100.)

2. The combination, with a lifting-jack having a base member and a head each with angular-cornered bearing portions connected by serrated edges, which head and base are separated by a screw projecting into the head, of a plurality of spacing rings surrounding the screw to regulate the projection of the screw into the head and means to prevent creeping comprising cooperating indents and detents in the bearing faces of said parts.

1,559,046. BUNDLE CARRIER. GEORGE R. MCLERAN, Hinsdale, Ill. Filed Oct. 16, 1924. Serial No. 743,885. 2 Claims. (Cl. 224—49.)

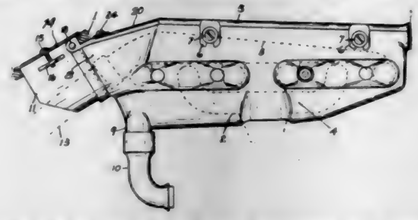


1. A bundle carrier comprising a body of flexible material provided at each end with a handle grip and provided across its center on the inside with a pocket flap secured at each end to the body and so arranged as to present its unsecured edges for contact with the proximate portions of the body when the ends of the body are flexed upwardly to bring the handle grips into close relation to one another, substantially as described.

1,559,047. AUTOMOBILE HEATER. LEWIS D. NELSON, Coldwater, Mich. Filed Nov. 17, 1923. Serial No. 675,343. 5 Claims. (Cl. 237—12.3.)

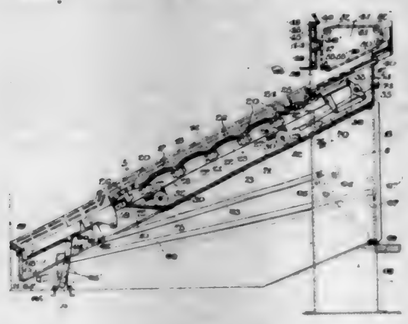
1. In a structure of the class described, the combination of a housing for the exhaust manifold of an internal combustion engine comprising a top wall and a side wall, the side wall being extended rearwardly beyond the top wall and provided with an inwardly projecting lug having a bolt opening therein, a register box adapted to be inserted in the footboard of a motor vehicle and having an opening in the bottom wall thereof adapted to fit over the exhaust pipe of an internal combustion engine, a conduit member having telescoping engagement

with the front end of said register box, connecting rivets for said conduit member and register box disposed at the top thereof permitting relative tilting adjustment of the parts, said conduit being adapted to overlap the



rear end of said side wall and complement said housing top and having a slot therein registering with said bolt hole in said lug, and a bolt disposed through said slot to engage said lug.

1,559,048. BOILER FURNACE. JAMES A. PACKARD, Milwaukee, Wis. Filed Apr. 22, 1921. Serial No. 463,441. 4 Claims. (Cl. 110—38.)

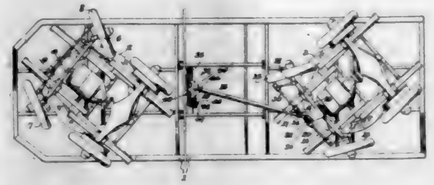


2. In a furnace, the combination of a plurality of grate sections disposed and movable on an incline and having air openings therein, a stationary air box forming a duct for blast air disposed beneath said sections and provided with an inclined bottom closure plate extending substantially the length of said sections and removable from the front of the furnace.

1,559,049. HOSE CLAMP. WILLIAM T. RUTLEDGE, Santa Ana, Calif. Filed Dec. 10, 1923. Serial No. 679,622. 3 Claims. (Cl. 24—19.)

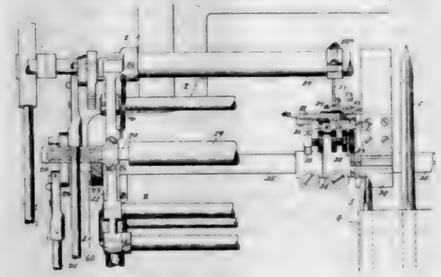
1. A hose clamp comprising a single length of ribbon bent into a ring, a portion adjacent one end of said ribbon being bent outward from the ring and bent back on itself to form a fold which is perforated, an extension beyond said fold to form a loop, a portion of the ribbon adjacent its other end bent outward and back on itself to form a perforated fold, an extension beyond the latter fold forming a tongue which bridges the gap between said folds, and fastening means passing through said perforations, one end of said means being secured within said loop.

1,559,050. STEERING MECHANISM FOR VEHICLES. OSCAR DANIEL SCHWARTZ, Hudson, N. Y., assignor, by mesne assignments, to Versare Corporation, a Corporation of New York. Filed May 24, 1924. Serial No. 715,642. 7 Claims. (Cl. 280—81.)



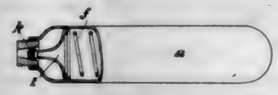
1. In a vehicle, a body, a truck having front and rear wheels on which the rear portion of the body is pivotally mounted, the front wheels of the truck being pivotally mounted on the truck to turn about two separate substantially vertical axes, a member operatively connected to the body and mounted so that a portion thereof has a lateral movement of translation relative to the truck when the forward portion of the body moves laterally, and connections from said portion of the member to the front wheels of the truck for turning those wheels about their separate axes when said portion of the member moves laterally.

1,559,051. PRINTING PRESS AND LIKE MACHINE. HERMAN J. SCHULTZ, Chicago, Ill. Filed July 5, 1919. Serial No. 308,843. 5 Claims. (Cl. 192—126.)



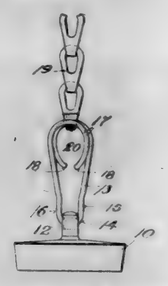
1. In a printing press having an automatic stopping device, the combination with a means for feeding the paper sheet to the press, of a pivoted vibrating element having contacting relation with the lateral edge of the paper sheet as it fed to the press, operative connections between the pivoted vibrating element and the stopping device whereby the press is automatically stopped when the lateral edge of the paper is out of position.

1,559,052. PRESSURE STORAGE VESSEL. GUSTAV SCHWORETZKY, Esslingen-on-the-Neckar, Wurttemberg, Germany. Filed Nov. 9, 1921. Serial No. 514,096. 2 Claims. (Cl. 220—3.)



1. The improved method of hermetically sealing storage vessels closed from the inside which consists in pressing a valve upon its seat from the inside by means of pressure generated by heat application, the pressure exerted being sufficient to effect an adhering contact between the valve and seat.

1,559,053. STOPPER LINK. JOHN A. SEXAUER, New York, N. Y. Filed Mar. 4, 1922. Serial No. 541,061. 2 Claims. (Cl. 24—237.)



1. In an anchor chain link for securing a stopper to an anchor chain, a stopper link having a U-shaped seat for holding said stopper and resilient sides terminating in parallel substantially equi-curved overlapping portions having inturned hook ends, said overlapping portions being tensioned to frictionally engage and hold a link of said anchor chain.

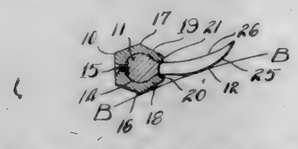
---

1,559,054. METHOD OF MANUFACTURE OF PREPARED CHARCOAL. ARTHUR WESLEY SMITH, Baltimore, Md., assignor of one-half to William W. Varney, Baltimore, Md. Filed Mar. 10, 1920. Serial No. 364,613. 2 Claims. (Cl. 23—233.)

1. The process of manufacturing a decoloring, deodorizing, and absorptive material comprising, impregnating the structure of a vegetable fibrous substance with a compound of a metallic element, reducing the said structure to charred condition, and, reducing said compound of said metallic element to its elementary form within the structure of the said charred vegetable fibrous substance thereby rendering free said metal within said structure.

---

1,559,055. COMB. ROBERT C. SMITH, Cleveland, Ohio, assignor to The Cleveland Trust Company, a Corporation of Ohio. Filed Nov. 5, 1923. Serial No. 672,809. 3 Claims. (Cl. 132—14.)

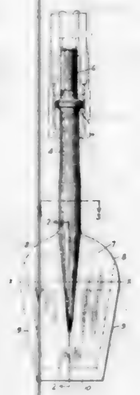


1. In a device of the character described, the combination with a holder having a longitudinally extending undercut groove therein and having laterally extending exterior portion, a member complementary to the groove slidable therein, said member having teeth with a convex surface projecting therefrom, the base portion of the teeth lying within the groove, whereby the joint between the holder and the member is out of contact with the surface to be combed and whereby cutting edges at the base of the teeth are concealed.

---

1,559,056. WORKING TOOL FOR PERCUSSIVE MACHINES. EDWARD W. STEVENS, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed June 14, 1923. Serial No. 645,311. 5 Claims. (Cl. 262—33.)

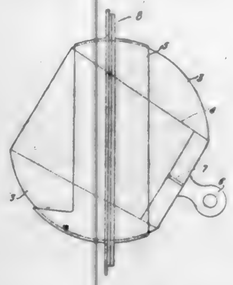
1. A working tool constructed and intended for use only with a percussive motor for cutting away and breaking up clay and other similar materials, comprising a shank arranged to receive the blows of the motor on one end and a blade at the other end of the shank, the latter forming a rib extending well down the front



of the blade, said blade having its greatest width at approximately one-third of its length from the shank end thereof and thence having straight sides tapering inwardly and terminating in a transverse front edge.

---

1,559,057. VENTILATION SYSTEM. ALEXANDER WILLIAM STEWART, Glasgow, Scotland. Filed May 25, 1923. Serial No. 641,405. 2 Claims. (Cl. 299—23.)

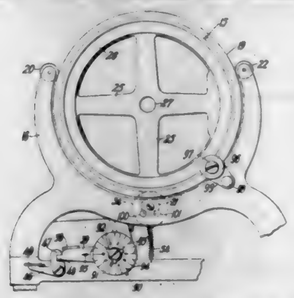


1. In a ventilation system, the combination of an air duct, an air box fitted to said duct and an outlet valve for said air-box discharging directly into the atmosphere, said valve comprising a ball socket and a valve proper in the form of a hollow spherical shell having cut away portions adjustable in said socket, said shell being adjustable in any position substantially within the range of a hemisphere without affecting the discharge through the valve.

---

1,559,058. STENCILING MACHINE. LINDEN A. THATCHER, Belleville, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 30, 1923. Serial No. 648,650. 44 Claims. (Cl. 101—110.)

2. In a stenciling machine, a stencil-cylinder, a pressure-roll to co-operate with the bottom thereof, means, including a rock-shaft, for pressing said roll against the cylinder, a handle on said rock-shaft for operating the same, and means to adjust the handle around said shaft comprising a rotatable adjusting head limited to one



complete turn, and having a scale thereon to co-operate with an index on said handle to indicate the position of the handle relative to the shaft.

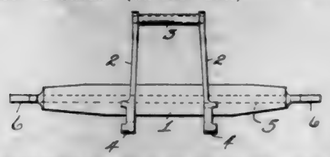
---

1,559,059. LIFE PRESERVER. WILLIAM E. ABBOTT, Pasadena, Calif., assignor of one-fourth to Dennison F. Rease, Santa Cruz, Calif., and one-fourth to R. H. Caldwell and one-eighth to Logan Smith, both of Santa Cruz, Calif. Filed Aug. 22, 1923. Serial No. 658,694. Renewed Mar. 17, 1925. 2 Claims. (Cl. 9—17.)

1. In a life preserver, the combination of a pair of substantially similar buoyant flexible members adapted to be applied and to fit close to the wearer's trunk, said members being of horseshoe shape with the bends over the wearer's shoulders, a waist belt, and flexible means coacting with the ends of the members and serving to seal the same and constitute reinforcing anchorages between the members and the belt.

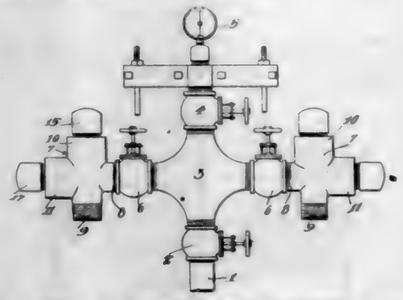
---

1,559,060. SCRAPER BLADE. GRANT E. ALLEMAN, Shoemakersville, Pa. Filed Mar. 28, 1923. Serial No. 628,395. 1 Claim. (Cl. 198—174.)



A scraper blade for conveyors including a body member with a chain engaging yoke issuing from one face and a blade issuing from the opposite face along the longitudinal center of the body whereby the marginal edges of the latter project beyond the sides of the blade, the terminals of said blade extending at right angles to the body and being in parallel relation to the yoke member.

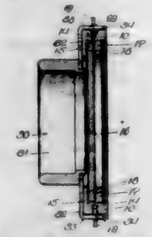
1,559,061. WELL CHOKER. HUBERT E. ALLEN and PERTON F. MURRAY, Whittier, Calif., assignor to Allen & Courtney Oil Tool Company, Compton, Calif., a Copartnership. Filed Feb. 14, 1924. Serial No. 692,849. 9 Claims. (Cl. 166—15.)



1. A device of the class described comprising a cross member containing a bean in the outflow joint of the cross member, said bean being out of the inflow path of the fluid entering said cross member.

---

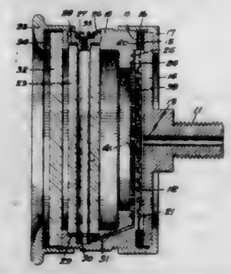
1,559,062. ADAPTER. FRITZ A. ANDERSON, Milton, Wis., assignor to Burdick Cabinet Company, a Corporation of Wisconsin. Filed Nov. 10, 1921. Serial No. 514,217. 8 Claims. (Cl. 174—177.)



2. An adapter having an exteriorly grooved ring for attachment to a lamp; a member mounted in the groove of the ring; resilient means yieldingly holding the ring eccentric to said member and permitting relative rotation therebetween and an applicator section detachably mounted on the ring.

---

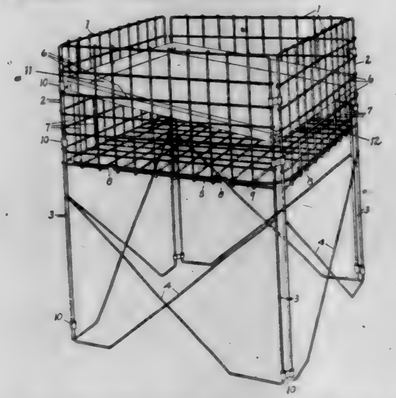
1,559,063. PRESSURE-RESPONSIVE DEVICE. JULIUS H. BECKER, San Francisco, Calif., assignor, by mesne assignments, of one-half to American Research and Development Company, a Corporation of Delaware. Filed Sept. 10, 1923. Serial No. 661,788. 6 Claims. (Cl. 73—110.)



1. A pressure responsive device comprising a casing having a pressure chamber therein, an indicating liquid chamber, a flexible impervious wall separating said

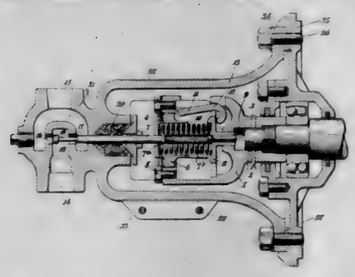
chambers whereby variations in pressure in the pressure chamber cause variations in capacity of the indicating liquid chamber and means for changing the capacity of the indicating liquid chamber to compensate for variations in volume of the liquid due to temperature changes.

1,559,064. DISPLAY RECEPTACLE. DEWEY H. BITNEY, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed May 23, 1925. Serial No. 32,345. 4 Claims. (Cl. 211—24.)



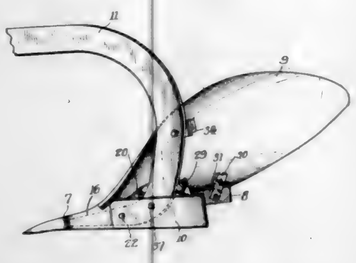
1. The combination with a wire receptacle having horizontal and vertical slats, of a bottom member adjustable within said receptacle, and a U-shaped bottom member support disposed through one side of the receptacle to rest on a horizontal slat and with its bight portion embracing the vertical slats between the arms and its hooks disposed facing downwardly and engaged with a horizontal slat on the opposite side of the receptacle.

1,559,065. GOVERNOR. ELI J. BLAKE, Buffalo, N. Y., assignor, by mesne assignments, to The Gould Coupler Company, a Corporation of Maryland. Filed Jan. 27, 1919. Serial No. 273,225. 1 Claim. (Cl. 137—140.)



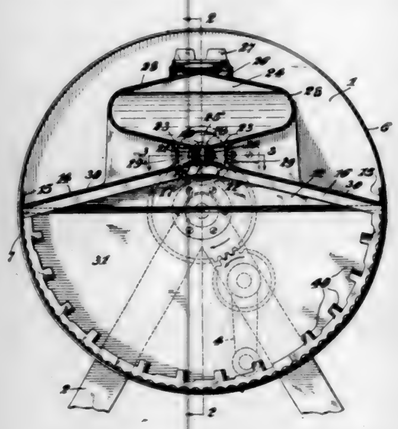
In a governor mechanism the combination of a rotating shaft, a stationary frame having bearings for said shaft, a frame secured on the end of said shaft, and rotating therewith, centrifugally operated members pivoted on said frame, a stationary housing secured to said first frame and surrounding said centrifugal members, said housing having a passage in line with said shaft, a valve member rotating coaxially with said shaft and flexibly connected with respect thereto and adapted to be moved axially of the shaft by said centrifugal members to regulate the flow of fluid through said passage, and a coiled spring coaxially arranged with said shaft and opposing the action of said centrifugal members.

1,559,066. PLOW. JOHN C. BOHMKER, Bradley, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed Oct. 19, 1923. Serial No. 669,472. 6 Claims. (Cl. 27—124.)



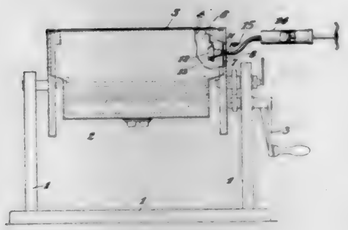
1. A plow bottom comprising, in combination with a beam having a downwardly and forwardly extending toe portion, a point constructed to provide a socket adapted to receive said toe portion of the beam, a mold-board secured to the beam rearwardly of the point, a share blade rigidly but detachably secured to the point at the rear end thereof, and means for detachably securing the share blade to the mold-board so as to hold such parts in alinement, said means consisting of a rod having one end fastened to the share blade and a device for fastening the opposite end of the rod to the mold-board adapted to place the rod under tension.

1,559,067. DUPLICATING MACHINE. ERNEST J. BRASSEUR, Chicago, Ill., assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 31, 1925. Serial No. 5,944. 9 Claims. (Cl. 101—119.)



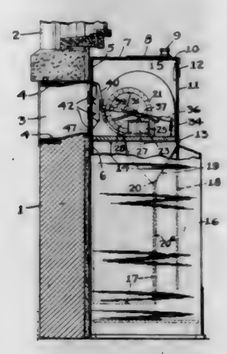
1. In a device of the character described, the combination with a rotatable stencil-duplicating drum, of an ink reservoir mounted in the drum, an inking pad carried on the drum for rotation therewith and vertically about the ink reservoir, said reservoir having an outlet and valve mechanism associated with said reservoir for opening and closing a passageway for ink to and from the reservoir, to permit and to prevent the dropping of ink from the reservoir upon the inking pad when the pad is beneath the reservoir.

1,559,068. INKING MEANS FOR DUPLICATING MACHINES. ERNEST J. BRASSEUR, Chicago, Ill., assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 31, 1925. Serial No. 5,945. 7 Claims. (Cl. 101—119.)



1. In a device of the character described, in combination, an inking pad, and means for establishing air pressure behind said pad.

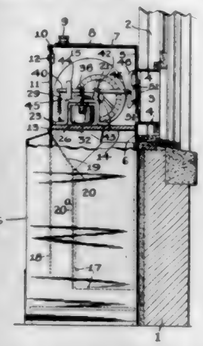
1,559,069. ELECTRICAL CONTROL FOR DAMPERS FOR UNIT VENTILATORS. MICHAEL J. CALLAHAN, New York, N. Y. Filed May 13, 1920. Serial No. 381,107. 11 Claims. (Cl. 268—10.)



1. In combination with a heating and ventilating unit having a chamber for the reception of air to be driven through the unit, a port for the admission of air to the chamber, a damper for controlling said port; and means for actuating said damper located in the said chamber, including a motor, a magnet in circuit therewith, and lever mechanism connecting the damper and magnet, whereby the admission of air to the chamber may be controlled.

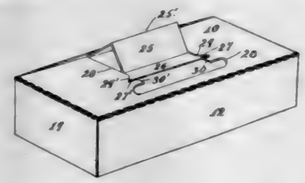
1,559,070. FLUID CONTROL FOR DAMPERS FOR UNIT VENTILATORS. MICHAEL J. CALLAHAN, New York, N. Y. Filed May 13, 1920. Serial No. 381,108. 7 Claims. (Cl. 98—27.)

1. In combination with a heating and ventilating unit having a blower chamber, and a port for admitting fresh air to the blower chamber; a damper for closing the said port; means for shifting the damper to and holding it in one position, including a lever of the first order, a plunger pivoted to the lever, and a spring pulling



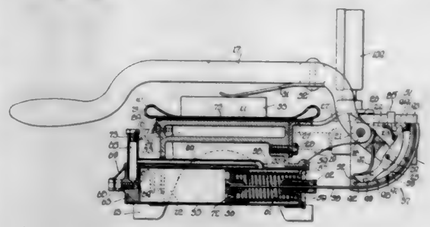
upon the end of the lever adjacent the plunger; and fluid controlled means, for shifting the damper to and holding it in another position, acting upon said plunger.

1,559,071. SLIDE-LOCK SUPPORT. WILLIAM F. CAVANAGH, Brooklyn, N. Y., assignor to Robert Gair Company, Brooklyn, N. Y., a Corporation of New York. Filed July 26, 1920. Serial No. 398,915. 6 Claims. (Cl. 206—44.)



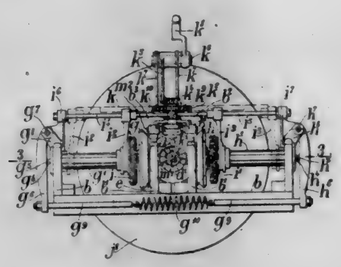
6. In a display box, an inner and an outer bottom panel, an easel for supporting the box in inclined position, cut from the outer bottom panel, but integral therewith at one end, transversely folded and the free end thereof being interlocked with the edge portions of the opening from which it was cut.

1,559,072. VULCANIZER. DAVID G. CHANDLER, Racine, Wis., and ROBERT T. SVENDSEN, Indianapolis, Ind. Filed Mar. 16, 1922. Serial No. 544,140. 32 Claims. (Cl. 18—18.)



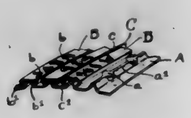
1. In combination, means for imparting a vulcanizing heat to the work, and means interposed between the work and said means for terminating the transfer of vulcanizing heat to the work upon the completion of the vulcanizing operation.

1,559,073. PROGRESSIVE CHANGE-SPEED GEAR. NICOLAS GHERASSIMOFF, Le Vesinet, France. Filed Sept. 5, 1923. Serial No. 661,081. 6 Claims. (Cl. 74—26.)



1. In a progressive change speed gear, a driving shaft, two auxiliary shafts arranged in alignment with each other, on either side of the driving shaft and at right angles to the same, a bevel wheel rigidly secured on each auxiliary shaft, two bevel wheels loosely mounted on the driving shaft and engaging with the preceding bevel wheels, means for rendering rigid with the driving shaft one or the other of the loose bevel wheels, two friction rollers, means for mounting each of the said rollers respectively on each of the said auxiliary shafts so that these rollers are driven in rotation by the said auxiliary shafts, but may be displaced in translation on the latter, a driven shaft arranged in alignment with the driving shaft, a friction plate mounted on the driven shaft for driving it in rotation and adapted for frictionally engaging with the two friction rollers, a control lever adapted to rotate on a fixed axis, a toothed wheel, means for transmitting the rotation of the lever to the said toothed wheel, two racks parallel to each other and to the auxiliary shafts, gearing with the said toothed wheel at diametrically opposed points, means for transmitting to the rollers the translation of the racks.

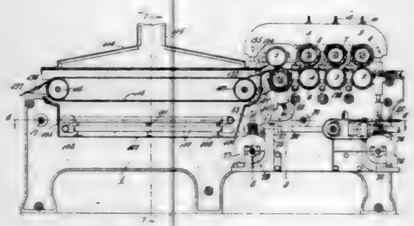
1,559,074. UNDERSCORING DEVICE FOR PRINTING FORMS. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 26, 1925. Serial No. 4,764. 10 Claims. (Cl. 101—368.)



1. The combination, with a holder having raised portions thereon and printing strips overlying such ports, of a rule mounted between the strips and resting on the holder between the raised portions thereof.

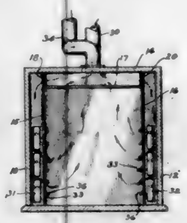
1,559,075. IRONING MACHINE. WILLIAM COLCLOUGH, Norwood, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 17, 1922. Serial No. 553,868. 2 Claims. (Cl. 68—9.)

1. An ironing machine structure, comprising a drying chamber, ironing rolls outside of said chamber, means for conveying the work after it has been ironed by said rolls through the drying chamber for the drying operation, heating means within said chamber below said



conveying means, and air discharge means having connection with said chamber from above said conveying means for discharging the moisture laden air therefrom.

1,559,076. OVEN. EDGAR F. COLLINS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 23, 1924. Serial No. 694,610. 5 Claims. (Cl. 34—19.)



4. The combination with an oven of oppositely disposed false side walls therein provided with apertures, electric heating means for the oven behind said false side walls, a false ceiling wall fitting between said false side walls and providing a space at each end for the passage of air, and baffles between said false ceiling wall and the top wall of the oven whereby the air is directed downward over said heating units through said apertures into the heating chamber and then upward past the ends of said false ceiling.

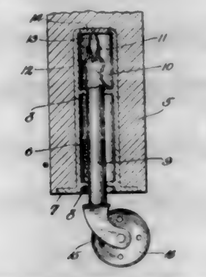
1,559,077. DRAWING OR ROLLING PROCESS. JEAN GUILLAUME DE LATTRE and HENRY HARDY, Paris, France, assignors, by direct and mesne assignments, to Bernard E. Pollak, New York, N. Y. Filed Mar. 29, 1923. Serial No. 628,934. 4 Claims. (Cl. 204—1.)

1. A process for forming a metallic lubricating coating upon articles to be subjected to drawing, rolling, or the like, comprising, electrolytically depositing upon the articles a layer of copper and mercury forming an amalgam.

1,559,078. CASTER. EDGAR B. EVERLY, Pacific Grove, Calif. Filed May 27, 1925. Serial No. 33,248. 2 Claims. (Cl. 16—38.)

1. In a caster construction, a tubular housing, an upper and lower bearing formed in the housing, a caster

shank extending through the bearings and having a head at its upper end, a resilient member having its

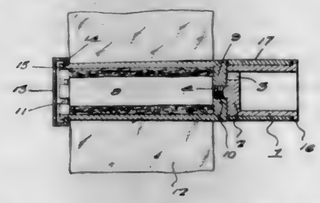


lower end resting on the upper bearing, adapted to grip the head of the shank, and a bearing supported in the resilient member.

1,559,079. ELLIPSOGRAPH. HECTOR FALLETTA, Los Angeles, Calif. Filed Jan. 26, 1924. Serial No. 688,680. 5 Claims. (Cl. 33—30.)

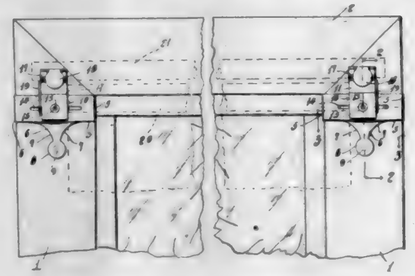
1. An instrument for drawing ellipses comprising a pair of dividers having legs in combination with a marker holder and a guide chain, a foot on each leg of said dividers, a fixing point and a focus pin on each of said feet, a swivel joint in said marker holder, a marker fixed in said marker holder below said swivel joint and adjustable means for attaching one end of said chain to said marker holder whereby the chain may be looped around said focus pins to serve as a guide for said marker in tracting ellipses of different forms and sizes.

1,559,080. ROTARY BUFFER. HENRY FIELDS, Buhl, Idaho. Filed May 31, 1924. Serial No. 717,124. 1 Claim. (Cl. 15—230.)



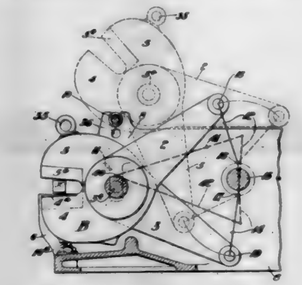
A rotary buffer comprising a driven hub portion having one end thereof closed, a threaded shank extending outwardly from the closed end thereof, a tubular member having an open outer end and having longitudinally extending circumferentially spaced slots provided therein extending from the outer end to a point adjacent the inner end thereof, cleaning elements supported in the radial slots, and means on the outer end of the tubular member for securing the cleaning elements against accidental displacement from said slots, said means comprising a cap provided with an inwardly extending annular flange, the outer end of said tubular member being provided with an annular recess to receive said flange.

1,559,081. ADJUSTABLE COMBINATION WINDOW-SHADE AND CURTAIN-POLE HOLDER. JOHN J. FISCHER, Arcadia, Ind., assignor of forty-nine one-hundredths to Noel Whisler, Arcadia, Ind. Filed Feb. 17, 1925. Serial No. 9,813. 2 Claims. (Cl. 156—24.)



1. A bracket of the character set forth comprising a plate provided at its ends with spring arms carrying prongs and intermediate its ends with a spring tongue carrying a friction block, said prongs and block constituting means adapted to secure the plate to a support and the spring arms and tongue constituting means adapted to hold said prongs and block in engagement with the support and supporting elements connected to the plate.

1,559,082. BILLET AND BAR SHEARS. AUGUST FRIEDERICI, Dusseldorf, Germany, assignor to MAX Friederici, Steubenville, Ohio. Filed Dec. 27, 1923. Serial No. 682,931. 14 Claims. (Cl. 164—41.)

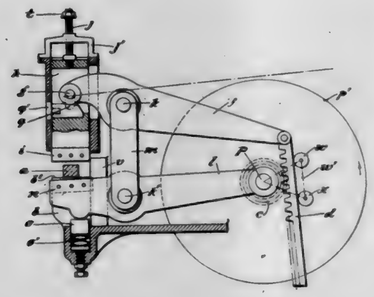


1. In a shear, opposed shearing members, a work support, and mechanical means for operating said members to first clamp the work between one of said members and said work support and thereafter move the other of said members to shear the work.

1,559,083. INGOT AND BAR SHEARS. AUGUST FRIEDERICI, Dusseldorf, Germany, assignor to MAX Friederici, Steubenville, Ohio. Filed Mar. 25, 1925. Serial No. 18,222. 3 Claims. (Cl. 164—47.)

1. In an upcut ingot and bar shear, a stationary work support, upper and lower shear levers, blades secured to the forward ends of said levers, said upper lever being pivotally connected to said upper blade, a link connecting each of said levers adjacent their forward ends, a power shaft, a pinion on said shaft, and a rack in mesh with said pinion and movable substantially vertically thereby, said lower shear lever being materially shorter than said upper shear lever and having its rear end pivotally connected to said power shaft, said lever having its rear end pivotally connected to

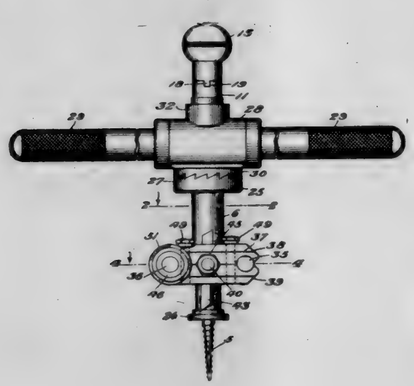
the upper end of said rack, whereby an upward movement of said rack will first rock said upper lever about its connection with said link so as to force its forward end downwardly until the upper blade engages the material to be sheared, and continued upward movement



of said rack will cause said upper lever to fulcrum at its pivotal connection with said upper blade and to lift said link connection and said lower lever so as to force said lower lever to shear the material being sheared.

---

1,559,084. TOOL. TACITUS WILLIAM GAILLARD, Brooklyn, N. Y. Filed Mar. 14, 1924. Serial No. 699,347. 14 Claims. (Cl. 164—82.)

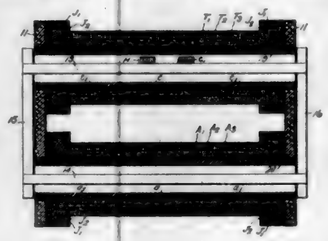


1. In a tool of the character described, the combination of a cutter head, a sleeve connected therewith, a spindle mounted in one sleeve, a handle connected with the spindle for moving the sleeve endwise in one direction relative to the spindle, and resilient means tending to force the sleeve toward the opposite direction.

---

1,559,085. PERMEAMETER. SHANKAR L. GOKHALE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 13, 1923. Serial No. 680,526. 8 Claims. (Cl. 175—183.)

3. A permeameter comprising a substantially closed magnetic circuit, a portion of which comprises a removable sample of magnetic material to be tested, magnetizing and compensating coils enclosing said circuit for producing a substantially uniform magnetic flux



therein, a potential coil enclosing said sample and a pair of potential coils enclosed by said other coils situated in close proximity to but not enclosing said sample.

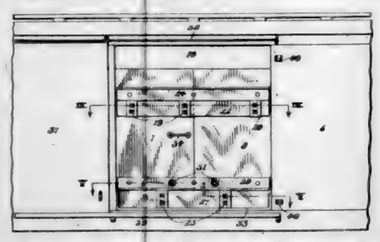
---

1,559,086. ATHLETIC SHOE. DANIEL J. GOLDEN, Brockton, Mass. Filed May 22, 1924. Serial No. 715,093. 1 Claim. (Cl. 36—59.)

An athletic shoe having orifices extending through its outsole, internally threaded metal sockets inserted in said orifices and provided with annular flanges of greater diameter than the sockets and seated on a face of the sole around the sockets, rivets uniting the flanges in the sole and thereby securing the sockets in the sole, said rivets having heads projecting outward from the tread face and from the flanges, and cleats of moldable compressible material having enlarged concave base faces formed to extend throughout the area of the socket flanges and cover the projecting heads of the rivets and adapted to be indented by said heads, the cleats being provided with screw threaded shanks projecting from said concave faces, and engaged with the sockets, to press the base faces of the cleats into nonrotating engagement with the projecting heads of the rivets.

---

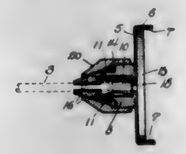
1,559,087. GRAIN-CAR DOOR. KAZIMIERZ GORNY, Buffalo, N. Y. Filed Apr. 30, 1924. Serial No. 710,041. 1 Claim. (Cl. 20—28.)



In a device of the type described, the combination with a freight car having a doorway frame, of a pair of inwardly opening doors hingedly connected to the frame and having their lower free corners similarly cutaway to jointly form a discharge opening, a series of outwardly extending T-shaped keepers fastened to the outer faces of the doors near their upper edges, a brace member having a series of slots to receive said keepers when the brace member is arranged transversely of the doors and resting upon the keepers, an additional outwardly extending T-shaped keeper carried by each door at the vertical edge of its cutaway portion, a second brace member having a pair of slots to receive the said additional keepers when the second brace member is arranged transversely of the lower edges of the doors with the intermediate portion of the same closing the discharge opening, and a permanent bracing strip secured to the floor portion of the doorway frame against which the lower edges of the doors are braced to withstand internal pressure.

---

1,559,088. ADAPTER. WALTER ERNEST GUNNERSON, Milton, Wis., assignor to Burdick Cabinet Company, Milton, Wis., a Corporation of Wisconsin. Filed Mar. 30, 1923. Serial No. 628,726. 4 Claims. (Cl. 174—177.)



2. An adapter for attaching applicators to a therapeutic lamp and comprising, a hollow threaded hub, a pair of relatively movable clamping jaws, a spring for holding and biasing the jaws apart, said spring being formed so as not to obstruct the passage of light through the bore of the hub, and a hollow cap adapted to be threaded upon the hub and acting upon the jaws to force the same together against the tension of the spring.

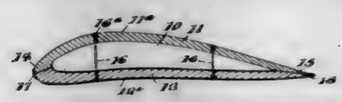
---

1,559,089. RULING DEVICE. JOHN HAGAN, New York, N. Y., and JOSEPH E. HAGAN, Akron, Ohio. Filed May 26, 1925. Serial No. 32,966. 2 Claims. (Cl. 33—41.)

1. In a device of the kind described, a pencil supporting head comprising a block of resilient material having a series of pencil lead receiving openings extending therethrough and having slots extending from one face through said openings, and a set screw extending from side to side of the block below said openings for drawing the sides of the openings together and thereby clamping pencil leads in position in said openings.

---

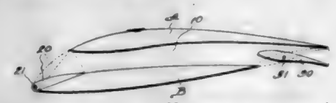
1,559,090. AIRPLANE. RANDOLPH F. HALL, Ithaca, N. Y., assignor of one-third to Theodore P. Hall, Wallingford, Conn., and of one-sixth to Paul Wilson, Ithaca, N. Y. Filed Nov. 3, 1923. Serial No. 672,548. 19 Claims. (Cl. 244—12.)



2. In combination with an aerofoil, a temporary structure thereon enclosing the aerofoil to form therewith a modified aerofoil having different characteristics.

---

1,559,091. AIRPLANE. RANDOLPH F. HALL, Ithaca, N. Y., assignor of one-fourth to Theodore P. Hall, Wallingford, Conn., and of one-fourth to Paul Wilson, Ithaca, N. Y. Filed Nov. 15, 1924. Serial No. 750,104. 32 Claims. (Cl. 244—12.)



1. An airplane wing embodying superposed aerofoils spaced apart to form an air displacement passage therebetween, and means for opening and closing said passage.

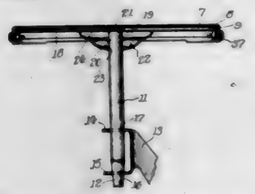
---

1,559,092. ADJUSTABLE LAMP SUPPORT. CLAUS W. HALLBERG, Marion, Ind. Filed May 2, 1924. Serial No. 710,691. 2 Claims. (Cl. 242—109.)

1. In a device of the character described, the combination of a hub, a pair of side members rigidly secured to said hub and held in spaced relation relatively to each other, a disc disposed between said sides and rotatably mounted on the hub, means secured to the outer end of the disc and forming a drum around which a flexible cord may be wound, a spring between said means and the hub, a ratchet wheel disposed between said disc and one of said side members and secured to the disc, a pawl for the ratchet pivotally secured to the said one side member, and means comprising a clamp for securing said device to a flexible element.

---

1,559,093. SCALE PAN. MARIUS H. HANSEN, Chicago, Ill. Filed Nov. 9, 1923. Serial No. 673,666. 2 Claims. (Cl. 287—20.)

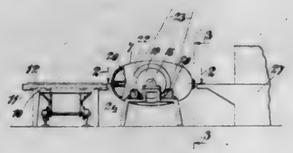


1. In a scale pan having a supporting stem, an intermediate member between the stem and the pan to which member the stem is secured, means to secure the intermediate member to the scale pan, said member having

a hole therein, the stem having a reduced portion forming a shoulder abutting the member at the hole, the reduced portion passing through the hole and being upset to engage the member on the other side, a dished collar about said stem having contact with said member, and ears on said collar passing through slots in the member to the other side thereof where they are bent to attach the collar to the member.

---

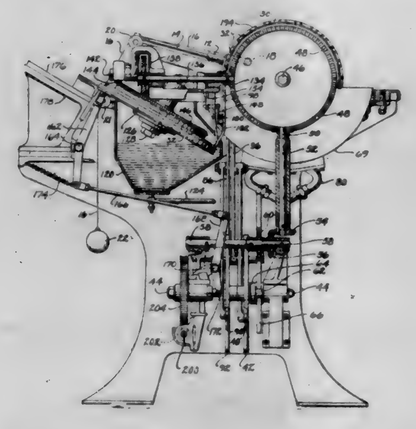
1,559,094. PROCESS AND MACHINE FOR FIRE-POLISHING GLASS. JOSEPH HASTREITER, Morgantown, W. Va. Filed Apr. 22, 1925. Serial No. 24,912. 2 Claims. (Cl. 49—14.)



1. In a glass working apparatus, the combination with a polishing table and a leer, of a drum intermediate the table and leer, said drum having two interior flat walls, closely spaced and enterable from one side, and means to rotate said drum to cause reversal thereof.

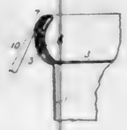
---

1,559,095. MACHINE FOR TEMPERING RAZOR BLADES. FERDINAND G. HENRY, North Philadelphia, Pa., assignor, by mesne assignments, to Walden Knife Company, Walden, N. Y., a Corporation of New York. Filed Feb. 2, 1921. Serial No. 441,730. 38 Claims. (Cl. 266—4.)



23. A machine for tempering blades, having in combination a blade guideway, blade heating means, a rotary current arranged to receive blades from said guideway and to carry the same into the range of action of said heating means, means for moving the blades through the guideway into the turret, a cooling bath, a chute through which the blades drop into said cooling bath, a guideway arranged to receive blades from said turret and leading to the chute, means for moving the blades from the turret through the guideway to the chute, and a second turret arranged to receive blades from said chute and to carry the same from the cooling bath.

1,559,096. SANITARY CAN AND SEAL. WILLIAM M. HALL, New York, N. Y.; Francis M. Hall administrator of said William M. Hall, deceased. Filed Jan. 10, 1924. Serial No. 685,413. Renewed Aug. 1, 1925. 2 Claims. (Cl. 220—78.)



1. A can, comprising a body having an annular exterior trough surrounding its upper end, and a lid having an annular exterior trough provided with a downwardly extending flange on its outer wall, the trough of the lid extending into the trough of the body with the outer wall of the trough of the body extending between the outer wall of the trough of the lid and its flange, the body and lid and their troughs being adapted to be pressed into engagement with the flange of the lid overlapping the outer wall of the trough of the body.

---

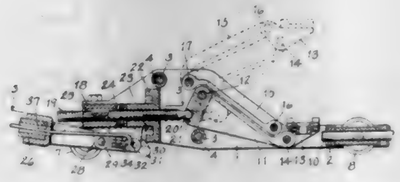
1,559,097. COMBINED TOOL SHANK AND HANDLE THEREFOR. CLAUDE HILL, Moberly, Mo., assignor of one-half to Lyman P. McDonald, Moberly, Mo. Filed Jan. 22, 1924. Serial No. 687,812. 1 Claim. (Cl. 145—61.)

In a device of the class described the combination with a tool shank having an annular groove; of a hollow handle having an opening in one end for the insertion of a tool shank, a transverse partition provided with a tool receiving opening, a catch member pivoted intermediate its ends in said handle and adapted to engage the shank of the tool inserted through said transverse partition, a plate spring also pivoted to said handle and bearing against said plate to normally hold it engaged with the tool shank, and to permit the shank to rotate relatively thereto, and a lever connected to rotate said shank and to be folded flat against the handle when in inoperative position.

---

1,559,098. LIFTING JACK. ARTHUR C. HOPKINS, Niles, Mich., assignor to National Standard Company, Niles, Mich. Filed Nov. 6, 1924. Serial No. 748,104. 14 Claims. (Cl. 254—7.)

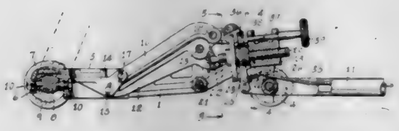
1. In a lifting jack, the combination of a frame comprising side members having parallel portions at their front and rear ends and intermediate forwardly diverging portions, said side members having laterally projecting arms at their rear ends, caster wheels mounted on said arms, a frame-like cross member disposed between the front parallel portions of said side members, an axle pivotally mounted on said cross member, the pivot for said axle being disposed centrally and longitudinally of the frame, wheels on said axle, a lifting lever pivotally mounted between the rear parallel portions of said frame side members to project forwardly and adapted to collapse between the same, a head member pivotally mounted on said lifting lever, a head supporting link pivotally



mounted between said side members and pivotally connected to said head member in parallel relation to said lifting lever whereby the head member is supported in upright position throughout the throw of the lifting lever, a screw support journaled between the rear ends of said side members for rocking movement, an actuating screw mounted on said support to engage said lifting lever below its pivot, a driving member disposed in front of said screw support and having a threaded engagement with said screw, and means for rotating said driving member in either direction.

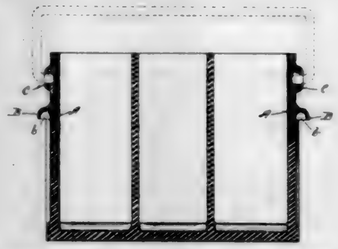
---

1,559,099. LIFTING JACK. ARTHUR C. HOPKINS, Niles, Mich., assignor to National Standard Company, Niles, Mich. Filed Mar. 18, 1925. Serial No. 16,356. 13 Claims. (Cl. 254—2.)



1. In a lifting jack, the combination of a frame, a lifting lever pivotally mounted on said frame, a screw support pivotally mounted on said frame, an actuating screw mounted on said support to coact with said lifting lever, a ratchet driving member having threaded engagement with said screw, said driving member being provided with a gear, an actuating lever pivotally mounted on said support, a pair of pawls mounted on said actuating lever to coact with said ratchet on opposite sides of its axis, a pawl control member rotatably mounted on the lever pivot and provided with oppositely disposed ears, pawls retracting rods having lost motion connections with said ears, pawl engaging springs arranged on said rods and adapted to be alternately placed under compression, a pinion mounted on said support to coact with said gear on said driving member and provided with a hand wheel to facilitate the rapid adjustment of the lifting lever to and from the work, and an adjusting rod for said control member disposed longitudinally of said actuating lever.

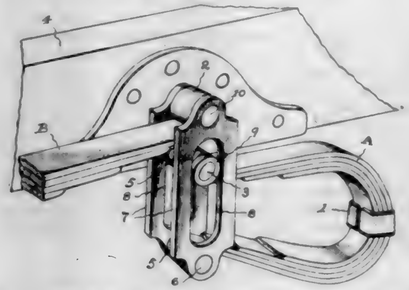
1,559,100. CONTAINER. LOUIS W. HOTTEL, Erie, Pa. Filed Apr. 4, 1924. Serial No. 704,192. 1 Claim. (Cl. 206—2.)



In a container, a depressed panel, a horizontal style ribbon above said depressed panel, a portion of said style projecting outwardly beyond the plane thereof, the depth of said depressed panel constituting a portion of said projecting portion of said style.

---

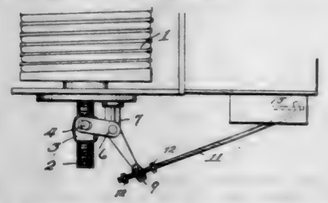
1,559,101. CUSHION-SPRING SHACKLE. CHARLES B. HOUSE, Klamath Falls, Oreg. Filed Jan. 31, 1923. Serial No. 615,094. 4 Claims. (Cl. 267—46.)



1. A vehicle spring shackle including a U-shaped spring element supported entirely at its end and with the bowed portion thereof free for vibratory movement, a pair of link members connected to one end of the spring element and provided with means for attachment to a vehicle spring, the other end of the U-shaped spring element projecting between the link elements, means thereon for slidably engaging the link elements to direct the spring element in its vibratory movements, and means for attaching the second mentioned end of the spring element to a support.

---

1,559,102. LIMIT STOP FOR ELECTRIC HOISTS. FRANK H. HOWARD, Reading, Pa., assignor to Reading Chain and Block Corporation, Reading, Pa., a Corporation of Pennsylvania. Filed Feb. 14, 1925. Serial No. 9,100. 2 Claims. (Cl. 187—35.)

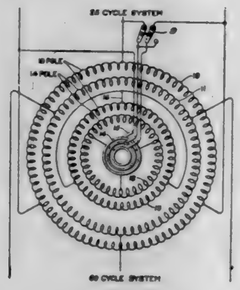


2. In a limit stop for electric hoists, the combination of a hoisting drum, a controller, a controller rod connected thereto, a screw-threaded shaft for the drum, a

nut on said shaft, a crank arm mounted on the drum frame, one end of which is in engagement with said nut and the other with said controller rod, and adjustable means on the controller rod whereby the time of actuating the controller may be determined.

---

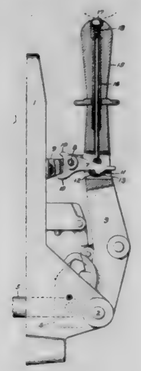
1,559,103. FREQUENCY CHANGER. JOHN I. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 9, 1924. Serial No. 691,794. 10 Claims. (Cl. 172—281.)



1. A frequency changer comprising a stator member provided with two alternating current windings arranged to be inductively noninterfering with respect to each other and having pole numbers of a difference equal to 4 or a multiple thereof, and a cooperating rotor member provided with a winding system having two alternating current circuits with pole numbers respectively equal to the pole numbers of the stator windings and arranged to be similarly noninterfering, one of said rotor circuits being closed in a manner to enable the same to function as the secondary of an induction machine and the other rotor circuit having a power connection with the stator winding of unlike pole number.

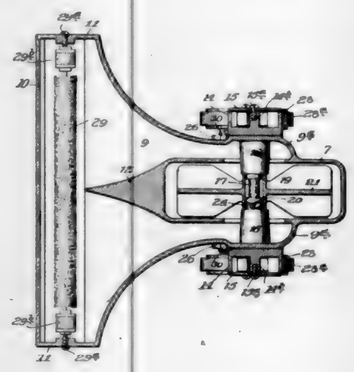
---

1,559,104. SWITCH-OPERATING MECHANISM. JENS M. JENSEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 18, 1925. Serial No. 43,068. 5 Claims. (Cl. 74—39.)



1. Switch operating mechanism comprising a hand operated switch lever, means constructed to retain the lever in a predetermined position only when pressure is applied to said means, and means whereby the hand of the operator supplies the required pressure.

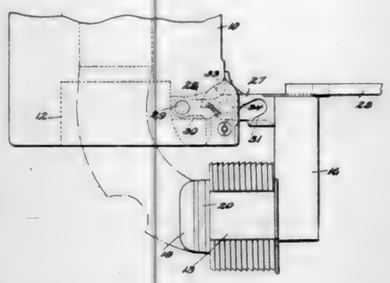
1,559,105. VACUUM CLEANER. JACK W. JOHNSON, Chicago, Ill., assignor to Radio Vacuum Cleaner Company, St. Charles, Ill., a Corporation of Illinois. Filed Nov. 26, 1923. Serial No. 676,995. 8 Claims. (Cl. 15—18.)



3. In a vacuum-cleaner, a fan-chamber having an exhaust-outlet, a horizontal axle in said chamber a fan carried by said axle to rotate in a vertical plane and having blades and means extending centrally between its blades to render it a duplicate fan, a suction-nozzle extending from said chamber and containing a partition forming separate passages in the nozzle at opposite sides of its center, and means for driving the fan.

---

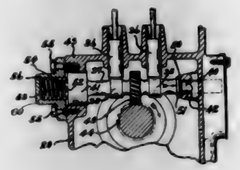
1,559,106. BREECH MECHANISM. CLAS J. JULSTEDT, Bethlehem, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed July 22, 1921. Serial No. 486,757. 25 Claims. (Cl. 89—20.)



1. A breech mechanism comprising in combination, a breech block, a carrier therefor, and a link secured to said carrier and adapted to be secured to the tube of a gun and to extend transversely of the latter whereby the block may be given first an axial movement and thereafter an arcuate movement in opening the breech recess.

13. In a breech loading gun, in combination, a tube having a radial slot therein, a breech block, a carrier for the breech block, a link pivotally supported in said slot, a pin pivotally connecting the link and carrier, a plate pivotally supported on said pin and normally extending across the mouth of said slot to exclude dust therefrom.

1,559,107. ENGINE. LESTER S. KEILHOLTZ, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Sept. 26, 1923, Serial No. 664,945. Renewed July 23, 1925. 8 Claims. (Cl. 123—90.)



3. Valve operating mechanism for internal combustion engines comprising, in combination, a crank shaft having a gear, a valve cam shaft having a gear meshing with the gear of the crank shaft, and a stationary friction member bearing against an end of the valve cam shaft, thereby maintaining the working faces of the gears in engagement.

---

1,559,108. STRINGED MUSICAL INSTRUMENT. WALTER I. KIRK, Chicago, Ill. Filed Oct. 22, 1921. Serial No. 509,603. 1 Claim. (Cl. 84—291.)
